The present system of industrial relations in the United States, said Prof. Slichter, presupposes good success on the part of management in raising output per man-hour and thereby creating additional product to share with employees.

"It is an important shortcoming in management's approach to industrial relations. I think, that top executives do not seem to have carefully analysed the basic policies of unions and have not gained a clear understanding of the stake that management has in making these arrangements work," he commented.

An important shortcoming in the system, he stated, is union rivalry. "Rivalry between unions is strong and is likely to continue to be strong. This rivalry tends to increase the demands that unions make on managements. During most of the time, unions are in a strong enough bargaining position to raise wages and other labour costs faster than managements are able to raise output per man-hour. Hence, labour costs are slowly rising. But increasing labour costs require a rising price level, at least in the long run. A rising price level creates difficult problems. But the problems that would be created by public policies designed to weaken unions and to interfere with the bargaining process would be even greater than the problems created by slowly rising labour costs and a long-run increase in the price level. The American trade union philosophy and the American bargaining system have tremendous advantages for the community as a whole. These advantages seem to me to be worth the slowly rising labour costs and price level which they entail."

Problems Created by Union Growth

What are the principal public issues that have been created by the rise of powerful trade unions, particularly the problems of disputes that imperil public health or public safety?

The great growth of trade unions in strength and power creates the problem of protecting the members and the community against abuse of power, stated Prof. Slichter. The Taft-Hartley Act, he said, represents the first real attempt on the part of the community to check abuse.

"It is understandable," he said, "that unions should keenly resent this attempt to restrict some of their methods and activities and that the Taft-Hartley Act should become a political issue. And it is not surprising that this first attempt to deal with the difficult problems presented by the rise of powerful labour organizations should contain many serious faults. For example, the Taft-Hartley Act outlaws the closed shop instead of attempting to regulate it, thereby unnecessarily disturbing a well-established institution; it inadequately protects the right of unions to enforce their rules by forbidding employers who have negotiated union shop contracts from discharging workers who have lost their good standing for other reasons than failure to pay union dues; the secondary boycott provisions (while in the main good) are too broad; the provisions for dealing with disputes that could imperil national health or safety are quite inadequate."

But, he said, the good points in the Taft-Hartley Act far outnumber the bad ones. "For example, it provides a statute of limitations governing the bringing of

complaints; it specifically authorizes employers to ask for elections (and there have been many elections held at the request of the employers); it authorizes decertification elections (the lack of such a provision was a glaring fault in the old Wagner Act); it corrects the refusal of the Labour Relations Board to put 'no union' on run-off ballots; it requires the Board to treat independent unions the same as national unions; it imposes the obligation to bargain on unions as well as on employers; it recognizes a category of unfair practices by unions as well as by employers, and there have been hundreds of unfair practice cases filed against unions each year of the Act, many of which have been brought by other unions."

Bases for an Industrial Relations Act

What labour policies should the community adopt to protect its members against abuses of either employer or trade union power?

Prof. Slichter outlined seven basic matters with which, in his opinion, an industrial relations act should deal. They are:—

1. Protection of the right of individual workers to join unions and to remain in unions.
2. Right of unions and employers to be represented by bargaining agents of their own choosing.
3. Scope of the subjects over which each side is required to bargain.
4. Protection of neutrals from injury in labour disputes.
5. Protection of employers against some forms of rivalry among unions.
6. Provision for unions to be held legally responsible for their acts.
7. Protection of the community against strikes or lockouts that imperil the public health or public safety.

Right of individual workers to join unions.—In many parts of industry the right to join a union determines the opportunity to make a living. This opportunity, declared Prof. Slichter, cannot be left solely to a decision by private organizations. Consequently, the terms on which a union shop or a closed shop may be established must be subject to public control to keep the doors of unions open without discrimination, and at a fair initiation fee, and to protect union members from being unjustly deprived of their membership.

Right to choose own bargaining agents.—In this respect the Taft-Hartley Act has taken a step forward, Prof. Slichter stated. It not only retains the provision contained in the Wagner Act protecting employees in the right to be represented by a bargaining agent of their own choosing but also restricts unions from interfering with the selection of bargaining representatives by employers.

Scope of subjects in bargaining.—The policy of requiring the parties to bargain about anything connected with wages, hours or working conditions, and of allowing both a free hand in making the kind of agreements they desire, is a wise one, according to Prof. Slichter:—

"If the bargaining process is to have vitality and to command the confidence of both sides, it should be permitted to apply to almost anything that the parties regard as worth bargaining about. Their judgment, not the judgment of a public agency, should be decisive." The Taft-Hartley Act, he pointed out, imposes virtually no limits on the subjects that may be bargained about.

Protection of neutrals in labour disputes.—Neutrals are entitled to protection from being forced by a boycott or economic pressure to help one side or the other in a labour dispute. While the Taft-Hartley Act attempts to give such protection, its provisions are not as well written as they might be, Prof. Slichter considered. An amendment or a new act, he said, should give neutrals effective protection.

Protection of employers against rivalry among unions.—No protection for employers was provided in the Wagner Act against the efforts of non-certified unions to compel an employer to cease dealing with a certified union and to deal with an uncertified one. The Taft-Hartley Act provides such protection, Prof. Slichter pointed out.

There is need also, he said, to protect employers and the community against attempts on the part of unions to use strikes or boycotts to control the assignment of jobs—attempts on the part of one union to compel an employer to cease employing the members of another union.

"The basic purpose of protecting the right of employees to organize," he emphasized, "was not to help one union fight another union; it was to strengthen employees in their bargaining with employers. Unions have been more uncompromising in their fights with one another over jobs than in their fights with employers. Hence, experience justifies the prohibition of strikes or boycotts to enforce claims to jobs."

The Taft-Hartley Act, he said, attempts to deal with this issue but its provisions are "crudely phrased and leave much to be desired". Referring to a recent ruling of the Supreme Court which permitted an

employer in Alaska to recover a large sum in compensation for damages suffered in a jurisdictional dispute, Prof. Slichter stated: "It is high time that employers be compensated for losses inflicted on them by jurisdictional disputes for which the employer has no responsibility."

Union responsibility.—Because unions are "loose" organizations, Prof. Slichter said, union responsibility is a difficult issue. The Taft-Hartley law makes an attempt to deal with it by giving statutory authority for a position that the Supreme Court took long ago in the Coronado Coal Company case and which many court states have taken. The Act distinguishes between the liability of unions and the liability of the individual members of unions and provides that judgments against the union shall not be enforceable against any individual member. This he considered to be a long step forward.

Protection of the community against strikes or lockouts that imperil public health or safety.—The President, or in the case of states the Governor, needs clear authority to protect the health and safety of the community, it was Prof Slichter's opinion. It is argued by some, he said, that it is unwise to give definite authority to the executive to deal with disputes imperilling public health or safety, on the ground that if the executive's authority is definite, the union or the employer will be able to plan its behaviour so as to evade this authority. He thought, however, that if the executive acts through "implied powers", neither side can predict what the executive may do and each will be restrained in its course of action. He quoted the experience with the recent steel dispute as showing that the so-called "implied powers" are not a satisfactory basis for executive intervention in disputes that create great emergencies. When the executive bases his acts on implied powers, he is bound to create the impression that he is acting in an arbitrary fashion and setting himself above the law.

"When the action of the executive is regarded as arbitrary," he said, "it arouses fear and intensifies the emotions that always accompany a grave dispute. This intensifying of emotions makes the dispute even more difficult to handle." There is also the danger that the executive may interpret his powers too broadly. Here Prof. Slichter referred to the action taken by the President in the recent steel dispute.

In providing a procedure by which the President may deal with disputes that threaten to create national emergencies, the Taft-Hartley Act, he added, is "entitled to credit for attempting to meet a problem that cannot be escaped".

Emergency Disputes

Discussing the provisions in the Taft-Hartley Act for dealing with emergency disputes, Prof. Slichter said it is difficult to imagine a more inappropriate set of arrangements; he cited the injunction provision for obtaining a postponement. The Railway Act, he pointed out, obtains the same result simply by forbidding either party from changing the *status quo* for a limited period.

"The word 'injunction'," he said, "has become charged with much emotion because of the abuse of injunctions in strikes many years ago. The provision that the board of inquiry shall not include recommendations in its report is recognized as wrong, even by Senator Taft. The public naturally wishes to know what settlement the board regards as fair, and the ban on recommendations in the board's report prevents the board from enlisting public opinion in support of a definite compromise. After the enforced delay of 60 days, the men are given an opportunity to vote on the employer's last offer—an offer which their own leaders have rejected. It is certain that they will vote down the offer, as they have done in every vote by an overwhelming majority. After this vote the injunction is discharged."

President's Powers

What authority should the executive (the President or, in the case of states, the Governor) have to deal with disputes that threaten public health or safety?

Several courses of action should be made possible, Prof. Slichter states. In the first place, the President or Governor should be authorized to require a postponement of the strike or lockout for a limited period, say 30 days, to give opportunity for further attempts at settlement. Secondly, he should have authority to summon the parties to a formal hearing before a moderator to show cause why the dispute should not be submitted to arbitration. Thirdly, the executive should have authority to arrange for the investigation of the dispute by an emergency board of public members. The board should have the duty to recommend terms of settlement. "In other words," he said, "it should be similar to the emergency boards created under the Railway Labour Act."

How, Prof. Slichter asked, can the possible appointment of an emergency board be prevented from having the effect

of making the parties less willing to bargain or less willing to submit their dispute to arbitration? The answer, he believed, is to give both unions and employers a strong incentive to avoid having their dispute referred to an emergency board. The attractiveness of emergency boards to both sides can be reduced by giving three additional powers to the executive.

In case one side or the other rejects the recommendations of an emergency board, the executive should have authority to do one of three things: (1) to let the strike or lockout occur, after working out an agreement with the union and the employer that, where technically practicable, production will continue, until the dispute is settled, on a limited scale but on a scale large enough to meet the needs of public health or safety; (2) to seize the property and operate it; (3) to require that the recommendations of the emergency board be put into effect for a limited period, say six months.

Much of the output, even in vital industries, Prof. Slichter observed, is not necessary to vital health and safety. Even though there might be hardship and inconvenience, the vital interest of health and safety would not be imperilled. At the same time, the parties would be able to conduct a sizeable strike or lockout. With the sales of the enterprise cut in half, both the employer and the union would be under strong pressure to reach an agreement. Thus economic warfare would serve its essential purpose of putting pressure on both sides to agree and, at the same time, this warfare would be prevented from imperilling vital interests of the community.

"In my judgment, agreements that production will be continued on a limited scale are the fairest and most practicable solution to the problem of disputes that imperil public health and safety," the professor declared.

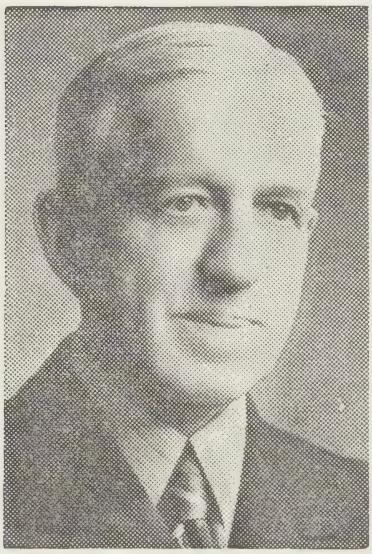
As regards seizure of property, this, said Prof. Slichter, "is in bad odour, mainly because of the President's unconstitutional seizure of the steel mills." But, he said, seizure has been used a number of times in the case of the railroads and seems to have worked fairly well. Furthermore, it is authorized by some state laws—in Virginia and Massachusetts, for example.

"Seizure," he said, "should occur only under certain safeguards. The law should provide that in the case of seizure the *status quo* should be maintained. The Government, while in possession of the properties, should not attempt to negotiate new terms of employment, as it did when the coal mines were seized in the spring of 1936."

The requirement that the parties put into effect the recommendations of the emergency board for a limited period would be, in effect, Prof. Slichter maintained, a mild form of compulsory arbitration. At the end of the period, or, by agreement between both parties, during the period, either party would be free to re-open the case and attempt to negotiate new terms of employment. The possibility that the executive might require both parties to put into effect the recommendations of the emergency board would make resort to emergency boards much less attractive to employers and unions and would be a strong inducement to both sides to settle their disputes by negotiation or arbitration, he believed.

Union's Role in Economy

Concluding his remarks with a few general observations on industrial relations in the United States, Prof. Slichter referred to his country's economy as "the most successful in the world". The trade unions and the industrial relations, he said, are "part and parcel of our extraordinary successful economy, and unions display many of the same characteristics that have made the economy successful."



Continuing, he said: "The hard drive to make money that leads enterprises to experiment, to scrap new equipment for still newer equipment, and to expand, finds its counterpart in the hard drive of trade unions for higher and higher wages and bigger and bigger benefits. And just as the businessmen of America (with not too many exceptions) try to make more and more money by expansion and change rather than to protect an established position by cartels which divide up the market, so trade unions seek to serve their members, not by various kinds of rules which ration opportunity or obstruct change, but by driving hard for higher and higher wages without limit.

"I say these things because I do not believe that the American businessmen as a general rule are aware of how American the trade unions of this country really are, of how faithfully they mirror the individualism and the optimism of American culture, the strong faith that this is an expanding universe, and that the key to the better life is growth, innovation, and invention, not restriction and a different division of what we have," he concluded. "The American trade unions are just as distinctively American as is American business. Of course, it could not be otherwise because the same environments have produced the philosophies of American business and of American unions.

Dr. A. MacNamara Retires

Prime Minister announces retirement of Deputy Minister of Labour who gave 40 years' conspicuous service to provincial, federal governments

After 40 years of conspicuous service in the upper echelons of provincial and federal administration, Dr. Arthur MacNamara on March 4 retired as Deputy Minister of the Federal Department of Labour, it was announced by the Rt. Hon. Louis St. Laurent, Prime Minister.

In a career so crowded with action and achievement, it would be impossible to detail the administrative successes of Arthur MacNamara. But a partial listing of his major accomplishments include the following appointments under the Government of Manitoba: Chief Inspector, Bureau of Labour, 1916; Deputy Fire Commissioner, 1924; Assistant Deputy Minister of Public Works, 1936 and then Deputy Minister of Labour and Public Works. During this period, Dr. MacNamara also served on a number of important provincial boards and commissions.

In January 1940, at the urging of the late Hon. Norman Rogers, the Manitoba Government released Dr. MacNamara to the Federal Government to organize the Dependents' Allowance Board. From here he was requisitioned in a succession of posts —Acting Chief Commissioner of the Unemployment Insurance Commission, Director of National Selective Service and, in January 1943, Deputy Minister of Labour.

However, to Canadians he became a national figure as director of mobilization of the manpower resources of the country. In this pioneering project his operational blueprint served as a working model for other countries. He was constantly in demand to address representative bodies in the United States, struggling to maintain the production lines at peak capacity under a manpower shortage.

Before the war was over mobilization of manpower had reached into every phase of life. For instance, it was precedent-shattering to have Canadian combine crews operating in Kansas and combine crews from Texas harvesting on Canada's western plains in an amazing exchange of agricultural labour across an invisible border.

But the field of mobilizing and channelling manpower into priority industries was not his only proving ground. The post-war task of unscrambling the manpower of defence industries and re-routing it back into civilian production with a minimum of lay-offs and dislocation found him equal to the challenge. There was no dislocation and no mass unemployment.

For this outstanding national service, the King in 1946 made him a Companion of the Most Distinguished Order of Saint Michael and Saint George. The University of Manitoba conferred on him the honorary degree of Doctor of Laws.

Free from intensive preoccupation with war and immediate post-war problems, Dr. MacNamara began re-establishing the Department to meet the challenge of the brave new world that everybody hoped would emerge out of the havoc and annihilation of the war.

With the lifting of immigration restrictions came the first thousands of Displaced Persons seeking a new life in freedom in a new land. To them he extended his quickened sympathy and practical assistance in formulating plans to facilitate their absorption into the Canadian social-economic structure.

He then turned to preparing the Department for the rapid industrial expansion that was making Canada a top-ranking industrial power in the world. The launching of vast projects and feeder plants in all parts of the country, with the fillip to construction, brought in its wake a new set

A. H. Brown is New Deputy

Succession of administrative posts since his entry into the Federal Government Service in 1929 leads to promotion to deputy ministership

Arthur Huntingdon Brown, appointed Deputy Minister of Labour effective March 5, 1953, progressed by training, application and aptitude in a succession of administrative posts that has now resulted in his promotion to probably the most exacting deputyship in the Federal Government Service.

He belonged to that old school that believed and applied the virtues of integrity and selflessness in a career that placed the emphasis upon adherence to the code of public duty.

Accordingly he preferred to accept service where he could apply his talents to the solution of problems that could increase social standards or eliminate, or diminish, the frictions inherent in the gearing of a nation's industrial potential.

In this respect the Federal Department of Labour offered to him that kind of opportunity.

Typical of his background, there is in his office a pastoral painting of a prairie sky which must be a constant reminder of his boyhood days in the grass lands of Saskatchewan. Though he was born in a manse in historic Huntingdon, Que. (his parents, Rev. Mr. S. Brown and Mrs. Brown, died when he was a boy), he was reared in Moosomin in the home of an uncle, J. T. Brown, now Chief Justice of the Saskatchewan Court of Queen's Bench.

From the primary school at Moosomin he attended high school at Regina. He graduated to the University of Toronto (Victoria College) where as a student he responded to the call that came to all his generation in the First Great War.

He enlisted in March 1915, as a gunner in a distinguished company of gunners that included such now prominent Parliamentarians as the Hon. Douglas Abbott, Hon. Brooke Claxton and Hon. George Drew, and such senior administrators as C. H. Bland, Chairman of the Civil Service Commission, and Watson Sellar, Auditor General. As Gunner Arthur Brown he served in France in all the grim fighting from the Salient to the Somme, being wounded several times.

Back in Regina honorably discharged in 1919, he became articled in law in a three-year course. Admitted to the Saskatchewan Bar in 1926 (also the year of his marriage to the former Miss R. M. Milliken), he practised in that province until 1929.

It was during this interlude that he could have made a name in football, for he was a pivot man with the famed Regina Roughriders.

However, in 1929 he came to Ottawa to accept appointment as Secretary-Treasurer and Legal Adviser to the newly created Canadian Farm Loan Board. During the early period of the Second World War (1939-1942) he was first member, and later Chairman, of the Dependents' Allowance Board, Department of National Defence. From this he went to another Defence Department post as member of the Dependents' Board of Trustees.

In the exigency of wartime industrial relations, the Federal Department of Labour reached out for expert help. Among those it sought and obtained was Arthur Brown for the post of Chief Executive Officer and Legal Adviser (January 1943).

This entailed the vice-chairmanship of the Wartime Labour Relations Board then establishing, under the urgency of war requirements, a new pattern of industrial relations in a series of precedent-making decisions out of which developed orders and regulations that formed the basis of the loosely termed "Labour-Code".

From this it was a natural corollary to the assistant deputyship and later the acting chairmanship of the Canada Labour Relations Board. In some of the most important cases the decisions of this Board have resulted in a comprehensive body of labour-management practice applicable to the changed complex of industrial relations in Canada.

Arthur Brown has developed and pioneered in this practical modern school of labour relations geared to the complexities of a new industrial age entailing an entirely new approach to an entirely new set of conditions imposed by the demands of a tremendous industrial expansion.

For his outstanding civilian service to his country he received the Order of the British Empire.

And so it is that this appointment of Arthur Brown gives the Department and the country the assurance of continuity and competence in labour administration during this critical period of national life.

Dr. MacNamara Retires

(Continued from page 410)

of industrial problems. To meet this new orientation he insisted upon a strong Department and got it.

Labour and employers and newspapermen have testified to his versatility in handling with competence and imperturbability the problems of a Department that, more than any other, deals so closely with those human issues that constantly bring into play conflicting factors—but factors that must be reconciled in the national interest.

When the Prime Minister, speaking to a labour delegation meeting the Cabinet, commented on Dr. MacNamara's relinquishing of the deputyship, he said: "We are all very conscious of the great contribution Dr. MacNamara has made to the economy of Canada and to the progress of our country in recent years and we hope his services will still be available to the Government and the people of Canada for many years".

Within 48 hours the Prime Minister announced Dr. MacNamara's new assignment as "special adviser to the Department of National Defence on the employment of civilians".

Economist Assesses Trends

(Continued from page 409)

"The American economy needs the contribution which the trade unions are making to it. Even with all the competition and research in industry, enterprises need the additional spur to efficiency that comes from strong pressure for higher wages and better conditions. But just as the community needs to fight vigorously the introduction of a philosophy of restriction in business, so it also needs to fight with equal vigour the philosophy of restrictionism in unions—all efforts to create unnecessary jobs (standby orchestras, for example, or two firemen on diesel locomotives), and all efforts arbitrarily to obstruct technological change. Let us have no hesitation in our industrial relations in fighting vigorously over how the gains in production are to be divided but let us be sure that each year there are large gains to fight over!"

See Special Announcement on page 459

International Labour Organization

Vocational Guidance and Training for Women Subject of ILO Report

Need for application of principle of equal rights for men and women in the field of vocational training is stressed. Co-ordinated work between the United Nations and specialized agencies is recommended

Both in those industries traditionally employing a large proportion of female labour and in industries where the labour force is mixed, the position of women workers is closely bound up with the question of vocational qualifications, states an International Labour Office report on specific current problems of vocational guidance and training for women.

"The need to apply the principle of equal rights for men and women in respect of vocational training and to promote full use of the productive capacity of the female labour force," says the report, "is all the more urgent because of the present trends in the employment of women."

The report was prepared for the Seventh Session of the Commission on the Status of Women at the request of the Economic and Social Council of the United Nations. It discusses trends in both the economically developed countries and in non-industrial areas.

In most countries whose economy has reached a high level of development, women workers constitute a considerable proportion of the total working population. Their numbers have become so large in many sectors, says the report, that they must be regarded as an integral part of the total labour force rather than a subsidiary source of labour or a reserve to be drawn upon in times of emergency.

Employment opportunities for women are increasing in number and diversity and distinction between men's jobs and women's jobs is gradually disappearing. A striking feature, however, the report notes, is that in spite of the progress that has taken place women are still employed mainly in semi-skilled work. In comparison with men, women's chances of promotion are more limited and higher technical qualifications are still exceptional among women, particularly in industry and commerce.

In a number of countries, many women, including married and older women, have been obliged to enter or return to employment because of economic difficulties. These women are faced with particular problems, as they are often without adequate training and have difficulty in finding jobs despite the increased employment opportunities. On the other hand, in countries where there is unemployment, which particularly affects unskilled workers, women suffer to a relatively larger extent than men.

Problems

Although the general principles for the vocational training of girls and women are of universal application, the economically and technically advanced areas where training has developed in a fairly homogeneous manner and those where it still occurs only sporadically are considered separately in the report. The problems in the countries of the first group are genuinely vocational training problems, it is stated, while the problems peculiar to the countries of the second group are mainly connected with the development of basic education.

Discussing problems of vocational training in relation to the first group, the ILO reports that the legislation of a large number of countries explicitly or implicitly recognizes the principles for the vocational training of women laid down in the Vocational Training Recommendation, 1939 (L.G., 1939, p. 766). There are now, it says, many vocational schools, training centres and higher technical schools open in principle to both sexes, with the same courses and certificates for boys and girls. In many cases, however, the vocational training facilities available to women do not permit complete and thorough observance of the principles.

The defects appear mainly to arise from two sets of circumstances, the report finds. First, a group of factors (predominantly psychological and social) still tend, even in economically and technically advanced countries, to deter women from undergoing

vocational training or from choosing any vocation outside certain traditional fields. Second, the facilities for vocational training available to girls and women are not always adequate quantitatively or qualitatively, and often do not afford training for a proper career.

Factors Affecting Women's Attitude

The report attributes the lack of interest shown by girls in systematic training for a career and their lack of imagination in the choice of an occupation partly to the general education which they receive and partly to the fact that even today they are often unaware of the opportunities open to them. While the general compulsory education given to boys emphasizes the importance of a career, tries to give them a picture of economic life and, in an increasing number of countries, introduces them gradually to the simple techniques of manual work, the education given to girls rarely takes account of vocational needs to the same extent (even by merely offering a choice between sewing and manual work of the type done by men) and rarely suggests that there are other occupations for the girls apart from home-making.

The same tendency is sometimes apparent even in the vocational training provided for women. Many courses in dressmaking, domestic science, etc., cater indiscriminately for future housewives and future semi-skilled workers and some of the related classroom courses for girl apprentices or trainees tend to prepare them for housework rather than to develop their general knowledge. The value of systematic training for the responsibilities and duties of a housewife is unquestioned, the report points out, but it is important that this should not limit the girls' opportunities of acquiring the additional general knowledge needed for embarking on a career.

Vocational guidance and counselling services also tend to take a conservative attitude with regard to women's employment. In many cases the vocational guidance officers are unable to keep abreast of women's employment opportunities and prospects, the report asserts.

As women become gainfully occupied to an increasing extent, the report points out, it is in the interests both of the national economy and of the women themselves that they should have the same opportunities as men for school and pre-vocational guidance and for a general education based on the assumption that many girls will take up a career. Close co-operation is needed at the international level in this respect between the various specialized agencies concerned with education, vocational guidance and manpower policy, if the progress already achieved is to be continued with success.

On the other hand, although the attitude of girls and women to a career has changed considerably, particularly since the war, there is still a tendency in many cases to consider their presence on the employment market as a temporary phenomenon. In many cases the girls themselves hestitate to undertake a training course of any great length, hoping to give up their career after marriage, states the report.

The parents, for their part, are often unwilling to make the additional sacrifice needed if the daughter is to be fully trained for a vocation or even given basic training for the branch which best corresponds to her aptitudes and tastes. This is a particularly important factor when there are several children in the family. Where the claims of the girls conflict with those of the boys, the parents often consider it better to concentrate their financial efforts on the vocational training of the boys. It may also happen that public or private financial assistance (such as scholarships) makes it possible for the boys to be trained for their chosen occupation, while corresponding facilities for the girls are not yet available or are inadequate. Financial obstacles are even more of a hindrance to the vocational training of adult women who are obliged to go out to work. Here, again, it is important that women should be given the same encouragement and assistance as men receive in similar circumstances, the report advises.

"The principle of equal rights for men and women in regard to training is bound to remain a dead letter," the report states, "as long as the economic burden on those who wish to take a training course is heavier for the girls and women than for the boys and men."

Training Facilities Available

While for various reasons women still do not take full advantage of the opportunities for vocational training open to them, in many cases the number and type of facilities available to women do not correspond to the present importance of the female labour force. The fact that a large proportion of working women are restricted to unskilled jobs is evidence of real shortcomings in the training facilities open to them, says the report.

Equality in the training opportunities open to both sexes could be achieved in principle, the report suggests, if at all grades parallel facilities—girls' departments

in vocational schools, apprenticeship centres and training work shops—were provided for girls and women or if the facilities hitherto reserved for boys and men were made available to women and girls also.

Advances that have been made in this direction are likely to lessen the differences in content and standard which for a long time made women's vocational qualifications of less value than those of men. Differences still exist, however, even where the training facilities are mixed, and certain grades of training, such as upgrading courses, are not open to girls or women, the authors found.

In addition, in many cases the general knowledge of girls and women is less complete than that of male entrants. Women who enter industry often have less understanding of work in an undertaking than men and therefore need special preparation. Allowance must also be made, the report points out, for the fact that most girls and women at present have less general acquaintance with simple mechanics, technology, and the handling of tools, than boys and men. In some countries various methods have been used to overcome this difficulty.

However, even where progress has been made, much still remains to be done before both sexes have equal opportunities of proper careers and equal chances of promotion.

Sound basic instruction will prepare the way for the acquisition of further practical and theoretical knowledge, which is one of the requirements for promotion to the higher grades. But it is also necessary that facilities for further training in the form of courses or in-plant training, identical with or equivalent to those open to men, should be made available for women, the report emphasizes.

Apart from the opportunities for further training during employment, access to the intermediate and higher grades of a career is generally obtained to a great extent by attending full-time vocational schools. Although girls and women are increasingly admitted to such schools on the same footing as boys and men, there are still certain defects in the arrangements, particularly as regards training for intermediate technical posts and for supervisory duties.

As regards the various supervisory grades, it is uncertain whether the problem is one of access to training or of access to the position. In undertakings employing a mixed labour force modern training courses for supervisory jobs are generally open in principle to women but the number of women supervisors so trained is still relatively small. This situation seems mainly due to the psychological difficulty of accepting a forewoman in a workshop where men and women work side by side. It is also due to the fact that relatively few women candidates possess, in addition to their actual vocational qualifications, certain other necessary technical knowledge.

"Female" Occupations

Under the present system of division of labour between men and women workers, certain occupations are still regarded as essentially "female" and conditions of work in them are somewhat different from those in other branches of activity. In these occupations, the report states, the question of vocational training is more one of assessment of the level of the training, rather than in what respects it differs from that for men.

The problem is twofold: (1) to create as many genuine careers as possible, with opportunities for advancement and specialization and with a social and economic standing comparable to that of other occupations for which similar qualifications are required; and (2) to raise the practical and technical level of training in several of the occupations in the interests both of the workers themselves and of increased efficiency.

Nevertheless, states the report, while the number of vocational training courses available has increased greatly—in some cases in excess of needs—the technical and practical training given is defective in some of the "female" trades.

The occupational aptitudes of women do not differ basically from those of men and no special training methods need to be employed for teaching women a trade. The choice of teaching methods and the preparation of sound training programs do not, therefore, raise any problems that are peculiar to women. It may be asked, however, the report comments, whether, at the current stage of development of training institutions, women enjoy the advantages of systematic training by rational methods to the same extent as men.

A further problem, according to the report, is the rapid growth of private schools, giving training for certain "female" occupations which is often superficial and of doubtful quality. At the end of the course the pupils are generally able to find immediate employment but their prospects for the future are extremely uncertain. The need for supervision of private schools is particularly urgent in the case of beauty

treatment, secretarial and dressmaking occupations, for which increasing numbers of private schools have grown up in the last few years. These exploit the demand among girls for rapid training and provide a hasty and inadequate course of instruction. For this reason private schools providing training for these occupations are to an increasing extent coming under direct or indirect state control in certain countries.

Conclusions

Certain immediate conclusions are drawn from the study and from discussions at the meeting of experts on women's work convened by the ILO in December 1951 (L.G., Aug. 1952, p. 1033), and broad lines for action are suggested in the report. They are as follows:—

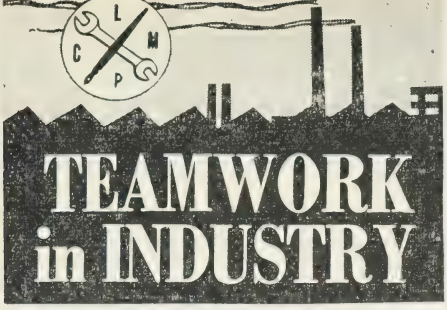
(1) Women workers have become an integral part of the labour force and the distinction between "male" and "female" jobs is gradually disappearing. The proportion of married women workers with family responsibilities is tending to grow; there is also an increase in the number of older women at work, partly because of the higher average age of the population.

(2) The need to apply the principle of equal rights for men and women in respect of vocational training and to promote full use of the productive capacity of the female labour force is all the more urgent because of the present trends in the employment of women.

(3) The problem of vocational training is closely linked to certain aspects of general education and vocational guidance. The compulsory general education provided for girls should open up prospects of a career in the same way as the education for boys and should teach them the elementary manual techniques. Similarly, the vocational guidance and counselling services must help girls and women in the same way as boys and men to choose the occupation that most closely corresponds to their individual aptitudes and tastes.

(4) The vocational training facilities available to girls and women should be as efficient as those offered to boys and men.

(5) Girls and women should have access to all grades of vocational training available to boys and men for all occupations in which the employment of women is not prohibited by law and should be admitted to them on the same footing as boys and men. The vocational training given should open up possibilities of advancement in the chosen occupation and allow them to rise to the higher grades of skill and to supervisory and managerial positions.



(6) Vocational training for traditionally "female" occupations and for those which employ a predominantly female labour force raises special problems. In this context vocational training may play an important part in raising the status of certain occupations and in creating genuine careers with prospects of advancement. Special efforts need to be made to substitute modern training methods for methods of trial and error and to ensure that the training meets the requirements of each group of occupations as shown by job analysis.

(7) The problems of vocational training for women in the non-industrialized regions do not appear to call for the introduction of special teaching methods but merely reflect cultural, social and economic conditions. Great efforts will be needed if girls and women are to be provided with educational and vocational training facilities commensurate with the size of the female labour force and the needs of the countries and if the necessary staffs for these establishments are to be trained.

(8) As the action required in respect to vocational training for girls and women will vary in the different countries and in different occupations in the same country, governments should study the needs in their respective countries, taking account of the employment situation and the economic outlook.

(9) The problems relating to the vocational training of women are closely linked to the question of general education, scholastic and vocational guidance and their opportunities for employment. There is an immediate need for (a) co-ordinated work by the United Nations and the specialized agencies, particularly under the Expanded Technical Assistance Program, and (b) close collaboration between the various public administrations in each country.

Deaf persons working in noisy jobs for which they have been properly selected are able to concentrate better and generally suffer less nervous strain than persons with normal hearing, the International Labour Organization has found. This fact was contained in a series of notes the ILO prepared for the United Nations Working Party on the Rehabilitation of the Physically Handicapped.

LMPC Plans Emergency Plant Evacuation

In co-operation with the City of Toronto Fire Department, the LMPC at Wonder Bakeries has worked out an efficient plan to evacuate the plant in the event of fire or other emergency. The basic idea of the plan is to concentrate on saving lives by clearing the building rapidly, leaving the actual fire-fighting to trained firemen.

A building fire chief has been appointed and a male and female captain for each floor. It is their responsibility to see that all rest rooms are cleared immediately in case of fire and to see that all doors and windows are closed to cut off drafts. In addition to the fire chief and floor captains a number of guides have been trained to take their places at strategic points to direct employees to safety.

Co-operating with management in this LMPC is Local 461, Bakery and Confectionery Workers Union.

LMPCs Now Total 893

At the beginning of February, Department of Labour records showed that there were 893 labour-management production committees in Canada. This is an increase of 97 since the same date last year, when there were 796.

Latest figures available show that at September 30, 1952, there were 330,619 employees working in establishments with LMPCs. This is an increase of 18,000 since the same date last year. Approximately one-third of the organized workers in Canada are now taking part in LMPCs.

Labour-management production committees are organized in the mining, manufacturing, transportation, construction, communications, trade, finance and service industries. Manufacturing, with over 480 committees, is the largest industrial group represented.

Plant Paper Reviews LMPC's Work

A summary of the work done by the LMPC in the past year and of the opinions of its members appeared in a recent issue of *The Press,* published at the Kingston plant of the Aluminum Company of Canada. The article said in part:—

"The members agreed that they had learned a great deal about the plant, why things are done the way they are and why some things are going to be done differently. Most of them confessed that, although they had worked here for some time, they had never really understood a great many of the things which must be taken into account in running a plant. Joining the Production Committees had proved an easy and enjoyable way of learning them.

Purpose of Committees

"Of course, the purpose of these committees isn't just to enable a group of people to have a good time, or even to learn some interesting things. The purpose of the committees is to get everyone in the plant to bring forward his ideas of how things can be improved in the interest of productivity, quality, economy, speed, safety, convenience, pleasure—or any other constructive way.

"A review of the work of these committees over the last year shows that they were instrumental in bringing about some two hundred such improvements—which is certainly a worthwhile record of accomplishment.

Appeal for Candidates

"Members of the committees felt that there are a good many people in the plant who would make good members of these committees and would enjoy being members, who have not considered standing for election because they didn't realize that being a member was a worthwhile experience. They suggest that more people might contest the elections."

Employees participating in this LMPC are members of Local 343, United Steelworkers of America.

Establishment of Labour-Management Production Committees (LMPCs) is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions set up LMPCs, the Service provides publicity aids in the form of booklets, films and posters.

Industrial Relations and Conciliation

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for one day during January. The Board issued six certificates designating bargaining agents and rejected one application for revocation of certification. During the month the Board received six applications for certification.

This section covers proceedings under the Industrial Relations and Disputes Investigation Act involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

Applications for Certification Granted

1. National Association of Broadcast Engineers and Technicians on behalf of a unit of certain radio and television technical employees of the Canadian Broadcasting Corporation (L.G., Feb., p. 237).

2. National Association of Marine Engineers of Canada, Inc. on behalf of a unit of marine engineers employed aboard the M/V *Abegweit* and the SS. *Prince Edward Island* operated by Canadian National Railway on its Cape Tormentine, N.B.-Port Borden, P.E.I. ferry service (L.G., Feb., p. 237).

3. Local 38/163, International Longshoremen's Association on behalf of a unit of longshoremen employed in the loading and unloading of coastwise vessels of the Northland Navigation Co. Ltd., in the port of Vancouver, B.C. (L.G., Feb., p. 238).

4. West Coast Seamen's Union (Canada) on behalf of a unit of unlicensed personnel of the deck, engineroom and steward's departments of the towboat SS. *Dola* operated by Dola Towing Co Ltd., Vancouver, B.C. (L.G., Feb., p. 238).

5. West Coast Seamen's Union (Canada) on behalf of a unit of unlicensed personnel of the deck, engineroom and steward's departments of towing vessels operated by Coastal Towing Co. Ltd., Vancouver, B.C. (L.G., Feb., p. 238).

6. West Coast Seamen's Union (Canada) on behalf of a unit of unlicensed personnel of the deck, engineroom and steward's departments of towing vessels operated by Dolmage Towing Co. Ltd., Vancouver, B.C. (L.G., Feb., p. 238).

Application for Revocation of Certification Rejected

M. Beaulieu and J. E. Tremblay, applicants, the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, respondent, and Canadian Pacific Railway Company, respondent (ticket office employees), Windsor Station, Montreal (L.G., Nov. 1952, p. 1467).

Applications for Certification Received

1. West Coast Seamen's Union (Canada) on behalf of a unit of unlicensed personnel employed by M. R. Cliff Tugboat Co. Ltd., Vancouver, B.C. (Investigating Officer: D. S. Tysoe).

2. Local No. 4, Marine Department, Canadian Communications Association on behalf of a unit of employees of SS. *Prince George* and SS. *Prince Rupert,* operated by Canadian National Steamships Limited (Investigating Officer: G. R. Currie).

3. Seafarers' International Union of North America, Canadian District on behalf of a unit of unlicensed personnel of the pursers' department of vessels operated by Union Steamships Ltd., Vancouver (Investigating Officer: D. S. Tysoe).

4. National Association of Broadcast Engineers and Technicians on behalf of a unit of employees of Radio Station CHEX, Peterborough, Ont. operated by The Brookland Company Limited (Investigating Officer: F. J. Ainsborough).

5. National Association of Broadcast Engineers and Technicians on behalf of a unit of employees of Radio Station CKWS, Kingston, Ont. operated by The Brookland Company Limited (Investigating Officer: F. J. Ainsborough).

6. Application to extend the bargaining unit for which the International Association of Machinists is certified (Maintenance and Overhaul Department, Station Services Department and Stores Department, Trans-Canada Air Lines) (L.G., Oct. 1948, p. 1101) to include the classification of ramp controller (Investigating Officer: C. E. Poirier).

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During January the Minister appointed Conciliation Officers to deal with the following disputes:—

1. Canadian National Railways and Canadian Pacific Railway Company (Vancouver Hotel Company Ltd.) and Local No. 882, International Union of Operating Engineers (Conciliation Officer: G. R. Currie).

2. British Columbia Coast Steamship Service (Canadian Pacific Railway Company), Canadian National Steamships Limited and Union Steamships Limited, Vancouver, B.C., and Seafarers' International Union of North America, Canadian District (Conciliation Officer: G. R. Currie).

3. Canadian National Railways (Oshawa Railway Company and Thousand Islands Railway Company) and Oshawa Railway and Thousand Islands Clerical Association (Conciliation Officer: F. J. Ainsborough).

4. Canadian Stevedoring Company Limited; Empire Stevedoring Company Limited; Louis Wolfe & Sons (Vancouver) Limited; and Victoria & Vancouver Stevedoring Company Limited, all of Vancouver, B.C., and International Longshoremen's and Warehousemen's Union, Local No. 507 (Conciliation Officer: G. R. Currie).

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The branch also acts as the administrative arm of the Canada Labour Relations Board in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certifications given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; three officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Settlements Reported by Conciliation Officers

1. Shipping Federation of British Columbia and Northland Navigation Co. Ltd., Vancouver, and International Longshoremen's Association, Local 38/163 (Conciliation Officer: G. R. Currie) (L.G., Jan., p. 54.)

2. Vancouver Barge Transportation Limited and National Association of Marine Engineers of Canada, Inc. (Conciliation Officer: G. R. Currie) (L.G., Feb., p. 239).

3. Vancouver Barge Transportation Limited and Canadian Merchant Service Guild, Inc (Conciliation Officer: G. R. Currie) (L.G., Feb., p. 239).

4. Ottawa Transportation Commission and Division No. 279 of the Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America (Conciliation Officer: Bernard Wilson) (L.G., Feb., p. 239).

5. Canadian Stevedoring Company Limited; Empire Stevedoring Company Limited; Louis Wolfe & Sons (Vancouver) Limited; and Victoria & Vancouver Stevedoring Company Limited, all of Vancouver, B.C., and International Longshoremen's and Warehousemen's Union, Local No. 507 (Conciliation Officer: G. R. Currie) (See above).

Conciliation Board Appointed

During the month the Minister established a Board of Conciliation and Investigation to deal with matters in dispute between Robin Hood Flour Mills Limited, Saskatoon and Moose Jaw, and Locals 342 and 201, Flour and Cereal Workers' Division of the United Packinghouse Workers of America (L.G., Feb., p. 239). The dispute between Robin Hood Flour Mills Limited, Moose Jaw, and Local 201, Flour and Cereal Workers' Division of the United Packinghouse Workers of America was not previously reported as it went directly to a Board of Conciliation and Investigation. (The Board had not been fully constituted at the end of the month).

Conciliation Board Report Received

During January the Minister received the report of the Board of Conciliation and Investigation established to deal with a dispute between Searle Grain Co. Ltd.; Pacific Elevators Ltd.; United Grain Growers Ltd.; Kerr Gifford & Co., Inc.; Alberta Wheat Pool, all of Vancouver, and the International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America (L.G., Feb., p. 239). Text of the Board's report is reproduced below.

Settlement Following Board Procedure

During January the Minister was advised that a settlement had been reached by the parties concerned through further direct negotiations following receipt of the reports of the Boards of Conciliation and Investigation appointed to deal with matters in dispute between the Brotherhood of Railroad Trainmen and the Canadian Pacific Railway Company and the Canadian National Railways (L.G., Feb., p. 240).

Report of Board in Dispute between

Alberta Wheat Pool; Pacific Elevators Limited; Searle Grain Company, Ltd.; United Grain Growers Limited; Kerr Gifford & Company, Inc.

and

International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America, Local 333

On January 23, 1953, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with matters in dispute between Local 333, International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America and (1) Searle Grain Co. Ltd.; (2) Pacific Elevators Ltd.; (3) United Grain Growers Ltd.; (4) Kerr Gifford & Co. Inc.; (5) Alberta Wheat Pool, all of Vancouver, B.C.

The Board was under the Chairmanship of Dr. Joseph A. Crumb. The nominee of the companies was Thomas E. H. Ellis; the union nominee, James Bury. All members of the Board reside in Vancouver.

The text of the Board's report is reproduced herewith.

To:
The Hon. Milton F. Gregg,
Minister of Labour,
Department of Labour,
Ottawa.

In the Matter of a Collective Agreement Dispute

between

Alberta Wheat Pool, Pacific Elevators Limited, Searle Grain Company, Ltd., United Grain Growers Limited, Kerr Gifford and Company, Inc., all of Vancouver, Employers,

and

International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America, Local No. 333, Bargaining Authority for the Employees.

Members of the Board
Joseph A. Crumb, Chairman.
T. E. H. Ellis, Member.
James Bury, Member.

Hon. Sir:

In accordance with letters of appointment and instructions given by Mr. M. M. Maclean, your Director of Industrial Relations, under date of December 17, 1952, our Board of Conciliation and Investigation has heard and deliberated upon the matters in dispute between the above named Parties and respectfully reports as follows:—

Institution and Duration of Conciliation

Our Board was convened on December 30, 1952, held public sittings on January 2, 1953 and private deliberative sittings on January 6, 9 and 16, 1953. At our first public sitting the Representatives of the Parties to the dispute approved such extensions of time as would be required by the Chairman and Members to complete their Report. This information, including a request for an extension of time to January 22, was conveyed to your Director of Industrial Relations on January 9, 1953. The request for extension was approved on January 12, 1953.

Representatives of the Parties

The Alberta Wheat Pool, Kerr Gifford & Co., United Grain Growers Ltd., and Pacific Elevators Ltd., were represented by Mr. R. H. Tupper, Barrister and Solicitor. Mr. F. C. Munro, Barrister and Solicitor represented Searle Grain Co. Ltd. The Employees and their Union were represented by Mr. E. C. Sims, Canadian Director of the International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America.

The public sittings were attended by Messrs. N. Abbot, D. Ireton, J. Bennet, H. McKay and D. A. Burney of the employment companies; and by Mr. F. Diggin, an Employee and Member of the Union.

Exhibits, Witnesses, Testimony, Etc.

The following exhibits were submitted:—

1. Principal brief on behalf of the Union by Mr. Sims.
2. Copy of 1952 Agreement between the Parties.
3. Copy of May 7 Report of previous Conciliation Board.
4. Principal submission on behalf of the Employers by R. H. Tupper and F. C. Munro.
5. Survey of Labour Agreements by British Columbia Industrial Association.
6. Copy of the Great Lakes Arbitration Award by the Hon. Mr. Justice J. T. Beaubien of the Manitoba Court of Appeal.
7. *Alberta Wheat Pool Budget* Vol. 3, No. 52, December 26, 1952.
8. Lists of Employees with ten or more years of service.

No witnesses were called and no sworn testimony was taken. Except when challenged, statements made to our Board and information presented in briefs was presumed to be authentic.

Terms of Reference and Issues

The matters referred to our Board arose out of the unsuccessful attempt of the Representatives of the Parties to negotiate a revision of their Collective Agreement which expired on November 2, 1952. The specific issues or items in dispute are:—

1. The work day and the work week.
2. Sunday work premium.
3. Night shift premium and shift work procedures.
4. Statutory Holidays.
5. Vacation qualifications.
6. Job classifications.
7. Wage rates.
8. Dust premium.

The provisions of the 1952 Agreement with respect to these items, the changes requested by the Union, the arguments and observations relating thereto and the Board's recommendations to the Parties are set forth below.

1. *The Work Day and the Work Week*
The existing Agreement provides a 40 hour 5 day staggered work week designed to provide a six day operation and, when necessary, continuous operation. The Union has requested a continuous Monday through Friday work week.

Arguments and Observations—The Union based its request on the desirability of a regular work schedule conforming to the standard Monday through Friday pattern and the resultant expectation of free Saturdays and Sundays; also, on the presumption that such an arrangement would tend to spread employment and minimize overtime requirements.

The Employers took the position that the Monday through Friday week could not, in fact, be instituted without adding Employees who could not be given full time work or without becoming liable for increased overtime payments for the more or less continually employed group; that, in any event, such additional Employees as would be required to implement the Monday through Friday work week were not readily available. Their Representative commented upon the very recent granting of the 40 hour week concession and, in view of its earlier profession of disinterest in the work week schedule, questioned the good faith of the Union in making the Monday through Friday request.

The Chairman sees this issue largely in terms of its practicability. He is informed that, during the rush season, there is not sufficient railway trackage to accommodate the Saturday and Sunday "pile up" of deliveries that would be involved in a five day Monday through Friday week. The whole grain movement would, therefore, have to be slowed down to accommodate elevator workers. In his opinion this is not in the public interest. Neither is it in the public interest to burden the Employers with additional overtime and penalty rates when, in the nature of things, such penalty rates cannot accomplish their professed purpose of avoiding Sunday work.

Recommendation on Standard Work Week—Our Board unanimously recommends that the Employers undertake to minimize Saturday and Sunday work but that they not be committed to the recognition of a standard Monday through Friday schedule or work week.

2. *Sunday Work Premium*

The existing Agreement provides for time and one-half for Sunday work. The Union has requested that all Sunday work be paid at double the regular rate.

Arguments and Observations—The Union based its case largely on the general desirability of eliminating work on the Sabbath; or, failing that, to amply reward the affected worker. The Employers again stressed the necessity of the work and denied the Union's contention that the men themselves wanted overtime less than they wanted premium pay.

The Chairman is of the opinion that excessive overtime should be discouraged in the interest of spreading employment and leisure time. In the circumstances, however, he would not single out Sundays which are already subject to premium rate. In his opinion the limitation should apply to the amount of overtime permitted in a standard work week.

Recommendation on Sunday Work Premium and on Overtime Rates in General—Our Board unanimously recommends that no change be made in the existing one and one-half rate for Sunday work within the regular 40 hour work week. The Chairman and Mr. Bury recommend that overtime in excess of 8 hours during the Employee's regular work week be compensated at double the regular rate. The first 8 hours would come under the existing time and one-half arrangement.

3. *Night Shift Premium—Shift Rotation and Call*

Second and third shift work now command a 5 cent differential. The Union has requested that the differential for the third shift be raised to 10 cents and that where practicable a rotation procedure be adopted; also that a 48 hour notice of a change in shift be required.

Arguments and Observations—The arguments on this issue related, for the most part, to the disruption in normal living schedules resulting from shift work and the justification of some further differential treatment for the third or "graveyard" shift; also to the fairness of rotation and advance notice of change.

It seems to the Chairman that these particular requests have merit and should, in so far as practicable, be implemented. But they should not be made too rigid. Mr. Bury joins the Chairman in this view but Mr. Ellis feels that existing arrangements are satisfactory.

Recommendations on Shift Differential, Rotation and Notice—The majority of the Board, comprising Messrs. Crumb and Bury, therefore recommend (1) that the requested 5 cent and 10 cent differential be adopted for the second and third shift work; (2) that the Employers work out a practicable plan for an even distribution

of the second and third shift arrangements; (3) that the Employers implement a workable system of notifying Employees in advance of such changes as from time to time may be necessary in the routine of shift arrangements. However, provision should be made for emergency calls without notice.

4. *Statutory Holidays*

Six statutory holidays with pay are provided in the existing Agreement. The Union has requested that the number be increased to nine.

Arguments and Observations — The Union's Representative pointed out that the Alberta Wheat Pool Agreement had provided for eight Statutory Holidays and contended that his organizations acceptance of six Holidays was a last minute concession in order to avert a strike and in order to gain wage concessions; he also contended that a Holiday without pay was an empty gesture to an hourly rated Employee and that it was discriminatory when given only to monthly rated Employees. The Employers' Representative was chiefly concerned with a continuation of previously settled issues, particularly when, he contended, wage advances had already been won in return for the Holiday concession. He did not agree with the Union's contentions with respect to discriminatory practices.

The Chairman is of the opinion that it is not in the interest of good personnel relations to provide different treatment for monthly and hourly rated Employees in the matter of Statutory Holidays and would, in principle, recommend that the treatment be made uniform. Mr. Bury joins him in this view.

Recommendations on Holidays—Messrs. Crumb and Bury recommend that the number of Holidays be fixed at eight. Mr. Ellis recommends that the number be left at six.

5. *Vacation Qualification*

Under provision of the existing contract between the Parties, an Employee with a year of service receives two weeks paid vacation. After fifteen years three weeks are allowed. The Union has requested that the qualification for three weeks be reduced to ten years.

Arguments and Observations — The Union based its case on the trend toward shorter qualification periods for the longer vacation awards and contended that the reduction was in the Employers' interest since it tended to reduce Employee turnover. The Employers' Representative stated that the two weeks now granted were in excess of statutory requirements and contended that, in view of the Union's other requests, the Employers should not be additionally burdened by reducing the three weeks qualification from fifteen to ten years.

Recommendation on Vacation Qualifications—Our Board gained the impression that the 5 year reduction in the qualification for a three weeks' vacation is not an important issue. We, therefore, recommend that the request be set aside or held in abeyance until such time as it can command greater significance in the negotiations between the Parties.

6. *Job Classifications*

The existing Master Agreement between the Union and the Employers does not set forth either individually or collectively the job classifications existing on the records of the different companies. The Union has requested that individual schedules be incorporated in the new Agreement.

Arguments and Observations — The Union would incorporate this information in the Agreement in order that the Employees might know the different job classifications and thus have the opportunity, qualifications permitting, to advance to better paid jobs. The Employers look upon the request as a move on the part of the Union to attempt eventually to standardize rates between the Companies in terms of the highest priced Employees in each classification.

This is a very difficult issue on which to make a recommendation. On the one hand it is common, though not universal, practice to incorporate wage schedules in Collective Agreements. On the other hand Unions do use such schedules to advantage in securing uniform wage treatment and such uniform treatment is usually sought without regard to the variable ability of surfacially similar jobs in different plants to produce the wage rates demanded.

However, if the Union were willing to make a commitment in the Agreement to the effect that it respected the individual Employer's right to establish and maintain classifications particularly suited to his own business, this request could be implemented without objectionable implications. Such a commitment should obviate the possibility of Union intrusion into the sphere of management on the mistaken presumption that either a Union's Agent or a Conciliation Board is competent to undertake job rating for Union membership.

Mr. Bury joins the Chairman in this view but Mr. Ellis is of the opinion that the

inclusion of classifications in the Agreement would lead to unnecessary difficulties and would unduly interfere with the efficient exercise of the prerogatives of management.

Recommendation on Classification—The majority of our Board, comprising Messrs. Crumb and Bury, recommend (1) that the Agreement between the Union and Employers set forth the job classifications of each Employer; (2) that the Agreement commit the Union to respect each Management's original right to establish job classification and to set rates applicable thereto.

7. *Wage Rates*

The basic rate provided in the existing contract is $1.50 per hour compared with the $1·305 prevailing when the 1951 Agreement was negotiated. The unnegotiated pre-war rate was 55 cents. The Union has requested that the 1952-53 rate be raised to $1·625. The Employers have proposed that it be lowered to $1.45.

The Union's Case—The Union's Representative contended that increases hitherto wrung from the Employers under threat of strike had not been large enough both to cover the rise in living costs that meantime had taken place and to provide an *improvement factor* commensurate with a properly conceived increase in living standards. He also contended that the 12½ cents requested was not extravagant and well in keeping with increases won in the building trades and other industries during the contract year.

It was demonstrated in the Union's brief that the General Motors Agreement, which combines a 1 cent to 1·3 point escalator adjustment with a 3 cent annual improvement factor, would have produced a $1.60 rate for elevator workers had it been adopted by them in 1939. It was also demonstrated that the Canadian Brewers formula, which combines a 1 cent to 1 point escalator adjustment with a 5 cent annual improvement factor would have produced a $2.05 rate. The Chairman should observe, however, that almost any preconceived conclusion can be reached with such formulae. Indeed, if the Union had chosen 1933 as a point of beginning a $3 rate could have been computed. In order to avoid a misconception it should be noted that the Brewery Workers rate provided by the formula is actually $1·555 —not $2.05—and, due to the decline in the cost-of-living index, is now due for a downward adjustment.

The Employer's Case—The Employer's Representative stressed the favourable comparison produced by elevator rates on those paid in alternative employments and substantiated the contention that the prevailing $1.50 rate was exceeded only by rates at Vancouver Breweries and Standard Oil. He stressed also the adverse effects of widening the 15 cent unfavourable differential between Vancouver and the Lake ports.

The proposal that the rate be reduced by 5 cents was based on the 7 point decline in the cost-of-living index since the present rate went into effect. It was also brought to the Board's attention that the rate had been proposed by the Deputy Minister of Labour to avert a last minute strike and had been regarded by the Employers as the result of a resort to force rather than a recognition of the economic factors involved.

The Chairman was not impressed by the Union's laboured attempt to better an already favourable wage position in a year which had witnessed a substantial decline in living costs. Nor was he impressed by the Employer's desire to make that position less favourable.

The decline in living costs has more than supplied the annual improvement in living standards which the Union now proposes that the Employers recognize as a legitimate wage claim.

In this connection it should be borne in mind that the rate in question has practically trebled while living costs have doubled; that few, if any, wage groups have made such progress. Now that living costs have flattened out and we appear at long last to have achieved some price level stability, it does not appear to be in the public interest to court the inflation which more or less arbitrarily directed increases in wages and other costs make inevitable.

Recommendations on Wages—The majority of our Board, comprising Messrs. Crumb and Ellis, is of the opinion that the present rate of $1.50 should be maintained during the current contract year, and so recommends. Mr. Bury recommends that the 12½ cents per hour across the board increase be granted.

8. *Dust Premium*

The existing Agreement between the Parties provides no differential wage treatment for less desirable or more irritating tasks incident to elevator work. The Union has requested a ten cent per hour premium rate for work undertaken under conditions of excessive dust.

Arguments and Observations—The Union based its request on the added irritation and dirt incident to shovel work in

(Continued on page 458)

Collective Agreements and Wage Schedules

Recent Collective Agreements

Long week-ends whenever a statutory holiday falls on a Tuesday or a Thursday are provided in the agreement between John Inglis Company Ltd. and English Electric Company of Canada Ltd. and The United Steelworkers of America, summarized below. Employees will work a Saturday at straight time in lieu of the Monday or Friday proximate to the holiday.

Mining

Fluorspar—*St. Lawrence, Nfld.—The St. Lawrence Corporation of Newfoundland Limited and St. Lawrence Federal Labour Union No. 24530 (AFL).*

Agreement to be in effect from July 1, 1952, to June 30, 1953, and thereafter from year to year, subject to 60 days' notice.

Union security: union shop with preferential hiring of union members.

Check-off: voluntary and revocable.

Hours: 8 per day 6 days a week, a 48-hour week. *Overtime:* time and one-half for work in excess of 8 hours per day and for work on Sundays and on 5 specified holidays, except for employees on continuous operations (pumpmen, hoistmen, diesel operators) who will be paid time and one-quarter for work on Sundays and the holidays. An additional holiday, Labour Day, is to be a *paid holiday* and work on same will be paid for at double time and one-half or, in the case of employees on continuous operations, double time and one-quarter.

Vacations with pay: after one year's continuous service one week, after 2 years' service 2 weeks (the last provision is new).

Hourly wage rates for certain classifications: motor mechanic and welder $1.49, crane operator $1.29; blacksmith, drillers, mucking machine operators, trammer operator $1.24; blaster, pipe fitters, powderman, pumpman, timberman, trackman $1.22; cage tender, hoistmen $1.19; blacksmith's helper, diesel operators, muckers $1.14; carpenters $1.19 and $1.09; jig operators, painters, stevedores $1.09; tippleman $1.06, truck driver $1.07, sampler $1.04; labourers (surface), mill ore feeders $1.01; electricians $285.32 (per month), diesel mechanic, chief mine and pump mechanic $285 (per month); cutting raises 5 cents per hour extra; shaft sinking—to 50 feet standard rates, from 50 to 150 feet 5 cents per hour extra, 150 feet and over 15 cents per hour extra. (The above hourly rates are 12 cents per hour higher than the previous rates.)

Clothing: the company will hold in stock and retail to employees, at cost price, rubber suits, boots, belts, gloves and hats. It will replace suits worn out while shaft sinking, up to one rubber suit per man for each 100 feet of shaft sunk.

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and through the Industrial Relations Branch of the Department. A number of those recently received are summarized here. Agreements made obligatory under the Collective Agreement Act in Quebec and schedules under Industrial Standards Acts, etc., are summarized in a separate article following this.

Seniority: in all cases of promotion, layoff or re-engagement seniority shall be the governing factor, provided qualifications, fitness and ability are adequate.

Provision is made for *grievance procedure*, the *safety* of employees, and the *employment of stevedores.*

Manufacturing

Fish Processing—*Lunenburg, N.S.—Lunenburg Sea Products Limited and National Sea Products Limited (W. C. Smith and Company Division) and the Canadian Fish Handlers' Union, Maritime Division, Local 2.*

Agreement to be in effect from October 1, 1952, to September 30, 1953, and thereafter from year to year, subject to 60 days' notice. This agreement is similar to the one previously in effect (L.G., April 1952, p. 446), with the following changes:—

Overtime: double time is now paid for work on Sundays and on 9 specified holidays, 7 of which are *paid holidays* for employees with one or more years of service (previously time and one-half for work on Sunday and double time for only 8 holidays).

Hourly wage rates are increased by 5 cents per hour and are now as follows: general labour, men (basic rate) 95 cents; cutters, skinners, freezer and fish meal plant employees $1; cullers and charge hands 98 cents; boys 78 cents, girls 73 cents.

Shoes—*Quebec, P.Q.—L'Association patronale des manufacturiers de chaussures de Québec and the John Ritchie Company Limited and the Shoe Workers' Protective Union of Quebec, Inc. (National Federation of Leather and Shoe Workers of Canada, Inc., CCCL).*

Agreement to be in effect from April 14, 1952, to April 14, 1954, and thereafter from year to year, subject to notice.

Union security: maintenance of membership; however, union members shall have the right to resign their membership 30 to 60 days prior to the termination of the agreement. Union members expelled by the union shall nevertheless remain in the company's employ.

Check-off: the company agrees to deduct from the pay of all employees who so authorize all union dues and to remit same to the union.

Hours: 48 per week; the right of determining both the daily starting and stopping hours is vested in the management. *Overtime:* time and one-half for work in excess of 48 hours per week.

Statutory holidays: no work shall be performed on Sundays and on religious days of obligation. During the first year of the agreement, employees will be entitled to choose 2, and during the second year 3, *paid holidays*.

Vacations with pay: 2 weeks will be allowed to each employee, the rate of payment to conform to provincial regulations.

Hourly wage rates, in effect immediately prior to December 1, 1951, are increased, effective April 14, 1952, by 10 per cent, not to exceed, however, 10 cents per hour, for those employees whose wages were not raised on December 1, 1951. (For wage scale which became effective in the shoe industry of the province of Quebec on December 1, 1951, *see* L.G., April 1952, pp. 449-451.)

Escalator clause: for each 5 points rise or fall in the cost-of-living index for Canada above the index figure as published in January 1952, the wage rates shall be increased or decreased, as the case may be, by 5 cents per hour. However, any decrease in the cost-of-living bonus will be limited by the hourly rates in force prior to December 1, 1951.

Provision is made for *seniority rights*, *grievance procedure* and the *health and safety* of employees.

Embroidery and Other Fashion Accessories—*Montreal, P.Q.—Fashion Accessories Manufacturers Association, Inc., and International Ladies Garment Workers' Union, Local 315 (The Embroidery, Pleaters, Stitchers and Button Makers' Union).*

Agreement to be in effect from August 1, 1952, to July 31, 1955.

Union security: closed shop. The employers agree to secure any additional help through the union, if available. Employees obtained through any other medium than the union shall be considered temporary help and retained only during the emergency period; they must register with the union after one week's employment, and must become members of the union after one month's employment.

Check-off: compulsory for all union members.

Hours: 8 per day Monday through Friday, a 40-hour week. *Overtime:* time and one-half for overtime work which is limited to 2 hours per day and 8 per week to be performed between 5 and 7 p.m. Monday through Thursday. No overtime shall be worked after 7 p.m. and on Friday. No work shall be permitted on Saturday and on 6 specified holidays, 4 of which are *paid holidays*. Except in the case of illness, slackness or lay-off, any employee absent during the week on which any of the paid holidays may fall, shall forfeit 2 hours' pay for each full day of absence.

In slack times the available work shall be divided as equally as possible among the union members. All homework is prohibited. Piece work is prohibited, except, under certain specified conditions, for frozen handle bonnaz operators working on cordé handbags.

Rest period: a 15-minute rest period shall be granted to each employee at 3 p.m. of each working day.

Vacations with pay: each employer shall pay 5 per cent of the payroll for his union employees into a vacation with pay fund out of which employees, members in good standing of the union for one year or longer, shall be paid 5 per cent of their earnings during the year, with a maximum, however, of 2 weeks' wages, for a 2-weeks' vacation. Employees who have been members of the union for less than one year shall be granted one week's vacation and paid 2½ per cent of their earnings which, however, shall not exceed one week's wages.

Health Fund: the employers agree to continue to pay one per cent of the weekly payroll of their employees, members of the union, into a fund which shall be devoted to the payment of health and sick benefits to employees, members of the union, under the terms and conditions mutually agreed upon between the parties to the agreement. Beginning August 1, 1953, the Health Fund shall contribute one-half of one per cent of the wages for the building and maintenance of a health centre. In addition, it shall pay to the International Ladies Garment Workers' Union Death Benefit Fund an additional sum of $4 per annum for each member; this will raise the death benefit, to which each member is entitled, from $500 to $1,000.

Hourly wage rates: bonnaz operators $1.32½, pleaters and pattern makers $1, frozen handle bonnaz operators 75 cents; special machine operators, stampers, pleater's assistants 67½ cents, crochet beaders, hand embroidery workers, floor help, covered button and buckle makers 55 cents; apprentice frozen handle bonnaz operator from 40 cents to 75 cents after 2 years; apprentice machine operator or apprentice stamper from 40 cents to 67½ cents after 2½ years; apprentice bonnaz operator from 45 cents to $1.32½ after 3 years.

In case of an increase or a decrease in the cost of living the union or the employers may at any time during the term of the agreement, on 30 days' notice, request an increase or a decrease in the wage rates. If the parties are unable to reach an agreement, the matter shall be referred to an impartial chairman, whose decision shall be final and binding on both parties.

Provision is made for an *apprenticeship plan* and *grievance procedure*.

Rayon — *Cornwall, Ont. — Courtaulds (Canada) Limited and Textile Workers' Union of America, Local 779.*

Agreement to be in effect from July 1, 1952, to June 30, 1953, and thereafter from year to year, subject to 60 days' notice. This agreement is similar to the one previously in effect (L.G., Oct. 1951, p. 1372), with the following changes:—

Hours: the hours of work on 2-shift operations for girls are now 42 per week on both shifts, instead of 42½ on the morning shift and 41½ on the afternoon shift, as previously.

Wages: 10 cents per hour in the case of male employees, and 5 cents per hour in the case of female employees and boys, of

the cost-of-living bonus payable under the terms of the previous agreement are now incorporated in the basic hourly wage rates and the basis of the present cost-of-living bonus is amended accordingly.

Pensions: the company agrees to implement the Pension Plan and the Disability Pension Plan for hourly rated employees of August 28, 1952, effective January 1, 1953, as negotiated between the two parties.

Insurance provided by the company for sick and accident benefits has been increased from $20 to $25 per week for a maximum of 20 weeks, instead of the previous 13 weeks.

Metal Products—*Toronto and St. Catharines, Ont.—John Inglis Company Limited and English Electric Company of Canada Limited and the United Steelworkers of America, Locals 2900, 4790 and 4152.*

Agreement to be in effect from July 12, 1952, to July 11, 1953, and for a further period of one year, subject to notice.

Union security: all employees covered by this agreement shall be and remain members of the union for the life of the agreement.

Check-off: compulsory for all employees.

Hours: 8 per day, Monday through Friday, a 40-hour week. *Overtime:* time and one-half for the first 4 hours in excess of the regular shift hours, Monday through Friday, and for the first 8 hours worked on Saturday, double time thereafter and for work on Sunday; double time and one-half for work on 8 specified *paid holidays.* Where one of the holidays falls on a Tuesday or a Thursday, a Saturday will be worked at straight time to substitute for the Monday previous to the Tuesday holiday or for the Friday after the Thursday holiday, the Saturday worked to be 2 weeks prior to the holiday week-end involved. If an employee is required to work on the Monday or Friday substituted he will be paid time and one-half.

Rest and wash-up periods: a 10-minute rest period will be allowed in the forenoon or corresponding period of each shift. The 5-minute wash-up privileges will be continued.

Vacation pay: employees will be paid 2 per cent of annual earnings after 3 months' continuous service, 2½ per cent after 2 years, 4 per cent or 2 weeks' pay, whichever is the greater, after 3 years, and 6 per cent of annual earnings or 3 weeks' pay after 15 years of continuous service.

Wage rates: the cost-of-living escalator previously in effect is eliminated and the 15 cents per hour paid under it are incorporated into the standard hourly rate. Job rates up to $1.49 are increased by 5 per cent with a minimum increase of 7 cents, those of $1.50 to $1.69 are increased by 6 per cent, and those from $1.70 up by 7 per cent. Of the above increases 5 cents per hour became effective July 13, 1952, and the balance on the start of the first pay period after January 1, 1953. Time and one-quarter will be paid for dirty work on repair jobs if authorized by foreman.

Off-shift differential: a premium of 7 cents per hour will be paid to employees who are rotating on an afternoon and night shift and of 9 cents per hour to those working permanently on an afternoon or night shift.

Employees serving on jury duty will be paid the difference between jury pay and the employee's regular rate of pay for such periods of jury duty as fall within the normal working day.

Outside work: all work away from the plant performed during the normal plant day shift hours shall be paid at the employee's basic hourly rate, plus $2 per day. An employee will be paid at his regular rate for travelling during any portion of the standard working shift, for travelling after he has worked his regular shift (up to a maximum of 3 hours), and for travelling on Saturday, Sunday or a plant holiday if he has not worked on such days (up to a maximum of 8 hours). The company will pay all travelling and other legitimate expenses and will also pay for suitable meals and lodging.

Provision is made for *seniority rights, grievance procedure* and a *Plant Safety Committee.*

Shipbuilding and Repairing—*Lauzon, P.Q.—George T. Davie and Sons Limited and Le syndicat catholique des employés de Geo. T. Davie and Sons Limited (CTCC).*

Agreement following strike (L.G., Nov. 1952, p. 1548), to be in effect from March 1, 1952, to February 28, 1954, and thereafter from year to year, subject to notice, provided, however, that if the old cost-of-living index reaches 195, the union may re-open the question of wages.

Union security: the company recommends that all its employees join the union.

Check-off: voluntary and revocable.

Hours: for day shift—8½ per day Monday through Friday and 5½ on Saturday, a 48-hour week; for night shift—8½ per day Monday through Friday, a 42½-hour week. *Overtime:* time and one-half for work in excess of the regular daily hours, provided that if overtime does not exceed 15 minutes it shall be paid at straight time; double time for work on Sunday and on 8 specified holidays, 5 of which are *paid holidays.*

Vacations with pay: after one year's continuous service 7 days, after 5 years' continuous service 14 days.

Hourly wage rates for certain classifications, effective December 15, 1952: loftmen $1.56; blacksmiths, boilermakers, carpenters, caulkers, electricians, engine fitters, machinists, patternmakers, platers, riveters, slabmen, tinsmiths, tracers $1.38; welders $1.11 to $1.48; painters $1.33 and $1.38; crane operators $1.21 to $1.38, linermen $1.33, ship riggers $1.31, burners $1.28; assemblers, erectors, machine operators, rivet heaters $1.21; bolters up, reamers $1.16; crane firemen, truck and tractor drivers $1.10; helpers $1.05 to $1.10, labourers $1.05. According to press reports the above rates are 15 cents per hour higher than the rates which were in effect prior to March 1, 1952, when there was no collective agreement in force. Of this increase 10 cents per hour was to be retroactive for the period from March 1, 1952, to September 11, 1952, the date the agreement was reached. For the period from September 12, 1952, to December 15, 1952, the wage rates were 3 cents per hour lower than the December 15, 1952, rates.

Dirty work: for performing "dirty work" on repair jobs employees will be paid at the rate of time and one-quarter.

Night-shift differential: employees on night shift will be paid at the rate of time and one-eighth.

Provision is made for *seniority rights, grievance procedure* and the *safety of employees.*

Transportation and Public Utilities

Urban and Suburban Transportation and Gas and Electricity Supply—*Winnipeg, Man.—Winnipeg Electric Company and Winnipeg Electric Employees' Federated Council, One Big Union.*

Agreements to be in effect from April 1, 1952, and thereafter until terminated on March 31, 1954, on any later year, by either party giving notice not later than January 31, in that year.

A. General Agreement

Union security: as soon as seniority is established, membership in the union shall be a condition of employment, except for employees engaged prior to January 1, 1947, certain employees belonging to two other unions (listed under "check-off" below) and employees excepted by a decision of a Board of Arbitration.

Check-off: compulsory for all employees with established seniority within the classifications represented by the union, except for employees who have been members of the Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America and employees of the company since January 1, 1939, and for bricklayers (journeymen) working at their craft who were members of their craft union at date of hiring.

Statutory holidays: 10 (previously 9) specified holidays will be observed, two of them with pay. Time and one-half will be paid for work on the unpaid holidays and double time for work on the *paid holidays.*

Vacations with pay: after 11 months' continuous service hourly-rated employees will be granted vacations on the basis of one hour for each 24 hours worked, with a maximum of 2 work weeks, and monthly-rated employees on the basis of one day for each calendar month worked, with a maximum of 2 calendar weeks; effective April 1, 1953, vacations will be increased by one-half for employees who have completed 20 years of service.

Paid sick leave: monthly-rated employees will be allowed 15 working days per year, cumulative after 2 years' continuous service, up to a maximum of 75 days. An employee with accumulated sick leave, who has drawn 15 days' sick pay in any year, will then be entitled to sick benefits at two-thirds of his regular rate for a maximum of one and one-half the number of days accumulated. If an employee is granted leave with pay in the case of a funeral in the immediate family, the time so allowed will be deducted as though the employee had been ill.

Transportation: all eligible employees shall be supplied with transportation on all street car and bus lines of the company and its subsidiaries.

Provision is made for *seniority rights, grievance procedure* and a *contributory Welfare Plan* (Group Life Insurance, Weekly Sickness and Accident Insurance, Blue Cross Hospital Benefits, and Blue Shield Medical Service).

B. Agreements Covering Employees Engaged In Urban and Suburban Transportation

1. *Motormen, Conductors, Bus Drivers*

Hours: effective April 1, 1953, the hours will be reduced from 48 to 40 per week; the normal working day shall conform as nearly as possible to 8 hours with a minimum of 7¾ hours and a maximum of 8½ hours per day. Except in cases of emergency no trainman shall be compelled to work more than 5 times the value of his run in any one week. The maximum spread of runs shall be 13 hours. *Overtime:* to regular trainmen—time and one-half for work in excess of 8½ hours per day and for work on the employee's days off; to spare men—time and one-half for all time worked in excess of 85 hours in any 2-week period and for work on their regular weekly day off.

Hourly wage rates, effective April 1, 1952, July 1, 1952, and April 1, 1953, respectively: one-man car operators, bus drivers, trolley bus operators—1st 6 months $1.09, $1.14, $1.37, next 12 months $1.14½, $1.20, $1.44, after 18 months $1.19, $1.25, $1.50; motormen and conductors on two-man cars—1st 6 months $1.03½, $1.08, $1.30, next 12 months $1.08, $1.14, $1.37, after 18 months $1.13½, $1.20, $1.44. In addition to the above, trainmen will receive 10 cents per hour extra for time worked on Sundays, for time worked over an 11-hour spread on signed runs and for training new employees.

Guaranteed pay: the company guarantees each spare man $100 per 2-week period during his first 6 months, $105 during his next 12 months and $110 after 18 months, provided such employee reports for work 6 days a week and carries out the duties assigned to him; he shall not be required to work more than 10 hours in any day to satisfy the guarantee requirements.

Uniforms: each trainman will be provided with a regulation uniform once each calendar year. Traimen entering the service will pay half the cost of the first uniform; thereafter uniforms will be furnished free of charge. They will also be provided with caps, overcoats and, at a cost to them of $2 each, with shirts.

2. *Track Department Employees*

Hours: 8 per day. Effective April 1, 1953, weekly hours will be reduced from 44 to 40.

Overtime: time and one-half for work in excess of above hours and for work on Saturdays and Sundays or the alternative days off; double time for all time worked in excess of 16 consecutive hours.

Hourly wage rates for certain classifications, effective April 1, 1952, July 1, 1952, and April 1, 1953, respectively: thermit welder $1.41, $1.48, $1.73, helper $1.18½, $1.24, $1.44; blacksmiths $1.31, $1.37, $1.60; welders $1.25, $1.31, $1.53; leading trackmen, asphalt operators $1.19, $1.25, $1.46; acetylene cutters $1.13½, $1.19, $1.39; truck drivers, switch inspectors, switch and diamond repairmen, tool repairmen, compressor men, derrick men $1.07, $1.12, $1.30; shimmers, air gun operators, asphalt finishers $1.01½, $1.06, $1.24; trackmen and labourers with established seniority 95½ cents, $1, $1.17.

Clothing: the company will supply not more than 3 pairs of overalls per year, the

employee paying half the cost, to switch cleaners and certain members of the asphalt gang requiring them.

3. *Mechanical Department Employees*

Hours: 8 per day. Effective April 1, 1953, weekly hours will be reduced from 44 (48 for general helpers) to 40; allowance will be made for variations due to changing of shifts or as mutually agreed. *Overtime:* time and one-half for all time worked prior to or after the set shift hours and for work on Saturdays and Sundays (except when posted for work); double time for all time worked over 16 consecutive hours. Men required to work more than 2 hours overtime after their regular shift will be paid a meal allowance of 75 cents.

Hourly wage rates for certain classifications, effective April 1, 1952, July 1, 1952, and April 1, 1953, respectively: journeymen —machinists, sheet metal workers, blacksmiths, welders, armature winders, upholsterers, painters, springmakers, air brakemen, wiremen, pipefitters, bodyshopmen $1.31, $1.37, $1.60; helpers to above tradesmen, utilitymen, motor repairmen, babbitmen, fendermen, trolleymen and oilers who have seniority as general helpers $1.01½ to $1.13½, $1.06 to $1.19 and $1.24 to $1.39; truck drivers $1.07, $1.12, $1.30; general helpers with established seniority 95½ cents, $1, $1.17; apprentices—50 per cent of journeymen's rate for the first 6 months, with an increase of 5 per cent of journeymen's rate each succeeding 6 months. Effective October 1, 1952, charge hands shall be paid 10 cents per hour above their regular rate.

The company will supply up to 3 pairs of overalls each calendar year to employees requiring them in their work, the employees paying half the cost.

Provision is made for an *apprenticeship plan.*

4. *Carpenters*

Hours: 8 per day. Effective April 1, 1953, weekly hours will be reduced from 44 to 40. *Overtime:* time and one-half for work outside the regular shift, double time for work in excess of 16 consecutive hours.

Hourly wage rates, effective April 1, 1952, July 1, 1952, and April 1, 1953, respectively: carpenters, inside work $1.31, $1.37, $1.60, outside work $1.42½, $1.49, $1.74; apprentices—from 50 per cent of rate for inside work during first 6 months to 85 per cent during eighth 6 months.

5. *Motor Bus and Truck Department Employees*

The provisions concerning working conditions for Motor Bus and Truck Department employees and the wage rates for tradesmen, helpers and apprentices are similar to those for Mechanical Department employees, outlined above.

6. *Boxmen*

Hours: 8 per day. Effective April 1, 1953, the weekly hours will be reduced from 48 to 40.

Overtime: time and one-half for all work outside the regular shift and for work on the days off.

Hourly wage rates, effective April 1, 1952, and July 1, 1952, respectively: after 6 months' continuous service—junior boxmen $212 and $223, boxmen $225 and $236, senior boxmen $228 and $239; night clerk $212 and $223, farebox checker $217 and $228.

Each boxman will be given 50 cents per month for the purchase of gloves and will be supplied with a smock each year.

7. *Storekeepers*

Hours, effective April 1, 1953: for day men—7¾ per day, $38¾ (previously 42¾) per week; for night men—a straight 8-hour shift with a 20-minute lunch period, 5 (previously 5½) days a week.

Monthly wage rates, effective April 1, 1952, July 1, 1952, and April 1 1953, respectively: stock record clerk $231, $243, $258, distribution clerk $218, $229, $243, invoice clerk and typist $213, $224, $237; warehousemen $192 to $207, $202 to $217, $214 to $230.

8. *Ticket Sellers*

Hours: 7½ on week-days and 7¾ on Sundays. Effective April 1, 1953, 5 days per week, with 2 consecutive days off, where possible. *Overtime:* time and one-half for work outside an employee's shift or for work on his days off.

Monthly wage rates: after 6 months service—effective April 1, 1952, $221, effective July 1, 1952, $232.

All ticket sellers shall be provided with office jackets.

C. Agreements Covering Employees Engaged In Supplying Gas

1. *Gas Production Employees*

Hours, effective April 1, 1953: for men on the battery, steam boilers, and gas holders —8 per day, 6 days on and 2 days off, an average of 42 (previously 48) hours per week; for yardmen, coal gang, mechanics, labourers, etc., 8 per day, 5 days a week, a 40-hour week (previously 44 hours per week). *Overtime:* time and one-half after the completion of the regular shift, double time for all work over 16 consecutive hours. Men required to work more than one hour over their regular shift shall receive supper money or a meal.

Hourly wage rates for certain classifications, effective April 1, 1952, July 1, 1952, and April 1, 1953, respectively: millwrights $1.37, $1.44, $1.67, shift engineers $1.31, $1.37, $1.60, heaters $1.29½, $1.36, $1.58; oilers, propane helpers $1.13½, $1.19, $1.39; boilermen $1.07, $1.12, $1.31, utility operators $1.05, $1.10, $1.29, machine operators (coal and coke) $1.01½, $1.06, $1.24, labourers with established seniority 95½ cents, $1, $1.17.

Clothing: employees working in certain specified classifications will be furnished with 2 pairs of heat resisting mitts per year; greasers will be supplied with 2 pairs of overalls a year and overalls will be available for the use of men working in sewers and tar wells. The company will supply 2 pairs of overalls each year, the employee paying the cost of one pair, to all employees requiring them in their work.

2. *Gas Distribution Employees*

Hours, effective April 1, 1953: for day shift workers—8 per day, 40 (previously 44) per week; for troublemen on both day and night shifts—8½ per day, 11 days in a 2-week period (previously 51 hours per week). *Overtime:* time and one-half for all work outside the regular hours, except for street men under certain specified conditions; double time for all work over 16 consecutive hours.

Clothing: compressor air gun operators will be supplied with leather protectors.

The company will supply 2 pairs of overalls each year, the employee paying the cost of one pair, to all employees requiring them in their work.

D. Agreements Covering Employees Engaged In Supplying Electricity

1. *Power Plants Employees*

Hours, effective April 1, 1953: 8 per day, 40 (previously 48 for operating employees and an average of 44 for maintenance employees) per week; operating employees shall work 80 hours in 2 weeks, with 4 consecutive days off where possible. *Overtime:* for hourly-rated employees—time and one-half for work in excess of a regular day's work and for work on Saturdays and Sundays, except where such work is part of the scheduled shift; double time for all work over 16 consecutive hours; monthly-rated employees will be allowed equivalent time off for work in excess of their regular hours. Any such time not taken by the end of the calendar year will be paid for.

Wage rates for monthly-rated employees: power plant operating men, rates effective April 1, 1952, and July 1, 1952, respectively —operators $280 and $294, relief operators $263 and $276, assistant operators $246 and $258, floormen $236 and $248, relief floormen $146 to $229 and $153 to $240; maintenance men (regular employees only if employed previous to May 1, 1945), rates effective April 1, 1952, July 1, 1952, and April 1, 1953, respectively—electrician $286, $300, $318, leading machinist $285, $299, $317, utilityman $267, $280, $297; blacksmith, pipefitter, machinist, maintenance mechanic $258, $271, $287; general maintenance man $253, $266, $282, teamster $195, $205, $217. For hourly-rated employees, effective April 1, 1952, July 1, 1952, and April 1, 1953, respectively: leading machinist $1.48, $1.55, $1.81, electricians $1.45, $1.52, $1.77; machinists, welders, blacksmiths, painters $1.31, $1.37, $1.60; electricians' helpers $1.13½, $1.19, $1.39, skilled labourers $1.02½, $1.07, $1.25, labourers with established seniority 95½ cents, $1, $1.17; patrolmen $1.21, $1.27, $1.52; apprentice patrolmen $1.09 to $1.17, $1.14 to $1.23, $1.37 to $1.38; other apprentices 50 per cent of journeymen's rates for the first 6 months with an increase of 5 per cent each succeeding 6 months.

Provision is made for *out-of-town work.*

2. *Electric Appliance Repair Department Employees*

Hours, effective April 1, 1953: 8 per day Monday through Friday, 40 (previously 44) per week. One senior and one junior repairman may be scheduled to work each Saturday morning and take the equivalent time off in the following week. Employees required to work over half an hour after completion of the regular working day shall be allowed 75 cents for lunch.

Monthly wage rates, effective April 1, 1952, July 1, 1952, October 1, 1952, and April 1, 1953, respectively: senior repairman $229, $240, $250, $265, junior repairman $211, $222, $225, $239, learners $150 to $174, $158, to $183, $160 to $185, $170 to $196.

Tools: effective October 1, 1952, learners and repairmen shall supply and pay for tools required in their work, except for special tools supplied by the company.

3. *Meter Readers and Collectors*

Hours, effective April 1, 1953: 8 per day Monday through Friday, a 40-hour week; employees may turn in their assigned work as soon as they are finished and be through for the day (previously the hours were 7¾ per day Monday through Friday, 4 on Saturday, a 40¼-hour week). *Overtime:* any meter reader will be allowed compensatory time off for all time worked outside the scheduled hours.

Monthly wage rates, effective April 1, 1952, July 1, 1952, and April 1, 1953, respectively: after 6 months' continuous service $187, $196, $208, after 12 months $196, $206, $228, after 18 months $205, $215, $247, after 24 months $213, $224, $247, after 30 months $222, $233, $247.

Provision is made for the supplying of *uniforms,* overcoats, etc., to employees.

Urban and Suburban Transportation and Electricity Supply—*Winnipeg, Man.—Winnipeg Electric Company and International Brotherhood of Electrical Workers, Local 1037.*

Agreement to be in effect from May 1, 1952, and thereafter until terminated on April 30, 1953, or any later year, by either party giving notice not later than February 28 in that year.

Union security: for employees engaged on or after May 1, 1947, membership in the union shall be a condition of employment as soon as seniority is established in a classification for which the union is bargaining representative.

Check-off: compulsory for all employees with established seniority within the classification represented by the union.

Hours and overtime: for day men—May to October, 1952, 9 per day Monday through Friday, a 45-hour week, the last hour on Friday being paid for at time and one-half; if the union so requests, the hours on Friday shall be reduced to 8; commencing November 1, 1952, 8 per day, Monday through Friday, a 40-hour week. Time and one-half will be paid for work in excess of above hours and for work between 8 a.m. and 5 p.m. on Saturday; double time for work after 5 p.m. on Saturday and between 12 midnight and 8 a.m. every day and for work on Sundays and on 10 specified holidays, 2 of which are *paid holidays.* For shift men—8 per day; until November 1, 1952, 88 hours per 2-week period, thereafter 80 hours. Time and one-half will be paid for work on 8 unpaid holidays and for the first 4 hours worked following the regular shift, double time thereafter and for work on 2 paid holidays.

Vacations with pay will be granted after 11 months' continuous service on the basis of 1 day for each 24 days worked, not exceeding 88 hours per year, and after 20 years' service on the basis of 1½ days for each 24 days worked, not exceeding 132 hours per year. For the vacation year commencing April 1, 1953, vacations shall be calculated on the basis of 1 hour for each 24 hours worked with a maximum of 80 hours, except for employees with 20 years' service whose vacations shall be increased by 50 per cent.

Hourly wage rates, effective May 1, 1952, and November 1, 1952, respectively: senior

foremen $1.70 and $1.87, foremen $1.68 and $1.85, sub-foremen $1.64 and $1.80, troublemen and linemen on emergency truck $1.61 and $1.77; linemen journeymen $1.59 and $1.75, linemen apprentices 1st year 67 per cent, 2nd year 81 per cent, 3rd year 88 per cent and 4th year 95 per cent of journeymen's rate; cable splicer sub-foremen $1.69 and $1.86, cable splicers $1.64 and $1.80, junior cable splicer $1.59 and $1.75, apprentices—from 50 per cent of cable splicers' rate during first 6 months to 95 per cent during tenth 6 months; lamp trimmers $1.33 and $1.46, line inspector $1.29 and $1.42.

Clothing: overalls and gloves shall be supplied at cost to all employees requiring them in their work.

Employees shall be supplied with transportation on all street car lines of the company and all city bus service where regular fares apply.

Provision is made for *seniority rights, grievance procedure, sickness and insurance benefits* and *out-of-town work.*

Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,* include the extension of one new agreement, the correction of another and the amendment of 18 others. In addition to those summarized below, they include: the correction of the agreement for the food products manufacturing and wholesale trade at Quebec, the extension of a new agreement for barbers and hairdressers at Chicoutimi and the amendment of the agreements for the furniture industry, for the ladies' handbag manufacturing industry in the province, for barbers and hairdressers and for retail stores at Quebec, for retail stores at Roberval, for the clock and watch repair industry in some eastern counties of the province, for the sheet metal fabricating industry at Montreal and for barbers and hairdressers at Sherbrooke, all published in the *Quebec Official Gazette,* December 20; the amendment of the agreement for barbers and hairdressers at Rouyn in the issue of December 27, and the amendment of the agreement for truck drivers at Quebec in the issue of January 10.

A request for the amendment of the agreement for the uncorrugated paper box industry in the province was gazetted December 20. Another request for the amendment of the agreement for iron oxide miners at Red Mill was gazetted December 27, and requests for the amendment of the agreements for barbers and hairdressers at Three Rivers, for the building trades, for the ornamental iron and bronze industry and for the printing industry at Montreal were all gazetted January 10. A request for a new agreement for barbers and hairdressers at Magog as well as requests for the amendment of the agreements for barbers and hairdressers at St. Hyacinthe and at Roberval and for the building trades at St. Hyacinthe and at Sorel were all gazetted January 17.

Orders in Council were also published approving the constitution and by-laws of certain joint committees and others approving the levy of assessment on the parties to certain agreements.

*In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application with or without changes as onsidered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the LABOUR GAZETTE, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the LABOUR GAZETTE monthly since June 1934.

Manufacturing

Men's and Boys' Clothing Industry, Province of Quebec

An Order in Council, dated December 15, and gazetted December 20, amends the previous Orders in Council for this industry (L.G., April 1949, p. 450, June, p. 735, Nov. 1950, p. 1903; June 1951, p. 827, July, p. 976; May 1952, p. 610, Oct., p. 1361; Feb. 1953, p. 283, and previous issues). In this amendment "The Odd Pants Manufacturers Association of Quebec" is added to the list of contracting parties and the name "La Fédération nationale du Vêtement inc." is corrected to read "La Fédération nationale des Travailleurs de l'Industrie du Vêtement, inc."

Millinery Industry, Province of Quebec

An Order in Council, dated December 15, and gazetted December 20, amends the previous Orders in Council for this industry (L.G., March 1947, p. 369, Sept., p. 1307; June 1949, p. 736; April 1951, p. 544).

Minimum wage rates are from $2.40 to $3.60 per week higher than those previously in effect and the new minimum rates are now as follows: hand blockers $61.56 per week; blocker $57.20; cutter, straw operator and fabric operator $55.89; draper $39; trimmer draper $34.80; trimmer $31.90.

Corrugated Paper Box Industry, Province of Quebec

An Order in Council, dated December 23, and gazetted January 10, amends the previous Orders in Council for this industry (L.G., Aug. 1949, p. 987, Dec., p. 1558; Feb. 1950, p. 209; June, p. 873; July 1951, p. 976; Oct., p. 1377; Nov., p. 1537, and previous issues).

Specified holidays: any 4 of 7 unpaid holidays (previously provided for) will now be *paid holidays.*

Hours remain unchanged at 50 per week.

Minimum hourly wage rates in Zone I are increased in the present amendment by 12 cents to 30 cents per hour for male employees and by 12 cents to 22 cents per hour for female employees. The minimum average wage for male employees is increased by 17 cents per hour to a new minimum average of 95 cents per hour, for female employees by 13 cents per hour to a new minimum average of 66 cents per hour. Minimum rates for general labourers which were previously 65 cents per hour for males and 47 cents for females are now as follows: males—75 cents per hour in first 3 months, 80 cents in third 3 months and 85 cents after 6 months; females—57 cents, 60 cents and 63 cents per hour. The minimum wage table is also revised by the addition of one new operation as well as by the addition of certain new classifications and the deletion of others. As previously in effect the minimum average and hourly rates of Zone II will be 5 cents per hour less than those of Zone I.

Vacation: one week with pay after one year of continuous service for the same employer, as previously provided for. However, this amendment now provides that every employee with 5 or more years' continuous service for the same employer (prior to May 1 in each year) is entitled to 2 weeks of vacation with pay at his basic hourly rate.

Printing Trades, Quebec District

An Order in Council, dated December 23, and gazetted January 3, extends the previous Orders in Council for this industry (L.G., April 1951, p. 544; April 1952, p. 451), to April 30, 1953.

Printing Trades, Montreal

An Order in Council, dated December 23, and gazetted January 10, amends the previous Orders in Council for this industry (L.G., May 1949, p. 604; June 1951, p. 827, June 1952, p. 780; Jan. 1953, p. 97, and previous issues) by setting down a new section of general provisions governing apprentices in composition, ruling, cutting, binding and finishing departments and apprentices and/or starting press apprentices in Zone I. These include the necessary qualifications of applicants for apprenticeship in the printing industry, probationary periods, instructional training at the Graphic School of Arts, examinations every 6 months to determine apprentice's progress, rating of apprentices by designated monitor (foreman or any qualified journeymen) in each plant according to a code set forth in the "Schedule of Operations" contained in a booklet called "Apprentice's Work Record Book for On-the-Job Training" supplied by the Apprenticeships Commission. Another regulation provides that all apprentices will be governed by the same rules, working conditions and hours as journeymen.

Construction

Building Trades, Montreal

An Order in Council, dated December 15, and gazetted December 20, amends the previous Order in Council for this industry (L.G., June 1952, p. 781).

Elevator Construction

Minimum hourly wage rates for employees of the *elevator construction* industry in the Montreal region are increased by 12 cents per hour for mechanics and by 8 cents per hour for helpers, and the new minimum rates are now as follows: mechanic $2.09, helper $1.46.

Another Order in Council, dated December 15 and gazetted December 20, amends the previous Order in Council for this industry.

Plumbers, Steamfitters, Etc., Part "A"

In this amendment the name "The Corporation of Plumbing and Heating Contractors of the Province of Quebec (Montreal Branch)", replaces the names "The Master Plumbers Association of Montreal and Vicinity" and "La Section des Entrepreneurs en Plomberie et Chauffage of the Retail Mercahnts of Canada Inc".

Industrial jurisdiction: this section of the agreement applies to all work governed by the Pipe Mechanics Act (Revised Statutes of Quebec 1941, chapter 173), and by-law No. 1341 of the city of Montreal,and applies to all work whether inside or outside the shop. It does not apply to oil burner mechanics, workers engaged in the construction of water-mains and sewers, nor does it apply to permanent employees, unless engaged in new construction operations.

Hours are unchanged at 8 per day, 40 per week.

Overtime: time and one-half for work between 5 p.m. and 10 p.m. (previously 5 p.m. and midnight), and for the first 4 hours of work on Saturday (previously any work on Saturday); double time for work between 10 p.m. and 8 a.m. (previously midnight and 8 a.m.), for work on Saturday in excess of the first 4 hours, and as formerly in effect, for all work on Sundays and 12 specified holidays. An employer may declare the following or preceeding Monday a holiday in place of any non-religious holiday falling on a Tuesday, Wednesday or Thursday providing double time is paid on any day declared a holiday, if worked.

Minimum wage rates: master plumber and master heating contractor working as an employee with tools or in any supervisory capacity $3 per hour ($100 per week); journeyman in plumbing, heating, pipefitting and pipe welding $1.90 per hour; junior journeyman $1.40 per hour; apprentices from 80 cents per hour in first year to $1.05 per hour in fourth year; truck drivers (service trucks without daily limitation of hours) $35 per week. Foreman in charge

of 10 or more journeymen will be paid 25 cents per hour over and above the rate set for journeymen. Effective after April 1, 1953, minimum rates for journeymen in plumbing, heating, etc., as well as the rates for junior journeymen will be further increased by 10 cents per hour and the rates for apprentices in third and fourth years will be increased by 5 cents per hour. (The above rates are $1 per hour higher than those previously in effect (L.G., Aug. 1951), for master plumbing and heating contractors, 20 cents per hour higher for journeymen and junior journeymen; increases for apprentices range from 10 to 14 cents per hour over the rates previously in effect. However, in accordance with the provisions of an escalator clause (L.G., Aug. 1951) the above increases include a cost-of-living wage adjustment of 9¾ cents per hour which became effective October 11, 1951. (Truck drivers and foremen are added classifications to the table of minimum rates for plumbers, etc.)

Cost-of-living escalator clause previously provided for (L.G., Aug. 1951) is not included in this amendment.

Vacations with pay provisions are those which are applicable to all building trades at Montreal as follows: employees continuously in the service of one employer during the vacation with pay credit period are entitled to 7 days continuous vacation, with pay equal to 2 per cent of their gross earnings for such credit period.

Other provisions include regulations governing board and travelling expenses for work outside the limits of Montreal, as well as regulations governing apprenticeship and notice of termination of employment (one hour for any reason).

Building Trades, Quebec District

An Order in Council, dated December 23 and gazetted January 10, amends the previous Orders in Council for this industry (L.G., Sept. 1950, p. 1679; July 1951, p. 977; Aug., p. 1109; Sept., p. 1251; Nov., p. 1539; Dec., p. 1672; Oct. 1952, p. 1362; Nov., p. 1481 and previous issues). This amendment provides for the addition of "The Corporation of Plumbing and Heating Contractors of the Province of Quebec (Quebec and District branch)" and "The Corporation of Master Electricians of the Province of Quebec (Quebec and District branch)" to the list of contracting parties.

Industrial Standards Acts, etc.

Recent proceedings under the Industrial Standards Acts, etc,* include eight new schedules, three made binding for the first time, the amendment of two others and the correction of another. In addition to those summarized below, they include: in Ontario, a new schedule for barbers at Ottawa and the amendment of the schedule for barbers at Woodstock published in *The Ontario Gazette* December 13, and the amendent of the schedule for barbers at Cornwall published December 27; in Alberta, a correction of the schedule for garages and service stations at Edmonton published in *The Alberta Gazette* December 15.

*In six provinces—Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan and Alberta—legislation provides that, following a petition from representatives of employers and employees in any (or specified) industries, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees, for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all zones designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. References to the summaries of these Acts and to amendments to them are given in the LABOUR GAZETTE, August, 1951, p. 1110.

NOVA SCOTIA

Construction

Bricklayers, Sydney

An Order in Council dated November 10 and gazetted November 19, makes binding the terms of a new schedule for bricklayers at Sydney, to be in effect from November 29, 1952, until May 1, 1953, and thereafter until rescinded or superseded by another schedule.

Hours: 8 per day, 40 per week instead of 44 per week as previously (L.G., March 1949).

Overtime: time and one-half for work in excess of 8 hours per day providing such time exceeds 15 minutes; double time for work on Saturdays, Sundays and 8 specified holidays. Work on Saturday, between November 1, 1952, and May 1, 1953, may be paid for at regular rates, to make up 40 hours in the week. (The previous schedule provided double time for work on Saturday afternoons only, on Sundays and 6 specified holidays.)

Minimum hourly wage rate is increased from $1.50 (L.G., March 1949) to $2 per hour; apprentices' rates are increased from 75 cents to 90 cents per hour during first 500 hours and from $1.50 to $1.70 per hour during eighth 1,000 hours. Apprentices' rates are subject to fulfilment of conditions laid down under the Apprenticeship Act.

70169—7

Plasterers, Sydney

An Order in Council dated November 10 and gazetted November 19, makes binding the terms of a first schedule for the plastering trade at Sydney, to be in effect from November 29, 1952, until May 1, 1953, and thereafter until revoked or superseded by another schedule.

Hours: 8 per day, 40 per week.

Overtime: time and one-half for work in excess of 8 hours per day providing such time exceeds 15 minutes; double time on Saturdays, Sundays and any of 8 specified holidays. However, it is provided that between November 1, 1952, and May 1, 1953, work may be done on Saturdays at straight time rates to make up 40 hours in the week.

Minimum hourly wage rates: journeymen $1.90 per hour; apprentices from 90 cents per hour during the first 500 hours to $1.70 during the eighth 1,000 hours. Apprentices' rates will apply only upon fulfilment of conditions laid down under the Apprenticeship Act.

NEW BRUNSWICK

Construction

Carpenters, Saint John

An Order in Council dated November 18 and gazetted December 10, makes binding the terms of a new schedule for carpenters at Saint John. This schedule rescinds the previous one which was to become effective on October 1, 1952. However, all the provisions of this new schedule are similar to those previously in effect (L.G., Jan., p. 99) with the exception of the effective date, which now is November 20, 1952.

Painters and Decorators, Saint John

An Order in Council dated November 18 and gazetted December 10, makes obligatory the terms of a new schedule for painters and decorators at Saint John. This schedule rescinds the previous schedule which was to become effective on October 15, 1952. However, all the provisions of this new schedule are similar to those previously in effect (L.G., Jan., p. 99) with the exception of the effective date, which now is November 20, 1952.

ONTARIO

Construction

Painters and Decorators, Kingston

An Order in Council dated November 27 and gazetted December 13, makes binding the terms of a new schedule for painters and decorators at Kingston, to be in effect from December 23, during pleasure.

Hours are unchanged at 8 per day, 40 per week. Work that cannot be done during regular daily hours may be done during other hours and such work will be known as *night work*. Employees working 8 hours in any 24-hour period will be deemed to be employed during a regular working day.

Overtime: time and one-half for work done during the 4-hour period immediately following the working period of a regular working day; double time for all other overtime and for work on Saturdays, Sundays or any of 7 specified holidays. With the exception of the 4 hours of overtime shown above, no overtime work will be done without a permit from the advisory committee.

Minimum hourly wage rates up to and including May 31, 1953: for work done during regular working periods and for night work—$1.50 per hour for spray painting, $1.40 per hour for all other work (an increase of 15 cents per hour). Effective on and after June 1, 1953, minimum rates will be further increased to $1.60 per hour for spray painting and to $1.50 per hour for all other work. The advisory committee may fix a lower minimum rate for handicapped persons.

Carpenters, Niagara Falls

An Order in Council dated November 27 and gazetted December 13, makes binding the terms of a first schedule for carpenters at Niagara Falls, to be in effect from December 23, 1952, during pleasure.

Hours: 8 per day, Monday through Friday, 40 per week. Work which cannot be done during regular working periods may be performed during other hours, if an employee does not work more than 8 hours, and such work will be *night work*. Provision is made for shift work.

Overtime: time and one-half during the 3-hour period immediately following the regular working day Monday through Friday and on Saturday between 8 a.m. and 5 p.m.; double time for all other overtime work, and for work on Sundays and 6 specified holidays. No overtime work on a holiday without a permit from the advisory committee.

Minimum hourly wage rate: $1.75 per hour for work done during regular working periods and for night work. Employees working on a night shift will be paid 8 hours' pay for 7 hours' work. The advisory committee may set a lower minimum rate for handicapped workers.

Electrical Workers, London

An Order in Council dated December 18 and gazetted January 3, makes binding the terms of a first schedule for the electrical repair and construction industry at London, to be in effect from January 13, 1953, during pleasure.

Hours: 8 per day Monday through Friday, 40 per week. Work performed in 2 or more shifts, and if an employee works not more than 8 hours in any 24-hour period, the employee will be deemed to be employed during a regular working day. Two or more shifts worked on the same job, only one shift will be a day shift.

Overtime: double time for work in excess of regular hours and for work on Saturdays, Sundays, or any of 8 specified holidays. No work will be performed on a holiday except in cases of extreme necessity and subject to the issuance of a permit by the advisory committee. Overtime work is excluded when work is performed in 2 or more shifts.

Minimum hourly wage rate: $1.90 per hour during regular working periods. Employees on night shift are entitled to 8 hours' pay for 7 hours' work. The advisory committee may fix a lower minimum rate for handicapped persons.

Annual Report Reviews Work of Ontario Department of Labour

General increase in use of Department's services shown in 32nd annual report, an increase resulting from expansion in industry and commerce

The 32nd annual report of the Ontario Department of Labour for the fiscal year ending March 31, 1951, shows a general increase in the use of the Department's services. Expansion in industry and commerce was responsible to a great extent for the greater volume of work.

Factory Inspection

Staff

A staff of 37 field inspectors, 10 women and 27 men, covered the 19 inspection districts of the province. During the year, 33,443 inspections were made with respect to the enforcement of the Acts and regulations administered by the Department, 29,198 being inspections under the Factory, Shop and Office Building Act.

Industrial Hazards

An employer is required to report accidents which keep an employee away from work for more than six days. All explosions must be reported.

A total of 9,912 accidents was reported during the year, 213 fewer than in the previous year. Accidents to men numbered 9,313, of which 45 were fatal. Of the 599 accidents to women, none was fatal. In 1949-50, accidents caused the deaths of 51 men and six women.

Almost as many fatal accidents (44) were reported in undertakings outside the jurisdiction of the Factory, Shop and Office Building Act.

There were 51 fewer cases of industrial diseases reported in the year under review than in the previous year. Out of a total of 193, dermatitis accounted for 168 cases, lead poisoning for 11, pneumoconiosis for five, silicosis for five, and undulant fever for four.

Ways and means for the improvement of fire prevention and protection are constantly being investigated. In the enforcement of this type of provision in the Act, municipal authorities and the Fire Marshal co-operate with the inspectors.

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

Many elevators and machines were ordered to be removed from service after inspection had shown that they were dangerous and that the provisions of the Act were not being carried out.

Hours of Work

The Factory, Shop and Office Building Act prohibits the employment of women and girls, and boys under 16 years, before 7 a.m. or later than 6.30 p.m. in a factory or 11 p.m. in a shop or restaurant but provides for emergency overtime permits and double-shift permits.

There were 1,489 permits for the employment of women or youths between 6.30 p.m. and 9 p.m. issued to employers during the calendar year 1950. This was an increase of 317 over the figure for 1949 but 278 fewer employees were involved (a total of 9,886 female employees in 1950).

The increasing use of double-shift permits instead of overtime permits is being encouraged in view of the longer working hours possible under overtime permits. In 1950, 319 firms (96 more than in 1949) received 641 double-shift permits. The two shifts must fall between 6 a.m. and 11 p.m. of the same day and neither can be more than eight hours long.

To allow female employees over 18 years to work in restaurants until 2 a.m., 318 permits were issued in 1950. Seven of these permits were suspended because of violation of their provisions and were not re-issued until intention of complying with the requirements was indicated. The late hours permits provide for a 30-cent bonus. If this bonus has not been paid, a permit is not reinstated until the amount owed to the employee has been paid.

70169—7½

No complaints were received with respect to authorized shorter lunch periods where a lunch-room or cafeteria is available. No further requests were received from the textile industry for two rest periods to replace the lunch period in an eight-hour shift for tenders of automatic machines. Where this experiment is being tried, as reported in the previous annual report, no complaints have been received.

Child Labour

Sixty-three children under 14 years of age were employed, contrary to the Act. This was a decrease of 22 from the number of child labour cases in the fiscal year 1949-50.

Home-Work

Fewer permits were issued in the calendar year 1950 for work to be done in homes. The figures for 1949 were 478 permits to employers and 4,236 to home-workers; in 1950, 410 were issued to employers and 3,836 to home-workers.

Approval of Building Plans

The Factory Inspection Branch is required to examine plans which must be submitted to it for constructing or repairing any factory building or any building over two storeys high which is to be used as a shop, bakeshop or office building. During the year, the 1,528 plans approved had a record value of $116,826,900.

The total increase in construction values was 79·4 per cent over the previous year and in the number of plans approved, 42·8 per cent. Construction expenditures in the public utilities group alone almost tripled compared to the previous year. The sharp increase in this category was due to the erection of automatic telephone exchanges, steam electric generating stations, large warehouses and workshops for telephone and electrical power services.

Iron and steel products, transportation equipment and electrical apparatus and supplies accounted for the largest expenditures on construction in the manufacturing industry. Construction in the manufacturing industry as a whole was 57·34 per cent of the total cost of industrial construction, compared with 44·54 per cent in the previous year.

The current practice of having manufacturing departments on the ground floor was adhered to in two large $5,000,000 factories. Unusual problems with respect to ventilation, lighting and safe exits were encountered in one of the factories, which was of windowless design.

In the non-manufacturing industries, the largest expenditures were for office buildings for financial, insurance and real estate firms.

In checking plans of alterations, the Branch paid a great deal of attention to improvements in exit facilities. Many factories and office buildings were required to provide at least one tower stairway continuously enclosed with fire-resistive materials and either an exterior steel fire escape or an additional tower stairway.

Prosecutions

Fines totalling $250 were imposed following 10 prosecutions for violations of the Factory, Shop and Office Building Act. Five of the cases dealt with the employment of female employees in restaurants at late hours. Three cases were neglect to correct fire hazards. The other two cases were child labour and improper guarding of machinery.

Boiler Inspection and Examination of Operating Engineers

For the purpose of inspecting boilers, pressure vessels and plants, there are in Ontario 11 inspection districts and 19 inspectors. These inspectors made some 19,128 inspections during the construction and installation of 6,376 new boilers and pressure vessels in the year. Altogether 8,697 new boilers, pressure vessels and plants were constructed, 2,246 of these being accepted without inspection on the affidavit of the manufacturer. A total of 896 used boilers and unfired pressure vessels was inspected; 7,427 uninsured boilers and pressure vessels were also inspected.

One thousand designs and specifications of boilers, pressure vessels and plants were approved and registered, an increase of 103 over the previous year.

Once again, there was an increase in the number of welding establishments visited and the number of welders tested by boiler inspectors. Out of 2,368 welders tested, 666 failed.

Eight explosions of boilers and pressure vessels were investigated. The report describes each of these explosions, setting out the causes of the accident.

The Board of Examiners of Operating Engineers examined 3,148 candidates for certificates of qualification as operating engineers and firemen during the year. More than two-fifths of the total candidates examined did not pass. The percentage of failures has been high for several years, because candidates lacked a

technical and practical knowledge. Altogether the Board issued 20,825 certificates of qualification, including renewals, to operating engineers and firemen.

A large number of violations of the Operating Engineers Act was reported. Most violations are probably the result of the fact that the demand for qualified operating engineers is far greater than the supply.

Conciliation Service

The Labour Relations Act passed at the 1950 session was proclaimed in force on September 1, 1950. Conciliation service was provided under this Act and under the Labour Relations Act, 1948, which was repealed by the new Act.

The functions of the Conciliation Service are conciliation and arbitration in disputes; preliminary investigations of alleged violations of the Labour Relations Acts of 1948 and 1950; preliminary investigations with respect to conferences, and convening conferences and reporting on them, under the Industrial Standards Act.

The new Labour Relations Act brought about a change in the procedure for obtaining conciliation services in disputes to conclude, renew or revise collective agreements. Previously a request for a conciliation officer was directed to the Minister of Labour. Now it is directed to the Ontario Labour Relations Board. In cases where the request is granted, the Minister then appoints a conciliation officer.

During the year the Board granted 443 requests. In 303 of these, the conciliation officer was able to bring about a settlement of the dispute. In the remainder a conciliation board was appointed. Eighteen disputes still unsettled by these means were settled by conferences between the Minister, the parties to the dispute and the Chief Conciliation Officer or his representative.

Applications may still be made to the Minister to provide conciliators in cases for which there is no established procedure. Twenty-two such requests were granted during the fiscal year and the disputes were settled with the aid of a conciliation officer.

Conciliation in strikes and lockouts effected settlements in 27 work stoppages.

Ontario Labour Relations Board

The five-member Labour Relations Board established in 1948, representing labour and management, was continued by the 1950 Labour Relations Act. During the year it administered the 1948 and 1950 Acts, dealing with a total of 1,015 applications of all types. The report enumerates the applications dealt with in connection with each of the Board's functions and indicates the action taken.

Of the 685 applications for certification as bargaining agent, 358 had been granted by March 31, 1951, 102 dismissed, 53 withdrawn and 172 were carried over.

Ninety-seven representation votes were conducted during the year.

The second largest group of applications were for conciliation services under the 1950 Act. Of these, 244 out of 297 were granted, 25 carried over into the next fiscal period, and the remainder dismissed or withdrawn.

Industry and Labour Board

The Apprenticeship Act, the Hours of Work and Vacations with Pay Act, the Industrial Standards Act and the Minimum Wage Act are administered by the Industry and Labour Board, which meets almost daily to explain to employers and employees the requirements of these Acts in particular situations.

Apprenticeship

At March 31, 1951, there were 4,061 apprentices under contract in designated trades under the Apprenticeship Act. During the year, 707 apprentices completed their term of apprenticeship and certificates of apprenticeship were issued to 674 of them.

The high demand for skilled tradesmen in the building trades and in the motor vehicle repair trade continued; these trades were the choice of 1,496 out of the 1,554 apprentices who registered between April 1, 1950 and March 31, 1951. A small number of apprentices registered as barbers and hairdressers. Prospective hairdressers show a preference for training in a trade school licensed under the Apprenticeship Act rather than in a hairdressing shop under a contract of apprenticeship. Licences for 11 hairdresser trade schools were in force at December 31, 1950.

The Departments of Labour and Education continued their joint operation of school training for apprentices, on the basis of full-time educational day-classes, with evening classes for those not attending day-classes and for hairdressers. In the day-classes, 942 apprentices registered in the designated building trades and 343 in the trade of motor vehicle repairer. Undesignated trades accounted for 30 more apprentices.

The Department of Labour assists interested trades other than those designated under the Apprenticeship Act to establish

a system of training their apprentices. At the end of March 160 apprentices were registered in such trades; 15 certificates were issued during the year.

In the motor vehicle repair trade, 20,630 current certificates of qualification were issued. It is compulsory for persons in this trade, other than registered apprentices, to hold these certificates.

Hours of Work and Vacations with Pay

The Hours of Work and Vacations with Pay Act sets an 8-hour day and a 48-hour week but allows overtime where the limits are not feasible, in the opinion of the Board, or where it is urgently required. Regulation 5 under the Act establishes weekly or annual limits for such approved overtime. Regulation 8 provides that emergency overtime will not reduce the amount of permissible overtime.

The general annual limit for overtime in excess of the 8- and 48-hour limits is 100 hours for any employee under the Act. Permissible overtime for an engineer, watchman, fireman, shipper or other person engaged in non-productive work, however, may be up to 12 hours a week. There is also a special ruling for the highway transport industry. In the fiscal year 1949-50, a 10-hour day, six days a week, was approved for that industry. An amendment in the 1950-51 period removed the limit of 10 hours in a day but retained the maximum working week of 60 hours.

Besides regulating hours, the Act assures every employee in an industrial undertaking of a vacation of at least one week with pay after a year of employment. The system of vacation-with-pay credit stamps, used widely when employees work for several employers during the year, ensures that an employer contributes his proper share of vacation pay to his employees and that employees build up a vacation-with-pay credit in proportion to their earnings.

A total of 285,318 vacation-with-pay stamp books was issued during the year. The sale of stamps to employers amounted to $6,075,824.71.

Industrial Standards

At the close of the fiscal year 137 schedules were in force under the Industrial Standards Act. These schedules, governing wages, hours and days of labour in particular industries, are drawn up at conferences of employers and employees with an industrial standards officer. Nineteen conferences were convened during the period under review.

Minimum Wages

The minimum wage orders apply only to women workers. Examination of employers' records by the Unemployment Insurance Commission and by inspectors of the Department provided information to show whether or not the orders were being complied with. Questionnaires requesting payroll information were also sent to some employers.

Wage increases were ordered in cases of under-payment in 65 firms. Wage arrears were also collected on behalf of or ordered paid to 26 female employees. There were no prosecutions.

At March 31, 1951, permits issued by the Board authorized the employment of 30 handicapped female employees at wages lower than the minimum.

Legal Decisions Affecting Labour

Saint John union loses appeal against judgment ordering reinstatement of a member expelled contrary to its constitution. British Columbia court holds Labour Relations Board not required to make available to union counsel notes of hearings made for its own use. Arbitration Act found applicable to engineers' agreement with City of Hamilton

The appeal court in New Brunswick has affirmed the judgment of the Chancery Division requiring reinstatement of a longshoreman as a member of the International Longshoremen's Association (AFL-TLC) and awarding him damages. The British Columbia Supreme Court has dismissed a union's application for an order to compel the Labour Relations Board to produce its record of the hearings in a certification case.

Holding that, since professional engineers are excluded from the Ontario Labour Relations Act, the arbitration clause in their agreement with the City of Hamilton is subject to the Arbitration Act, the Ontario High Court of Justice has granted the motion of a professional engineers' union for the appointment of an arbitrator, as provided for in the agreement.

Supreme Court of New Brunswick, Appeal Division . . .

. . . dismisses longshoremen's union appeal against award of damages to a member illegally expelled

The Appeal Division of the New Brunswick Supreme Court, on June 4, 1952, affirmed a judgment of the Chancery Division awarding a longshoreman damages for the loss of his employment resulting from his illegal expulsion from his union and ordering the union to reinstate him as a member (*See* L.G., April 1952, p. 461). The union, a Saint John local of the International Longshoremen's Association, appealed from this judgment on the ground that the union constitution prohibited recourse to the courts until the appeal procedure set out in the constitution had been followed. The Appeal Court held that, since the body which expelled the longshoreman had no jurisdiction to do so under the union constitution and no charge had been laid as required by the constitution, the expelled member was not obliged to exhaust the rights of appeal given under the constitution before appealing to the courts.

Mr. Justice Harrison, giving the facts of the case, found that the plaintiff had been expelled by vote of a general meeting of the local, after a report that he was guilty of making false charges against members of the executive had been submitted by a special investigating committee. His Lordship then examined the relevant sections of the union constitution to determine whether this procedure was in accordance with the constitution. He referred to Section 3 of Article XVIII, which lays down the procedure for making charges against a member. His Lordship found that this section was not complied with in that no charge was laid against the plaintiff, he was not given notice of a hearing at which witnesses could be examined and cross-examined, and no such hearing was held.

Mr. Justice Harrison found also that the constitution gave no authority to a membership meeting to administer discipline except in an appellate capacity on appeal from a decision of the executive board. Under Article XVIII, the executive board may hold a hearing upon charges after proper notice to the accused, or may appoint a committee to report the evidence to it, but the board makes the decision upon the evidence and determines the penalty. Article XIX makes the board's decision subject to an appeal to a membership meeting. His Lordship stated that a general meeting was obviously entirely unfitted to conduct what should be a proceeding like a judicial hearing where witnesses are examined and cross-examined and a decision is rendered after consideration of the evidence and arguments submitted.

In dealing with the union's argument that the plaintiff should have made an appeal in accordance with the constitution before bringing a court action, Mr. Justice Harrison distinguished the judgment at issue from the judgment of the Privy Council in the *Kuzych* case. In that judgment it was held that the trial committee which found Kuzych guilty was validly constituted and that the decision of the general meeting to expel him, even if it were tainted by bias or arrived at in defiance of natural justice, was still a "decision" within the meaning of the constitution and could therefore be appealed. Since Kuzych had not exhausted the remedies provided by the constitution, he had no right to appeal to the courts, the Privy Council held.

Mr. Justice Harrison pointed out that the Privy Council had found that the proceedings for hearing and deciding upon the charges against Kuzych and the resolution to expel him were regular. After citing several cases dealing with a claim for a declaration that an expulsion was illegal, he concluded:—

> These authorities indicate that recourse may be had to the court where a union body acts in violation of its constitution and certainly where a body acts entirely without jurisdiction. In such a case the rule that remedies by way of appeal provided by a union constitution must be exhausted before coming to the court do not apply, since action taken without jurisdiction is a nullity.

In the case under consideration, the membership meeting had no jurisdiction to deal with the charges against the plaintiff, since the constitution gave that jurisdiction to the executive board. The action of the meeting in expelling the plaintiff was therefore null and void.

His Lordship stated that Article XIX of the union constitution provided for appeals from a decision of the executive board of a local union, the district council, its executive board, or the executive council in accordance with Article XVIII or from a decision made by a membership meeting on an appeal. In this case, since the resolution of expulsion was not made under Article XVIII and the membership meeting was not exercising its appellate jurisdiction, there was no "decision" to appeal from. Therefore the provision of the constitution forbidding recourse to the courts until appeal remedies had been exhausted did not apply.

Counsel for the union argued that, since the membership meeting was the parent body of the executive board, it did have jurisdiction to expel a member. His Lordship held that the constitution gave the executive board exclusive jurisdiction to hear charges and to deal with questions of discipline.

The Court dismissed the union's appeal with costs. *McRae* v. *Local 1720, The Cargo and Gangway Watchmen's Union of the Port of Saint John, N.B. (ILA) et al*, [1953] 1 DLR 327.

Supreme Court of British Columbia . . .

. . . holds that Labour Relations Board cannot be compelled to produce a record of its proceedings

The Supreme Court of British Columbia, on December 6, 1952, dismissed a union's application for a writ of *mandamus* to compel the Labour Relations Board to make available a record of its proceedings in connection with an application for certification. The Court held that there was no legal requirement that the Board keep a record of proceedings and that the Board could not be compelled to produce notes taken for its own use.

Mr. Justice Wilson delivered the judgment of the Court. The applicant in the case was Local 333 of the United Packinghouse Workers of America (CIO-CCL), which was involved in a jurisdictional dispute with the Fruit and Vegetable Workers' Union (TLC), regarding the right to bargain on behalf of packinghouse employees in the Okanagan Valley. The Labour Relations Board had dismissed an application by Local 333 as bargaining agent for the employees of a packinghouse at Oliver. Later it recognized the TLC union as the bargaining agent for all packinghouse employees in the Okanagan Valley. On an application by the CCL union for reconsideration of this decision, the Board affirmed its previous ruling.

[The Board's reasons for decision were set out in its press release for the week September 2-6. The TLC union sought certification on behalf of employees in 30 different packinghouses, in three of which the CCL union was at that time the certified bargaining agent. The TLC union argued that collective bargaining with the 30 employers had been done on an overall basis for several years and that the agreement reached between this union and a majority of the employers invariably became the industry-wide agreement. All 30 employers gave consent in writing to have the employees included in one bargaining unit. The Board considered that the multiple-employer unit was appropriate and stated: "The Board has stated frequently that to leave out or take out of a unit appropriate for collective bargaining a minority group would be to accept a principle which renders vulnerable every certification in a way never contemplated by the Act, and certainly in a way that makes for increased industrial unrest. The only permissible exception . . . is the establishment of craft units."]

The CCL union then considered applying to the Board for further review or appealing to the courts for redress. The union's counsel stated that before advising on these matters he must have a full record of the Board's proceedings. His request for copies of the proceedings on July 18 and August 15, 1952, was refused by the Board.

Mr. Justice Wilson stated that the Industrial Conciliation and Arbitration Act, which creates the Board, makes no provision for the keeping of records of the proceedings or of evidence given before the Board. A stenographer employed by the Board, not trained in the taking of evidence at hearings, testified that she attended both hearings with instructions to make notes on the evidence and argument. She stated that it was not possible for her to take down all that was said and that it was left to her discretion what part of the proceedings should be noted for the assistance of the Board. The notes did not constitute a record. The union sought a writ of *mandamus* to compel the production of these notes.

Mr. Justice Wilson stated that if he were chairman of the Board he would, as a matter of courtesy and policy, immediately make the notes available to the union, explaining that they were in no sense a complete or exact record. However, he was not here concerned with questions of courtesy or policy but with questions of law.

His Lordship pointed out that the representatives of the union present at the hearings were perfectly free to make notes of the proceedings. The Board was not required by law to keep any record whatever of the evidence and argument heard by it. Therefore, he could see no legal basis for compelling production of the stenographic notes taken.

The union's counsel argued that any tribunal performing judicial or quasi-judicial functions should keep records of all its proceedings available to interested persons. His Lordship cited the case of *Welch* v. *Grant,* 28 BCR 367, to show that, in the absence of any statutory requirement, even a court was not required to keep notes of evidence before it or to produce to an appellant from a judgment of the court any notes the judge might have taken for his own use. If a statutory court could not be compelled to produce such notes, it followed that a quasi-judicial body such as the Labour Relations Board could not be so compelled.

The Court accordingly dismissed the union's application. *In re British Columbia Labour Relations Board and United Packinghouse Workers of America, Local 333,* Supreme Court of British Columbia, December 6, 1952.

Ontario High Court of Justice . . .

...finds Arbritration Act applicable to clause in agreement between engineers and City of Hamilton

The Ontario High Court of Justice, on October 21, 1952, granted the application of the members of a union of professional engineers for the appointment of an arbitrator to settle the salary schedule for engineers employed by the City of Hamilton. An agreement between the parties made provision for the arbitration of disputes. The City refused to name its arbitrator on the ground that the Arbitration Act did not apply to collective agreements.

Mr. Justice Barlow outlined the facts of the case in his reasons for judgment. In an agreement between the City of Hamilton and Hamilton Municipal Unit No. 1 of the Federation of Employee-Professional Engineers and Assistants dated January 2, 1949, the salaries of the professional engineers employed by the City were agreed upon for the year 1949. The agreement, which was to remain in force from year to year subject to two months' notice of termination, provided for the submission in writing to the Board of Control of the City, during January each year, of a schedule of salaries for the current year.

In January 1952, a schedule of salaries was submitted to the Board of Control pursuant to the agreement. Negotiations took place and reports were made by the Board but no agreement was reached. In September, the union requested that the dispute over salaries be settled by the arbitration machinery set out in the agreement. The union appointed its arbitrator and requested the City to name its arbitrator. On October 2, the City notified the union that it did not propose to take arbitration proceedings. The union, having complied with the requirements of the Arbitration Act as to notices, moved under Section 8 of that Act for the appointment by the Court of an arbitrator for the City.

Counsel for the City contended that the motion must fail because Section 32 (5) of the Ontario Labour Relations Act declares that the Arbitration Act does not apply to arbitrations under collective agreements.

Mr. Justice Barlow stated that this argument would answer the union's motion if professional engineers came under the Labour Relations Act but that they are excluded from the Act by Section 1 (3) (a), which reads:—

> For the purposes of this Act, no person shall be deemed to be an employee,
> (a) who is a member of the architectural, dental, engineering, legal or medical profession entitled to practise in Ontario and employed in a professional capacity.

Although this Act was not yet in effect at the time the parties signed their agreement, the legislation then in effect also contained a provision excluding professional engineers from the application of the Act.

Since the engineers were not "employees" within the meaning of the Labour Relations Act, the agreement between their union and the City of Hamilton was not a collective agreement under the Act, His Lordship stated. Accordingly, the Arbitration Act was applicable, and since the applicants had taken the preliminary steps required by that Act, their motion should be granted. He held also that a representative action was appropriate in this case.

Mr. Justice Barlow stated that the issue of the Court's order would be delayed for 10 days to allow the City to suggest to the Court the name of the person to be appointed as arbitrator. *Re Hamilton and Hamilton Municipal Unit No. 1 of the Federation of Employee-Professional Engineers and Assistants,* [1953] 1 DLR 197.

Recent Regulations, Federal and Provincial

Special provision for compensation to war veterans who are injured in industry to be discontinued. Higher minimum wage for construction workers set in British Columbia. Order permitting 48-hour week in smaller Saskatchewan centres before overtime applies is kept in force

The federal Government has taken steps to bring to an end on March 31, 1954, the arrangement by which the Department of Veterans Affairs has paid the costs of compensation for industrial accidents to veterans receiving a war disability pension of 25 per cent or more.

In British Columbia, an hourly rate of 85 cents was fixed as the minimum wage for the construction industry. As before, if construction workers are required to work longer than eight hours in a day or 44 in a week, they must be paid time and one-half their regular rate.

In Saskatchewan, the hours of work order permitting employees in the smaller centres, except factory workers, to work up to 48 hours in a week without payment of time and one-half for overtime is to continue in force until June 30, 1953.

By a new regulation in Alberta, payment of a supplementary allowance will no longer be made to a recipient who moves to another province. Under a reciprocal agreement, the province of Saskatchewan will provide free health services to pensioners who come to Saskatchewan from another province.

FEDERAL

Canada Shipping Act

Pilotage rates, movage charges and fees for the embarkation and disembarkation of pilots for the pilotage district of Caraquet, N.B. were revised by an amendment to by-laws, P.C. 1953-49, of January 14, gazetted January 28.

Pilotage rates now vary according to the waters or section of the harbour through which the ship is piloted. Movage charges no longer depend upon the tonnage of the ship but consist of a flat rate of $10 for moving any ship (a) between the ballast ground and a loading berth outside the harbour or (b) between two loading berths inside the harbour. The previous flat rate of $5 for embarking and disembarking a pilot by pilot boat has been increased to $10 and, in addition to the pilot-boat fee, a boatman's fee of $5 must be paid.

Department of Veterans Affairs Act

A recent Order in Council indicated the federal Government's intention to bring to an end a system in effect since 1921, under which it has borne the cost of workmen's compensation benefits paid to a veteran receiving a war disability pension of 25 per cent or more or to his dependents. The new Order (P.C. 4713), made December 30, 1952, and gazetted January 14, amends P.C. 6221 of 1949 (L.G., 1950, p. 355) which was a revision of earlier regulations. This policy was adopted after the First World War to encourage the employment of war veterans in industry.

The amended regulations provide that the Department of Veterans Affairs may reimburse a Workmen's Compensation Board or an employer who is individually liable for the whole or partial cost of compensation to a pensioner for the period up to September 30, 1953, for any industrial accident or disease occurring or contracted before December 31, 1952. The Department may also pay the capitalized value of a permanent compensation benefit awarded before September 30, 1953, commuted as of December 31, 1952, or as of the date of the award, if made between December 31, 1952, and September 30, 1953. No payment may be made after March 31, 1954, the date on which the scheme expires.

PROVINCIAL

Alberta Supplementary Allowances Act

An amendment has been made to the regulations under the Alberta Supplementary Allowances Act which state the conditions under which the province will pay a supplementary allowance of $10 a month to recipients of an old age security pension, a blind person's allowance or an old age assistance allowance if their income does not exceed the limit set by the Act (O.C. 579-52; L.G., 1952, p. 1102). The amendment revokes the authority formerly granted for the payment of an allowance for a limited time to a recipient who moves to another province.

The regulations previously provided that a recipient of the supplementary allowance

who temporarily moved out of Alberta could continue to receive the allowance for a period not exceeding three months, subject to any reciprocal agreement between Alberta and another province for the payment of such an allowance. Under the amended regulations, the allowance will be paid for a period not exceeding three months to a recipient who has temporarily moved out of Canada but not to a recipient who has moved to another province. The amendment was approved by O.C. 1844-52 on December 22 and gazetted December 31.

British Columbia Male Minimum Wage Act

A higher minimum rate for the construction industry applicable to the whole province was provided for in Male Minimum Wage Order No. 12 of January 8, gazetted January 15 and effective March 2.

The order, which replaces Order No. 12 (1940) and a 1952 amendment requiring the payment of time and one-half for overtime, applies to every employer and employee in the construction industry except those covered by another Order of the Board of Industrial Relations or exempted by the Board because they are employed in a supervisory, managerial or confidential capacity.

It sets a minimum wage rate of 85 cents per hour for all construction workers. Previously, the rate was 54 cents per hour in the cities of Vancouver and Victoria and surrounding municipalities and in Prince Rupert, and 48 cents in the rest of the province, for employees over 21 years of age (42 and 36 cents for those under 21). As before, handicapped or part-time employees and apprentices may be paid whatever wage is prescribed in written permits for their employment by the Board.

Overtime rates for all hours worked in excess of eight in a day or of 44 in a week where the hours worked do not exceed eight in any one day must be at least time and one-half the employee's regular rate of pay. Where other limits for working hours have been arranged, as provided for in the Hours of Work Act, overtime need not be paid until the hours agreed on have been completed.

Written permission from the Board is required for an employee to work more than eight hours in a day or 44 in a week except in exceptional cases as provided in the Hours of Work Act.

A new "daily guarantee" provision requires an employee reporting for work on the call of an employer to be paid the regular rate of pay for the entire period spent at the place of work, with a minimum of two hours' pay if he does not commence work and four hours' pay if he is put to work.

The new order also requires payment at least semi-monthly of wages earned by an employee up to a day not more than eight days prior to the date of payment.

The usual provisions requiring an employer to post a schedule of shifts and rest periods as well as a copy of the Order and to keep a register of his employees and records of their wages and hours are contained in the new order.

Saskatchewan Health Services Act

Amendments were made to the regulations governing the provision of free health services to certain classes of pensioners and their dependents to permit health services to be provided to pensioners from another province with which Saskatchewan has concluded a reciprocal agreement. The amendments were approved by O.C. 38/53 on January 6 and gazetted January 17.

The beneficiaries entitled to free health services under the regulations previously included persons over 70 years of age receiving an old age security pension and persons receiving a blind person's allowance whose low income makes them eligible for a supplementary allowance of $2.50 a month under the Saskatchewan Social Aid Act; dependants of such persons, including spouse and dependent children and grandchildren under 16 years of age; and mothers or incapacitated fathers receiving a mother's allowance under the Social Aid Act and their dependent children under 16 years of age.

A new provision permits the Minister of Public Health to enter into a reciprocal agreement with another province for the provision of free health services to recipients of certain allowances who move from one province to another. A person from another province living in Saskatchewan who is entitled to free health services under the terms of such an agreement is now included in the list of beneficiaries. Another change clarifies the condition that no person eligible to receive health services from the Government of Canada may be a beneficiary under these regulations.

Saskatchewan Hospitalization Act

The list of hospital services available to beneficiaries under the Saskatchewan Hospitalization Act during the calendar year 1953 was approved by O.C. 2802/52 on December 12 and gazetted December 27.

The services to be provided both in Saskatchewan hospitals and in hospitals outside the province are the same as in 1952. These include public ward accommodation, operating and caseroom facilities, surgical material, X-ray and other diagnostic procedures, physiotherapy, anaesthetic agents, drugs, and certain endocrine and vitamin preparations.

The maximum amount which may be paid out of the hospitalization fund to a beneficiary in a hospital outside Saskatchewan is an average of $5 a day for not more than 60 days, except under certain specified conditions. No payment may be made for a patient in a mental hospital, sanatorium, or hospital associated with mineral springs where treatment is given for arthritic and rheumatic conditions.

Saskatchewan Hours of Work Act

An exempting order under the Saskatchewan Hours of Work Act, permitting all employees in the 83 smaller centres with between 300 and 500 inhabitants, except factory workers, to work up to 48 hours a week before overtime must be paid, is to remain in force until June 30, 1953. The order, approved by O.C. 238/52 (L.G., 1952, p. 467), was due to expire December 31, 1952. Its term was extended by O.C. 2629, approved November 21 and gazetted November 29, 1952.

Safety Code for Woodworking Industry

Minimum standards for the safe installation, operation and maintenance of machinery in the woodworking industry including cooperage operations and the making of veneer are set forth in a *Safety Code for the Woodworking Industry* recently published by the Canadian Standards Association.

This CSA Standard (Z114-1952), prepared at the request of the Canadian Association of Administrators of Labour Legislation (L.G., 1951, p. 156), is recommended for adoption by industry and government authorities interested in the prevention of accidents in the woodworking industry.

The Code deals primarily with "point of operation" hazards on machinery used in connection with the last stage of the woodworking industry, the finishing of wood products. It does not apply to sawmill and woods operations. The term "point of operations" is defined in the Code as "that point at which cutting, shaping, boring, or forming is accomplished upon the stock".

Detailed specifications are set out for the proper location and safe construction of woodworking machines and equipment and the maintenance of floors and aisles in the working area.

"The driving power for woodworking machinery," the Code states, "should be by individual motors." A number of requirements for machine control designed to safeguard the operator are listed. The maximum speed at which circular saws may be safely operated, unless especially tensioned for higher speeds, is given as 10,000 peripheral feet per minute; in the Appendix to the Code there is a table of revolutions per minute of various sizes of saws to produce the maximum speed prescribed.

Section 5 deals comprehensively with guarding requirements for specific machines such as circular saws, band saws and band resaws, jointers (hand planers), tenoning, boring and mortising machines, wood shapers, planing, moulding, sticking and matching machines, profile and swing-head lathes and automatic shapers (including wood heel turning machines) and sanding machines. The mention of specific machines in this section, the Code states, "is not intended to exclude other woodworking machines from the requirements that suitable guards and exhaust hoods must be provided to reduce to a minimum the hazard due to the point of operation of such machines".

Specifications for cooperage machinery are dealt with in a separate section. Another section covers specifications for the construction, location and safe operation of machinery used in the making of veneer.

The final section of the Code contains rules for the maintenance of machinery and for the selection of suitable machines and tools and requirements with respect to the proper clothing and goggles which should be worn by operators of woodworking machinery. Emphasis is placed on the importance of maintaining systematic inspection of all woodworking machines and safety equipment to ensure the prompt correction of any developing defects.

Copies of *Safety Code for the Woodworking Industry* may be obtained from the General Manager, Canadian Standards Association, National Research Council, Ottawa. The price is $1 a copy.

Monthly Report on Operation of the Unemployment Insurance Act

Statistics* for December, 1952, show claims for benefit increased by about 75 per cent over November and 23 per cent over December 1951

The seasonal increase in claims for unemployment insurance benefit was reflected in the amount paid out in benefit during the month. Payments in December amounted to $10,926,557 in respect of 3,586,600 proven unemployed days, compared with $6,435,444 and 2,158,920 days during November. In December 1951, benefit payments totalled $6,923,194 in respect of 2,680,987 proven days.

The monthly report on the operation of the Unemployment Insurance Act, issued by the Dominion Bureau of Statistics, shows that initial and renewal claims increased by about 75 per cent over the previous month. The total for December was 215,848, compared with 123,418 for November, and was about 23 per cent higher than the December 1951, figure of 175,040. The increase over last month was common to all provinces, the largest—around 34,000—being recorded in Quebec. A comparison with December 1951, shows that all provinces except Ontario experienced a higher claim load. In Ontario there was a slight decline, caused in part by the much higher levels of employment maintained this year in the automotive and related industries.

Total claimants on the live unemployment register numbered 303,831 (247,329 males and 56,502 females) on December 31, compared with 181,554 (140,297 males and 41,257 females) on November 30 and 287,819 (213,657 males and 74,162 females) on December 31, 1951. Examination of the sex composition of claimants on the live register indicates that the proportion of males increased from 74 per cent on December 31, 1951, to 77 per cent on November 30, 1952, and to 81 per cent on December 31, 1952.

Ordinary claimants on December 31 totalled 265,274 compared with 161,912 in November and 238,950 in December 1951.

See Tables E1-E8 at end of book.

> Comparison of current employment statistics with those for a previous period serves no useful purpose if made on the basis of numbers alone. Consideration must be given to other relevant factors, such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

Short-time claimants on December 31 numbered 12,931 and claimants on temporary lay-off, 12,254. (The category "temporary lay-off" is not identical with the former "temporary mass lay-off". As now used, "temporary lay-off" is applied to all claimants who are temporarily separated from their employment but who have reasonable prospects of returning to their former employers within 30 days of lay-off).

Adjudication centres disposed of 183,435 initial and renewal claims during the month. Entitlement to benefit was granted in 142,793 cases. Claims disallowed—insufficiency of contributions—numbered 26,050, while disqualifications were imposed on 19,419 claimants (including 4,312 on revised and 515 on supplementary benefit claims). Chief reasons for disqualification were: "not unemployed", 7,017 cases, 3,879 of which were for a period of six days or less; "voluntarily left employment without just cause", 6,088 cases; "not capable of and not available for work", 1,515 cases.

A total of 120,101 claimants commenced the receipt of benefit payments during the month, compared with 68,034 in November and 87,739 in December 1951.

For the week December 27-January 2, 164,159 beneficiaries received $2,928,266 as compensation for 944,244 unemployed days, while for the week November 29-December 5, 112,319 beneficiaries received $1,883,934 in respect of 626,554 days. During the week December 29, 1951-January 4, 1952,

152,269 beneficiaries received $2,232,209 in compensation for 852,687 unemployed days.

The average daily rate of benefit for the week December 27-January 2 was $3.10, compared with $3.01 for the same week last month and $2.62 for the corresponding week last year.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission show that during December insurance books were issued to 4,364,856 employees who had made contributions to the unemployment insurance fund at one time or another since April 1, 1952.

Employers registered as at December 31 numbered 246,481, an increase of 581 since November 30, 1952.

Supplementary Benefit

Supplementary unemployment insurance benefit is payable during the period January 1 to April 15, inclusive.

The procedure for handling supplementary benefit claims remains substantially unchanged from last year. All claims are originally processed in the regular manner and those claims filed on or after December 1 for which the contribution requirements have not been met are immediately considered for supplementary benefit.

As no extension in coverage was made during the past year and Class 3 (pertaining to workers in lumbering and logging) is inoperative, claimants for supplementary benefit can qualify only under Classes 1 and 2—persons whose benefit years have terminated since the preceding March 31, and persons who have failed to meet the statutory conditions since that date.

Beginning this season, the period for which these benefits are payable is extended until April 15.

The number of initial claims considered during December and their disposition are shown in Table E-8 in the Labour Statistics section.

Decisions of the Umpire under the Unemployment Insurance Act

Digests of two selected decisions rendered by the Umpire

Decision CU-B 880, December 2, 1952

Held: *That a claimant, who had voluntarily left his employment to follow a day course in barbering in the hope of financing his course by obtaining night work, was not available for work within the meaning of the Act.*

Material Facts of Case.—The claimant, married, 38 years of age, was employed as a log-deck man in a sawmill from April 7, 1952, to April 23, 1952, when he voluntarily left to take a course in barbering.

He registered for employment as a waiter and filed a renewal claim for benefit on May 10, 1952. Also on the same date he filed a statement with the local office to the effect that he had commenced the course on April 28, 1952, which would continue until October 28, 1952. The hours of attendance were from 8:45 a.m. to 4:30 p.m. He stated also that he was available for work and was prepared to discontinue the course and accept suitable employment if offered to him at any time while he was on claim.

The insurance officer disqualified the claimant from the receipt of benefit for a period of six weeks as from April 24, 1952, because he had voluntarily left his employment without just cause within the meaning of Section 41 (1) of the Act. He also disqualified him for an indefinite period as from May 10, 1952, because he was not available for work within the meaning of Section 27 (1) (b) while attending the said course.

On June 16, 1952, the claimant filed a renewal claim for benefit and stated that he had worked in another sawmill as a tail sawyer on the night shift from May 29, 1952 to June 13, 1952, when his employment terminated because of a strike at the premises. The employer reported that the claimant's separation resulted from a shortage of logs.

The insurance officer considered that the fourteen days the claimant worked on the night shift was not sufficient continuity of employment to warrant a removal of the indefinite disqualification under Section 27 (1) (b).

From that decision the claimant appealed to a court of referees, which, after having heard the claimant, unanimously disallowed his appeal.

The claimant applied to the chairman of the court for leave to appeal to the Umpire, which was granted.

Conclusions.—The claimant voluntarily left his employment which consisted of day work in order to attend a six-month course in barbering upon completion of which he was assured of a job in that trade.

No doubt he was in earnest and expected to finance his studies by obtaining night work, a pattern of employment which he had followed at times in the past. However, as it turned out and as far as the record shows, in three months he succeeded in obtaining night work for two weeks only.

The claimant will undoubtedly admit that his chances of employment were lessened by his restricted availability. As was pointed out to him by the chairman of the court (transcript of the evidence—exhibit 12) "to be available for work means just that: employment whenever it is found, day or night. It is not on terms and conditions which you lay down".

For those reasons, the unanimous finding of the court of referees is upheld and the appeal is dismissed.

Decision CU-B 881, December 2, 1952

Held:(1) *That while the claimant had excellent personal reasons for voluntarily leaving her employment in a large city in order to accompany her husband, a member of the armed forces who had been transferred to another large city, she had not just cause within the meaning the the Act.*

(2) *That inasmuch as she could reasonably expect to find employment in her new place of residence and she registered for work shortly after her arrival, a reduction of the period of disqualification from six to two weeks was justified.*

Material Facts of Case.—The claimant, married, 28 years of age, filed an initial claim for benefit at the Commission's office in Vancouver, B.C., on July 8, 1952, and stated that she had been employed in Winnipeg, Man., as a comparative shopper by a large departmental store from August 1949, to June 27, 1952, when she voluntarily left because her husband, who is in the RCAF, was transferred to Vancouver.

The insurance officer disqualified her from the receipt of benefit for a period of six weeks because she had voluntarily left her employment without just cause (Section 41 (1) of the Act).

The claimant appealed to a court of referees which, after having heard the claimant, by a majority finding allowed her appeal on the ground that if, for the purposes of the Act, a wife of a civilian worker who voluntarily leaves her employment has the right to follow her husband to another locality where he has established his domicile, then the wife of a serviceman who is posted for duty to another point should be entitled to the same consideration.

The insurance officer appealed to the Umpire.

Conclusions.—As a general rule, a woman whether she is the wife of a serviceman or the wife of a civilian worker, does not show just cause within the meaning of the Unemployment Insurance Act if she voluntarily leaves her employment to follow her husband who is temporarily posted for duty or temporarily works at a distant point.

It is true that a wife has a legal and moral obligation to live with her husband wherever he has established his residence or domicile. On the other hand, it will be readily understood that the application of that principle in the case of a wife who has or chooses to be in the labour field may at times come into conflict with the underlying principle of the Unemployment Insurance Act, which is to assist the worker who is in the unfortunate position of being involuntarily unemployed. For that reason, unless there are special circumstances (for instance if the husband has established his domicile or is taking up residence for a substantial period of time in another locality) her status, in all fairness to the other contributors to the Unemployment Insurance Fund, is assimilated to that of a single girl.

While the claimant therefore in this case had excellent *personal* reasons for voluntarily leaving her employment, she had not just cause within the meaning of the Unemployment Insurance Act. However, inasmuch as she moved to a large centre in which she could reasonably expect to find employment and she registered for work shortly after her arrival there, I consider that the period of disqualification previously imposed by the insurance officer should be reduced to two weeks, effective as from the date that this decision is communicated to her.

Labour Conditions in Federal Government Contracts

Wage Schedules Prepared and Contracts Awarded during January

For Works of Construction, Remodelling, Repair or Demolition

During January the Department of Labour prepared 99 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition.

In the same period, a total of 85 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under this heading provide that:—

(a) the wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and that contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and forty-four in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and forty-four per week;

(d) no employee shall be discriminated against because of his race, national origin, colour or religion, nor because the employee has made a complaint with respect to such discrimination.)

Contracts awarded for the Manufacture of Supplies and Equipment

Contracts awarded during January for the manufacture of supplies and equipment are set out below:—

Department	No. of Contracts	Aggregate Amount
Defence Construction (1951) Ltd.: (Building and Maintenance)	4	$2,756,285.95
Defence Production (December Report)	135	969,993.00
Post Office	10	214,527.36
Public Works	2	16,922.00

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:—

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen, and if there is no current rate then a fair and reasonable rate, but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom, then fair and reasonable hours;

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour, showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work. These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is, however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no employee shall be discriminated against because of his race, national origin, colour or religion, nor because the employee has made a complaint with respect to such discrimination.)

Wages Claims Received and Payments Made during January

During January the sum of $120.81 was collected from one employer who had failed to pay the wages required by the labour conditions attached to his contract. This amount was distributed to the seven employees concerned.

Contracts Containing Fair Wages Schedules Awarded during January

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week and also empower the Minister of Labour to deal with any question which may arise with regard thereto.)

Department of Agriculture

Vauxhall Alta: Square M Construction & Equipment Co Ltd, reinforced concrete irrigation structures, Main Canal, Little Bow Reservoir.

Central Mortgage and Housing Corporation

Greenwood N S: Terminal Construction Co Ltd,* installation of fire alarm system. *Halifax N S:* Nova Scotia Light & Power Co Ltd,* installation of street lighting system; Nova Scotia Light & Power Co Ltd.*, installation of street lighting system. *Shearwater N S:* Murry & Falconer, landscaping; Municipal Spraying & Contracting Ltd, hardsurfacing of roads & driveways, H.M.C.S. "Shearwater". *Deep River Ont:* M Sullivan & Son Ltd, construction of addition to school. *North Bay Ont:* Bennett-Pratt Ltd, construction of extension to school, R.C.A.F. Station; Sterling Construction Co Ltd, installation of storm sewers. *Ottawa Ont:* Dinelle Plumbing Service, remodelling of shower baths, Laurentian Bldg. *Petawawa Ont:* Storms Contracting Co Ltd, construction of roads, parking areas & accesses. *Rockcliffe Ont:* Coghlan Construction Ltd, rough grading & placing of duckwalks. *New Westminster B C:* Ed Johnston,* landscaping. *Vancouver B C:* Rosehall Nurseries,* landscaping, Renfrew Heights.

Defence Construction (1951) Limited

Summerside P E I: M F Schurman Co Ltd, construction of water pumphouse & concrete water storage reservoir. *Chatham N B:* Caldwell Construction Co Ltd, construction of standard control tower. *Bagotville P Q:* A Janin & Co Ltd, construction of chapels; J R Theberge Ltee, construction of standard control tower; A Janin & Co Ltd, construction of standard drill & recreational hall. *St Hubert P Q:* O Langlois Construction Ltee, construction of standard explosive storage bldgs; Williams Construction Co Ltd, construction of chapels; Argo Construction Ltd, construction of standard synthetic training bldg. *Val d'Or P Q:* Stacey Mfg Co, erection of steel tanks. *Cobourg Ont:* George Hardy Ltd, construction of ordnance warehouses. *Leitrim Ont:* Sirotex Construction Ltd, construction of administration bldg. *Petawawa Ont:* Stacey Mfg Co, erection of fuel oil storage tanks. *South Bay Ont:* Tatham Co Ltd, construction of air to ground target range. *Churchill Man:* Manitoba Bridge & Engineering Works Ltd, erection of steel tank for bulk fuel storage. *Portage la Prairie Man:* Claydon Co Ltd, construction of standard drill & recreational hall. *Moose Jaw Sask:* Bird Construction Co Ltd, construction of standard garage. *Edmonton Alta:* Bennett & White of Edmonton Ltd, construction of command supply depot; Provincial Engineering Ltd, installation of underground steam distribution system. *Namao Alta:* Wappel Concrete Construction Co, construction of gun testing stop butt. *Penhold Alta:* Alexander Construction Co Ltd, extension to water supply system. *Frobisher Bay N W T:* Toronto Iron Works Ltd, erection of bulk petroleum storage tanks.

Torbay Nfld: United Engineers & Contractors Ltd, construction of power house. *Dorval P Q:* Robert LaFerme & Co Ltd, addition to stores bldg at airport. *Lac des Loups P Q:* Northland Construction Co Ltd, construction of two staff dwellings, equipment garage & power plant. *Quebec P Q:* Bergerville Estates Ltd, construction of power house at airport. *Bracebridge Ont:* F D Howie Construction Ltd, construction of equipment garage, dwelling & related work. *Killaloe Ont:* M J Sulpher & Sons Ltd, construction of equipment garage & two dwellings. *Ottawa Ont:* J R Seguin & Dagenais Ltd, installation of heating system in dwellings at s/w station; H J McFarland Construction Co Ltd, construction of omni-range station. *Grande Prairie Alta:* New West Construction Co Ltd, additional airport development. *Suffield Alta:* Urban Young, installation of field lighting at airport. *Nanaimo B C:* S E Weismiller & Son, construction of foundation for radio range bldg, etc.

At the beginning of 1953, weekly wages and salaries in Canada's major non-agricultural industries averaged $53.96, higher by $3.54 than the $50.42 average at the beginning of 1952. In manufacturing alone, the average was $55.05, up $3.23 from $51.82 a year earlier.

Tobacco, Cigar and Cigarette Industry

Average hourly wage rates rose approximately four per cent in year ending October 1, 1952. Since 1939, wage rates have increased about 250 per cent, a rise ranking with the highest in any other industry

Average hourly wage rates in the production of tobacco, cigars and cigarettes rose by approximately four per cent during the year ending October 1, 1952, according to preliminary figures from the Department's annual survey. During the previous 12-month period they increased 20·9 per cent; at the same time, the work week was reduced from 42 to 40 hours.

(The chief reason for the difference in increases during the two years was the granting, in an agreement signed in August 1951, of a substantial wage increase to a large proportion of the employees in the industry. This agreement affected several establishments.)

Since 1939, wage rates have increased approximately 250 per cent, a rise ranking with the highest obtained by employees in any other manufacturing industry.

For purposes of this article, 17 establishments across Canada were used, of which 15 were located in Quebec and Ontario. These factories employed a total of 6,300 workers, with a large majority working in Quebec. Ninety-four per cent of the workers were employed by four major companies, with the remaining six per cent distributed in the other 13 companies.

Standard Work Week

All but two of the 17 establishments used in this analysis of the tobacco, cigar and cigarette industry were on a five-day week as of October 1952. The majority of the 6,300 plant workers employed in the 17 plants were on a 40-hour schedule and in no case did the weekly hours exceed 45.

The five-day, 40-hour week has become more common among establishments in this industry: in 1951, only 13 of the 17 factories were on a five-day schedule.

Average Wage Rates

Average hourly wage rates are shown in the table for five male and 13 female occupations for the pay period preceding October 1, 1952. (By far the larger number employed in this industry are women.) The Canada average wage rates cover Quebec and Ontario only. This means the exclusion of only two relatively unimportant factories.

Of the male workers in the tobacco products industry, cigar rollers received the lowest rate of pay, 89 cents an hour, and machinists the highest, $1.81. For the female workers, cigar rollers received the lowest rate of pay, 79 cents an hour, and cigarette-making machine operators the highest, $1.33. Average wage rates for other female occupations shown include hand packers, $1.05 per hour; cigarette machine stemmers, $1.20; and searchers (pickers), $1.31.

Increases in wage rates over those which prevailed in 1951 occurred in 15 of the 18 occupations used in this analysis, with the amounts varying from one to 16 cents an hour. The other three occupations showed slight decreases. Adjusters received increases which averaged one cent; female machine cigarette packers, 16 cents. For the occupations receiving increases, the average amounted to six cents an hour.

AVERAGE WAGE RATES FOR SELECTED OCCUPATIONS IN THE MANUFACTURE OF TOBACCO, CIGARS AND CIGARETTES, OCTOBER, 1952

Occupation and Locality	Rate per Hour
	$
Canada (Quebec and Ontario)	
Adjuster	1.70
Binderlayer, Female	1.26
Cigarette Making Machine Catcher, Female	1.22
Cigarette Making Machine Operator, Female	1.33
Cigarette Packer, Machine, Female	1.06

Stemmer, Machine, Cigar, Female	1.09
Unskilled Worker, Male	1.26
Unskilled Worker, Female	1.07
Wrapper Layer, Female	1.29

Prices and the Cost of Living*

Consumer Price Index, Feb. 2, 1953

The Dominion Bureau of Statistics consumer price index dropped one-fifth of a point, from 115·7 to 115·5, between January 2 and February 2, 1953. A decline in the food index accounted for most of the change.

The food index dropped from 113·5 to 112·7. Among items showing decreases were sugar, tea, eggs, oranges, potatoes, tomatoes, lettuce and celery. Margarine and most meats, particularly fresh pork, were higher in price.

Price changes in index items other than food were confined to narrow limits. The clothing index moved from 109·7 to 109·6; the household operations group advanced from 116·5 to 116·6. No change was recorded in the index of other commodities and services, which remained at 116·7. An increase in the rent index of 0·2 per cent, from 123·5 to 123·8, advanced the shelter component from 122·3 to 122·5.

The consumer price index for one year ago (February 1, 1952) was 117·6. Group indexes at that date were: food, 120·8; shelter, 118·3; clothing, 113·5; household operation, 116·3; and other commodities and services, 115·8.

Cost-of-Living Index, Feb 2, 1953

The cost-of-living index advanced from 184·4 at January 2, 1953, to 184·9 at February 2, 1953. At February 1, 1952, it was 190·8.

(It was recently announced that publication of the cost-of-living index will continue for another six months, until September, to allow more time for conversion to the use of the new index.)

Group indexes at February 2 were: food, 227·4; rent, 150·5; fuel and light, 154·3; clothing, 205·2; home furnishings and services, 196·1; and miscellaneous, 149·0.

Group indexes at January 2 were: food, 226·2; rent, 150·2; fuel and light, 153·9; clothing, 205·3; home furnishings and services, 196·0; and miscellaneous, 148·9.

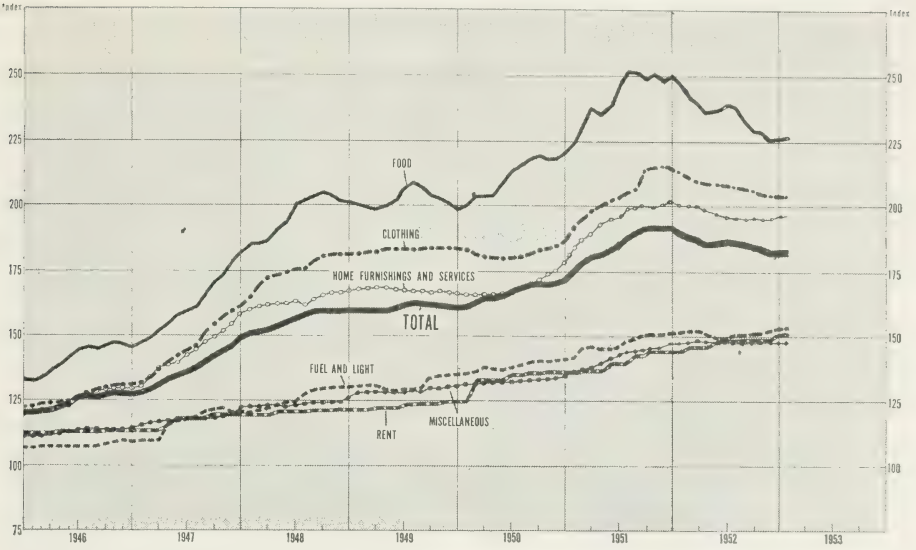
Group indexes one year ago (February 1, 1952) were: food, 248·1; rent, 144·8; fuel and light, 151·3; clothing, 213·0; home furnishings and services, 200·1; and miscellaneous, 146·5.

See Tables F-1 to F-6 at end of book.

City Cost-of-Living Indexes, Jan. 2, 1953

Cost-of-living indexes advanced in seven of the nine regional cities between December 1, 1952, and January 2, 1953, declined in one, Edmonton, and remained unchanged in the eighth, Halifax.

Increases for meats and potatoes and decreases for eggs and fresh fruits were the predominant changes registered in food prices. Clothing indexes in Saskatoon, Edmonton and Vancouver were lower as a result of decreases in the prices of men's suits, socks and footwear. In Halifax and Saint John a slight advance in cotton yard goods moved the clothing indexes higher. Increases in telephone rates were recorded in Saint John and Vancouver. Other advances in the home furnishings and services group were noted for furniture, floor coverings and electrical equipment in some cities, with decreases being recorded for soaps and other household supplies.



Fuel and light indexes were unchanged in five cities, while in the remaining four, indexes were higher because of increases in coal and coke prices. Rents showed advances in six of the nine cities, no changes being recorded for Saint John, Winnipeg and Saskatoon. Indexes for miscellaneous items were unchanged except in Vancouver, where a decrease of 0·1 points occurred.

Composite city cost-of-living index point changes between December 1 and January 2 were: Montreal, +0·9 to 189·7; Saskatoon, +0·9 to 181·8; Toronto, +0·5 to 181·3; Saint John +0·3 to 180·7; Winnipeg, +0·2 to 176·5; Vancouver, +0·1 to 188·2; St. John's, +0·1 to 102·4; Edmonton, —0·6 to 175·6; and Halifax, unchanged at 173·5.

Wholesale Prices, Jan. 1953

Canada's general index number of wholesale prices rose 0·1 per cent in January, compared with December, but was 6·5 per cent below last year's January level. This year's January index stood at 221·5 compared with 221·2 in December and 236·8 in January 1952.

Among the group indexes, non-ferrous metals moved up from 167·7 in December to 169·6, reflecting increases for silver, lead and zinc. In the animal products section, firmer prices for fresh meats, fowl, cured meats, milk and its products and fish outweighed decreases in hides, livestock and eggs to advance the group index from 237·4 to 239·3.

The chemical products group index rose from 176·1 to 177·0 as a result of price increases for glycerine, shellac, aluminum sulphate, soda ash and litharge. These outweighed decreases for copper sulphate and sodium cyanide.

A change from 174·9 to 175·3 in non-metallic minerals was due to advances in imported anthracite and domestic bituminous coal, asphalt and cement and crushed stone at certain centres. An advance in iron and steel products from 221·4 to 221·5 reflected an increase in the castings sub-group index.

Because of lower quotations for raw cotton, cotton yarns, cotton duck and jute bags, the fibres, textiles and textile products group index declined from 241·4 to 240·3. These decreases outweighed advances in raw wool, woollen yarns, cloth and carpets.

Lower prices for grains, rubber, sugar, potatoes, oranges, tea and coffee and raw leaf tobacco overbalanced strength in milled feeds, vegetable oils and onions to lower the vegetable products index from 202·7 to 202·0.

The wood, wood products and paper index also receded from 291·2 to 291·1 as a result of lower prices for woodpulp, which outweighed advance in cedar shingles.

The index for Canadian farm products at terminal markets declined in January to 219·9 from 222·3. Lower prices were recorded for both field and animal products, the index for the former series declining from 176·4 to 173·4, reflecting decreases in grains and potatoes, the index for the latter dropping from 268·3 to 266·4, mainly as a result of lower quotations for western livestock and eggs outweighing moderate strength in eastern livestock.

The index for residential building material prices moved fractionally from 283·8 to 283·7 between December and January. Group changes were small; lumber prices averaged slightly lower while the paint and glass sub-group was somewhat higher because of an advance in shellac. The electrical equipment and fixtures series decreased in the wake of a lower price for outlet boxes.

The new United States consumer price index, issued in completely revised form for the first time, dropped two-tenths of a point between mid-December 1952, and mid-January 1953, the Bureau of Labour Statistics reported. The index declined from 114·1 to 113·9.

The mid-January figure was 0·7 per cent above that for a year earlier, 11·9 per cent above the level of June 1950, but 0·3 per cent below the peak reached in November 1952.

Strikes and Lockouts

Canada, January 1953*

Fewer workers were involved in work stoppages in January than in the previous month and the resulting time loss was down. Three stoppages caused more than three-quarters of the total idleness. These were: copper refiners at Montreal, Que.; rayon factory workers at Louiseville, Que.; and clothing and hosiery factory workers at Montreal, Que.

Wages and related matters were the central issues in nine stoppages in January 1953, causing 80 per cent of the total idleness. Of the other disputes, two arose over dismissals and lay-offs, two over causes affecting working conditions and one over a union question.

Preliminary figures for January 1953, show 14 strikes and lockouts in existence in the month, involving 2,136 workers, with a time loss of 31,050 days, compared with 18 strikes and lockouts in December 1952, with 3,646 workers involved and a loss of 47,279 days. In January 1952, there were 15 strikes and lockouts, with 5,749 workers involved and a loss of 75,220 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in January 1953, was 0·03 per cent of the estimated working time, compared with 0·05 per cent in December 1952, and 0·08 per cent in January 1952.

Of the 14 strikes and lockouts in existence in January 1953, two were settled in favour of the workers, two in favour of the employers, and two were compromise settlements. At the end of the month eight stoppages were recorded as unterminated.

(The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes and lockouts of this nature still in progress are: compositors, etc., at Winnipeg, Man., which began on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; and waitresses at Timmins, Ont., on May 23, 1952.)

Great Britain and Other Countries

(The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. Statistics given in the annual review issued as a supplement to the LABOUR GAZETTE and in this article are taken, as far as possible, from the government publications of the countries concerned or from the International Labour Office *Year Book of Labour Statistics*.)

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in November 1952, was 128 and 15 were still in progress from the previous month, making a total of 143 during the month. In all stoppages of work in progress, 47,500 workers were involved and a time loss of 126,000 working days caused.

Of the 128 disputes leading to stoppages of work which began in November nine, directly involving 29,400 workers, arose over demands for advances in wages, and 37, directly involving 6,100 workers, over other wage questions; six, directly involving 300 workers, over questions as to working hours; 18, directly involving 3,200 workers, over questions respecting the employment of particular classes or persons; 53, directly involving 4,000 workers, over other questions respecting working arrangements; and five, directly involving 2,000 workers, over questions of trade union principle.

United States

Preliminary estimates released by the United States Bureau of Labor Statistics for the year 1952 show 4,950 work stoppages resulting from labour-management disputes involving about 3,500,000 workers and causing a time loss of 55,000,000 man-days. Comparable figures for 1951 are 4,737 stoppages with 2,220,000 workers involved and a time loss of 22,900,000 days.

loading and unloading operations. The Employers contended that the existing scale was conceived with respect both to favourable and unfavourable job conditions and that the premium was thus merely a request for additional wages.

Recommendations on Dust Premium— The Chairman and Mr. Bury feel that the Union's case for a dust premium has merit and recommend that the ten cent premium be granted. Mr. Ellis recommends that the existing uniform rate be maintained.

(Sgd.) Joseph A. Crumb,
Chairman.
(Sgd.) T. E. H. Ellis,
Member.
(Sgd.) J. Bury,
Member.

Signed at Vancouver on January 17, 1953.

CORRECTION

The classifications of the railway personnel affected were inadvertently omitted in the reports of the Boards of Conciliation as they appeared in the February issue of the Labour Gazette, pages 248 and 260.

In the dispute between the Canadian National Railways and the Brotherhood of Railroad Trainmen (p. 248), the employees involved were: (1) yardmasters and assistant yardmasters of all lines in Canada except on former government railways south of the St. Lawrence River; (2) conductors, baggagemen, brakemen and yardmen, Atlantic and Central Regions; (3) baggagemen, flagmen and brakemen, Western Region; (4) yardmen, Western Region; and (5) freight handlers handling LCL freight on passenger trains.

In the dispute between the Canadian Pacific Railway Company and the Brotherhood of Railroad Trainmen (p. 260), the employees involved were: (1) conductors, baggagemen, trainmen, yardmen and switchtenders employed on the Prairie and Pacific Regions; (2) conductors, baggagemen, trainmen, yardmen and switchtenders employed on Eastern Region; and (3) yardmasters on all lines.

NOTICE

The subscription rate of the *Labour Gazette* will be raised to $1.50 a year, effective with the April, 1953, issue.

Group subscriptions (5 or more) will be 50 cents each a year; single issues, 15 cents

This announcement is made with regret. Publishing costs have increased since the subscription rate was last changed in 1948. The present price increase is only the second in the 53 years that the Labour Gazette has been published

hogs	000		792·9	435·8	381·2	767·7	403·8
Flour production	000,000 bbls.		1·84	1·76	1·97	2·03	1·60
Newsprint (3)	000 tons		463·4	435·3	430·6	245·0	240·7
Cement producers' shipments	000,000 bbls.		1·06	0·78	0·79 (6)	0·19 (6)	0·21
Automobiles and trucks	000			22·1	30·7	12·5	17·0
Gold	000 fine oz.			378·1	382·5	229·6	434·5
Copper	000 tons			22·1	22·8	22·9	26·3
Lead	000 tons			15·6	11·7	17·6	15·8
Nickel	000 tons			11·4	10·3	10·9	8·9
Zinc	000 tons			30·3	27·2	25·4	17·6
Coal	000 tons	1,777	1,740	1,729	1,927	1,524	1,486
Crude petroleum	000,000 bbls.			3,924	2,603	879	503
Electric power	000,000 k.w.h		5,536	5,113	4,674	3,356	2,536
Construction—							
Contracts awarded	$000,000	99·6	98·1	120·5	102·5	12·7	9·4
Dwelling units started	000		3·7	2·2	4·1	†	†
completed	000		7·1	6·5	11·3	†	†
under construction	000		55·7	45·9	59·4	†	†
Distribution—							
Wholesale sales index, unadjusted (4)			341·5	307·2	†	†	†
Retail trade	$000,000		1,120·8	1,005·7	976·4	†	†
Imports, excluding gold	$000,000		345·5	273·0	266·3	127·2	72·1
Exports, excluding gold	$000,000		389·4	379·3	289·9	266·9	101·0
Railways—							
Revenue freight, ton miles	000,000			5,490	5,191	5,192	2,976
cars loaded	000		333·5	314·6	314·2	273·0	199·9
Banking and Finance—							
Common stocks, index (4)		172·3	168·4	177·3	146·3	86·6	92·2
Preferred stocks, index (4)			160·7	159·5	160·2	129·8	110·1
Bond yields, Dominion, index (4)		118·3	118·0	112·0	96·7	96·9	110·5
Cheques cashed, individual accounts	$000,000		12,386	10,134	9,315	5,063	3,057
Bank loans, current public	$000,000		3,188	2,901	2,651	1,182	960
Money supply	$000,000		5,173	4,843	4,851 (5)	3,153 (5)	1,370
Circulating media in hands of public	$000,000		1,377	1,275	1,214	990 (5)	281
Deposits	$000,000		3,796	3,568	3,637 (5)	2,163 (5)	1,089

NOTE—Latest figures subject to revision. Many of the statistical data in this table are included in the Canadian Statistical Review issued by the Dominion Bureau of Statistics.

* Population figures given are as at Sept. 1, for 1952, June 1 for 1951, Sept. 1 for 1950, June 1, for 1944 and 1939.

† Comparable statistics are not available.

(1) Labour Force Survey figures given are as at Dec. 13, 1952, Nov. 3, 1951 and Nov. 4, 1950. Estimates are based on 1951 census. Prior to December 1952 labour force figures were available only on quarterly basis.

(2) Real earnings computed by dividing the Consumer Price Index into the average weekly earnings index base: average 1946 = 100.

(3) Newfoundland is included after April 1, 1949.

(4) Average 1935-39 = 100.

(5) Year end figures.

(6) Figures for 1939-44 are production data rather than shipments.

(7) Effective August 1, 1952, claimants on temporary mass lay-offs excluded from total of claimants.

[1] Includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies and non-metallic mineral products. The non-durable group includes the remaining manufacturing industries.

[2] Mainly hotels, restaurants, laundries, dry cleaning plants and business and recreational services.

TABLE C-4.—HOURS AND EARNINGS IN MANUFACTURING

(Hourly-Rated Wage-Earners) SOURCE: Man-hours and Hourly Earnings, D.B.S.

Tables C-4 to C-6 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage-earners of the co-operative firms.

Year and Month	All Manufactures			Durable Goods			Non-Durable Goods

D—National Employment Service Statistics

Tables D-1 to D-7 are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751: statistical report on employment operations by industry, and UIC 757: inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

Form UIC 751: This form provides a cumulative total for each month of all vacancies notified by employers, applications made by workers, and referrals and placements made by the National Employment Service. Also reported are the number of vacancies unfilled and applications on file at the beginning and end of each reporting period. Because the purpose of these data is to give an indication of the volume of work performed in various local National Employment Service offices, all vacancies and applications are counted, even if the vacancy is not to be filled until some future date (deferred vacancy) or the application is from a person who already has a job and wants to find a more suitable one.

Form UIC 757: This form provides a count of the number of jobs available and applications on file at the end of business on a specified day. Excluded from the data on unfilled vacancies are orders from employers not to be filled until some future date. The data on job applications from workers exclude those people known to be already employed, those known to be registered at more than one local office (the registration is counted by the "home" office), and registrations from workers who will not be available until some specified future date.

Claimants for unemployment insurance benefits who are subject to a temporary mass lay-off are not registered for employment, and thus are not included in the statistics reported on form UIC 751 nor in the main figures in form UIC 757. A temporary mass lay-off is defined as a lay-off either for a determinate or indeterminate period which affects 50 or more workers and where the workers affected, so far as is known, will be returning to work with the same employer. Commencing 15 days after the date of such a lay-off, claimants still on the live insurance register are registered for employment on their next visit to the office and henceforth are counted in both statistical reporting forms. Persons losing several days' work each week and consequently claiming short-time unemployment insurance benefits are not included in either statistical reporting forms unless they specifically ask to be registered for employment.

TABLE G-1.—STRIKES AND LOCKOUTS IN CANADA, JANUARY, 1953, JANUARY AND DECEMBER, 1952†

Date	Number of Strikes and Lockouts		Number of Workers Involved		Time Loss	
	Commencing During Month	In Existence	Commencing During Month	In Existence	In Man-Working Days	Per Cent of Estimated Working Time
January, 1953*	14‡	14	2,136‡	2,136	31,050	0·03
December, 1952*	8	18	1,442	3,646	47,279	0·05
January, 1952*	15‡	15	5,749‡	5,749	75,220	0·08

* Preliminary figures.

‡ Strikes unterminated at the end of the previous year are included in these totals.

†The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, JANUARY, 1953 (1)

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(2)
	Establishments	Workers		
Strikes and Lockouts in Progress Prior to January, 1953				
MINING—				
Copper refiners, Montreal, P.Q.	1	200	5,000	Commenced July 14, 1952; for a union agreement; unterminated.
MANUFACTURING—				
Textiles, Clothing, etc.—				
Rayon factory workers, Louiseville, P.Q.	1	460	10,000	Commenced March 10, 1952; for a new agreement providing for increased wages, union shop, check-off and other changes following reference to arbitration board; unterminated.
Clothing and hosiery factory workers, Montreal, P.Q.	2	490	9,000	Commenced November 25, 1952; for a new agreement providing for increased wages and other changes following reference to arbitration board; unterminated.
Miscellaneous Wood Products—				
Wood furniture factory workers, Durham, Ont.	1	65	1,400	Commenced July 21, 1952; for a union agreement providing for increased wages, union security, two weeks' vacations with pay and pay for seven statutory holidays, following reference to conciliation board; unterminated.
Metal Products—		(3)		
Jewellery factory workers, Vancouver, B. C.	5	44	900	Commenced December 8, 1952; for implementation of award of conciliation board for increased wages, pay for nine statutory holidays and other changes in new agreement under negotiations; work resumed at one establishment Jan. 30-53; unterminated.
CONSTRUCTION—				
Buildings and Structures—				
Sheet metal workers, Fort William and Port Arthur, Ont.	15	150	2,400	Commenced December 17, 1952; for implementation of award of conciliation board for increased wages in new agreement under negotiations; terminated January 23; negotiations; compromise.
Carpenters, Fort William, Ont.	1	33	650	Commenced December 17, 1952; for a new agreement providing for increased wages retroactive to Apr. 1-52; unterminated.
Strikes and Lockouts Commencing During January, 1953				
MINING—				
Coal miners, Mercoal, Alta.	1	335	670	Commenced January 29; alleged violation of seniority in lay-off of a worker; terminated January 30; negotiations; in favour of workers.
MANUFACTURING—				
Textiles, Clothing, etc.—				
Silk dyers, printers and finishers, Joliette, P.Q.	1	185	200	Commenced January 15; for a greater increase in wages than recommended in award of arbitration board in new agreement under negotiations; terminated January 16; conciliation; in favour of workers.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, JANUARY, 1953 [1]

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars [2]
	Establishments	Workers		
Strikes and Lockouts Commencing During January, 1953				
MANUFACTURING—*Concluded*				
Metal Products—				
Steel mill workers, painters, Trenton, N.S.	1	14 [4]	25	Commenced January 20; protesting dismissal of four workers; terminated by January 22; replacement; in favour of employer.
Aluminum foundry moulders, Wallaceburg, Ont.	1	40	200	Commenced January 22; for extension of heat-relief periods for moulders; terminated January 28; return of workers; in favour of employer.
CONSTRUCTION—				
Miscellaneous—				
Power project drillers and powdermen, McArthur Falls, Man.	1	90	100	Commenced January 8; for increased wages; terminated January 9; negotiations; compromise.
TRADE—				
Coal handlers, Montreal, P.Q.	1	24	490	Commenced January 8; *re* number of men required on conveyor belt following reference to arbitration board; unterminated.
SERVICE—				
Business and Personal—				
Valet service store workers, Oshawa, Ont.	1	6	15	Commenced January 28; for a union agreement providing for increased wages; unterminated.

[1] Preliminary data based where possible on reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

[2] In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

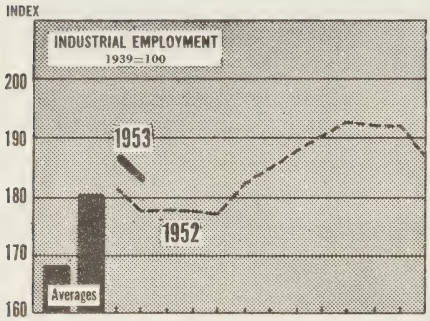
APRIL 15, 1953

CURRENT manpower and labour relations REVIEW

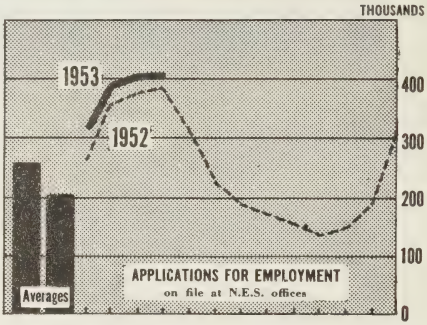
Economics and Research Branch, Canadian Department of Labour

Current Manpower Situation

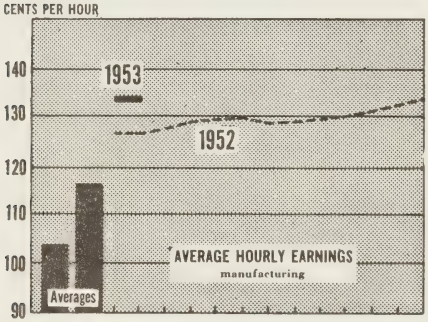
DURING the greater part of March, the general pattern of employment did not change significantly from that of the preceding two months. Logging employment continued to decrease in Eastern Canada as most camps terminated their season's operations; construction employment had already reached a low ebb in most regions. On the other hand, industrial employment continued to hold firm during the month at levels considerably higher than last year.



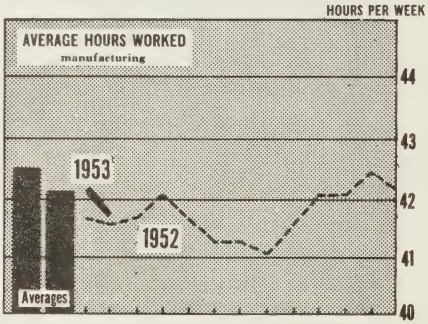
As the month progressed, however, it became apparent that for Canada as a whole the seasonal low point for employment opportunities had been reached and that in succeeding weeks a general improvement in the employment situation could be expected. By the first of April about 67 per cent of all paid workers were located in labour surplus areas, compared with 75 per cent in the previous month and 87 per cent in early April last year. This change can be largely attributed to the early opening of navigation and the gradual seasonal rise in construction activity.



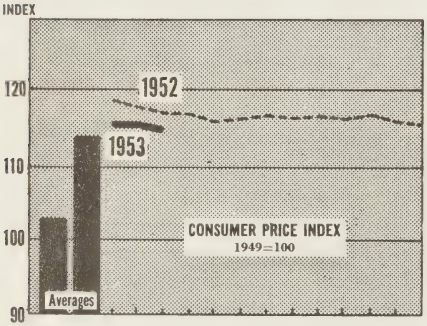
The monthly Labour Force Survey, which provides an overall picture of current manpower utilization patterns, estimates that for the week ending March 21, 1953, there were 5,192,000 persons in the civilian labour force, a decrease of 2,000 from the figure reported for the week ending February 21. Of this total, 4,534,000 were at work for 35 hours or more during the week, an increase of 16,000 from February 21; 325,000 were at work for fewer than 35 hours, an increase of 4,000 from the previous month; 161,000 had jobs but were not at work, a decrease of 15,000; and 172,000 were without jobs and seeking work, a decrease of 7,000.



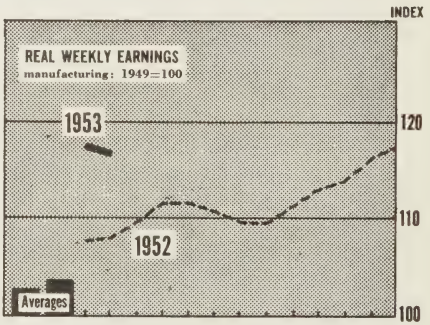
Of the 325,000 persons working fewer than 35 hours during the week, about 195,000 were reported as usually working part-time. Of the remaining 130,000, about 31,000 were employed on a short-time basis; 40,000 were away because of illness and 17,000 because of bad weather; the remainder were not at work for various reasons, including temporary lay-offs, vacations or industrial disputes. These proportions were not

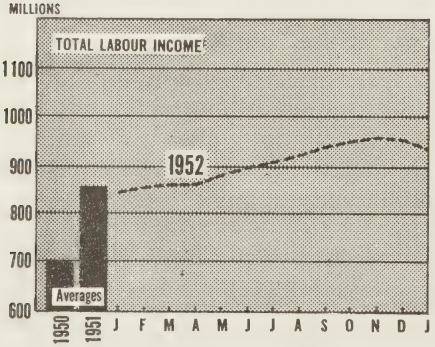


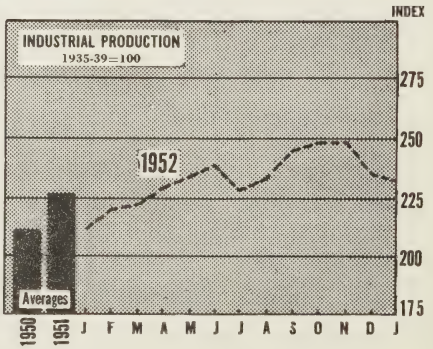
A Monthly *Labour Gazette* Feature



CURRENT LABOUR TRENDS







markedly different from those of the previous month.

Of the 161,000 persons estimated to have jobs but not working at all during the survey week, 82,000 persons were idle because of illness, the most important reason for absence from work. About 39,000 workers were laid off for the full week and 15,000 persons were on vacation. The only significant changes from the previous month were temporary lay-offs, which involved 13,000 fewer persons than in February, and absences due to illness, which involved 13,000 more.

It was estimated that 172,000 persons were without jobs and seeking work during the survey week. Another 12,000 worked part of the week but were also actively seeking other work, making a total of 184,000 persons actively seeking work during the week ending March 21. While the total was slightly less than for the week ending February 21 (193,000), the active labour force also contracted slightly, so that the ratio of this group to all paid workers in Canada (5 per cent) remained substantially the same.

Supplementary information with respect to regional patterns is available from data on registrations for employment, collected at local National Employment Service Offices. Between February 19 and March 19, 1953, the number of applications on file for all regions rose by about 6,000, bringing the total to about 408,000 at the latter date. The increase during the previous month was 17,000.

The largest increase took place in the Quebec region, where the number of applications increased by nearly 12 per cent, bringing the regional total to 149,800. The total in the Prairie region (55,300) also increased slightly while in the Atlantic region (60,300) it remained about the same. These three regional totals were all markedly higher than last year. On the other hand, the number of applications in the Ontario region (92,400) decreased by nearly 5 per cent during the month and the total was more than 16 per cent lower than at the same time last year. The number in the Pacific region (49,900) declined by more than 11 per cent during the month but was still somewhat higher than last year.

Unusually mild weather has been an important factor affecting employment during most of the winter. March was no exception, since the continuation of favourable weather conditions permitted the resumption of activity in many parts of Canada in such seasonal activities as construction, shipping and farming. Construction, in particular, began to reduce surplus labour supplies in the latter part of March and it is already apparent that the demand for construction workers may exceed local supplies in some areas during the months to come.

While seasonal activities of the kind noted above are now increasing as weather permits, heavy industry continues to provide many new job opportunities. By February 1, 1953, industries manufacturing transportation equipment, for example, were operating at employment levels more than 20 per cent higher than a year earlier, having increased their staffs by more than three per cent during January. Employment in manufacturing industries as a whole increased by 0.7 per cent during the month; the year-to-year increase was nearly seven per cent. The index of industrial production shows year-to-year gains of even greater magnitude.

Labour—Management Relations

AT mid-April, major developments occurred in collective bargaining which are expected to be significant in the 1953 industrial relations picture. Although comparatively few settlements had been reached in larger establishments, important negotiations were in progress in a number of industries, including coal mining, gold and base metal mining, water transportation and electrical goods manufacturing. A few building trades agreements have been signed but most of them are either in the negotiation or conciliation stages or are about to be bargained. Bargaining in the important West Coast logging and lumbering industry is expected to begin shortly.

Current Negotiations. In the coal-mining industry, both in the Maritimes and in the West, negotiations have been proceeding for some time between the United Mine Workers of America (CCL) and the operators. In both regions, conciliation assistance was given. Substantial wage increases requested by the miners, who number about 20,000, were rejected by the companies.

The United Steelworkers of America (CIO-CCL) is engaged in bargaining with several large gold and base metal mines in Northern Ontario and Quebec. The main issues appear to be wage increases and union security. In British Columbia, the International Union of Mine, Mill and Smelter Workers (independent), has begun bargaining in a few mines; negotiations are about to begin in others.

Several water transportation disputes are still undergoing conciliation. The most important of these disputes involves the Seafarers' International Union (AFL-TLC) and shipping companies on the West Coast, the Shipping Federation of Canada on the East Coast, and four of the major companies operating on the Great Lakes; the Canadian Brotherhood of Railway Employees and Other Transport Workers (CCL) and the Canadian National Newfoundland Steamship Service.

Little progress was reported in negotiations between the United Electrical, Radio and Machine Workers (independent) and the Canadian Westinghouse Co., Limited, in Hamilton and Canadian General Electric Company, Limited, covering its Toronto and Peterborough plants. At Peterborough, however, The International Union of Electrical, Radio and Machine Workers (CIO-CCL) has applied for certification to displace the United Electrical Radio and Machine Workers (independent). The IUE is also negotiating with the Phillips Electrical Works, Limited, Brockville.

Most of the building trades agreements signed so far have been relatively small ones between individual unions and various builders' exchanges. In Winnipeg, however, an agreement between 11 AFL-TLC building trades unions and the Winnipeg Building Trades Council provides a 10-cent hourly increase, effective May 1. Ordinarily, the various construction craft unions bargain separately with the employer groups but in Winnipeg the various unions joined together for bargaining purposes. In other building trades bargaining now in progress elsewhere in the country, the main demand is for wage increases.

The master agreement between West Coast logging and lumbering operators and the International Woodworkers of America (CIO-CCL) expires on June 14. Bargaining over a new agreement, involving more than 30,000 workers, was expected to begin during April.

A conciliation officer was appointed in a dispute involving more than 1,500 employees at the Polymer Corporation, Sarnia, represented by United Gas, Coke and Chemical Workers (CIO).

Strikes and Lockouts. A strike of 1,600 grain elevator workers at the Lakehead, represented by the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (AFL-TLC), was averted following a conciliation conference in Ottawa early in April. The dispute arose over the application of the five-day week and, following a strike vote, the union had threatened to call the strike beginning April 6.

The strike of 275 elevator employees at five storage elevators on the West Coast, which began February 16, was still in progress at the time of writing. The demands of the union, the International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America (CIO-CCL), are for increased wages, dust premiums, the inclusion of schedules of job classifications in the collective agreement and pay for eight statutory holidays instead of six.

For the first three months of 1953, preliminary figures show 38 work stoppages, involving only about 9,000 workers with a time-loss of 88,000 man-working days.

Preliminary Index of Wage Rates. Wage rates increased by 8.1 per cent during the 12-month period preceding October 1, 1952, according to the annual survey of employers conducted by the Economics and Research Branch. The index rose from 243.6 at October, 1951, to 263.3 at the same date in 1952 (1939=100). The increase in the preceding year was 12.8 per cent.

The six major industrial groups used to compile the general average all showed substantial gains but in only two of the groups, logging and service, were the increases higher than in the previous year.

The largest increase, 19.3 per cent, was in the logging industry, reflecting gains of 25 per cent in Eastern Canada and 3 per cent on the Pacific Coast. (The Eastern Canada figure is as of February, 1952, whereas the Pacific Coast figure is as of October). More modest gains were registered in the other four groups, ranging from 6.5 per cent in manufacturing to 10.3 per cent in transportation and communication.

Indexes of Wage Rates for Six Major Industrial Groups in Recent Years (1939=100)

Industry	1945	1949	1951	1952	Per Cent Increase 1951-1952
Logging	153.3	216.2	246.2	293.8	19.3

Durables	January	312.7	+ 2.7	+15.7
Non-Durables	January	202.1	— 5.0	+ 3.8

(a) Estimated by DBS on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs. Labour force estimates are based on a sample survey of 30,000 households chosen by area sampling methods in more than 100 different areas in Canada. They are subject to sampling error. In general the smaller the estimate, the larger the relative sampling error. The estimates, however, do show the numbers in the various labour force categories with sufficient accuracy for practical purposes.

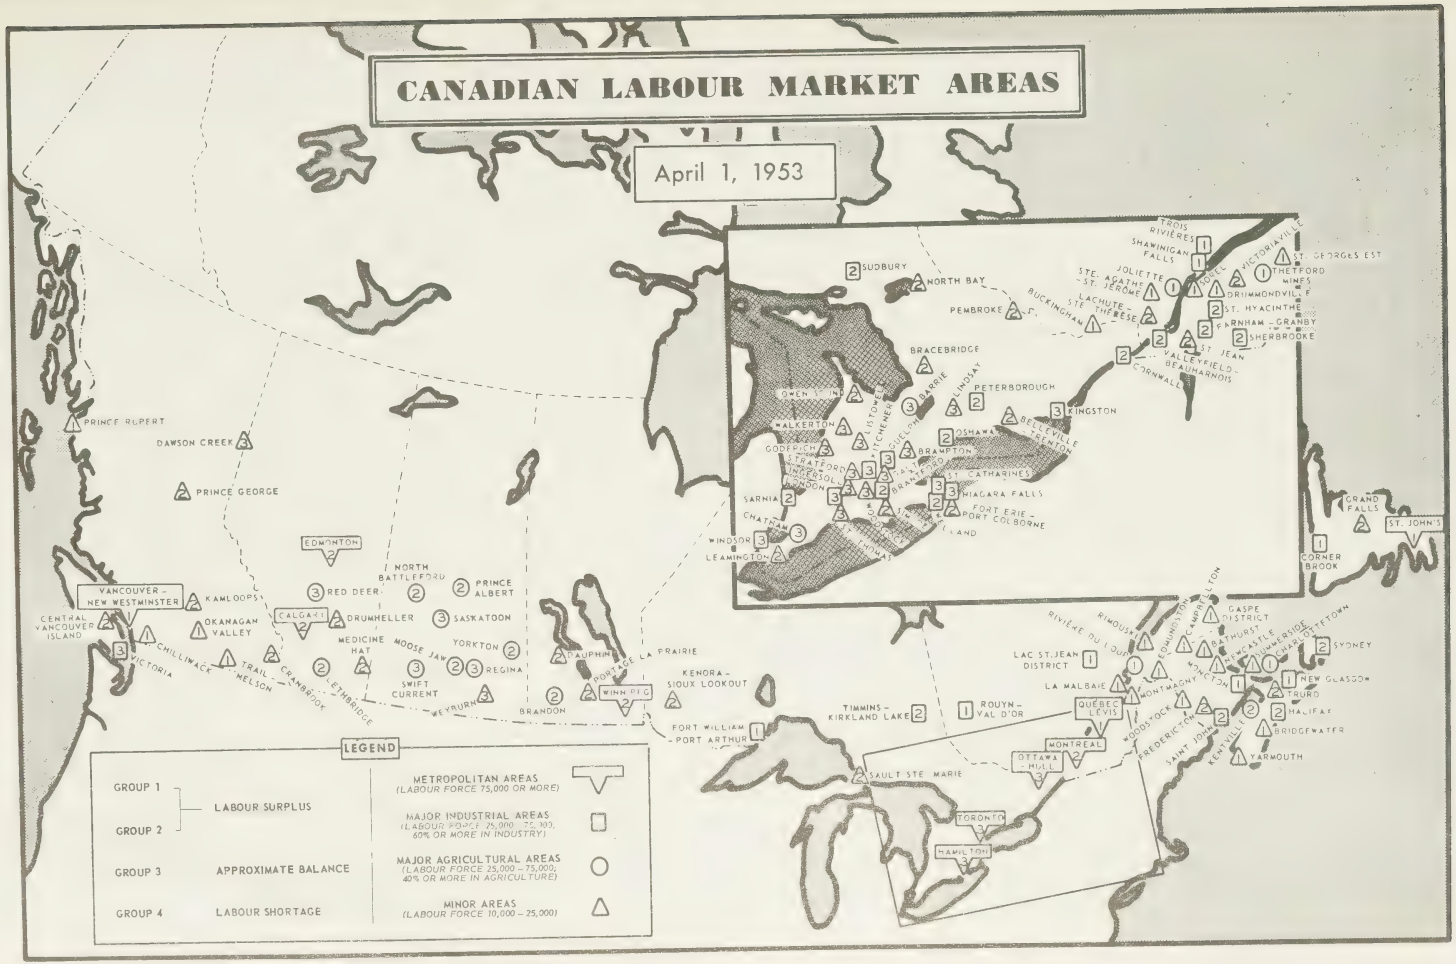
(b) Total applications on file at NES offices exclude registrations from persons known to have a job while applying for another one. Means are also taken to exclude, as far as possible, persons who have secured work on their own since registration. Nevertheless, the figures inevitably include a number of persons who have found employment or who have left the labour force by the time the count is made. On the other hand, not all the persons who are looking for work register at employment offices.

(c) These percentages compare the cumulative total to date from first of current year with total for same period previous year.

Manpower Situation in Local Areas

BY the first of April the usual seasonal increase in employment in Canada was in progress. This was reflected by a change in the situation in seven areas from one of labour surplus to one of approximate balance between labour supply and demand. At April 1, the labour market was in balance in 30 areas, compared with 23 at the beginning of March. The number of areas in the Group 2 labour surplus category dropped from 56 to 49 during the month; the number in the Group 1 category remained unchanged at 36.

Compared with last year, more areas were in approximate balance between labour supply and demand (see table below). Moreover, because the increase in the number of these areas occurred mainly in the more heavily populated industrialized areas, the number of workers involved in the change was proportionately greater. Thus, while the number of areas in the balanced category rose from 25 to 30, the percentage of paid workers in this category increased from 13 to 33. Similarly, although there were three more areas this year in the Group 1 surplus category, the percentage of paid workers in this category was the same as a year earlier.



Most of the balanced labour markets (29 out of 30) are located in the Ontario and Prairie regions. In Ontario, the higher winter level of manufacturing and construction activity this year was accompanied by an earlier resumption of spring construction and farm work. Six of the seven additions to the balanced labour market category during March occurred in this region. On the other hand, the lower level of logging operations this year resulted in more and larger labour surpluses in the minor areas of the Quebec and Atlantic regions. Altogether, 13 of the 21 minor areas in the Group 1 labour surplus category are centres in which logging is a major activity during the winter.

Labour Market Areas	Labour Surplus*				Approximate Balance*		Labour Shortage*

ATLANTIC

The number of persons with jobs in the Atlantic region again fell slightly during March. Both full-time and part-time workers were affected. At April 1, persons with jobs numbered 452,000 compared with 462,000 at the beginning of March. Workers were still being released from New Brunswick lumber camps during March and construction employment throughout the region remained almost unchanged from the levels of the earlier winter months, which were lower than those of the corresponding period in the previous year. By the end of the month, however, hiring had begun for defence and northern resource developments and some increases in employment had occurred at local construction sites.

Employment was higher this winter than last in the shipbuilding, food-processing and iron and steel industries in Nova Scotia and in the sawmills in New Brunswick, but logging activity was much reduced. Employment in most areas of New Brunswick, therefore, was lower in March than at the same time last year. A similar decline occurred in all but a few industrialized areas of Nova Scotia. Employment levels in Newfoundland were approximately the same as a year ago. For the region as a whole, employment levels were slightly lower than last year.

As in February, labour surpluses were reported in all areas in the Atlantic region during March. Of the 20 areas in the region, 13 were in the Group 1 surplus category. The remaining seven were in the Group 2 surplus category and represented 46 per cent of all paid workers in the region. At the same time last year, one area was in the balanced labour market category, eight in the Group 2 and eleven in the Group 1 surplus categories.

Metropolitan and Major Industrial Areas. Heavy labour surpluses continued in St. John's during March as industry generally awaited the quickening of activity in the spring. Logging employment improved slightly during the month as a heavy snowfall and frost provided suitable weather conditions for hauling operations. In the fishing industry, preparations were being made for the annual voyage to the Grand Banks.

Although labour surpluses declined slightly in four of the six major industrial areas during March, three remained in the Group 2 and three in the Group 1 surplus categories, as in the previous month. Employment was higher than last year in manufacturing industries in Halifax, where shipbuilding and fish-processing plants were most active. Shipping and waterfront activity, however, showed a considerable year-to-year decrease. Fish-processing plants in New Glasgow were slack and short-time operations were reported in some of the coal mines in this area. Work on the Canso causeway in Cape Breton will be increasing shortly as the contract for the construction of the lock has been awarded.

Major Agricultural and Minor Areas. Many farmers returned from work in the woods during March and most rural areas indicated a slight increase in labour surpluses during the month. Kentville, Grand Falls, Truro and Fredericton were classified in the Group 2 surplus category while the remaining nine areas were in the Group 1 surplus category. This was an increase of one area in the Group 1 category during the month.

QUEBEC

Full-time employment in all major industries, except logging, showed little change during March. The sharp reductions occurring in this industry, however, affected numerous workers, particularly in rural areas. The total number of persons with jobs dropped from 1,434,000 to 1,425,000 during the month and that of persons working 35 or more hours per week, from 1,318,000 to 1,306,000.

Although employment in logging and construction declined, compared with 1952, the total number of persons in the Quebec region with jobs was about 10,000 greater at April 1, 1953, than at the same time last year. Nine of the twelve leading manufacturing industries showed year-to-year increases and of these, the clothing, leather and transportation equipment industries recorded increases of 15 per cent or more. On the other hand, the primary textile, paper products and tobacco industries registered decreases in employment during the year.

The manpower situation in the province of Quebec showed little change from that prevailing in January and February, except for some minor areas where surpluses were larger. At April 1, 17 of the 25 areas in the region were in the Group 1 surplus category; the remaining eight were in the Group 2 category. These eight areas, however, represented 64 per cent of all paid workers in the region.

Metropolitan Areas. Although Montreal remained in the Group 2 surplus category during March, employment was gradually increasing. Workers laid off from various manufacturing industries at the beginning of the year were being recalled and skilled workers were being hired in the clothing, boot and shoe, aircraft and electrical appliances industries. A number of seamen were hired as a result of the unusually early opening of Great Lakes navigation.

No improvement occurred in the employment situation in Quebec City, however, the area remaining in the Group 1 surplus category. In spite of higher year-to-year employment levels in the boot and shoe, leather and clothing industries, labour surpluses were greater than at the same time last year mainly because of the large numbers of workers who came into the area seeking work.

Major Industrial Areas. Few new developments occurred in the employment situation in the major industrial areas in the Eastern Townships during March. Labour surpluses remained stable at a level generally lower than at the same time last year. In other industrial areas, however, loggers and construction workers were still being released during March. The Lac St. Jean, Rouyn–Val d'Or, Shawinigan Falls and Trois Rivières areas remained in the Group 1 category. In Lac St. Jean and Rouyn–Val d'Or, labour surpluses were substantially higher than in the same period in 1952.

Major Agricultural and Minor Areas. Employment decreased further in the rural areas of Quebec during March. Logging activity drew to a close in most areas and was not expected to increase until the river drive got under way late in April or early in May. Heavy labour surpluses, exceeding last year's high level, were reported in almost all areas. Increased employment of seamen was reported in towns bordering the St. Lawrence, but fishing was not active and little hiring was taking place at Sept Isles or at the Bersimis hydro-electric power site.

ONTARIO

Employment in Ontario, which has been at higher levels this winter than a year ago, began its seasonal increase early in February, about two weeks earlier than last year. The month of March saw an increase in employment of 20,000, the number of persons with jobs having risen from 1,803,000 to 1,823,000.

Seasonal expansion in the fishing, construction, ship-repairing and shipping industries provided an increasing number of workers in the region with employment. Moreover, employment gradually increased in the meat-packing, boot and shoe, rubber, automobile, and pulp and paper manufacturing industries, while furniture, electrical goods, and most iron and steel manufacturing plants continued at capacity production. The demand for farm help has been strengthening in the central southern part of Ontario and farm operations will be underway in most other parts of the region as soon as the ground is dry. Although the early spring heightened employment activity in most of Ontario, the closure of logging camps increased the labour surplus in some of the logging areas.

During March, seven local labour market areas in Ontario moved into the Group 3 balanced category, one moved from the Group 1 to the Group 2 surplus category, while another moved from the balanced to a surplus category. By the beginning of April, there were 23 areas with approximately balanced labour markets compared with 13 a year earlier and 17 a month earlier.

Metropolitan Areas. Increased hirings in the construction industry reduced the labour surplus in Hamilton during March, bringing its labour market into approximate balance. All three of the metropolitan areas, therefore, had approximately balanced labour markets by April 1. However, the influx of woods workers into Hull and Maniwaki during the latter part of March temporarily increased job applicants in the Ottawa–Hull areas, but many of these are expected to be re-employed for the log drive in April. Qualified secretaries and stenographers, as well as engineers, machinists, and machine shop workers were still in short supply in Toronto and Ottawa–Hull.

Major Industrial Areas. Employment increased in most of the major industrial areas during March. Increased employment in the automobile industry in St. Catharines and Windsor and in abrasives and iron and steel manufacturing in Niagara Falls brought these areas into the balanced category during the month. The opening of the shipping season and increased construction activity reduced the labour surplus in Cornwall. Although surpluses increased somewhat in Timmins–Kirkland Lake and Sudbury when bush workers were released, both areas remained in the Group 2 surplus category.

Major Agricultural and Minor Areas. Labour surpluses disappeared in Chatham, Leamington and Walkerton as spring farming operations began in central southern Ontario. On the other hand, a surplus developed in Sault Ste. Marie as closure of the logging camps in the area resulted in an influx of workers into the district. At the beginning of April, 13 major agricultural and minor areas had approximately balanced labour markets compared with 11 the previous month.

PRAIRIE

Heavy snowfall over most of the Prairie region in the third week of March delayed the expected increase in activity and the employment situation showed little change. At the end of the month, workers with jobs numbered 902,000, the same total as a month earlier. Within this total, however, 12,000 workers changed from part to full time employment, reflecting the more continuous operations made possible by milder weather.

Demand for farm labour increased markedly throughout the region and early shortages are foreseen in parts of Saskatchewan and Alberta. These may be aggravated by the large volume of construction planned for the region. Contracts for residential, commercial, defence, pipeline and highway construction were all markedly higher than last year. The increase in employment in construction and agriculture, however, was offset by the completion of pulp-cutting in northwestern Ontario and by further lay-offs in the Alberta coal-mining industry.

Labour surpluses existed in most areas at the beginning of April, although the proportion of areas in the surplus categories in the Prairie region was small when compared with the corresponding figures for the Pacific, Quebec and Atlantic regions. At April 1, one area was in the Group 1 surplus category, fourteen were in the Group 2 surplus category and six were in the Group 3 balanced category.

Metropolitan and Major Industrial Areas. Although labour surpluses decreased in Calgary, Edmonton and Winnipeg, the reduction was not quite sufficient to bring these areas into the balanced category. Heavy snow delayed the beginning of construction work, caused some lay-offs in transportation and prevented deliveries of livestock to packing plants. Hiring for the meat packing industry was at a seasonal low; yet, despite the re-opening of the United States market to Canadian cattle, meat-packing employment in the three cities remained considerably higher than last year. In Winnipeg, the clothing industry continued to expand as civilian demand increased and additional defence contracts were received. The industrial employment index in this city reached 210.5 (1939=100) in February, a year-to-year increase of five per cent.

Logging companies at the Lakehead completed cutting and hauling during March and released several thousand workers. As a result, Fort William – Port Arthur moved to the Group 1 surplus category. Many of the workers involved are not expected to be rehired until the river drives get under way in May.

Major Agricultural and Minor Areas. There were four changes in the classification of these areas during March. Saskatoon and Swift Current moved from a labour surplus to the balanced category as demand increased for farm and construction workers. Farther west, however, new labour surpluses developed in Medicine Hat and Drumheller following further reductions in employment at coal mines, almost all of which are now either on short time or completely closed. This early closure in the industry was caused partly by the mild winter and partly by the increasing use of oil and gas for heating.

PACIFIC

Employment in the Pacific region continued to increase as logging and construction operations moved towards peak summer levels. During March, persons working full-time increased by 11,000. The total number of persons with jobs showed a somewhat smaller increase, rising from 414,000 to 418,000. A comparison of these figures with those of the previous year indicates that there were about 5,000 more persons with jobs this year than last.

Although the level of employment was higher than a year earlier, the increase was very unevenly distributed among the main industries, most of it being in construction. This reflects the large labour requirements of the Kitimat development and of several hydro-electric power plants under construction. On the other hand, some of the main industries of the region experienced actual declines in employment over the year. Logging employment, for example, decreased by more than 3,500 and the unsettled dispute over herring prices reduced employment in the fishing industry by more than 50 per cent.

At the beginning of April, excess labour supplies still existed in most parts of the region. Five areas were in the Group 1 labour surplus category, four were in the Group 2 surplus category and one area (Victoria) was in the Group 3 balanced category. A year earlier the numbers of areas in these categories were three, six, and one, respectively.

Metropolitan and Major Industrial Areas. The gradual movement of loggers and construction workers to Kitimat and Vancouver Island continued during March, reducing the labour surplus in Vancouver—New Westminster by about 10 per cent. At April 1, however, the area was still in the Group 1 surplus category. The rate of hiring for the sawmill and logging industries was lower than in previous years and the lack of agreement between fishermen and operators sharply reduced fishing and fish-canning activities. The smaller amount of repair work in these industries, in turn, resulted in lay-offs and short-time work in machine shop, foundry, and shipbuilding firms.

In Victoria, the expected increase in construction employment was retarded by delays in starting several major building projects. Nevertheless, the labour supply decreased sufficiently during the month to bring the area into the Group 3 balanced category. Welders, burners, fitters and platers for the shipbuilding industry were in short supply. Most of the current surplus of construction tradesmen was expected to be absorbed during April.

Minor Areas. The employment situation in the minor areas at April 1, 1953, was unchanged from that of March 1, 1953, and April 1, 1952, with two exceptions. The only major increase in employment occurred in Central Vancouver Island, which during March this year moved from the Group 1 to the Group 2 labour surplus category, as additional logging areas recovered from the effects of winter. Because of excessive log inventories, however, most companies were operating below capacity, so that the labour surplus in the area was about one-third greater than at the same time last year. In Trail—Nelson, which is in the Group 1 surplus category, employment opportunities were restricted by the lower level of activity this year than last in base metal mining and lumbering.

Industrial Expansion, 1948-1952, in the Transportation Equipment Industry

THE construction of new plants or plant extensions in the Canadian transportation equipment industry from 1948 to 1952, inclusive, resulted in the creation of more than 21,500 new jobs, according to a survey conducted by the Economics and Research Branch of the Department of Labour. Total employment in the industry is estimated to have risen from 110,000 to 160,000 in the same period, an increase of 50,000. The construction of new plant facilities took place chiefly in the automobile, aircraft and diesel-locomotive sectors of the industry.

In the years 1948 to 1950, increasing consumer demand for automobiles and the conversion of Canadian railways from steam to diesel locomotives were responsible for the bulk of the new plant construction in the industry. Expansion in the aircraft sector was rapid in the following two years and was largely responsible for the fact that the greatest number of plant completions in the transportation equipment industry occurred in 1952, when a total of 16,400 new jobs was created through the completion of new plant facilities.

Employment in the industry showed opposing trends between 1948 and 1952. The index of employment declined from 218.4 in 1948 to 215.5 in 1950 (1939=100), largely because of a continued slump in shipbuilding and decreases in employment in the rolling stock and aircraft divisions. Subsequent rapid expansion in aircraft production, together with improved employment conditions in other branches of the industry, resulted in a general increase in employment after 1950. By 1952, the employment index had risen to an estimated figure of 297.8. The upward trend is expected to continue in 1953 as further plant completions are scheduled for the aircraft and automobile manufacturing industries.

Aircraft and Parts. The program for expanded aircraft production, begun in 1950, has been the largest single source of new labour demand in the transportation equipment industry. The production of military aircraft and engines has required the construction of additional assembly facilities and a large number of parts plants. The program resulted in the construction of 19 new plants and plant additions from 1950 to 1952, with total labour requirements of approximately 15,300 workers for full production. Four additional plants or extensions, to be completed in 1953 and requiring 1,300 workers, will conclude the present stage of the aircraft production program.

With two exceptions, new plant construction has been entirely in Ontario and Quebec near the two largest assembly plants in the industry, A. V. Roe Canada Limited at Toronto and Canadair Limited at Montreal. These two plants have also expanded capacity and have accounted for approximately half of the new employment in the industry from this source.

Expansion in 1953 will include estimated expenditures of more than

$8,000,000 for three large plants. The Rolls Royce Company is opening a large new engine plant at Montreal, which may employ 1,000 workers at capacity production. Bristol Aeroplane Engines Limited completed an addition to its repair plant in Montreal which will require 300 additional workers by the middle of 1954. The DeHavilland Aircraft of Canada Limited, has a $4,000,000 plant under construction which will replace present facilities and will not result in increased staff.

Motor vehicles and Parts. Twenty-nine new plants and plant additions, with labour requirements estimated at 4,400 workers, have been constructed in this sector of the industry since 1948. The value of new investment, involving expenditures of $52,000,000 for construction and $65,000,000 for new machinery during the five-year period, has been high in relation to labour requirements. This stems largely from the fact that most of the investment has been for purposes of modernization and replacement of facilities, which did not require additional employees.

Further increases in employment in the motor vehicles and parts industry are expected in 1953. It is estimated that 5,000 workers will be required to staff new plants coming into production this year. Most of these will be taken on at the new Ford assembly plant near Oakville, Ont. Another large plant slated for completion in 1953 is a part plants at Ajax, Ont., which is expected to hire 300 workers at full production. Four other plants and extensions under construction, with total expenditures of approximately $14,000,000, will not result in any employment increase.

Railway Rolling Stock. The past five years have seen the development of a new Canadian industry, the manufacture of diesel-electric locomotives. The gradual replacement of steam by diesel locomotives on Canadian railways has created a large volume of business not only for locomotive manufacturers but also for firms manufacturing electrical apparatus, since diesel engines contain a large number of electrical components.

Canadian companies already engaged in the manufacture of steam locomotives converted their facilities to enable them to manufacture diesel engines. In addition, one large assembly plant was built at London, Ont., providing employment for about 1,000 workers. This plant is at present expanding its facilities further. Other than this, there was little new plant construction in the industry from 1948 to 1952. A total of 1,200 new jobs was created through industrial expansion in this period.

In addition to the expansion in the above-mentioned sectors of the industry, four other new plants, with labour requirements totalling 600 workers, were constructed during the last five years. Two of these manufacture miscellaneous transportation equipment and two were extensions to shipyard facilities.

Employment in the transportation equipment industry increased by 45 per cent from 1948 to 1952. About half the increase is attributed to the construction of new plants and plant additions. Seventy per cent of the employment increase resulting from the expansion of plant facilities was in the aircraft and parts segment of the industry.

Notes of Current Interest

CCL Willing to Unite With TLC—Mosher

"The question of unity is one of the most important issues before the Canadian labour movement today," said A. R. Mosher, President of the Canadian Congress of Labour, speaking at the 16th annual convention of the International Woodworkers of America (CIO-CCL) in Vancouver.

"We are ready to enter into organic unity with the TLC the moment they indicate their willingness for such a move," he added.

He said the CCL was concerned only with the best means of representing the interests of Canadian workers and added: "There is not one CCL officer who would not willingly fall by the wayside if that would bring labour unity."

The TLC and the CCL have in recent months taken joint action on a number of issues and both have called for "unity of purpose" among all sections of Canadian labour.

TLC's 80th Anniversary Marked by Banquet

The Trades and Labour Congress of Canada is 80 years old this year. The anniversary was marked last month by a banquet in Montreal attended by some 250 labour leaders, industrialists and government representatives.

Percy Bengough, President of the 525,000-member labour organization, outlined the history of the labour movement and labour legislation in Canada. He said that the labour laws of today were a direct result of a long struggle by trade union pioneers.

"These men did not believe in changing our democratic way of life," said Mr. Bengough. "They believed in gaining the objectives of organized labour by constitutional means.

"They sought laws and better laws, under which unions would be recognized as legal entities, where collective bargaining could be carried out in a friendly atmosphere between the representatives of employers and employees, and where such negotiations failed to reach agreement a dispute could be settled by conciliation."

Mr. Bengough recalled the work of his immediate predecessors, the late Paddy Draper and Tom Moore, and earlier leaders such as O'Donoghue, MacMillan, Carter, Joyce and Magnew. He said that when the TLC was founded in 1873 there were no federal and provincial labour departments. One of the first resolutions of the founding convention of the Congress called for the setting up of a federal labour department. It was not until 1900 that this took place. Now, said Mr. Bengough, all these things are taken for granted.

Also Commemorated

The banquet also commemorated three other events: the 10th anniversary of the election of Mr. Bengough as President of the Congress; the 10th anniversary of the appointment of Max Swerdlow as Congress organizer in Quebec; and the 10th anniversary of the founding in Quebec of federal labour unions affiliated with the Congress.

R. F. Hepenstal, Vice-President of the American Can Company, addressed the gathering and pointed out that the fortunes of labour and management were inextricably bound together. He urged greater efforts towards mutual understanding in matters common to both.

Marine Unions of TLC Form Joint Council

A council of all marine unions in the Trades and Labour Congress of Canada, representing some 14,000 masters, mates, pilots, engineers, firemen, cooks and seamen, was formed March 17 in Montreal.

To be called the Joint Marine Council of the TLC, the new group comprises the National Association of Marine Engineers of Canada, Inc., the Canadian Merchant Service Guild of Masters, Mates and Pilots, and the Seafarers International Union of North America, Canadian District.

Consolidated Negotiation

The Council will consolidate the efforts of all member unions in negotiation and conciliation with shippers and steamship lines.

International Vice-President Hal C. Banks of the Seafarers International Union was elected President of the Council. Other council officers are: Capt. W. MacIntyre, First Vice-President; J. E. McGeough, Second Vice-President; and Capt. J. J. Deauriers, Secretary.

71839—2

CCL Rail Union Merges With AFL Railway Clerks

The 4,000-strong Brotherhood of Express Employees (CCL) last month joined the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (AFL-TLC). The merger, which followed a referendum vote by members of his union, was announced by Emmett Kelly, National Secretary of the Express Employees.

Membership of the AFL-TLC railway union, of which Frank Hall is Canadian chief, has been brought close to the 20,000 mark by the merger. It still falls about 15,000 members behind the membership of the Canadian Brotherhood of Railway Employees and Other Transport Workers, "Canada's biggest transportation union".

Confer on Uniformity of Job Accident Statistics

Representatives of Workmen's Compensation Boards from nine Canadian provinces met with federal government officials on March 27 and 28 with a view to developing a program of uniform industrial accident statistics.

At the present time, statistics compiled by the various Boards are not comparable because of variations in classification. The object of the program is to develop on a broad national basis a picture of the extent and cause of accidents and occupational illnesses in Canadian industries. Comparable statistics from the provinces will make possible the computation of frequency rates and severity rates, which will provide an indication of the relative degree of hazard in various industries.

In opening the meeting, Hon. Milton F. Gregg, Minister of Labour, stressed the potential value of such statistics for use in accident-prevention work. He also emphasized the co-operative nature of the program between the federal and provincial authorities.

The meeting was chaired by George V. Haythorne, Director of the Economics and Research Branch, Department of Labour. Those present from the provincial Workmen's Compensation Boards were: Irving Fogwill, Chairman, Newfoundland; L. J. McLellan, Prince Edward Island; D. R. Cameron, Nova Scotia; R. A. A. Burnham, New Brunswick; David Robillard and Gaston Barrette, Quebec; A. G. MacDonald, Ontario; G. L. Cousley, Chairman, Manitoba; D. S. Sinclair, Alberta; and F. H. Clark, British Columbia.

Participating in the discussions also were officials from the Department of National Health and Welfare, the Dominion Bureau of Statistics, and the Government Employees' Compensation Branch of the Department of Labour.

F. S. McElroy, Director, Industrial Hazards Branch, United States Bureau of Labor Statistics, also attended the two-day session.

New U.S. Labour Attaché Arrives in Ottawa

John A. Ballew is the new Labour Attaché at the United States Embassy in Ottawa. He succeeds Joseph Godson, who was transferred to London early this year (L.G., Dec., p. 1556).

Mr. Ballew has just completed 2½ years as Labour Attaché at the United States Embassy in Tokyo. Before that he served with the Bureau of Labour Standards, United States Department of Labour, and, earlier, as Director of Public Institutions, State of Washington.

TLC Names M. Swerdlow Director of Organization

Max Swerdlow, Chief Organizer for the Trades and Labour Congress of Canada in Quebec, has been appointed Organizing and Educational Director of the Congress.

Mr. Swerdlow has been a TLC organizer in Quebec since 1942. He will move from Montreal to Ottawa.

The congress also announced that Arthur E. Hemming will become Publications Director in addition to his present post as Executive Secretary. Leslie E. Wismer will continue as Public Relations and Research Director.

In 1952, Mr. Swerdlow attended the General Conference of the International Labour Organization as the Workers' Delegate for Canada.

Newfoundland Appointment

John H. Crann, Vice-President of the Newfoundland Federation of Labour (TLC), has been appointed to the Newfoundland Labour Relations Board to succeed W. J. May, who resigned to become Director of Apprenticeship in the provincial Department of Labour.

A supervisor at Bowater's Mill, Corner Brook, Nfld., he is also Vice-President of the Humber Trades and Labour Council and Secretary of Local 64, International Brotherhood of Pulp, Sulphite and Paper Mill Workers.

Sharp Increase in 1952 In House Construction

Residential construction in Canada increased sharply during 1952, reversing the downward trend of the previous year.

The annual report of the Central Mortgage and Housing Corporation, tabled in the House of Commons recently by Hon. R. H. Winters, Minister of Resources and Development, revealed that housing starts numbered 83,246 compared with 68,579 in 1951. The 1952 rate was about equal to that of 1950.

A total of 76,302 houses was completed in 1952 compared with 84,810 in 1951. This decline was due to fewer unfinished houses being carried over from 1951.

Reasons given by the Minister for the increased construction activity in 1952 were the greater availability of mortgage money, materials and labour and stable prices.

The report said there is reason to believe the high level of housing starts may continue into 1953. But it warned that availability of mortgage money and of serviced land will become increasingly important as a brake upon house building.

Post-War Housing Record Set in United Kingdom

A post-war record of house construction was set in the United Kingdom in 1952. During the year, 239,922 dwellings were completed.

This figure compares with 194,831 constructed in 1951. The total in 1946 was only 55,400.

Since the end of the war, 1,256,270 new dwelling units have been built in the United Kingdom.

The Government's tentative target for 1953 is 270,000 new houses. At the beginning of the year, some 280,000 houses were already in the process of construction.

Brief Urges Added Aid To Employable Jobless

Assistance beyond the present range of unemployment insurance to unemployed persons capable of working was advocated in a brief submitted March 20 by the Canadian Welfare Council to the Prime Minister and members of the Cabinet.

The Council maintained that after unemployment insurance runs out, aid to the employable unemployed should be a matter of public assistance such as now is extended to unemployables. Also, such assistance should cover the one-fifth of the five million workers in Canada who are not under unemployment insurance.

The Council urged that machinery for the plan be set up immediately to be ready in the event of heavy unemployment developing. It suggested that the program be administered by the provincial governments, with the federal Government paying a percentage of the cost of administration and the bulk of the benefit payments.

The brief was presented simultaneously to the provincial governments.

CNR Begins Survey of Its Labour Relations

The Canadian National Railways has begun a survey of its labour relations. This was revealed in the CNR's 1952 report to Parliament.

A condition of recurring crises is "detrimental to the best interests of employer and employee alike, and highly undesirable from the standpoint of the general public," the report said.

It has become increasingly clear, the report continued, that, "despite a generally harmonious background, the wage-bargaining aspect of relations between the railways and representatives of the organized employees leaves something to be desired".

Purpose of the survey, according to the report, will be to "examine objectively and in the light of modern conditions the whole context of labour-management relations".

Particular attention will be given to "the mutual responsibilities which devolve upon officers of the railway and of the unions".

Triple Time for Working On Holidays at U.S. Plant

A contract providing triple time for holiday work has been signed by the Goodyear Tire and Rubber Company and the United Rubber Workers of America (CIO).

The first major collective bargaining agreement in the United States since the new Administration in Washington took office, the contract provides for triple time for work on six paid holidays and a two-weeks' vacation after three years of employment. The previous contract called for a two-weeks' vacation after five years.

The two-year agreement contains 25 basic improvements covering all non-wage matters, such as severance pay, leaves of absence, safety and health. A clause permits wages to be discussed on 30 days' notice.

Board Criticizes Firm For Move to Bar Union

Notwithstanding the fact that the employer had given up its factory and all employees had received a week's notice before the Board set, a Quebec Arbitration Board appointed in January to arbitrate the preamble and all other clauses of a proposed agreement between Times Square Clothing and Amalgamated Clothing Workers of America (CIO-CCL), local 115, handed down a majority decision finding the agreement submitted "one that the employer can properly sign".

Chairman Bernard Rose, QC, who sided with the employees' representative, viewed the company's decision to move from Joliette to St. Gabriel de Brandon as "a clever move on the part of the employer and in all likelihood designed to influence the Board in the carrying out of its mandate".

No Prior Notice

Having received no prior notice, however, the Chairman decided to proceed and to discuss whether it could recommend adoption of the agreement submitted to the Board. The Chairman states in his report that the fact that the dismissal of the employees was signified to the Board after it had been constituted as "certainly suspicious" and adds that he felt justified in concluding that "the employer was determined to do everything he could to avoid entering a collective agreement with the union".

The agreement which the Board recommends be accepted by the employer is almost identical to the collective agreement presently existing between the Associated Clothing Manufacturers of the Province of Quebec, Inc., and the Montreal Joint Board of the Amalgamated Clothing Workers of America. Times Square Clothing company, however, is not a member of the Association.

In rendering its decision the Board states:—

> It is therefore all the more regrettable that, in view of the collective labour contract presently in effect between the parties above-mentioned, an employer who is not a member of the Association should adopt an attitude the reverse of conciliatory.

The Times Square clothing factory is being taken over by the S. Farbstein Company Inc. but there is no obligation for this company to employ the dismissed workers.

The Board remarks on this:—

> It does not seem fair that employees who have, for several years, loyally served this employer should be dismissed and deprived of an opportunity to earn their livelihood in the city in which they live, because of his apparent hostility towards the union which seeks to enter into an agreement with him.

The minority report by the employer representative states that "the proposed agreement is unfair, onerous and not in accordance with the principle of equity, justice and good will".

Cardinal Urges CCCL To Assert its Vitality

His Eminence, Cardinal Paul Emile Léger, Archbishop of Montreal, has urged the Canadian and Catholic Confederation of Labour to set up strong, effective organizations which will assert the vitality of the Confederation and bring legitimate pride and proof of maturity to the whole labour movement.

The new cardinal suggested this policy at a reception held for him in Montreal, early in March, by the leaders of the CCCL.

"For you," the Montreal archbishop stated, "trade-unionism is not merely an instrument for claiming your rights. You want it to be also an effective means for carrying out your duties."

Cardinal Léger quoted the following passage from a recent message of His Holiness, Pope Pius XIII: "What, after all, is the essential aim of trade unions, if it is not the practical affirmation of the fact that man is the subject and not the object of social relations; to protect the individual faced by the collective irresponsibility of anonymous owners; to represent the person of the worker before those who tend to consider him as a mere productive force with a set price."

"Road to Ruin"

The new cardinal also recalled the Pope's warning to the effect that "the whole world is on the road to ruin if men continue to seek remedies for social evils in greater productivity directed solely towards the consumption of goods".

Cardinal Léger, who has been called in certain circles "the workingman's cardinal", then called upon the CCCL to set up educational, mutual aid and charitable services, to endow trade-unionism with strong, effective organizations—information, employment and social security services—to "assert your vitality in works which will bring legitimate pride and proof of maturity to the whole labour movement".

CCL Sets Up Fund to "Protect" Que. Workers

The Canadian Congress of Labour is establishing a defence fund "to protect the rights of Quebec workers to bargain collectively". Decision to set up the fund was made unanimously by the Executive Council of the CCL at a meeting in Ottawa, March 5.

Explaining this action, Donald MacDonald, CCL Secretary-Treasurer, said: "Conditions which our own and other unions have faced in Quebec make it obvious that workers in that province are facing extreme handicaps in their efforts to exercise what is recognized in the letter of Canadian law as the right to organize into unions of their choice and to bargain collectively. The most recent example has been the strike* of the Oil Workers International Union, an affiliate of our Congress." Despite the fact that the union was recognized by the Quebec Labour Relations Board, he added, the company refused to meet union representatives.

Mr. MacDonald also cited the strike of the Canadian and Catholic Confederation of Labour in Louiseville.†

The CCL Executive Council established a committee composed of Mr. MacDonald; C. H. Millard, Canadian Director of the United Steelworkers of America; George Burt, Canadian Director of the United Automobile Workers; and Alex McAuslane, Canadian Director of the International Oil Workers to administer the fund.

Montreal Building Trades Open Apprentice Centre

The Montreal Building Trades Apprenticeship Centre, a million-dollar building, was officially opened March 23 by Hon. Antonio Barrette, Quebec Minister of Labour.

The structure was built with funds provided by the Joint Montreal Committee of the Building Trades, comprising trade unions and representatives of the building industry, and by the provincial government, which contributed one-third of the cost.

The new building, known as "Carpenters' Hall", permits building of full-size houses inside it. Apprentices of the various building trades do the construction work under the supervision of skilled instructors.

Galleries allow other apprentices to watch every phase of the work.

Mr. Barrette described as "something unique" the co-operation between labour unions and the Montreal Builders' Exchange in the solution of the manpower shortage problem in the building trades which existed at the end of the war.

UAW Council Devises Apprenticeship Plan

A formula for employing one apprentice for each eight journeymen in industries where training facilities are available has been devised by the United Automobile Workers (CIO-CCL). Major industries will be approached by the union with requests that the plan be implemented.

The formula, adopted at a meeting of the union's skilled trades council in London, Ont., early last month, applies to boys with high school graduation or the equivalent.

Equal Pay Laws Urged By U.S. Conference

Federal legislation embodying the principle of equal pay for equal work, to be enacted as soon as possible, and state legislation where it does not already exist were called for by the National Conference on Equal Pay sponsored by the Women's Bureau of the United States Department of Labour. Improvement of state laws where they are inadequate is also sought.

The conference was called at the suggestion of the Women's Advisory Committee on Defence Manpower and met in Washington in the spring of 1952. In attendance were representatives, both men and women, of national women's organizations, trade unions, employer associations, civic groups and administrators of state equal pay laws. A report of the conference has just been made available by the Women's Bureau.

To achieve this end, the conference recommended that an intensive educational campaign be carried on at national and local levels to "inform and influence employers, employees and the general public". This, it was agreed, would require the use of all channels available to women's organizations, the Women's Bureau, trade unions, community organizations, the press and radio.

A small continuing committee was appointed from the conference to further the objectives agreed upon.

*Called off March 20 after lasting eight months, since July 19, 1952. Most of the 500 workers who struck have now returned to work.

†Began March 10, 1952; ended February 20 (L.G., March, p. 361).

Prospects Bright for Graduates This Year

Employment prospects for university graduates and undergraduates in 1953 are bright according to present indications.

There is a stronger demand for graduates in some faculties than in others. In engineering, for example, employment officials estimate there will likely be more openings available than graduates to fill them. There is also a strong demand for Bachelor of Commerce graduates in banks, trust and insurance companies, other financial institutions, manufacturing industries and large scale merchandising firms. Many Commerce graduates also would be entering chartered accountants' offices to work for their chartered accountant degrees.

These estimates are based on replies received from questionnaires mailed to some 7,000 Canadian employers last December. Up to March 3, 2,558 replies had been received. These replies offered 3,472 jobs for graduates and 6,735 summer jobs for undergraduates. This is exclusive of openings for both graduates and undergraduates in the government service and the armed forces.

Included in the 3,472 openings for graduates received up to March 3 were requests for 404 Bachelor of Commerce graduates, 329 mechanical engineers, 296 electrical engineers, 284 civil engineers, 184 chemical engineers, 89 mining engineers, 41 metallurgical engineers, 140 graduates in medicine and 93 social workers.

Many employers stated they would need graduates or undergraduates but were not listing their requirements as they would take advantage of the facilities of the National Employment Service offices established at some of the universities in order to have personal interviews with students.

College Attendance Rises 175 Per Cent Since 1921

University attendance in Canada has increased 175 per cent in the last 25 years, it has been found as the result of a survey by the Economics and Research Branch of the Department of Labour in co-operation with the Executive and Professional Division of the National Employment Service.

During the same period the population in the age group 18 to 22, which includes most college entrants, increased only 45 per cent.

High school attendance increased 150 per cent during the same period, while the age group 13 to 17 increased only 29 per cent.

In 1901, the survey showed, there were fewer than three engineers for every 1,000 non-agricultural workers in Canada; today there are more than eight. This indicates a trend towards the necessity for an increasingly larger proportion of the work force to be university-trained.

The sample survey was made of 417 Canadian firms employing some 15,000 professionally trained persons and whose total employment represented almost 14 per cent of all wage and salary earners in Canada.

Reuther Wins Fifth Term As UAW President

Walter Reuther has been unanimously re-elected President of the United Automobile Workers for his fifth straight term in ballotting at the union's annual convention in Atlantic City, N.J.

Secretary-Treasurer Emil Mazey and Vice-Presidents Richard T. Gosser and John W. Livingston were also returned without opposition.

Mr. Reuther first gained the UAW presidency in 1946, when he defeated R. J. Thomas, who had held the office for seven years.

Shortage of Engineers May be Relieved Soon

The shortage of engineers in Canada's expanding industries may be partially relieved in a few years if the present trend toward engineering as a career continues. A report of the Executive and Professional Division of the National Employment Service shows that new registrations in engineering at Canadian universities in 1952 numbered 2,714, compared with only 1,852 in 1951 and 1,649 in 1950.

Preivous experience has shown that wastage by drop-outs, failures, changes to other courses, etc., may run from 20 to 25 per cent over a four-year course. This means that probably not more than 2,000 to 2,200 of the 2,714 students who began engineering studies in 1952 would actually graduate in 1956.

The substantial increase in engineering registrations in 1952 was due in no small measure to the publicity given to the shortage of engineers and also the efforts of National Employment Service officers who, during the past year or two, have done a great deal of vocational counselling to senior high school students in the course of which opportunities in the engineering field were outlined.

John V. Riffe Chosen To Succeed Haywood

According to Stanley Levey of the *New York Times,* leaders of the Congress of Industrial Organizations have agreed on John V. Riffe as successor to the late Allan S. Haywood as CIO Executive Vice-President. Mr. Riffe is Southern Organizing Director for the CIO.

If his selection is approved by the CIO executive board, Mr. Riffe will serve until the next convention.

Mr. Riffe, a member of the United Steelworkers of America, was a leader in the organizing campaign in the mills of the Bethlehem Steel Company before the United States entered the last war. After the war he began to organize for the CIO in the South; for the last two years he has directed CIO forces there.

Under the CIO constitution, the Executive Vice-President takes over the presidency whenever the President is unable to serve. He also acts as Director of Organization and Director of CIO Industrial Union Councils in all parts of the country.

O. L. Garrison, also a member of the Steelworkers and a former secretary to John L. Lewis, has been named as Mr. Riffe's chief assistant. R. J. Thomas, former President or the United Automobile Workers, has been appointed to fill the next position on Mr. Riffe's staff.

D. J. McDonald Confirmed As Steelworkers' Chief

David J. McDonald, appointed President of the United Steelworkers of America by the union's executive to succeed the late Philip Murray, has been confirmed in the position by a rank-and-file election conducted in February, the results of which were announced March 11.

Mr. McDonald is only the second president the Steelworkers Union has had since its founding in 1936. The late Mr. Murray, who died last November 9, was the first.

428 Fatalities in 1952 In Ontario Industry

In 1952, 209,974 work injuries were reported to the Ontario Workmen's Compensation Board, Labour Minister Charles Daley has announced. Of this number, 428 were fatal. In 1951 there were 202,645 accidents and 421 fatalities reported.

The cost of compensation and medical aid awarded by the Board was $29,000,000, compared with $25,000,000 in 1951. More than $563,000 was paid out to safety and accident prevention associations by the Board in 1952.

The Minister reported that in 1952 automatic coverage for their employees was received by 49,917 employers as compared with 47,858 the previous year. During 1952, 3,736 patients were admitted and 3,772 discharged from the Board's rehabilitation centre at Malton, Ont. This was an increase of 85 patients treated over 1951.

"Despite a tremendous expansion of industrial workers," said Mr. Daley, "Ontario's industry and accident prevention groups are to be congratulated for keeping 1952 accident fatalities almost identical with 1951."

Israeli Unions Vote To Bar Communists

The secretariat of Israel's General Federation of Labour (Histadrut) voted recently to ban the Communist Party from the organization. It described Communists as "avowed enemies of the Jewish nation, the State of Israel and the Hebrew workers movement".

The secretariat also voted to take court action to suspend all Communist office holders and expel all Communist Party representatives from the membership of the Federation.

Attacks upon the Zionist movement by Communist governments and incitement against Jewish immigration to Israel were given as reasons for the secretariat's action. The secretariat's six-to-two vote decision is expected to be confirmed by the 210-man Histadrut council.

2 Italian Union Groups Join Against Communists

The two outstanding democratic labour groups in Italy have signed an agreement to collaborate against communism. The agreement was reached under the auspices of Vincent Tewson, chairman of the International Confederation of Free Trade Unions.

The two groups are the *Confederazione Italiana Sindacati Lavoratori* (Italian Confederation of Workers Unions) and the *Unione Italiana Lavoratori* (Italian Workers Unions). These two bodies claim a membership of 2,000,000, compared with the claim of the Communist-dominated *Confederation Generale Italiana del Lavoro* (Italian General Confederation of Labour) of 5,000,000 members.

Law to Bar Communists From U.S. Unions Urged

Legislation which would bar a member of a Communist organization from holding office in or being employed by any labour organization and which would permit the discharge of persons who are members of subversive organizations was recommended recently by a Senate subcommittee investigating internal security in the United States.

In its report on the International Union of Mine, Mill and Smelter Workers, the subcommittee also recommended that officers of the union who were named as Communists by witnesses during the investigation, and who had signed non-Communist affidavits required under the Labour Management Relations Act of 1947, be considered for prosecution by the Attorney General on charges of perjury.

TLC and CCL Support Rehabilitation of Disabled

"Wherever it is possible for a handicapped person to return to his former occupation, this should be arranged; otherwise he should be placed in an occupation where his productive ability can be fully utilized," the Trades and Labour Congress of Canada and the Canadian Congress of Labour have declared in a joint statement.

The declaration was in answer to criticism that labour unions generally were opposed to the employment of handicapped persons. Such criticism is wholly unjustified, the statement said.

"Both Congresses strongly support the principle of rehabilitation and the employment of disabled persons to the fullest extent," the statement declared.

Health Insurance Plan Introduced in Congress

A bill for a voluntary national health and hospitalization insurance plan was recently introduced in the United States Congress.

Providing universal coverage through a federal-state grants-in-aid program, the plan would be administered by the states and local communities rather than by the federal Government.

Under the proposal, both old and new plans could qualify for federal-state aid provided their premium rates were based on a percentage of the subscribers' gross income. To participate, a state would have to set up a state health council and regional health authorities. A "national yardstick" of services and benefits would be established and the cost of coverage would be estimated by authorities for each region but the charge for a comprehensive range of benefits would be not less than $150 per year.

A plan could offer more or less comprehensive benefits than those contained in the "national yardstick". The minimum charge for participating in a plan would be $6 per year and deficits of any plan would be paid by the state out of federal grants-in-aid.

The bill also calls for the creation of a bipartisan Federal Health Study and Planning Commission, expansion of the hospital construction aid program and the provision of federal grants-in-aid to assist in developing and expanding medical and nursing schools.

U.S. Commission Advises Federal Aid to Health

Federal-state co-operation in establishing and financing a comprehensive medical service for all persons in the United States was recommended by the President's Commission on the Health Needs of the Nation in the report it gave to Mr. Truman before he left office January 20.

The Commission was set up by the ex-president at the beginning of 1952. Testimony was taken from experts, previous studies were reviewed and public hearings were held in eight cities in different parts of the country.

Headed by Dr. Paul B. Magnuson of Chicago and composed of 14 professional and lay members, including representatives of labour and consumers, the Commission came to the unanimous conclusion that many persons in the United States do not get and are not able to pay for personal and preventive care of family physicians as well as specialists and hospitalization. It declared that the comprehensive services which people need and want can best be furnished through group medical practice, bringing general practitioners and specialists together in organized professional groups.

The chief recommendation of the Commission is for a program of federal-state co-operation, with federal grants to assist each state in developing a plan of personal health services for all persons. Part of the federal funds would be used by the states for the general population and part for the extension and improvement of medical care for persons receiving public

assistance and for mental disease, tuberculosis and other long-term illnesses. Both private and public agencies and resources would be used. The states would define local and regional areas for the organization and furnishing of services in cooperation with the health professions.

Federal aid would be given to private and public health insurance plans, which would supply the services of both the family doctor and specialists. The report suggests that at least half the members of the governing bodies of these insurance plans be representatives of the consuming public.

According to the Commission's proposals, those who can afford it would meet their doctors' bills on a prepaid basis if they wished to join the government-sponsored plan. For those unable to pay, the federal and state governments would contribute part or all of the costs. Under the scheme, membership would be voluntary, states would be free to participate or not, patients would be allowed to choose their own doctors and the medical profession would be unfettered in its practice.

Other recommendations of the Commission are: loans from federal funds to assist in the development of group medical prepayment plans, continuation of the federal hospital construction program, federal assistance for medical education and research, federal aid for local health departments, and the establishment of a federal departmenet of Health and Social Services headed by an officer with cabinet rank.

The Commission also recommends the establishment of a permanent Federal Health Commission to make continuing studies and recommendations.

The cost of the proposed program to the federal government is estimated at $750,000,000; with the specialized recommendations, at one billion dollars. Declaring that the United States could well afford these expenditures, the Commission's report states: "The nation cannot afford to neglect the measures for which these funds would be used. In the better health of our people and increased productivity these expenditures would lead to a net saving."

The Commission's report was presented to officials of the new administration for their consideration.

Health Insurance Plans Being Surveyed in U.S.

Four surveys of health insurance plans are now underway in the United States. The studies, being undertaken by the Health Information Foundation, will be devoted to a nation-wide examination of how voluntary plans are working and where greater coverage and benefit provisions are required.

The four projects are:—

1. A national sampling of households to see how family medical costs are related to health status and how the insurance plans affect this relationship.

2. A more intensive study of these points within certain communities, including the impact of "catastrophic" illnesses not covered by some insurance plans.

3. A study of how existing voluntary plans might be extended to include groups not now covered, e.g., farmers and other self-employed persons.

4. A study of the relationship of family debts to illnesses and medical costs.

All the surveys except the third will be completed this year; the third may take until 1955.

The Health Information Foundation is a non-profit, non-political organization supported by the drug, pharmaceutical, chemical and allied industries.

U.K., Australia Plan to Reciprocate on Welfare

A reciprocal agreement enabling United Kingdom citizens in Australia and Australian citizens in the United Kingdom to enjoy social service benefits in the country of their adoption without the usual long-term residence requirements has been approved by the Australian Government.

Negotiations for the agreement began in 1946 and were concluded last year. Considerable difficulty was encountered in that pensions and certain other benefits under the U.K. scheme are on a contributory insurance basis, whereas the Australian scheme is non-contributory and is financed from taxation.

Citizens of the United Kingdom who were in the National Insurance scheme and now reside in Australia will receive any United Kingdom pension they are entitled to and will, subject to a means test, have their pension supplemented by Australia to bring it up to the current pension rate in that country.

Other benefits covered by the agreement are invalid pensions, child endowments and unemployment and sickness insurance. In general, all residence tests will be waived.

The United Kingdom will reciprocate and, broadly speaking, will give to all persons arriving from Australia the necessary insurance credits, based on their Australian

residence. The agreement also contains provisions to safeguard the social service rights of people who take temporary residence in either country.

The agreement has not yet been signed and Australian government officials expect it will be several months before it can come into effect.

Extracts from Hansard of Interest to Labour

Education of Immigrants

February 18

Hon. W. E. Harris (Minister of Citizenship and Immigration): Hon. members will be interested to know that it is the intention of the Government to provide in the supplementary estimates for a sum from which grants may be made to provincial Governments with respect to the education of our newcomers in citizenship. It is a well recognized fact that the sooner the newcomers are made familiar with the English or the French language, the habits and customs of the Canadian people, our history, our form of government, and our democratic processes, the sooner they will become useful and productive citizens. There are at the moment approximately 45,000 adult newcomers attending citizenship classes in the various provinces and we hope that these classes will be continued and increased in number.

The grant to each provincial Government would be one-half the amount contributed by the provincial Government for these citizenship classes. Letters are going forward to each provincial premier advising him of this and inviting his government to join in making a suitable agreement.

Unemployment Insurance Fund

February 18

Mr. Knowles:

1. What is the total amount of money now in the unemployment insurance fund?

2. What was the total amount in the fund one year ago; two years ago; five years ago; ten years ago?

3. Has consideration been given by the Government or by the Unemployment Insurance Commission to the size of the fund, as to whether it is overfunded, or too large? If so, what is the result of such consideration?

4. Has consideration been given to increasing the benefits available to those insured under the fund? If so, what is the result of such consideration?

Mr. Coté (Verdun-La Salle):

1. January 31, 1953: $862,371,504.10.

2. (a) January 31, 1952: $776,134,110.49;
(b) January 31, 1951: $654,051,465.58;
(c) January 31, 1948: $435,682,436.15;
(d) January 31, 1943: $101,471,458.29.

3. Annually, in accordance with the statute, the Unemployment Insurance Advisory Committee has reported on the status of the unemployment insurance fund. Extracts from the last three reports of the Committee are as follows:—

1950. While a great deal of valuable information has been accumulated over the past nine years, the period of the war and the ensuing years of very high employment do not appear to the Committee a period likely to be sufficiently representative to yield dependable results on which to judge the future workings of the fund.

1951. The fact that so large a proportion of the contributions was required to meet the benefit payments in a year of high employment shows that there may not be an unduly large margin for bad years. It is reassuring, therefore, that as a result of the sustained high level of employment ever since the Act came into effect the fund provides a substantial reserve against adverse conditions.

1952. The Committee reports that the unemployment insurance fund, in its judgment, is in a sound position.

4. When the Act came into force in 1940, the maximum weekly benefit was $14.40. On the recommendation of the Unemployment Insurance Commission and the Advisory Committee, the rates have been increased by amendments to the Act in 1948, 1950 and 1952, and the maximum weekly benefit is now $24. Supplementary benefits were introduced in 1950 and a number of other amendments have been made from time to time, such as the reduction in the waiting period, which have tended to increase the benefits available.

Equal Pay for Equal Work

February 25

Mrs. Ellen L. Fairclough (Hamilton West) moved the first reading of Bill No. 188, to provide equal pay for equal work for women.

Motion agreed to and bill read the first time.

Colombo Plan

February 26

Mr. Knowles:

1. Since the end of World War II how many persons from countries other than Canada have received training in Canada under the provisions of the Colombo Plan, the United Nations Technical Assistance Program, or any other plan designed to assist in the development of under-developed countries?

2. From what countries have such persons come, how many in each case, and how many in each year since the end of World War II?

3. What is the total amount spent to date for the training of those referred to in question (1), including transportation, maintenance or any other costs met by Canada?

Mr. Claxton:

1. 243 students are receiving training or have received training in Canada since January 1, 1951, under arrangements made by the technical co-operation service of the Department of Trade and Commerce. Of these, 99 came under the Colombo Plan, 123 under United Nations programs, 16 under UNESCO, 3 under FAO and 2 under ICAO.

2. Antigua (1), Austria (1), Australia (1), Brazil (5), British Guiana (2), British West Indies (4), Burma (1), Cambodia (1), Ceylon (9), Chile (2), Colombia (3), Cuba (1), Denmark (2), Dominica (1), Ecuador (2), Egypt (4), Finland (10), Formosa (2), France (2), Gold Coast (2), Greece (2), Haiti (8), India (66), Indonesia (3), Iran (8), Iraq (2), Israel (4), Jordan (3), Korea (10), Malta (1), Mexico (1), Nicaragua (1), Nigeria (1), Norway (2), Pakistan (53), Philippines (3), South Africa (1), Sweden (1), Switzerland (2), Syria (4), Thailand (3), Trinidad (1), Uruguay (2), Venezuela (1), Virgin Islands (2), Yugoslavia (2). Total 243, of whom 115 came in 1951 and 128 in 1952.

3. $334,748.88 have been spent on the 99 Colombo plan trainees. Since the United Nations programs are administered by that body and its specialized agencies, it is not possible to indicate how much of their funds may have been spent in Canada. Canada contributed $1,600,000 to the United Nations Expanded Technical Assistance Program from July 1, 1950 to December 31, 1952.

Records are complete for trainees handled through the technical co-operation service since its inception. Prior to this, arrangements for training were made through other channels so that complete records of the numbers of trainees who came to Canada are not available. It is estimated that an additional 120 received training in Canada under these other arrangements. In addition 13 students from the Commonwealth countries in South Asia have come to Canada during the past four years to take up post-doctorate fellowships tenable in National Research Council laboratories.

Merchant Seamen Compensation Act

March 20

Hon. Milton F. Gregg (Minister of Labour) moved the second reading of Bill No. 46, to amend the Merchant Seamen Compensation Act.

Mr. Green: May we have an explanation from the Parliamentary Assistant?

Mr. Paul E. Coté (Parliamentary Assistant to the Minister of Labour): Mr. Speaker, this bill provides for amendments to the Merchant Seamen Compensation Act, which was passed by Parliament in 1946. That Act replaced and largely embodied the provisions of the merchant seamen compensation regulations of 1945, passed under the authority of the War Measures Act.

The Act provides for payment of compensation to seamen who are injured in the course of their employment, and to dependents of seamen who are killed in the course of their employment, and who are not covered in respect of the accident under any provincial workmen's compensation act.

A seaman who cannot claim compensation under any provincial compensation act is eligible therefore to claim for benefits under the Merchant Seamen Compensation Act, if he is employed on a ship of Canadian registry, or one under charter to a person resident in Canada or having his principal place of business in Canada if the ship is on a foreign or "home trade voyage". I might explain that a home trade voyage covers coastal trade voyages and is defined in the Canada Shipping Act, but does not include a voyage on inland waters in Canada; a foreign trade voyage is a voyage extending beyond the limits of a home trade voyage.

The amendments are very simple. They provide for an upward revision in the scale of benefits payable under the Act, having regard for the changes in the seamen's earnings and changes in living conditions which have occurred in the past several years since the passage of the Act.

Under the present provisions of the Act, claims are not considered where an accident does not result in disabling a seaman from earning full wages for seven days. We propose to reduce this period to four days. It is also proposed to raise

the ceiling of yearly earnings for use in the computation of compensation from $2,500 to $3,600.

The significant changes in cash benefits which are provided in the bill are as follows:—

1. The maximum payment towards the funeral expenses of a deceased seaman is increased from $125 to $200;

2. The amount of the monthly allowance or pension to the widow of a deceased seaman is increased from $45 to $50, and the same increase applies in the case of an invalid husband who was dependent on the earnings of a deceased wife employed on a ship;

3. Where there are dependent children as well as a widow or invalid husband, the monthly payment for each child under 18 years of age is to be increased from $10 to $15 and, in the event of the death of the widowed mother or invalid father, the monthly amount paid to the dependent children is increased from $20 to $25 for each child;

4. In the case of a deceased seaman who leaves no widow but leaves dependent children under 18 years of age, the monthly payment to each child is increased from $20 to $25.

I should explain at this point that the Act provides that the total compensation payable to the widow and children of a deceased seaman is not to exceed in any event the average earnings of the seaman prior to his decease.

5. The minimum amount of compensation to which an injured seaman is entitled for temporary total or permanent total disability which is now fixed at $12.50 per week or the sum equivalent to the seaman's earnings if less than that, is increased to a minimum of $15 per week, or a sum equivalent to the seaman's earnings if less than that.

On January 1, 1950, the responsibility for administering the Act, which previously had been vested in the Minister of Transport (Mr. Chevrier), was transferred to the Minister of Labour (Mr. Gregg) by virtue of an Order in Council passed under the Public Service Rearrangement and Transfer of Duties Act. This transfer of administration is given statutory effect in the amendments to the Act contained in this bill.

Since the Act came into force, or I should say since the regulations of 1945 were made effective, there have been 578 accidents reported as coming under the regulations or Act. The number has been declining year by year because the employing shipping companies covered by the Act have decreased in number from 102 in 1947 to 66 in the last fiscal year. Their number has now increased to 90 as of this date.

Our Act covers seamen on ships of Canadian registry or operated by companies or persons with chief place of business in Canada. There has been a switch from Canadian to other registry to account for the decrease I have mentioned. This decrease has been counteracted in the current fiscal year by an influx of new registrations, mainly from Newfoundland.

As hon. members will know, we do not pay any compensation from federal funds. By the Act, shipping companies are required to place the necessary liability insurance to cover the risks of compensation arising under the Act. Payments of compensation by a company under the Act are covered by the insurance policy.

The claims for compensation arising under the Act are adjudicated by a board known as the Merchant Seamen Compensation Board composed of three officers of the public service.

Cost of administration was $3,463 in the fiscal year 1951-52. Every employer coming under our Act pays $25 a year, and there is an additional assessment on companies whose employees suffer accidents. This is an amount based on the number of such accidents, and equals the balance of cost of administration over and above that collected through the annual $25 assessment.

We think this is a worth-while amendment to the Act, even if it does apply only to relatively few people. It is necessary for the protection of our seamen and their dependents. I am sure it will commend itself to the House.

Mr. P. C. Black (Cumberland): Mr. Speaker, . . . if I have any criticism to offer of this legislation it is that the compensation is not as large as it should be.

We all realize that this is a hazardous occupation. My information is that the compensation to be paid is not as great as that paid under workmen's compensation acts in some of the provinces, notably Ontario, Saskatchewan and Alberta. In order that these sailors may have proper protection they should receive maximum compensation for themselves and their families, equal to what is paid in any part of Canada. I should like to have an explanation from the Parliamentary Assistant as to why the basis of compensation is not on a scale equal to that paid as compensation anywhere else in Canada. This is especially important when we have in hand the

responsibility of protecting men who sail the seas and carry out this hazardous occupation. On the whole, we are in sympathy with the purposes of this legislation and are pleased to give it our support.

Mr. A. M. Robichaud (Gloucester): Mr. Speaker, I deprecate the fact that this bill applies only to a few people. In my submission legislation of this nature should apply, not only to seamen but to fishermen engaged in deep-sea fishing in Canadian registered vessels. I notice that by Section 2 the Merchant Seamen Compensation Act defines a seaman as being any person except a pilot, an apprentice pilot or a fisherman.

I have already drawn to the attention of this House and the Minister of Fisheries (Mr. Sinclair) the fact that there exists in France a law of assistance for merchant seamen and fishermen. The French law covers both the merchant seaman and the fisherman. Several of us from the Maritime Provinces have advocated in this House a system of assistance for fishermen. I submit that our fishermen should come within the ambit of a law of this kind so that in case of accident or death they or their relatives would receive compensation.

Mr. Angus MacInnis (Vancouver East): ...My only concern is that this revision shall be in harmony with what has taken place in the provinces during the last two years. The cost of living has increased considerably since 1946 and the workmen's compensation laws in the provinces have been changed accordingly.

I notice that in most provinces the rate of compensation is a certain percentage of the wage actually being earned. I understand that in this bill it will be a stated sum, although there is a minimum or floor below which it cannot fall. If the weekly wage being received is below $15 a week, $15 a week will be paid as compensation.

I believe there are four provinces, Alberta, Saskatchewan, Ontario and Prince Edward Island, where the maximum compensation is 75 per cent of the earnings. In most of the other provinces, if not in all, I believe the rate is 66⅔ per cent. What we should be concerned about at the moment is to be sure that the rates laid down in this bill meet the situation with regard to wages and compensation being paid under the workmen's compensation acts of the provinces.

The Hon. Member for Gloucester (Mr. Robichaud) has referred to compensation for fishermen. This has been discussed in British Columbia where we have a fairly large fishing industry. I understand that where a fisherman is in the employ of an employer or a company, compensation is payable under the provincial compensation act. However, many fishermen own their own boats and are not employed directly by an employer. It would be most difficult to assess these fishermen for their own compensation.

Under our laws the employers create a fund out of which the compensation is paid and that is where the difficulty would be in bringing fishermen under a compensation act unless the Dominion Government was prepared to set up a fund out of which compensation could be paid under Dominion legislation.

I notice that the bill provides for an increase in the average earnings from $2,500 to $3,600 per annum, which as far as I know is equal to the highest prevailing in any Canadian province. That is the average earnings on which compensation is based and paid in the province of British Columbia. I believe the province of Saskatchewan has an average rate of $4,000. The other change is that the Act is brought under the Minister of Labour (Mr. Gregg) instead of the Minister of Transport (Mr. Chevrier). I think that is a move in the right direction although I have no criticism to offer of the administration of the Act under the Minister of Transport.

Mr. Clarence Gillis (Cape Breton South): ...The Department of Labour has now taken the responsibility for administering the Act and I think it should advertise the fact that this type of legislation is available for merchant seamen and that they are covered by the Act. It is not generally known. I know of two cases where men had been injured or laid up for over a year. They knew nothing about this legislation until I had a talk with them, but the fact that the injuries occurred so far back did not make any difference to the Department when the cases were brought to their attention. They settled back to the date when the injury occurred. I think the Department of Labour should make it known that this legislation is available. Ship owners who have employees who could be covered by this Act should be notified that it is their responsibility to protect their employees, and that this legislation is available...

First, a board should be set up. It should not consist of just two or three civil servants who may handle the stray claim that may come in once in a while, but a section of the Minister's Department should

be made responsible for the administration of the Act. The board that is set up within his Department should undertake to advertise the Act in the press, indicating that it is available to seamen who may be injured. Secondly, ship owners should be advised that they can protect their employees under this legislation and, if they do not do so within a reasonable time, the Government may have to consider the question of making coverage mandatory, because I do not think you get too much co-operation from those companies...

Mr. G. F. Higgins (St. John's East): ... I welcome the bill in that it increases the disability and death benefits to seamen; but I question whether, in view of the increased cost of living, the benefits are sufficient to meet the present scale of expenses...

Motion agreed to, bill read the second time and the House went into committee thereon.

Mr. Coté (Verdun-La Salle): Before we proceed with an examination of this bill clause by clause, I might answer immediately the more important questions which have been raised during the debate on second reading. In the first instance, I should like to assure the Hon. Member for Cape Breton South that it is not optional for a ship owner to get protection under the Act. Under Section 29, which is not being amended by this bill, we find the following:—

> Every employer shall cover, by insurance or other means satisfactory to the board, the risks of compensation arising under this act.

The measure of control that the board has is exercised through the collector or other chief officers of the Customs Department who, upon notification by the board, shall detain the ship complained about until he receives a notice from the board that he may release the said ship. I believe, therefore, there is full protection ...

There was a question raised as to the minimum pension per week payable, and the minimum of $15 which is being provided in the amending bill. That is not necessarily the minimum. The amount paid may be less than that if the wages or the average earnings are less than $15 per week, but in any other event the minimum is $15 per week.

I should like to mention now the $3,600 ceiling on annual earnings. One of the members who participated in the debate misinterpreted that clause of the amending bill. This means that the maximum yearly earnings could be used as a basis for the computation of the compensation, but the compensation is not necessarily calculated on $3,600. It will be calculated on the average earnings during the twelve months preceding the accident.

Mr. Browne (St. John's West): But if they do exceed $3,600, you are brought down to $3,600?

Mr. Coté (Verdun-La Salle): Yes, that is so ...

So far as government employees are concerned, their protection is derived from the application of the Government Employees Compensation Act, so there must not be any misunderstanding on that particular point. Much has been said about the relatively low proportion of the increase which we are making in the compensation. I wish to remind the committee that the field of workmen's compensation is one which primarily falls under provincial jurisdiction. It is only in an incidental way, to supplement the provincial legislation, that we have under federal authority the Government Employees Compensation Act and the Merchant Seamen Compensation Act.

Our officials have thought that the scale of benefit which would compare reasonably well with the scale of benefits prevailing under provincial legislation in that field should be a fair one. In this particular instance, when one refers to the monthly payment to a widow being raised to $50, one should recall that in all provinces, except Saskatchewan and British Columbia, the monthly payment to a widow is $50 or less. Only in Saskatchewan is it above that amount, namely, $60 a month, and in British Columbia where the monthly payment to a widow is $75. Therefore this rate does compare well enough with the rates in effect in the provinces.

While I am making comparisons with the provisions of provincial workmen's compensation acts, I might say that the ceiling on annual earnings which we are setting at $3,600 does compare with $3,000 in Newfoundland, $2,500 in Prince Edward Island, $3,000 in Nova Scotia, $3,000 in New Brunswick, $3,000 in Quebec, $4,000 in Ontario, $3,000 in Manitoba, $4,000 in Saskatchewan, $3,000 in Alberta and $3,600 in British Columbia.

Another point made has been the advisability of including fishermen in the coverage of this Act. The matter has been raised several times.

Mr. Gillis: Before you leave the income question, on what percentage of that income do you compute the rate? Your ceiling is $3,600. How much of that $3,600 are you using? In some of the provinces it is 75 per cent; in others it is 66⅔ per cent.

Mr. Coté (Verdun-La Salle): It is two-thirds, 66⅔ per cent; no change is being made there.

Mr. Black (Cumberland): Why does the Department accept the lowest percentage of benefit that is paid in any province, and does not accept the 70 per cent paid in some of the provinces and 75 per cent paid in four of the provinces?

Mr. Coté (Verdun-La Salle): I may say, in reply to that, that the provisions of the Merchant Seamen's Compensation Act apply mainly to transportation in the lower St. Lawrence, in the Maritimes and in Newfoundland; and if any one will compare the rates that we are setting up with the rates prevailing under provincial legislation in that part of the country I think he will agree that we are doing well enough ...

I was about to mention the advisability of including fishermen under the coverage of the Act. The matter has been studied thoroughly but there is one fundamental difference in the fishing industry and in the transportation industry which we are covering in this Act. In the fishing industry the ships do operate out of ports in their own province to the ports where they originated. It is not a matter of communication by water from a province to a province or out of a province abroad to another country. In the matter of the fishing industry, most of the provinces have already extended reasonable coverage to the fishermen. For instance, the commercial fishermen are fully covered by provincial legislation in the provinces of Ontario, Manitoba and British Columbia. The Quebec legislation applies to commercial fishermen if more than 60 per cent of the personnel are employed. In New Brunswick the legislation covers commercial fishermen if more than 50 per cent of the personnel are employed; in Saskatchewan commercial fishermen are excluded by the legislation. In Alberta coverage of commercial fishermen may be obtained by application, and under the Nova Scotia and Newfoundland acts fishermen are not covered in the same manner as other employees, but employers are required to carry liability insurance to provide assurances of payment of compensation. The field of protection to the fishermen is already occupied by the provinces ...

The Chairman: I think at this point we should proceed section by section, in order that we may have orderly discussion. We are now having questions asked which really are related to the sections in the bill. It would seem to me that the questions could more properly be asked under the sections.

On Section 1—*Minister.*

Mrs. Fairclough: ...Are there any companies already covered by a provincial workmen's compensation board which would govern the home ports of the ships, and which would also fall within the terms of this Act? Does the Parliamentary Assistant know of any companies already covered by a provincial board either on application or through compulsion?

Mr. Coté (Verdun-La Salle): The basis of application of the Act is that no coverage shall be afforded by provincial legislation or by our own Government Employees Compensation Act. This Act applies only with those two reservations. There is no alternative.

Mrs. Fairclough: I am not thoroughly familiar with the provincial acts of all the provinces, but I know that in Ontario it is possible for a company to obtain coverage in many instances on application, even though it does not fall within the strict application of the Act. It seems to me that some of the larger shipping companies may have made application to a provincial board for coverage for their employees, and still fall within the scope of this Act. Can the Parliamentary Assistant say whether he has knowledge of the existence of any such dual coverage?

Mr. Coté (Verdun-La Salle): I do not know of any such applications.

Mr. Browne (St. John's West): Who constitute this board? Where are they located? Do they make an annual report?

Mr. Coté (Verdun-La Salle): The chairman of the board was, until recently, A. H. Brown, who was Assistant Deputy Minister of Labour. The members were B. J. Roberts of the National Harbours Board, who acts as vice-chairman, and Captain G. L. C. Johnson, Assistant Supervisor of Nautical Services in the Department of Transport.

Mr. Browne (St. John's West): Where are they located?

Mr. Coté (Verdun-La Salle): In Ottawa. They are civil servants living here.

Mr. Browne (St. John's West): Do they make any report on their activities?

Mr. Coté (Verdun-La Salle): They report to the Minister of Labour.

Mr. Browne (St. John's West): Does the Minister of Labour make any report on their activities? Where can people find out what they have been doing?

Mr. Coté (Verdun-La Salle): Their report is contained in the annual report of the Department. I would refer my hon. friend to the one tabled for the last fiscal year.

Section agreed to.

Section 2 agreed to.

On Section 3.

Mrs. Fairclough: I realize that this Act has been in effect actually for a comparatively short time, and that the amounts set out for burial expenses compare favourably with similar expenses in some of the provinces. However, it is still an extremely low figure. In these days, when all costs are very high, funeral costs in particular, it would seem to me that the amount set out here is a ridiculously low figure... While some living costs have doubled and others have trebled. I think funeral expenses have reached an all-time high. Were those facts considered when arriving at this figure?

Mr. Coté (Verdun-La Salle): One of the purposes behind this measure was to take into account the rise in the cost of living. That is why the main feature of the bill is an upward revision of the scale of benefits. The basis upon which these rates have been established has been, to a great extent, comparable figures prevailing under provincial workmen's compensation acts. We have taken inspiration from the rates applied by provincial boards. As there are ten provinces, and the rates vary from province to province, we have tried to strike a happy medium and, in the over-all picture, promote a worth while improvement in the Act.

Mr. Black (Cumberland): Does the Parliamentary Assistant consider that the provision for $50 a month for a widow, as set out in Section 3(2)(d), is sufficient? It states that where the widow or an invalid husband is the sole dependent, there shall be a monthly payment of $50. It seems to me that is entirely too low a compensation at today's living costs. Upon what standard did the Department base that figure? What do they compare to? What standard do they accept in order to establish $50 as being adequate compensation for a widow under these conditions?

Mr. Coté (Verdun-La Salle): I agree with the hon. member that this amount is certainly not excessive, but it compares with the monthly pensions to widows in all provinces except Saskatchewan and British Columbia where the amounts are $60 and $70 respectively.

Mr. Black (Cumberland): Could not the Minister, the Department and the federal Government set a standard for those provinces which the Parliamentary Assistant admits make too low a payment? If that is the basis on which they have established this payment of $50, why should not the federal Government and this Parliament set a standard for those provinces which are considered to be too low?

Mr. Coté (Verdun-La Salle): Workmen's compensation legislation is under the jurisdiction of the provinces. This is intended to be supplementary to the workmen's compensation coverage. If our rates compare favourably with those of the provinces I think under those circumstances we could hardly be blamed.

Mr. MacInnis: I think the rate of $50 is too low. The $45 which was paid in 1946 was really a larger amount than the $50 being suggested here. However, I must agree with the Parliamentary Assistant that the payments provided in the bill are not out of line with the average payments in the provinces. In Saskatchewan the payment for a child under 16 years of age is $25, and this bill provides for a payment of $25 for each child under the age of 18 years...

Mr. Browne (St. John's West): I do not think the Parliamentary Assistant has answered the argument. If $45 was considered by the Dominion Government in 1946 as being suitable compensation, how can it justify a payment of $50 today? The cost of living has increased at least 90 per cent and I submit that there should be a higher payment for widows...

It would take at least $75 to equal the $45 that was paid in 1946. It would not cost the federal Government anything because they are going to be insured...

Section agreed to.

On Section 4—*Minimum compensation.*

Mrs. Fairclough: The wording of this section seems to be a little ambiguous where it says:—

—shall not be less than fifteen dollars per week or, where his average earnings are less than fifteen dollars per week, the amount of such earnings,—

Mr. Coté (Verdun-La Salle): Perhaps it would be clearer if before the words "the amount of such earnings" the words "shall be" were added.

Mrs. Fairclough): Should it not be, "except where his average earnings are less than fifteen dollars per week"?

Mr. Coté (Verdun-La Salle): That would be another way of arriving at the same thing.

Section agreed to.

Sections 5 to 12 inclusive agreed to.

Title agreed to.

Bill reported.

Mr. Deputy Speaker: Shall this bill, by leave, be read the third time now?

An hon. Member: By leave.

Mr. Gregg moved the third reading of the bill.

Motion agreed to, bill read the third time and passed.

Union Organizations Submit Annual Briefs to Cabinet

Canada's four major labour organizations last month presented their annual memoranda to the Cabinet. Criticism of proposed amendment of Criminal Code appeared in all four presentations

During a two-week period last month, delegations from Canada's four major labour organizations submitted their annual memoranda containing proposals for legislative and administrative changes to the Cabinet at Ottawa. The Trades and Labour Congress of Canada presented its brief on March 3, the Canadian Congress of Labour on March 6, the Canadian and Catholic Confederation of Labour on March 10, and the Dominion Joint Legislative Committee of the Railway Transportation Brotherhoods on March 13.

All four briefs expressed concern at some sections of the proposed revision of the Criminal Code. Subjects also mentioned in all briefs included housing, taxation, unemployment insurance and old age pensions.

Trades and Labour Congress of Canada

TLC criticizes Government's taxation policies and requests improvements in old age security legislation, national labour code, housing and proposed amendments to Criminal Code. Price controls again urged

Criticism of the Government's taxation policies and varied requests for improvements in Canadian labour and social laws were contained in the annual memorandum to the Cabinet presented by the executive council of the Trades and Labour Congress of Canada on March 3. The major requests dealt with old age security, health insurance, unemployment insurance, the national labour code, housing, proposed amendments to the Criminal Code, price controls and immigration.

One of the largest sections in the brief was that containing the TLC's requests on behalf of government employees. Among the things requested were the five-day week for all government employees and overtime payments at time and one-half and sick leave for prevailing rates employees.

Percy R. Bengough, TLC President, who read the memorandum, departed from his prepared text to pay tribute to Dr. Arthur MacNamara, former Deputy Minister of Labour, whose retirement effective March 4 had just been announced.

The Prime Minister, Rt. Hon. Louis S. St. Laurent, thanked Mr. Bengough for "this tribute to the services which Dr. MacNamara has rendered over the years to the economy of Canada.

"We are conscious," he continued, "of the contribution he has made to the development our country has experienced during the last few years."

The Prime Minister also commented on the selection of A. H. Brown to succeed Dr. MacNamara as Deputy Minister of Labour, expressing confidence that his experience in the Department would "serve him in good stead" in his new responsibilities.

The TLC's annual legislative submission also called for action on a Bill of Rights, federal aid to both primary and secondary education, government annuities and the elimination of level crossings.

In his reply to the memorandum, the Prime Minister referred specifically to only a few of the TLC's requests; he pointed out that the brief would have to receive consideration by various government departments and that all the requests could not be dealt with at the current session of Parliament. He did speak on the pleas for a Canadian Bill of Rights, for federal aid to primary and secondary education, for a system of collective bargaining for government employees and for improvement in the working conditions in the postal service.

Union Charter for the Cabinet?

During the Prime Minister's reply to the TLC brief, he said: "If we were going to attempt seriously to implement your recommendations that all the representations you have made here be dealt with before this session ends, it would require many hours more than eight per day."

To which TLC President Bengough replied that there were enough Cabinet members present to form a union. If you apply for a charter, he said, we will grant you one.

"Cabinet Minister's Local No. 1," suggested Finance Minister Abbott.

Fourteen members of the Cabinet attended the presentation. The labour organization's delegation numbered close to a hundred union representatives.

Taxation

Dissatisfaction with some aspects of the Government's recent budget and disappointment at the failure to adopt previous TLC taxation requests were expressed in the memorandum. "Our members," the brief declared, "feel very strongly that the time has come for a considerable re-orientation in taxation policy so that the load will be spread more evenly over the whole population."

The TLC repeated its request for increased personal exemptions—$3,000 for married persons, $1,500 for single taxpayers and $400 for each child—for exemption from taxable income of out-of-town travelling and living expenses of workers in the building and construction trades, and for exemption of the cost of tools from income tax. The submission reiterated the TLC's objection to all forms of sales tax.

Departing from his prepared text, Mr. Bengough added a request that the cost of prescribed drugs be included in the medical expenses a taxpayer can claim as a deduction. "In many cases the cost of those drugs far exceeds the other medical expenses," he said, "and we feel that an exemption should be allowed for that added cost."

Social Security Program

Old Age Security

The TLC again asked for a lowering of the qualifying age for old age pensions to 65 years for men, 60 for women, and for an increase in the amount of pension to $65 monthly. The same increase in the amount of old age assistance payments was requested.

Health Insurance

Expressing "great disappointment" at statements that the Government is not yet prepared to proceed with a measure of national health insurance and pointing to the growth and variety of prepaid health plans, the TLC's brief declared that "only a public scheme can provide adequate health services on a prepaid basis to all of the people of Canada."

The memorandum then requested the establishment of a national health insurance plan:

> Thus we again repeat our urgent request for the establishment of a national health insurance plan providing medical, surgical and dental services, accident and hospitalization benefits, and treatment for the mentally ill, financed by individual prepayment and government subsidy, and to be made available to the individual without cost at the time of need.

Unemployment Insurance

While welcoming the changes and improvements in the Unemployment Insurance Act during the past year, the TLC in its submission expressed the conviction that "still further improvements are necessary and desirable". Specifically mentioned was a further increase in the amounts of weekly benefits.

The major change in the Act requested by the delegation was the extension of the Act to provide benefits to workers who are out of work because of illness.

In the TLC's view, administration of such a provision could be carried out by the present Unemployment Insurance Commission. The provision would apply to the same employees now covered by the Act; the system of contributions and benefits would be similar; the benefits would be paid to insured employees when sickness resulted in loss of earnings, on presentation of a doctor's certificate.

"Those who are unemployed through sickness should receive benefits as a right," Mr. Bengough emphasized in a departure from his prepared text, "and there should be no suggestion of any means test."

The TLC repeated its request for the inclusion of all employees under the Act, calling attention especially to employees of hospitals, of governments, in horticulture and in accessible portions of agriculture.

Labour Legislation

National Labour Code

Four amendments to the Industrial Relations and Disputes Investigation Act were recommended by the TLC.

They were: (1) that the provisions of the Act be extended to cover all employees of the Government, including those on hourly rates; (2) that the check-off of union dues become mandatory on the employer when this is properly authorized by the recognized bargaining agency; (3) that in a dispute between more than one union and an employer the Minister of Labour shall appoint one conciliator or one conciliation board to deal with the entire matter when requested by the unions concerned to do so; and (4) that the Canada Labour Relations Board be expanded in membership to include alternates as well as members.

Vacations with Pay Act

Legislation providing for minimum vacations with pay for all workers within federal jurisdiction was recommended. Such legislation is now "fairly general" throughout the provinces, the brief pointed out. The TLC requested that the law establish a minimum of two weeks' vacation with pay and at least nine statutory holidays with pay each year.

Fair Wage Act

A Fair Wage and Conditions of Work Act combining the provisions of the present Fair Wage Act and those of Order in Council P.C. 5547 was requested in the TLC submission. The present Act, the memorandum pointed out, applies only to the building and construction trades; the Order in Council establishes wages and other conditions for other workers on government projects.

Three adjustments to the Government's Fair Wage Policy were recommended:—

1. Where government projects are distant from the labour supply centres, the wages and working conditions should be no less favourable than those in the labour supply centres.

2. The Fair Wage Policy should apply to all government contracts, including those entered into by the Post Office.

3. Where contracts are let to firms in a "single industry" centre, the wages and working conditions should be no less favourable than those in other plants in the province producing essentially similar products where wage rates and working conditions are governed by collective agreements.

Housing

"Our affiliated membership is greatly disturbed over current housing conditions and the failure of our Government to provide due encouragement to home-building," the TLC memorandum declared.

Asserting that labour and material shortages no longer exist, the brief "urgently" recommended lower down payments on new housing units. "The maximum down payment on new homes should be reduced to not more than ten per cent," the TLC declared, "and the term of the mortgage loan should be extended sufficiently to allow the monthly payments to fall within the purchaser's ability to pay. We particularly urge you to provide that reasonable low interest rates will be charged on mortgage loans."

Criminal Code

Two comments on the proposed revisions to the Criminal Code were made in the TLC memorandum. On the one hand the labour body requested a strengthening of the law as protection against subversive elements and, on the other, a clarification of the sections of the Code dealing with damages arising out of a cessation of work.

"We would favour," the brief stated, "some strengthening of the criminal law which would serve to protect the interests of Canada from the activities of those who seek to be known as and to enjoy all the privileges of Canadian citizens while at the same time owing allegiance to an authority outside of Canada whose purpose is to undermine our Canadian democracy and the eventual overthrow of our electoral system."

Referring to the sections of the Code that deal with damages to persons and property arising out of a cessation of work, the TLC expressed the desire that it be made "abundantly clear" that the proposed revisions are not aimed at "the lawful activities of *bona fide* trade unionists.

"We earnestly recommend," the brief continued, "that a section be added to the Code expressly setting out that such sections of the law apply only to criminals and criminal negligence and not to persons engaged in a lawful industrial dispute."

Government Employees

The single subject that was given most space in the TLC's memorandum was government employees. In its submission on this subject the labour body dealt with the five-day, 40-hour week for all government employees on a year-round basis; the payment of overtime rates;* sick leave for

*An Order in Council tabled March 16 provides for overtime wage-rates at time-and-a-half for operating staffs (as distinct from administrative staffs) of government departments for hours worked in excess of 48 in the week. Straight time will be paid for hours in excess of 44 but fewer than 48.

prevailing rates employees; the provision of collective bargaining for the public service; amendments to the prevailing rates policy; and working conditions of Post Office employees.

The question of government employees also appeared in the introduction to the memorandum, where the TLC said: "We believe that our Government, in its capacity of possibly the largest employer in Canada, should be a model employer and most certainly should not, as presently obtains for employees in some branches of government service, lag behind the general run of fair employers in private industry."

While requesting the provision of a system of collective bargaining for government employees, the TLC did not wish to see the prevailing rates policy revoked in the meantime, although it felt some amendments were urgently needed.

The prevailing rates regulations fail, the TLC asserted, in places where government operations overshadow private operations. The Halifax Dockyard and the Government Printing Bureau in Ottawa were cited as examples.

"In Halifax most employees are working for the Government," TLC President Bengough added. "But when it comes to setting wages, the wages of hundreds are considered to govern the wages of thousands. That is not a fair wage policy at all."

The TLC would like to see the prevailing rates regulations amended "to give the Minister of Labour more discretionary power in the establishment of wage rates".

Disappointment was voiced at the Government's refusal to establish the five-day week for the public service generally and at its decision to exclude operational undertakings such as the Post Office when the five-day week is granted. "This is class discrimination which we greatly deplore," the memorandum declared.

Departing from the printed text, Mr. Bengough criticized the decision to establish the five-day week only in those cities where such a work week predominated in private industry. "The list includes only two cities in British Columbia, 21 in Ontario, one in Quebec and no centre in the Maritimes or in the Prairies," he pointed out. "We are at a complete loss to understand why such centres as Edmonton, Calgary, Saskatoon and Winnipeg were not included. Although we wholeheartedly disagree with the Government's policy of establishing the five-day week on this piecemeal basis, we earnestly request that the list of centres be extended at once to include at least the following: Victoria, Edmonton, Calgary, Regina, Saskatoon, Winnipeg, Moncton and Sydney."

Other Requests

Immigration

Again this year the TLC requested that the Department of Labour be given the responsibility for immigration and that an immigration commission, with equal representation from labour, management and government, be established.

The memorandum contained an expression of pleasure that a previous request for the restriction of immigration during the winter has been adopted in part but stated that "we cannot fully subscribe to all the methods being used".

Price Control

Because wages "can never catch up with rising prices" until after the damage has been done, because such damage "can never be repaired no matter how far prices may sink in a later period", and because "even if prices dropped substantially from present levels many of the necessities of life would still be out of reach of families in the medium and lower income groups", the TLC wants price control to be a continuing national policy. Also desired is the subsidization of basic foods.

The delegation repeated last year's request for a prices and trade board with labour representation which would have to approve applications for price changes, and for a 100-per-cent excess profits tax "to act as a deterrent to those who wish to take all that the traffic will bear and also as a means to defray the cost of the subsidization program".

Fair Employment Practices Act

The Government was commended for its decision to introduce a Fair Employment Practices Act, for its amending of the Unemployment Insurance Act to prohibit discrimination by National Employment Service officers in the referring of job applicants, and for its provision that discrimination in hiring and employment under government contracts shall be a breach of the contract.

On the subject of discrimination, the TLC requested the outlawing of restrictive covenants in land and property contracts.

British North America Act

The TLC recommended amendment of the British North America Act to include a Bill of Rights and to provide for the establishment of uniform labour and social laws throughout the whole of Canada.

Annuities

"Greatly deploring the failure of the Government" to improve the status of government annuities, the memorandum urged the introduction of amendments to bring the annuities into line with present-day conditions.

Federal Aid for Education

Believing that there should be greater equality of educational and post-school opportunities in Canada and that this can be accomplished only through federal financial assistance, the TLC requested federal aid for both primary and secondary education.

Conclusion

In a concluding section to its memorandum, the TLC repeated its offer to co-operate with employers and the Government in the promotion of production and the social betterment of the Canadian people. In the introduction to its brief, the Congress, while congratulating the Government for its actions in international affairs, expressed the belief that the Government should take more specific steps towards encouraging and assisting Canadian citizens to develop sound social and economic security.

Government's Reply

Delivering the reply for the Government, Prime Minister St. Laurent, pointing out that it would be "almost impertinent" for him to discuss such a full presentation in the time available, dealt specifically with only four of the requests made by the TLC.

On the request for amendment to the constitution to include a Bill of Rights, he said that would require the co-operation and acquiescence of all the parliamentary institutions in Canada. Such an amendment would be desirable, he said, but pointed out that rights written into legislation do not always guarantee those rights in practice.

"I do not know that there is any constitution in the world which has more admirable provisions expressed in its terms," he continued, "than that of the Soviet Union; but we are not too favourably impressed with the way in which those admirable principles enunciated in that constitution are in fact applied to the daily lives of those who live under it."

On the request for action at this session on the TLC recommendations, the Prime Minister pointed out that it is not the Government that determines the pace at which parliamentary business is disposed of.

The TLC request for the adoption of a system of collective bargaining in the public service has been getting consideration for a long time, Mr. St. Laurent said. He pointed out that long ago another system had been set up and that it is the Civil Service Commission, not the Government, which controls employment in the government service.

"It may be that another system will some day replace this one; but that is the system that is still there," he went on. "I feel quite sure that at this time, as we are probably approaching an election, no party would want to go to the country and say: 'Here, we are going to do away with the civil service system and substitute something else.'"

There will have to be a long process of education in respect to the system of recruiting for the public service before it becomes more closely akin to that which prevails among good employers in private enterprise, he added.

In reply to the requests concerning the Post Office, the Prime Minister reminded the delegation that a bill to improve the postal service had been referred to a committee and remarked that there would probably be an opportunity for discussion by the committee of some of the problems cited by the TLC.

On federal aid to education, he said:—

> We tried federal aid to universities just two years ago. We were able to do that once in all the provinces but this year we do not seem to be able to do it everywhere because of misgivings over the possibilities that it might mean some interference by the central authority with the exclusive control and jurisdiction of the provincial authorities over this important matter of education.

"I do not know that it is going to be possible for us to do everything you recommend," the Prime Minister concluded, "but we are always anxious to give consideration to any representations made by the labour organizations of our country, because we honestly believe that they are not made from selfish motives to serve any individual private interest but they are made in the view that they would be good things, if they could be realized, for the Canadian economy."

Cabinet Members Present

Accompanying the Prime Minister at the presentation of the TLC memorandum were: Rt. Hon. C. D. Howe, Minister of Trade and Commerce and Minister of Defence Production; Rt. Hon. J. G. Gardiner, Minister of Agriculture; Hon. Alphonse Fournier, Minister of Public Works; Hon. Lionel Chevrier, Minister of

Transport; Hon. D. C. Abbott, Minister of Finance; Hon. James J. McCann, Minister of National Revenue; Hon. Wishart Robertson, Leader of the Government in the Senate; Hon. Milton F. Gregg, Minister of Labour; Hon. Stuart Garson, Minister of Justice; Hon. R. H. Winters, Minister of Resources and Development; Hon. Gordon Bradley, Secretary of State; Hon. Walter Harris, Minister of Citizenship and Immigration; and Hon. Alcide Coté, Postmaster General.

Canadian Congress of Labour

CCL gives first place in memorandum to international affairs, asking for closer consultation with labour on major international questions. Health insurance and national labour code among other things sought

A request for closer consultation with labour on major international issues was given first place in the annual memorandum of the Canadian Congress of Labour to the Federal Cabinet on March 6. Calling attention to the Department of International Affairs recently established by the Congress, the brief stated:—

"At this critical period in world history, the Congress believes it is highly desirable that Canadian foreign policy be fully understood by, and have the support of, representative Canadian organizations. While the Government has recognized the advisability of consulting these organizations on major national questions, it has rarely done so in the past on vital international issues. As a result, bodies such as our Congress have had little opportunity to ascertain the factors underlying many policies adopted by the Government in foreign affairs."

One of the functions of the new department, the brief pointed out, is to assist in making known to the Canadian Government the views of Congress on international questions of concern to labour.

The Congress asked that a committee, representative of all organizations in the country, be set up to act in an advisory capacity to the Canadian delegation at the United Nations General Assembly, similar to the one operating in the United States. Establishment of consultative machinery in connection with economic assistance programs such as the Colombo Plan was also requested.

Urging increased aid for economically underdeveloped countries, the CCL drew attention to the "active role" it is playing in this field. It is, it said, "contributing more per capita to the regional activities fund of the International Confederation of Free Trade Unions than any other affiliate of that organization."

Major requests of the Congress on the national level covered a wide range; they included establishment of a national health insurance scheme, adoption of a national labour code, improvements to the Unemployment Insurance Act and extension of unemployment insurance benefits, co-operation with provincial and municipal governments in providing subsidized low-rental housing, and the setting-up of an immigration advisory committee.

The delegation was headed by President A. R. Mosher and included representatives of affiliated unions. Donald MacDonald, Secretary-Treasurer of the Congress, read the brief.

In his reply, the Prime Minister assured the delegation of the Government's deep concern with the matters presented in the memorandum and said they would receive careful consideration. He expressed appreciation that in the various representations the Congress bore in mind the interests of the Canadian people as a whole.

National Health Insurance

The CCL repeated its request for the establishment of a national health insurance plan and asked for the appointment of a parliamentary committee to go into the whole question and to make recommendations.

"The biggest single gap in our social security system," it said, "is the lack of health insurance. We have been talking about it since 1919." The Government, it said, is committed to health insurance but it seems to be on a "this year, next year, some time, never basis". Describing as a "hodge-podge" and "not good enough" the variety of plans at present in existence, the brief declared "the time has come for action."

National Labour Code

Pointing out that considerable variation exists in the terms, interpretation and enforcement of provincial labour laws, the Congress urged the adoption of a National Labour Relations Act to ensure uniformity in labour legislation and administration throughout Canada. The expansion and development of Canadian industry on an interprovincial basis make it more essential than ever, said the brief, that such an Act be adopted.

The Congress would like to see included in such a labour code specific provision for the outlawing of company unions, voluntary check-off of union dues, removal of the provision for the revocation of certification at the request of an employer and effective enforcement of penalties.

Unemployment Insurance

Reiterating its assertion that the unemployment insurance fund is over-funded, the Congress prophesied a balance of a billion dollars in the near future if the present rate of employment is maintained. There is room for substantial improvements to the Act without the need for further contributions, it said.

The Congress expressed strong opposition to any reduction in the daily rates of contribution, suggesting instead an increase in the benefit rates. "The present rates of contribution are not burdensome. The present rates of benefit are thoroughly inadequate," it said. "To reduce contributions is just about the worst possible use to which the fund's surplus could be put. The simple, obvious, right and sensible thing is to raise the benefits."

As measures to improve the Act, the brief recommended: (1) a further increase in the benefit rates and the creation of two new insurance classes to replace the top income class; (2) elimination of the non-compensable days and the waiting period; (3) further extension of the period of supplementary benefits; and (4) recognition of compensable days of illness.

The time has come, the brief stated, to introduce a sickness disability scheme to protect workers against loss of income during illness. Such a scheme, it suggested, could supplement unemployment insurance, be administered by the Commission and be financed in part out of the "large balance" in the unemployment insurance fund.

Housing

The Congress again urged adoption of a low-rental housing scheme. "The Government could and should," it said, "do a great deal to stimulate local initiative and provincial co-operation in this field."

Anticipating a backlog of demands for 735,000 dwellings by the end of the year, the CCL said the Government's immigration program will make "a bad situation worse, unless prompt and effective action is taken to provide subsidized low-rental housing". A housing program, the brief added, would be an excellent way to take up any slack in employment following a tapering-off of the defence program.

Immigration

In proposing the setting-up of an Immigration Advisory Committee, the CCL expressed the view that a good immigration policy can do much to strengthen and enrich the nation and to preserve peace. A committee representing labour, management and the general public, it said, would keep the Government informed on what people are thinking and feeling.

Criminal Code

Revision of the Criminal Code, especially of those sections affecting picketing and the right to strike, is of "crucial" importance to the whole labour movement, the brief declared. If Sections 365 and 372 of Bill 93 remain as they are, "unions of every kind, all over the country, may find themselves totally unable either to strike or to picket legally, even in the most peaceful way".

Congress, stated the brief, took full advantage of the opportunity to present its views to the House of Commons committee, when it asked particularly: (1) to have a subsection added to Section 365 to ensure that the section would not apply to unions and collective agreements; (2) to have Section 372 deleted, and replaced (with necessary amendments) by the sections of the present code which it purports to condense (or, alternatively, to add a proviso similar to the one suggested for Section 365); and (3) to have the Canadian law on peaceful picketing brought into line with the British law, expressly legalizing not only the communication of information, but also peaceful persuasion.

1953 Budget

The CCL expressed "deep regret that the 1953 budget, which has been referred to as a 'social dividend' budget, appears rather to be a 'business dividend' budget." Congress, the brief stated, had urged that the sales tax be reduced and income tax exemptions raised "but nothing had been done in this respect". Income lost through tax reduc-

tions granted to corporations, it said could have been used to extend assistance to under-developed countries and to finance a national health scheme.

Although appreciating the reduction in the floor on deductible medical expenses for income tax purposes, the Congress regretted that the Minister of Finance had not seen his way to allowing the full amount of such expenses to be deductible.

Disappointment that the sales tax had not been reduced was also voiced.

Other Requests

Education

Commending the Government for its valuable assistance to the provinces through its vocational training program and grants to universities, the Congress "strongly urged" the Government to do everything possible to provide equal educational opportunities for all Canadian children.

Labour Representation

The CCL again urged the Government to appoint a representative of labour on the Dominion Coal Board and to appoint workers' delegates and advisers to the sessions of the International Labour Conference in accordance with the Treaty of Versailles.

Textile Industry

In again calling attention to the "depressed state of the textile industry," the brief stated that, although there had been some improvement in the last year, many textile workers were still unemployed or working on short time while at the same time imports of textiles had increased. The Congress urged that a survey be made of the industry with a view to providing adequate protection against dumping and other unfair competition.

Deduction of Union Dues

To relieve unions from the necessity of having to provide receipts for income tax purposes for union dues paid under the check-off plan, the brief urged that space be provided on T-4 income tax forms for employers to record the amount of dues deducted.

International Affairs

The Congress regretted that the Government had not supported a proposal to establish a Good Offices Commission to deal with the Franco-Tunisian dispute. Regret was also expressed at the abstention of the Canadian delegation to the United Nations from voting on the Arab-Asian resolution calling for the setting-up of a United Nations commission on the racial situation in the Union of South Africa. The CCL urged the federal Government to give "leadership in matters of this kind, particularly where there is an obvious violation of the principles and purposes of the United Nations Charter".

Additional Recommendations

The Congress also recommended:—

Adoption of a Bill of Rights, along the lines of the United Nations Universal Declaration of Human Rights.

Removal of the restrictions on employment of older workers in the government service.

Equal pay for equal work for men and women.

Increase in the blindness allowance to at least $50 per month, and abolition of the means test.

Establishment of a national fuel policy, with special attention to the coal mining industry in the Maritimes and western Canada.

Provision of old age pensions of $65 per month at 65 years of age, without a means test.

An increase in family allowances to compensate for the rise in the consumer price index.

Government endorsation of the adoption of a World Calendar.

Collective bargaining rights for Government employees.

Statistics

Congress expressed satisfaction with the new consumer price index. It also expressed appreciation of the new policy of the Labour Gazette in "carrying a special up-to-date supplement on the labour market situation".

Government's Reply

Replying for the Government, the Prime Minister, Rt. Hon. Louis St. Laurent, expressed appreciation of the CCL's concern for the welfare of the Canadian people as a whole. "This is as it should be," he said. He assured the delegation that the representations contained in the brief would receive careful consideration by the Government and the federal departments concerned.

Although the view was expressed with respect to some of the subjects that progress had not been as rapid as was hoped, the Prime Minister said, he appreciated the fact that the brief recognized that "we are all travelling in the same boat" and that improvement of the Canadian situation as a whole "benefits each and every one of us individually".

Referring to the division of jurisdiction between the federal and provincial legislatures, Mr. St. Laurent said "it is a ticklish proposal to suggest the transferring of any activity from one jurisdiction to another". But progress in that direction has been made, he felt, and he thought that Canadians generally recognize that it has not impaired the efficiency and stability that was provided by the constitution in 1867. Mr. St. Laurent cited the setting-up of the Unemployment Insurance Commission, the introduction of family allowances and old age pensions.

Requests which received direct comment by the Prime Minister were: (1) a Bill of Rights; (2) aid to economically under-developed countries; and (3) the unemployment insurance fund.

On the question of a Bill of Rights, the Prime Minister gave the same reply as he had to the Trades and Labour Congress (see p. 535).

In regard to increased aid to economically under-developed countries, such aid, said the Prime Minister, can be most effective if directed towards helping these people to help themselves.

Turning then to the unemployment insurance fund, the Prime Minister thought it should be a source of satisfaction to all to know that there is an accumulated fund. We cannot isolate our economy from that of the rest of the world, he said, and the fund should be kept as a "nest egg" against the possibility of unemployment in the future.

All your points—"a national fuel policy is one of them"—the Prime Minister concluded, will receive the most attentive consideration.

A. R. Mosher

President A. R. Mosher, in thanking the Prime Minister and the members of the Cabinet for their courteous hearing, expressed disappointment that time did not permit them to deal fully with "some of the hardy perennials which we have brought before the Government year after year".

Referring in particular to labour representation at the ILO, he said it was "beyond the comprehension" of the CCL that it was not consulted with respect to the selection of delegates.

Mr. Mosher reiterated the CCL's concern over the proposed amendments to the Criminal Code. He hoped the Government would see their viewpoint and realize the damage that might be done to the labour movement, and to the freedom and rights of individual citizens, if some changes are not made with respect to the proposed amendments.

Cabinet Ministers Present

The Congress was received by the Prime Minister, the Rt. Hon. Louis S. St. Laurent, accompanied by Rt. Hon. C. D. Howe, Minister of Trade and Commerce and Minister of Defence Production; Hon. Alphonse Fournier, Minister of Public Works; Hon. Lionel Chevrier, Minister of Transport; Hon. D. C. Abbott, Minister of Finance; Hon. J. J. McCann, Minister of National Revenue; Hon. Milton F. Gregg, Minister of Labour; Hon. Stuart Garson, Minister of Justice; Hon. R. H. Winters, Minister of Resources and Development; Hon. Hugues Lapointe, Minister of Veterans Affairs; Hon. W. E. Harris, Minister of Citizenship and Immigration; Hon. George Prudham, Minister of Mines and Technical Surveys; Hon. Alcide Coté Postmaster General; and Hon. R. O. Campney, Associate Minister of Defence. Paul E. Coté, Parliamentary Assistant to the Minister of Labour, was also present.

Canadian Catholic Confederation of Labour

Postponement for at least one year of final examination of proposed revision of Criminal Code urged by CCCL. Changes also suggested in Unemployment Insurance Act, National Housing Act and Income Tax Act

The Canadian and Catholic Confederation of Labour, in its annual brief presented to the federal Cabinet March 10, requested the Government to put off for at least a year the final examination of the plan for re-drafting the Criminal Code, since certain sections could, as they are worded, paralyse the right to strike by preventing all legal picketing and by making all strikes inoperative and ineffective.

The 3,000-word brief, presented by Gérard Picard, General President, on behalf of the Confederation's more than 93,000 members, was read by Jean Marchand, General Secretary.

Nearly a third of the brief was devoted to the plan for re-drafting the Criminal Code; according to the CCCL, this plan contains a number of provisions "which appear to be very dangerous with regard to legitimate union activity".

Far from constituting an improvement on the present text, the CCCL stated, the new Criminal Code draft, by too indefinite a wording and by an excessive generalization of certain sections concerning misdemeanours, "may expose many citizens to serious molestation from persons interested in provoking brutal and abusive police intervention".

The CCCL also expressed the fear that the new Code might "lead to abuses which could not be corrected by the federal Government because the application of the Criminal Code comes under the jurisdiction of the provinces".

The brief also suggested important changes in the Unemployment Insurance Act, the National Housing Act and the Income Tax Act, asked for a more generous old age pension scheme and the payment of pensions to invalids and put forward a number of suggestions for ensuring the stability of the Canadian shipbuilding industry.

In its brief, presented in both French and English, the CCCL also asked for free radio broadcasts on the CBC for workers, for amendment of the Government Annuities Act to increase to $2,400 the maximum annuity payable and the granting of the right to vote to all persons 18 years and over.

The labour delegation was received by the Rt. Hon. Louis St. Laurent, Prime Minister, and ten Cabinet ministers. In presenting the Government's reply, the Prime Minister said the CCCL's representations had been made "quite objectively, and for the purpose of improving the national economy and not only of advancing the interests of organized labour".

Before the reading of the brief, Mr. Picard laid emphasis on the ability with which the retiring Deputy Minister, Arthur MacNamara, had attended to the problem of labour, especially with regard to manpower.

He termed the choice of A. H. Brown to replace him an "excellent appointment", stating that the latter has all the necessary ability to occupy this high position and assuring him of the closest co-operation on the part of his labour organization.

Mr. Picard took the opportunity to suggest that a French-Canadian be appointed Assistant Deputy Minister of Labour to fill the vacancy created by Mr. Brown's appointment. In making this suggestion, he pointed out that he had no intention of denying the proficiency of the other officials of the Department.

International Situation

The threat of a third world war resulting from the tense international situation is a source of anxiety to the CCCL, the memorandum said. It is confident, however, that Canada, "because of its prestige, its favourable geographical position and the sense of impartiality which has so far characterized its participation in international affairs, will know how to prevent the world from slipping towards a new cataclysm".

The CCCL repeated that communism will not be beaten on battlefields but on economic and social grounds. It therefore suggested that the chance of maintaining and strengthening peace would be increased if it were possible to devote the enormous sums being spent on the Korean war to improving the social and economic standards of poor and underdeveloped countries.

Canadian Prosperity

Happy to note that Canada is now enjoying an era of prosperity, the CCCL nevertheless called on the Government to "favour all measures intended to ensure an equilibrium between production and consumption in order to reduce the anxiety and insecurity brought about by succeeding cycles of inflation and depression".

Income Tax

The main defect in our income tax system, according to the CCCL, lies in the inadequacy of the basic exemptions. The CCCL therefore renewed its request that the federal Government increase the basic exemptions for single persons from $1,000 to $1,500 and for married persons from $2,000 to $3,000. It also suggested that the allowance per child be increased from $150 to $400.

The brief also protested against the effects of the progressive income tax rates, which, the CCCL pointed out, put the father of a family who is the sole provider in a position inferior to that of a household where both husband and wife work; in other words, the former pays more tax than the other two together.

The CCCL therefore suggested that the Income Tax Act be amended in such a way that "the family income may be considered as having been earned equally by the husband and the wife, and that both file an income tax return as though they were single and take into account the exemptions allowed for this category".

The CCCL also asked that the Department of National Revenue use all the means at its disposal to combat income tax exasion, which, it said, is most prevalent in certain sectors of the population. The brief stated that income tax could be reduced by at least 40 per cent if there were not so many persons avoiding payment.

The CCCL also recommended that workers be allowed to deduct from their taxable income an amount equal to 10 per cent of the value of the tools required to do their work; that permission be given to deduct all medical expenses and all contributions paid for health and accident insurance plans; that the need for receipts in order to take advantage of the 10 per cent reduction allowed for charitable donations be eliminated and that the deduction from taxable income of the amounts paid for unemployment insurance and for joint committees be permitted.

Re-drafting of Criminal Code

The CCCL devoted the major part of its brief to the plan for re-drafting the Criminal Code (Bill 93), which is now under consideration; after making definite representations concerning three sections which it would like to have removed, in order to avoid their being used to paralyse all union activity, the CCCL recommended that the Government postpone the final examination of this plan.

The brief specified that the CCCL wants the criminal law to be strong enough to ensure the proper maintenance of public order and the security of citizens and their property but is afraid that too general a wording of the legal text may lead to serious consequences.

The CCCL first protested against Section 365 of Bill 93, which deals with breaches of contract in the field of public utilities and with breaches of contract which might lead to "endangering human life, causing serious bodily injury, exposing valuable property to destruction or serious damage". According to the CCCL:—

> The new section thus permits punishment under the Criminal Code for breach of a civil contract. If such a principle can be admissible for very serious reasons, it still remains that it should be confined within strict and well-defined limits, which the present Code guarantees to a large extent. But unfortunately the new text widens the effect considerably. Consequently, the new text might easily serve to paralyse the right to strike and could be used arbitrarily to break off a work stoppage.

The CCCL expressed the belief that this provision should be modified in a way to protect freedom of association and the right to strike, especially since labour legislation already provides penalties.

The brief also made a protest against Section 372 of the revision, which deals with "mischief", since it might "lead to graver consequences for the workers, particularly in respect to the use of the right to strike".

The CCCL said it feared that paragraphs "b", "c" and "d" of the first part of this section may be used to render any strike inoperative and ineffective. These provisions read as follows:—

> Commits a mischief whoever, voluntarily,
> (b) renders property dangerous, useless, inoperative or ineffective;
> (c) obstructs, interrupts or interferes with the lawful use, enjoyment or operation of property; or
> (d) obstructs, interrupts or interferes with any person in the lawful use, enjoyment or operation of property.

The CCCL submitted that this section might lead to abuses "which could not be corrected by the federal Government bacause the application of the Criminal Code comes under the jurisdiction of the provinces".

According to the CCCL, paragraphs "c" and "d" also make it possible to prevent all legal picketing. The purpose of picketing, the CCCL specified, is to persuade people to refuse to work for an employer by informing them that there is a labour dispute in an establishment, thus, in a way, preventing, interrupting or interfering with the operation of property.

Under the same heading, the CCCL also asked the Government to amend Section 366 of Bill 93 "so as to clearly legalize the right of picketers to persuade their fellow-workers that it is in their own interest not to return to work during a strike". It mentioned that British law has provided this right since 1859.

Shipbuilding Industry

The Canadian shipbuilding industry, according to the CCCL, is at present the least stable industry in the country. Periods of almost full employment are followed by periods of generalized unemployment.

The CCCL believes, its momorandum said, that the Government, in order to ensure greater stability in this industry, should require Canadian steamship companies to have their ships built and repaired in Canadian shipyards.

It also considers that water transportation in interior and coastal waters should be carried on as much as possible by ships registered in Canada and carrying the Canadian flag.

Unemployment Insurance

The brief stated that the CCCL appreciated the important improvements made in the Unemployment Insurance Act last year, particularly the increase in benefits, and that it was opposed to any lowering of the contribution rates. Because the unemployment insurance fund now exceeds the sum of 800 million dollars, it would rather recommend increasing the advantages of the Act, especially with regard to benefits.

The CCCL therefore requested an increase in benefits of $1 a week for insured persons without dependents, $3 a week for insured persons with one dependent and $6 a week for insured persons with two or more dependents.

In addition, the CCCL presented ten amendments which it intends to submit to the advisory committee of the Unemployment Insurance Commission, as follows:—

1. The widening of the field of application of the Act in order to cover all workers, including employees of hospitals, religious and welfare institutions;

2. The elimination of the five-day waiting period and payment of benefits without delay;

3. A new method of establishing the number of days an employee has worked in a week, when working on part time;

4. The elimination of the particular restrictions concerning the qualifications required of married women to have the right to benefits;

5. That the period of supplementary benefits for seasonal unemployment be extended from April 15 to 30;

6. That the National Employment Service be strictly forbidden to refer candidates to an employer whose employees are on strike;

7. The right of dismissed employees to draw unemployment benefits when a strike is going on;

8. That paragraph 3 of Section 28 be amended concerning the exceptions already specified by adding the time the workers have been on strike;

9. That the number of daily contributions required in Section 28 be reduced from 180 to 100;

10. When a factory is closed on account of general vacations, employees not entitled to such vacations should be paid their unemployment benefits, providing they fulfil the conditions which gives them the right to these benefits.

Broadcasts for Workers

The CCCL requested free broadcasting time on the CBC for workers, as the *Réveil Rural* program now broadcast for farmers. The major Canadian labour federations would be responsible for the time thus placed at their disposal on the French and English networks. According to the CCCL, such an initiative would contribute to the development of adult education.

The CCCL also asked for the setting up of a Polish section on the CBC's international service.

Old Age and Invalid Pensions

The CCCL again asked the Government to lower the age for admission to pension to 65 for men and 60 for women, without a means test. It also recommended that the pension be increased from $40 to $50 a month.

Moreover, the CCCL considers, the delegation said, that our old age pension system should be completed as soon as possible by a system of pensions for invalids.

Housing

The housing problem, according to the CCCL, is the most alarming of our social problems. The main obstacle to be overcome by those who wish to have a house of their own, the brief stated, is the initial payment necessary in order to benefit by existing legislation.

The CCCL made four recommendations, as follows:—

1. That the additional loan of a sixth of the joint loan to owners, discontinued by an Order in Council on February 6, 1951, be re-established, while the recent decision to allow a minimum loan and a maximum loan be maintained;

2. That the Order in Council of June 26, 1951, increasing by one-half of one per cent the interest rate on loans under the National Housing Act, as well as the Order in Council of September 1, 1952, increasing the rate by one-quarter of one per cent, be revoked, and that for one-family houses the interest be set at a rate not exceeding 4½ per cent;

3. That a representative of the workers be appointed a member of the Central Mortgage and Housing Corporation;

4. That the standard of housing established by the Corporation be made a little more flexible so as to favour the building of a larger number of houses.

The CCCL completed its representations by an additional memorandum containing requests already presented to the federal authorities.

Among other subjects, these requests, wihch were grouped under 11 headings, dealt with immigration, family allowances, diplomatic representation at the Vatican, the International Labour Office, freedom of association and collective bargaining. The establishment of a permanent price-inquiry commission was also requested.

Government's Reply

Replying in French to the CCCL brief, Prime Minister St. Laurent made a point of congratulating the organization for realizing the fact that its real interests lie in improving the well-being of the nation as a whole and not solely in promoting the interests of organized labour.

Before reviewing the main representations contained in the brief, he repeated that the CCCL's recommendations, made in a completely objective fashion, will be given most careful consideration.

Mr. St. Laurent stated that the Government shares the CCCL's opinion that communism will really be beaten on economic grounds. He explained that this is the object of the Colombo Plan and of the United Nations technical assistance program. Nevertheless, he specified that all aggression must be resisted.

"We must do our share," he said, "in establishing that powerful army which is, unfortunately, necessary in order to make aggression against the free nations less attractive."

He added that the cold war, which has been going on for a number of years now, has not yet degenerated into a world conflict.

In reply to the fears expressed by the CCCL, the Prime Minister stated that none of the consequences which the unions were afraid would result from the plan for re-drafting the Criminal Code need be feared if this legislation were always applied honestly and in good faith.

However, Mr. St. Laurent acknowledged that it would perhaps be advisable to change certain legal texts in order to avoid the temptation to make an improper application of them.

The Prime Minister therefore requested the CCCL to inform the parliamentary committee now studying the new Criminal Code of its misgivings and to submit representations to it.

While admitting that the suggestion put forward by the CCCL with regard to the sharing of the family income between husband and wife would favour the family earning $4,000, the Prime Minister also pointed out that this system would be still more favourable to a family whose income amounted to $40,000.

"If it is disagreeable to pay income tax," he said, "it is also disagreeable to collect it, and as the Government has to obtain the revenue necessary to carry on its administration these charges must be accepted."

Mr. St. Laurent qualified as "exaggerated" the statement that a great many persons avoid paying income tax. "There may still be some cases of evasion," he admitted, "but not as many as people would like to make you think." On the contrary, he pointed out, the rigorous way in which the law is enforced by the Department of National Revenue has given rise to numerous complaints.

Repeating that it is the duty of every Government to make sure that funds are available for carrying on its administration, the Prime Minister pointed out that a person who does not pay his income tax is hurting, not the Government, but his fellow-citizens.

Mr. St. Laurent agreed with the CCCL that it is important not to lower the rates of contributions to the unemployment insurance fund. "We must not count on having Providence always grant us those favourable conditions by which we have benefited for some years now," he said. The Prime Minister also stressed the fact that numerous improvements have been made in the Unemployment Insurance Act during the last few years and that progress is still being made.

Referring to the CCCL's request for free broadcasting time on the CBC, Mr. St. Laurent said that he was not an expert on the matter but that, personally, he could not see why organized labour should not enjoy the same advantages as the agricultural class.

Such broadcasts, he added, should have a favourable effect on all the Canadian people. He therefore urged the labour leaders to bring this request, as well as their request for Polish-language broadcasts on the CBC's international service, to the attention of the Corporation.

Referring to the "additional memorandum" accompanying the CCCL's proposals, which contained a résumé of the requests already presented to the federal authorities, in the hope that the Government would give consideration to them, the Prime Minister called on the labour delegates not to lose patience.

"If you do not obtain all the desired results immediately," Mr. St. Laurent said, "that does not mean that you should drop your representations."

Jean Marchand, CCCL General Secretary, did not say a word but shook his head to indicate that the CCCL does not intend to give up and that the additional memorandum, made up from the list of unsatisfied requests, will not cease to appear before the Cabinet.

The Prime Minister reminded the labour delegation that a system of pensions for invalids could not be set up unless a change were made in the constitution, which would require the consent of the provinces. He explained that public opinion in the ten provinces would have to exert sufficient pressure on the provincial authorities to convince them that such a step was necessary.

Mr. St. Laurent then suggested that the CCCL make its sentiments known to the Royal Commission recently set up by the Quebec Government to study federal-provincial relations.

The housing problem also led Mr. St. Laurent to speak of federal-provincial relations. The Prime Minister recalled that he had just visited some extensive house-building projects in the Toronto area and said he would like to see similar propects undertaken in other parts of the country.

He stressed the fact that if such projects are to be carried through successfully there must be close co-operation between the authorities of the different Governments and the Central Mortgage and Housing Corporation. He specified that better results are always obtained through combined efforts and co-operation with a view to the realization of desirable objectives than when there is mutual distrust.

He added that there is no difference of opinion concerning the concepts of administrative machinery but that opinions do differ concerning the way in which best results can be obtained therefrom.

The Prime Minister concluded his remarks to the delegation by reminding them that Canada, although a relatively young country, is making constant progress. He added that the trade unions are making an effective contribution to this progress by realizing that they are serving their own particular interests better when they serve the general interest.

Cabinet Ministers Present

Members of the Government who received the delegates from the Canadian and Catholic Confederation of Labour included: Rt. Hon. Louis St. Laurent, Prime Minister; Rt. Hon. C. D. Howe, Minister of Trade and Commerce and of Defence Production; Hon. Douglas C. Abbott, Minister of Finance; Hon. James J. McCann, Minister of National Revenue; Hon. Milton F. Gregg, Minister of Labour; Hon. Hugues Lapointe, Minister of Veterans Affairs; Hon. Stuart Garson, Minister of Justice; Hon. Gordon Bradley, Secretary of State; Hon. Walter E. Harris, Minister of Citizenship and Immigration; Hon. Alcide Coté, Postmaster General; and Hon. Alphonse Fournier, Minister of Public Works.

Also present were Paul E. Coté, Parliamentary Assistant to the Minister of Labour; A. H. Brown, the new Deputy Minister of Labour; and several Members of Parliament from Quebec.

Railway Transportation Brotherhoods

National transportation policy is demanded by railway brotherhoods. Amendments to Railway Act, Explosives Act and Criminal Code, higher unemployment insurance benefits are also sought in annual memorandum

A national transportation policy was the major demand of the Dominion Joint Legislative Committee of the Railway Transportation Brotherhoods when it presented its annual memorandum to the Cabinet March 13.

Recognizing that the basic question of federal versus provincial jurisdiction over interprovincial and international motor vehicle traffic on Canada's highways remained to be solved, the Brotherhoods said they were awaiting with interest the decision of the Privy Council on the matter.

The Committee declared that effective regulation and control of all interprovincial and international highway traffic could be established by an amendment to the Transport Act which would place motor vehicles in the same position as railways and ships. It would thereupon become the duty of the Board of Transport Commissioners, said the brief, to co-ordinate and harmonize their operations with those of the highway carriers. These carriers would lose some of their freedom of action but would acquire a status which they do not now enjoy, the Committee's brief pointed out.

Other recommendations in the brief concerned amendments to the Railway Act, the Explosives Act and the Criminal Code; increases in unemployment insurance benefits; old age security and health services, fair employment practices, income taxes, housing, immigration, education, broadcasting and labour representation on public bodies.

The delegation, representing about 40,000 railway workers, was headed by J. L. D. Ives, Chairman of the Committee, who read the brief. The Prime Minister, Rt. Hon. Louis St. Laurent, and 14 members of the Cabinet were present at the meeting.

The Railway Act

The Committee again this year urged that Section 250 of the Railway Act be amended to provide for statutory side clearances applicable to all railway lines and tracks, regardless of when they were built.

While noting that the Board of Transport Commissioners had issued a great many orders, based on the provisions of Section 250 of the Act, approving clearances with applicants undertaking to keep their employees off the tops and sides of cars while operating past restricted clearances, the Committee proposed in particular the following amendments to the section: (1) a safe side clearance appropriate to the use of equipment of present dimensions in addition to vertical clearances now prescribed by subsection 1; (2) subsections 3 and 5 to be amended to conform with subsection 1; and (3) new construction or alterations of buildings to conform with the side clearances prescribed in subsection 1.

The Committee drew attention to the hazards of level crossings, pointing out that these hazards have increased proportionately with the increased mileage of improved roads and the number, dimensions and speed of motor vehicles. Something must be done, stated the brief, to halt the unnecessary loss of life and property due to increasing highway traffic and the speeding up of trains.

The only practical solution to the crossing accident problem, declared the Committee, is the elimination of level crossings and the construction of either over-passes or under-passes on all highways. The Committee suggested that as an immediate solution, all crossings should be protected by either manual or automatic signals.

The brief suggested that the annual grant to the Grade Crossing Fund be increased to $2,000,000. The Committee was pleased to note that the Government had directed the Board of Transport Commissioners to make a thorough investigation of the railway-highway crossing problem.

Explosives Act

More protection for the public and for those who are required to handle or be in the vicinity of vehicles carrying gasoline, explosives and other inflammable material was urged in the brief.

The Committee suggested that the regulations under the Explosives Act dealing with such traffic be revised and made to conform more closely to the regulations of the Board of Transport Commissioners covering the transportation of such material by railways.

Criminal Code

Concern was expressed by the Committee over certain provisions of the Criminal Code. Section 52, dealing with sabotage, could be used, said the brief, against unions engaged in a legal strike, regardless of the intention of the legislators. Section 365 of the proposed Bill "O" could mean that a legal strike is considered a breach of contract in the province of Quebec where, under the civil code, an individual work contract is presumed to exist between employer and employee. Another section could be interpreted as outlawing picketing.

The Committee urged that these sections be clarified so that the recognized rights of *bona fide* trade unions will be protected.

Unemployment Insurance Act

Declaring that the Unemployment Insurance Fund is sufficient to meet the needs of the unemployed person more adequately than is now being done, the brief requested amendments to the Act to provide: (1) a three-day waiting period; (2) a $3-increase in maximum weekly benefits for all groups; (3) a two-week extension of the supplementary benefit period from April 15 to April 30; (4) coverage for all workers gainfully employed in all occupations; (5) extension of the clause in the Act protecting union rights to protect workers who refuse to cross another union's picket lines; and (6) sickness disability insurance for all insured workers.

Social Security

Old Age Security

Appreciation was expressed for old age security legislation already enacted. However, the Committee suggested that the pension allowance of $40 per month be increased to at least $50 per month and urged that old age legislation be extended to provide assistance to women between 60 and 65 years of age with a means test and pensions to all persons 65 years of age and over without a means test.

Health Services

Pointing out that under existing economic and social conditions many citizens are not receiving adequate medical, surgical and hospital services, the Committee urged that a national health insurance plan be established at the earliest possible date.

Fair Employment Practices

Expressing concern with the provisions of Bill 100, the Canada Fair Employment Practices Act, the Committee stated it would not be in the best interests of either employers or employees to restrict the freedom of employers to choose the type of employee considered most suitable for the job or position to be filled at the immediate moment, or to be filled later on through promotion.

The Committee declared that trade unions, particularly those which are fraternal in scope, should still continue to enjoy the right to determine eligibility for membership. The proposed Act, said the brief, would make it compulsory to admit communists to union membership.

The Committee declared its opposition to any legislation restricting the right of employers to choose suitable employees and denying unions the right to determine eligibility for membership.

Income Tax Act

Pointing out that heavy taxation continues to be a burden to the average wage-earner, the Committee declared that, in arriving at the proper amount of exemptions to be allowed taxpayers, the first governing factor should be the assurance of a reasonable standard of living. The cost of maintaining a reasonable standard of living has greatly increased during the past few years, said the Committee, and it naturally follows that a proportionate increase in the amount of exemptions is justified.

The brief requested that statutory exemptions be increased to $1,500 for single taxpayers, $3,000 for those with dependants and $500 for each dependant not eligible for family allowances. It further requested that the term "dependants" include all those, regardless of age, who are attending educational institutions and vocational training classes, and that all medical expenses for the taxpayer and his dependants be deductible in computing taxable income.

Housing

Pointing out that the backlog of needed dwellings in Canada is increasing each year and that the National Housing Act, as now applied, is of no assistance to the great majority of wage-earners whose annual income is less than $3,600, the Committee declared that the Government should regard the housing shortage as a national emergency.

The brief suggested that the rate of government interest under NHA be lowered to 3½ per cent for those private citizens only who earn not more than $3,000 per year, that the low interest rate be retained in the event of re-sale of the house to another person earning the same amount or less, and that such houses be re-sold only when the wage-earner is transferred to another district, or when there is a need for larger family accommodation, or when the wage-earner's income increases, enabling him to obtain a mortgage at prevailing rates of interest.

The Committee presented figures to show that a home costing $5,750 is within the reach of a worker earning $40 per week but that such a dwelling is not available.

Immigration

The Committee expressed its full accord with the Government's policy of selective immigration. It approved of the citizenship classes which in 1952 provided some

45,000 newly-arrived persons with vocational training and facilities for learning English and French.

Seasonal employment, said the brief, necessitates regulating the number and time of arrival of immigrants to periods of the year offering the best employment opportunities.

Other Recommendations

Education

The Committee commended the Government for providing financial assistance to Canadian universities. It suggested that favourable consideration be given to granting federal aid for apprenticeship which, it declared, is in a far from satisfactory situation.

Broadcasting and Television

The Committee re-affirmed its support of public ownership and Government control of radio broadcasting and television under the trusteeship of the Canadian Broadcasting Corporation.

Labour Representation

The brief expressed the hope that the Government would continue and extend its policy of affording labour representation on public bodies, boards and commissions. It suggested that it would be in the national interest to appoint representatives of labour to the Senate when vacancies occur in that body.

Replacement of Steam Locomotives

The brief urged that legislation be enacted providing benefits for employees who are displaced or reduced to a lower grade occupation by the utilization by the railways of diesel-electric power as a substitute for steam.

The brief was submitted on behalf of the Brotherhoods by J. L. D. Ives, Chairman of the Committee, Order of Railway Conductors; W. H. Phillips, Vice-Chairman of the Committee, Order of Railroad Telegraphers; J. B. Ward, Secretary of the Committee, Brotherhood of Locomotive Engineers; A. H. Balch, Brotherhood of Railroad Trainmen; J. G. McLean, Brotherhood of Locomotive Firemen and Engineers; and W. K. McKee, Brotherhood of Maintenance of Way Employees.

Government's Reply

Replying for the Government, the Prime Minister said he was aware that the Brotherhoods were making their recommendations with the objective of maintaining and stimulating the economy of Canada for the general benefit of all citizens.

He said the specific recommendations made with respect to the Railway Act would be given consideration. He drew attention to the difficulties that arise from the divided jurisdiction between the federal Parliament and the provincial legislatures.

Mr. St. Laurent indicated that joint co-operative action by the federal and provincial governments was required in dealing with such matters as side clearances on the railways, the control of highway traffic and the regulation of motor transportation of explosives.

On the subject of level crossings, Mr. St. Laurent expressed his own concern and the concern of the Board of Transport Commissioners about the large increase in the number of accidents. He said the survey of accidents made by the Board showed that the problem is one that needs to be dealt with in a substantial way.

Over the last year there has been, said the Prime Minister, an increase in the general production of the Canadian economy which made it possible to revise to an extent the apportionment of the taxation burden in this year's budget.

Agreeing that the level of taxes at the present time is a burden to the average wage-earner, he said the Government was endeavouring to distribute that burden as fairly as possible over the whole body of taxpayers.

The Prime Minister said the housing situation is a problem and he expressed the hope that the total of 400,000 houses built in the last five years, an average of 80,000 per year, would be bettered in the future.

He said the Government realized that it is in the national interest to have as many home owners as possible but added that he did not think there was any immediate prospect of being able to provide housing at a cost of $5,750 per unit.

Mr. St. Laurent said the Government appreciated the fact that representatives of organized labour in Canada have approved the policy of using radio broadcasting and television for the benefit of the Canadian public generally.

The Prime Minister said that in framing the Fair Employment Practices Act there was no intention of curbing the legitimate requirements of employers in hiring workers, nor of interfering with the autonomous rights of labour unions to control their own membership. Qualifications to this effect had been placed in the context of the proposed statute, he said.

Cabinet Members Present

Members of the Government who received the Dominion Joint Legislative Committee of the Railway Transportation Brotherhoods were: the Prime Minister; Rt. Hon. C. D. Howe, Minister of Trade and Commerce and Defence Production; Rt. Hon. James Gardiner, Minister of Agriculture; Hon. Alphonse Fournier, Minister of Public Works; Hon. Lionel Chevrier, Minister of Transport; Hon. Paul Martin, Minister of National Health and Welfare; Hon. James J. McCann, Minister of National Revenue; Senator the Hon. Wishart Robertson; Hon. Milton F. Gregg, Minister of Labour; Hon. Stuart Garson, Minister of Justice; Hon. Gordon Bradley, Secretary of State; Hon. Walter Harris, Minister of Citizenship and Immigration; Hon. George Prudham, Minister of Mines and Technical Surveys; Hon. Alcide Coté, Postmaster General; and Hon. James Sinclair, Minister of Fisheries.

Wage Changes during 1952 in Collective Agreements

Wage increases were provided by 95 per cent of the 1,795 collective agreements analysed by the Department of Labour during 1952. Of the workers covered in the survey, 94 per cent received wage increases

Wage-rate increases were provided by 95 per cent of the 1,795 collective agreements analysed by the Department of Labour during 1952. This analysis, part of a continuing study by the Economics and Research Branch, included agreements covering nearly 580,000 workers. Of the workers covered in the survey, 94 per cent, or 542,000, received wage increases. About one-third of the increases were between 10 and 15 cents an hour.

The Department actually received 2,244 current agreements, but for 449 it was not possible to determine the amount of the wage change. The latter group included some agreements received for the first time, which did not indicate the wage change, and other agreements in which successive wage scales were not comparable. More agreements were received which took effect in the earlier part of the year than in the latter months so that the survey coverage is best for the first three-quarters of the year. The agreements have been analysed according to the date at which the wage change became effective.

The agreements studied provide for several different types of wage settlement. In the main group of more than 1,500 agreements, each contract provided for a single wage increase. The practice of bargaining a series of increases to take place periodically over the term of the agreement, which has become more common in recent years, was employed in an additional 168 of the agreements analysed for this study. Total increases in these contracts applicable during the year 1952 have been dealt with separately below. A smaller number of contracts, including agreements covering more than 20,000 loggers in Ontario and Quebec, indicated no change in wage rate. Finally, a single agreement covering fewer than 10 workers provided for a reduction in wages.

Wage-Change Trends

Of the 1,545 agreements covering some 467,000 workers which provide for a single wage increase, the largest number of settlements, covering a third of the workers, fell within the range of 10 to 14·9 cents an hour. In 1951 also, about one-third of

* Agreements providing for more than one increase during year not included.

the workers received increases within this range. However, in 1951, larger increases were more prevalent, whereas in 1952 the predominant group received lesser amounts. While wage advances were thus of smaller dimensions on the average in 1952 than in 1951, it should be noted that the surveys are not strictly comparable from year to year since the coverage varies. Furthermore, agreements which have a duration of two years will be included in these analyses only in alternate years and still other agreements have a longer duration.

Wage Changes by Industry

The pattern of wage increases in a few industries varied slightly from the general conclusions which have been noted. In manufacturing, for example, wage advances involving 5 to 9·9 cents slightly outnumbered those in the 10- to 14·9-cent group.

The majority of settlements in construction and in public utilities were in the range of 15 to 19·9 cents. Other industries more nearly approximated the general pattern. The only outstanding exceptions were two large groups of loggers, one of which received an increase of 5½ cents in the second quarter of the year while the other settled for 4 to 5 cents in the last quarter.

Deferred Increases

In addition to the 1,545 agreements analysed above, which provided for one wage increase, there were 168 agreements which provided for more than one increase during the year. These agreements, affecting 75,000 workers, are summarized in Table 5. The total amount of the increases applicable to the year 1952 are shown. The bulk of the employees receiving deferred increases were in manufacturing, with mining being the next largest group. Taking into consideration the total amount of increase becoming effective during the year, the pattern in these contracts resembled that in the other 1,500 agreements, in that about one-third of the workers received 10 to 14·9 cents per hour.

Other Settlements

The foregoing discussion of wage changes disregards many other changes in agreements which may have affected the wage settlement. Change in working hours, paid holidays, vacation, overtime, cost-of-living bonus plans, and many other items may have influenced the wage-rate adjustments in the 1952 agreements. The extent and nature of some of these settlements are dealt with below.

A number of the agreements provided, in addition to general wage increases, escalator clauses under which wages are to be changed in accordance with variations in the cost-of-living index. The largest group of these affected workers whose wage-rate increases fell within the range of 5 to 9·9 cents an hour, although in the category of 20 to 24·9 cents an hour roughly one-third of the workers were covered by cost-of-living provisions. It is likely that these clauses resulted in a slight downward pressure on wages, as the index declined gradually during 1952. In a number of the agreements received during 1952, escalator clauses formerly in effect had been dropped.

Reductions in hours of work were contained in 281 agreements affecting 63,000 workers. The largest group of these received wage increases in the 5- to 9·9-cent range. In three agreements, hours of work were extended.

TABLE 3.—ESCALATOR CLAUSES IN AGREEMENTS ANALYSED, 1952*

Per Cent of Total Coverage with Escalator Clauses

	Agreements	Workers
No change	18·2	4·8
0— 4·9 cents	32·0	20·2

THE SLOAN REPORT

Chief Justice Sloan's 400-page report summarizing the results of his exhaustive, two-year inquiry into workmen's compensation in British Columbia, laid before Legislature in February 1952, is reviewed here

The British Columbia Workmen's Compensation Act and its administration by the Workmen's Compensation Board were examined by Chief Justice Sloan of the British Columbia Supreme Court acting as a Royal Commissioner. His report, a volume of more than 400 pages, laid before the Legislature in February 1952, summarizes the results of his exhaustive inquiry, which lasted for more than two years, from November 7, 1949, until November 23, 1951.

Because of the wide terms of his Commission, the Commissioner, who had acted in a similar capacity in 1942, dealt with hundreds of submissions from labour, industry and others requesting amendments to the Act or making general or specific complaints against the Board's administrative policies. Sitting for 226 days at Vancouver, Victoria, Trail and Nelson, he heard the evidence of 630 witnesses which, together with the arguments of counsel and others, filled almost 23,000 pages of transcript. More than 1,200 exhibits were filed. In the course of his inquiry the Commissioner inspected rehabilitation centres in Toronto, Montreal, New York, San Francisco, Los Angeles and Orange, N.J.

Consideration of the various issues raised involved not only a detailed examination of every phase of the Board's administration but also a discussion of the history and fundamental principles of the Act.

The report contains a discussion of the two alternative methods which may be used in compensation administration in arriving at the amount of compensation payable for an injury (compensation based solely on loss of physical function or compensation based on wage-loss), explains why, in the Commissioner's judgment, requests for payment of compensation for disability on the basis of 100 per cent of earnings cannot be justified, and gives reasons why increased benefits should not be made retroactive.

Blanket coverage of all occupational diseases was rejected as being in no way superior to the present method of scheduled coverage. The whole field of silicosis was reviewed and the Commissioner recommended that the system of medical examination similar to the one required in metal mines should be made obligatory in coal mines.

Because of the problems posed by recurring medical disputes, the Commissioner recommended that in the public interest a permanent three-man Medical Appeal Board should be established with jurisdiction to decide disputed questions of diagnosis and of the extent of a workman's functional disability.

Charges that the Board had not exercised leadership in accident prevention made it necessary for the Commissioner to examine all phases of the Board's safety work and the Board was commended for its long-continued efforts in this field.

Because the Sloan report contains much information of interest to workers and employers concerned with workmen's compensation, it has been reviewed here in as much detail as possible. The review, by the Legislation Branch, Department of Labour, will appear in two instalments.

INSTALMENT I

Scope of Act

As a result of the province's industrial growth and the extended coverage of the Act, the work of the Workmen's Compensation Board has steadily increased. A comparison between the figures for 1941 and 1950 shows an increase in the assessment payroll from $241 million in 1941 to $695 million in 1950, in the number of firms registered with the Board from 8,709 to 20,920 and in the amount of compensation and medical aid paid from about $5 million to about $14 million.

The report estimates that 316,000 workers were covered by the British Columbia Act in 1950. Commenting on its wide coverage, the Chief Justice stated: "It is difficult to name an industry of any hazard which is not now covered, or which is not entitled to coverage under the elective system. Any new industry in which a hazard exists will doubtless come within the Act by Regulation of the Board".

Regarding the main exclusions, agricultural workers, domestic servants and office

Major Recommendations of Sloan Report

1. An increase from 66⅔ to 70 in the percentage rate of earnings used in computing compensation.
2. An increase from $2,500 to $3,600 in the maximum amount of annual earnings on which compensation is based.
3. An increase in funeral allowances and in monthly benefits to widows and other dependants. Payment of hospital insurance premiums of widows and orphans from the Accident Fund.
4. Removal of limitation on Board's annual expenditure for rehabilitation work.
5. Compulsory coverage of farm workers.
6. Elective coverage of domestic servants.
7. The creation of a Medical Appeal Board.
8. Annual physical examination and issue of certificates of fitness for workers in coal mines.

NOTE: The first four of these recommendations were implemented by the British Columbia Legislature at the 1952 Session (L.G., June 1952, p. 783).

personnel, the Commissioner recommended that the Act be amended to extend compulsory coverage to agricultural employees, that provision be made for elective coverage of domestic servants, and that no change be made in relation to office personnel.

Farm Workers

The report discusses very thoroughly the coverage of farm workers in British Columbia and in other jurisdictions. No province provides for compulsory coverage but farm workers may be brought under the Act by application to the Board in British Columbia and in most of the other provinces. Only a small number of the estimated 79,000 employed in agriculture in the province (including both hired and self-employed) apply for coverage. In 1950, 72 farmers applied and their workmen were brought within the Act. The fact that few, if any, farm workmen have requested coverage (in British Columbia an industry may be brought under the Act by application of *either* employer or workman) was due, according to the report, to lack of information as to their rights and to inadequate organization.

The assessment rate charged by the Board for farming has fluctuated with the amount of annual assessed payroll and the number of employers covered by voluntary application from a low of 23 cents to a high of $10.90 on $100 of payroll. The assessed farm payroll for 1949 was $289,018. The 1951 assessment rate was $3 per $100 of payroll.

The fact that farming has now become a mechanized industry with all the hazards inherent in the use of power-driven machinery led the Commissioner to recommend the inclusion of farm workers under the Act. Statistics compiled by the Dominion Bureau of Statistics, showing that from June 1, 1946, to June 1, 1947, an estimated 37,200 farm accidents occurred in Canada, demonstrated that "the agricultural industry is fraught with hazard". Of these, 900 happened in British Columbia. Available American statistics on farm accidents also illustrate their high-frequency rate.

In all but seven of the United States, farm employees are specifically excluded. In the seven which provide for coverage—California, Connecticut, Louisiana, New Jersey, Ohio, Vermont and Washington—many farm workers are effectively removed from compulsory coverage by exemptions based on number of employees, size of payrolls, elective provisions, etc. In California, farm employment is included unless a farmer's payroll for the preceding calendar year was less than $500 or unless the farmer or his employees elect to remain outside the Act. In that state, however, the great majority of farmers having a payroll of at least $500 have elected coverage and their assessment rates based on each $100 of payroll are as follows: dairy-farms and sheep-raising, $3.07; field crops and stock-farms, $3.84; orchards and poultry-farms, $2.36; truck-farms and vineyards, $1.03.

Unlike Canada and the United States, where the general run of farm labour is without the protection of compensation laws, 34 countries, including Great Britain, New Zealand and Australia, place farm employees on the same footing as any other group.

On the subject of compensation for farm labourers, the Commissioner quoted a section of a report given at the 1947 conven-

tion of the International Association of Industrial Accident Boards in Toronto, which summed up the farmer's traditional objection, his changing attitude and the need to provide for compulsory coverage of all farm workers.

> The farmers at the time of the passage of the early laws opposed the whole idea of workmen's compensation or at least opposed the application of the law to them. Their opposition undoubtedly sprang from lack of understanding of the purposes behind the workmen's compensation laws and the possible benefits to the farmers themselves. Their opposition, however, was effective in all of the legislatures.
>
> The farmer is an individualist. He wants to do things in his own way, unfettered and unhampered by rule or regulation or legislative fiat. Being told that he must buy insurance or else suffer criminal or financial penalties is not to his liking.
>
> The farmer was also inclined to possess the view that workmen's compensation laws were all right for factories and similar establishments where machinery was used, but he could see no reason for its application to the farm. In the early days of workmen's compensation, the average farmer regarded himself as simply a tiller of the soil who made his living with the aid of draft animals and the few simple farm tools handed down through the ages. He reasoned also that there was no danger to life and limb on the farm compared to the dangers involved in manufacturing and commercial establishments.
>
> Another reason for opposition to the applicability of workmen's compensation to the farm was the farmer's fear of the cost. More often than not he did not know how much it might cost, but whatever the cost he felt that it would add to his already heavy burden.
>
> Between the time when the workmen's compensation acts were being first considered and the present time, much has happened to destroy and render obsolete the farmers' reasons for opposing the workmen's compensation laws.
>
> To a very large degree the nature of farming has undergone a change. The hand hoe and horse-drawn plough are no longer the only tools of the farmer. The farm of today is mechanized and electrified and the modern farm employee in many instances uses and is subject to the danger from machinery quite as much as the factory worker.
>
> Actually the farm never was as safe a place of employment as the farmer thought and under modern mechanized conditions it takes high rank among the dangerous occupations. There are more fatalities in agriculture than in any other industry group.
>
> There are many signs that the attitude of the farmer himself toward the idea of workmen's compensation is changing. . . A substantial percentage of farmers today are college trained at agricultural colleges or general universities. The radio keeps him abreast of the times. The automobile, the airplane, and other rapid means of transportation have broken down provincialism. Two world wars have afforded the modern farmer opportunities for travel and have broadened his horizon. The farmer of today is not the same individual, socially and educationally, that the farmer of 30 years ago was. But unfortunately he still is not as interested in workmen's compensation as he should be.
>
> As administrators of workmen's compensation laws, we all recognize the value of workmen's compensation coverage both to employees and employer. In common with the original proponents of the workmen's compensation laws, all of us will no doubt agree that the ideal for which all should strive is coverage of every employee of whatever class or group. To reach this goal in full as far as farm workers are concerned, all specific exclusions contained in most of our laws would have to be eliminated, all numerical and other types of exemptions would have to be stricken out, and the basic provisions of a majority of laws would have to be amended so as to provide for compulsory coverage.

In the hearings it was pointed out that farming operations were widely diversified and that hazards varied with the type of farming carried on. After hearing the evidence, the Commissioner was of the opinion that numerical and other exemptions, such as limiting coverage to certain geographical areas or to persons engaged in handling mechanical equipment, would not be administratively practicable and he therefore recommended that the Act should be amended to apply to all employees in the various fields of agriculture.

If this recommendation were adopted by the Legislature, the Commissioner felt that it would result in a very real reduction in the present too high accident frequency in the industry, a reduction which would follow from "the activities of the Accident Prevention Division of the Board in carrying out an educational program now lacking in this field, from inspection and betterment of hazardous conditions, and from the development of safe practices by the farm operators themselves in order to reduce assessment rates".

Domestic Servants

As regards the request for compulsory coverage of domestic servants, evidence showed that, because of the nature of the employment, the cost of providing benefits would be disproportionately high and that coverage would be from an administrative viewpoint nearly impossible. The Commissioner's recommendation was that Section 2(2), which excludes domestic servants and their employers from the Act, be repealed and that an employer of a domestic servant or a domestic servant be allowed to apply for coverage under the optional section of the Act (Section 5).

Student Trainmen

The Commissioner also recommended that student trainmen be given the pro-

tection of the Act. The railway unions pointed out that certain railway companies, as a condition precedent to the employment of a man as a trainman, require that he undergo a preliminary course of instruction, and that while so engaged, although not under a contract of service or apprenticeship, he is subject to the same hazards as any employee.

In 1950, the Manitoba Court of Appeal held that a student trainman, under such circumstances, did not come within the definition of "workman" in the Manitoba Act, and the Act was later amended accordingly.*

The Commissioner considered that, when any employer subjects a student to the hazards of an occupation as a term of future employment, such student should be brought within the Act.

Fishermen

The Commissioner was unable to recommend that the Act be amended to extend coverage to all types of commercial fishermen who fish as a means of livelihood and who supply fish to a person licensed under the provincial Fisheries Act. Fishing companies did not favour any extension of the Act but in fact challenged the validity of the present coverage.

The Act of 1916 applied to employers and workmen in the fishing industry as it does today. The determination of whether or not a fisherman is an employee within the meaning of the Act and the directives of the Board must be made in each case in the light of the existing relationship between the fisherman and the fish-buying company. The general rule adopted by the Board is that, if the essence of the relationship is the sale of the fisherman's labour, coverage is extended. Where the worker is not selling his labour as such but a commodity—fish, he is not covered by the Act. In this regard the Commissioner quoted his statement in 1942, stating that the same situation exists today.

> At the present time a fisherman who uses a boat, or boat and gear supplied by a cannery and who is under contract to sell his catch to that cannery is deemed by the Board to be a "workman" and entitled to compensation. The earnings of the fishermen within that category are determined by taking the gross value of the catch, less net and boat rentals and other operating expenses. . . On the other hand, the Board has held that "independent fishermen"—that is, those who own their own boats—cannot be considered as "workmen" and are in consequence outside the scope of the Act.

The greater percentage of commercial fishermen have been regarded not as employees but as independent contractors and are outside the Act. Herring fishermen, most salmon-seine fishermen and some salmon gill-netters are covered. Halibut fishermen and salmon trollers are not within the Act.

In the Commissioner's opinion, the union's proposed coverage of *all* commercial fishermen would create an arbitrary relationship of employer and employee between the fishermen and the companies purchasing the fish caught by them.

> The test for coverage would be determined by the mere fact of occupation alone. Such a theory is a complete departure from the basic concept of compensation legislation, which has as its foundation the employee and employer relationship. If this new occupational-coverage theory is engrafted into the Act, it cannot with any logic be limited to the occupation of fishing. Thus we would find independent producers and sellers of all kinds of products being regarded in law as the employees of those who purchase their wares. For instance, a farmer owning his own farm and selling potatoes to a wholesaler would be an employee of that wholesaler. An independent logger selling logs to a mill would fall within the same category and be an employee of the mill.

To include within the Act occupations rather than employees would be to distort the Act out of all semblance to its original basis.

The fishermen's union also requested an amendment to the section which provides that medical aid is not payable to a workman employed on a vessel while it is being provided from the Sick Mariners' Fund under Part V of the Canada Shipping Act but that any additional medical aid may be furnished which is not provided under the Canada Shipping Act. The union asked that the Board should be given discretion to pay the medical costs of a workman when, for reasons beyond his control, he cannot be furnished prompt, necessary or emergent medical care under the Canada Shipping Act. The Commissioner found the request reasonable and recommended that the section be amended accordingly.

*As were the Acts of Alberta, Ontario, Prince Edward Island and Saskatchewan.

Blanket Coverage

As in 1942, the Commissioner did not favour "blanket coverage" of all occupational diseases, which was requested by many unions, in preference to the present system of "scheduled coverage".

Under the scheduled coverage plan, the Act contains a list of diseases faced by an accompanying column specifying the process or industry to which the diseases are peculiar. The Workmen's Compensation Board has power to add to the schedule as conditions may arise necessitating the extension of either the list of diseases or the associated processes or industries.

One of the union complaints was that the Board "failed to exercise initiative" in adding new diseases to the schedule, a complaint which the Commissioner found unjustified. Under the original Act of 1916, six diseases were made compensable. In 1942 the list had grown to include 23 diseases, and in 1951 to 60. "If this progression continues", the Commissioner observed, " 'blanket coverage', in effect, will, in time, result". A comparison with the scheduled coverage in other provinces (set out in a table in the report) shows that in British Columbia the list of compensable diseases far outnumbers that of any other province. Saskatchewan recognizes 38, Ontario and Newfoundland 26, and Quebec 23.*

The Commissioner found that, if the Board is satisfied that a disease is occupational in character, it is then added to the schedule with retroactive effect so that all medical bills of the claimant are paid as if the disease had been in the schedule when contracted. Once a disease is added to the schedule and subsequently contracted by a workman his illness is deemed to be due to the nature of his employment unless the contrary is proved. Such a statutory presumption could hardly be made to apply with any certainty to a system of blanket coverage. Further, for blanket coverage there must be a statutory definition and some guide as to what constitutes an "occupational disease". To use any published list of occupations and their potential hazards would be to have an extended schedule and nothing more.

Compensation and medical aid paid for industrial diseases, exclusive of silicosis and tuberculosis, for the four-year period 1947 to 1950, are set out in a table. Amounts paid are relatively minor in proportion to total expenditure on accident claims for the same period.

Rheumatism, Arthritis, Cancer

On the basis of medical evidence the Commissioner could not recommend that the Board should put rheumatism, lumbago, sciatica, arthritis and industrial skin or lung cancer in the schedule as requested by various unions. At present the Board regards as compensable any cancerous condition shown to be the result of trauma due to an accident suffered in the course of employment. Five provinces regard skin cancer as compensable.

Industrial Deafness

On the other hand, the Commissioner recommended that occupational deafness should be added to the schedule. Each claim for compensation for occupational deafness is dealt with on its merits and where it can be shown that a workman's deafness has been brought on by his occupation, e.g., following head injury or by prolonged exposure to excessive noise such as may be encountered in underground mining and ship-building yards, compensation is granted.

The Board pays compensation, however, on the basis that the workman is suffering from an accident and not a disease. In the Commissioner's opinion, based on the medical evidence before him, occupational deafness is a disease caused by a physical degeneration of the nerves which conduct the sound impulse and as such he considered that it should be scheduled. He felt that, if this were done, its incidence would in time decrease due to the adoption of more extensive measures of prevention, such as pre-placement audiograms and hearing tests.

Anthracosis

The United Mine Workers of America requested that anthracosis (a form of pneumoconiosis arising from inhalation of coal dust) be added to the schedule. The disease is being carefully studied but its

*In Ontario since 1947 and in Manitoba since 1950 a compensable industrial disease includes not only one of the diseases in the schedule but also any other disease peculiar to, or characteristic of, a particular process, trade or occupation. In Alberta, as a result of 1952 amendments, the Board has discretion to grant compensation for any disease which arises out of and in the course of employment.

precise nature is not yet clear and the Commissioner was unable to find that the disease results in any disabling incapacity in the province.

Silicosis

More than 30 pages of the report are devoted to a summary of the evidence presented concerning silicosis.

The Commissioner summed up the medical testimony regarding the disease, as follows: Silicosis results when fine silica dust has been inhaled and retained in sufficient quantity to produce detectable characteristic silicotic changes or lesions in the lung tissue. For this condition to develop, an exposure of from five to fifteen years to dust containing silica is required. Simple, uncomplicated silicosis progresses for a period varying in the individual, usually one to three years, and then stops. After the progress of the disease has become arrested, life expectancy of the silicotic is not affected except indirectly in the sense that his condition renders him more vulnerable to lung infections. Tuberculosis superimposed on silicosis may develop and terminate fatally or it may manifest atypical symptoms and remain quiescent for years.

The question of whether or not a silicotic should remain in employment subjecting him to further dust exposure must be determined by the special circumstances of each individual case. Men under 40 years of age who contract the disease and in whom it is showing signs of rapid progress should be removed from further exposure. The men over 40 must be dealt with each according to his special need. To change their occupation is not usually recommended.

It is difficult to determine the present incidence of silicosis since most of the cases now being recognized were contracted before the disease became compensable in 1936 when little or no attempt was made to reduce the dust hazard. Of the 20 cases first diagnosed in 1949, 17 entered the mines before 1930. Of the other three, one started in 1930, one in 1932 and one in 1934.

In the 1942 inquiry the Board's Silicosis Referee stated that, in his opinion, demonstrable silicosis requires, on the average, 12 to 14 years to develop, and the Commissioner forecast an increasing duration of exposure as preventive services were developed. Figures recorded in the report show that the average actual exposure in the province had increased from 12 to 14 years in 1942 to 21·23 years in 1947, 16·32 years in 1948, and 17·46 years in 1949. In the Commissioner's opinion, the average duration will continue to increase with adequate dust prevention and wise medical control and he expressed the hope that "with co-operation between men and management, under the watchful eye of the Board", the incidence of silicosis will be reduced almost to a vanishing-point in the province.

With regard to both dust control and medical control the Commissioner made specific recommendations.

In underground mining, dust-control measures consist of the suppression of dust at its source, removal of dust as near as possible from the point of origin, ventilation, and wetting down broken rock.

While it is not known with any certainty what is the maximum number of silica dust particles per unit volume of air which can be said to be innocuous, the number taken in the province as a reasonably safe concentration is 300 dust particles per cubic centimetre of air.

The report of the Workmen's Compensation Board's Dust Inspectors covering 57 inspections of 40 metal mines in 1950 is set out in tabular form showing the average of the dust concentrations found in underground workings, crushing plants and assay grinding rooms. From this record the Commissioner found that the very large expenditures of the mining industry for dust-control devices, coupled with the activities of the Board's inspectors, are achieving a generally satisfactory result in reduction of dust concentrations.

The Commissioner did not recommend the posting of the inspectors' dust-count, as suggested by the miners' unions, stating that it appeared that this procedure would cause confusion rather than enlightenment. Instead, his recommendation was that a summary of the inspector's recommendations for the improvement of dusty conditions should be posted in a conspicuous place where it could be seen by the workmen. This practice must be followed by mines inspectors under the Metalliferous Mines Regulation Act.

Medical Control

With respect to medical control, the report stated that a wise medical program is being carried out.

Under Section 16 of the Metalliferous Mines Regulation Act every workman in the metal-mining industry must be medically examined at least once a year. If he is found free from disease of the respiratory organs and fit for work in his employment, he is issued a certificate of

fitness. Should the physician find that his employment endangers the health of his fellow-workmen, the employer must terminate the employment.

Under this section the practice is that the examining doctor forwards his findings and the X-ray plates to the Board's Silicosis Referee. The material is examined by the Referee and his decision is transmitted to the local doctor with a recommendation as to the issuance or non-issuance of a certificate.

If a man first coming into the industry is found to have tuberculosis or silicosis, or both, he is refused a certificate. If a man already in the industry, on undergoing his annual examination, is found to be suffering from tuberculosis, his certificate is revoked. If a diagnosis is made of simple silicosis of the early type and there is no significant degree of disability, all factors are weighed and in most instances a certificate is issued. A young man in whom the disease has made rapid progress is advised to discontinue underground work and establish a claim with the Board for future potential disability.

In the age-groups from 40 on, where the silicosis is in an early and non-progressive stage, men are granted certificates and permitted to continue working underground but are examined each year. Experience has shown that the disease does not as a rule progress faster because these men remain working underground, particularly since dust-control methods have been extensively adopted, and to deprive them of their livelihood would, in many instances, result in economic hardship. If the disease advances to a point where continued exposure would injure the man's health, he is refused a certificate.

The report points out that the distinction between refusing a certificate to a miner found to have some evidence of exposure to silica dust when applying for his first certificate and granting one to a miner already employed and then on subsequent examination discovered to have silicosis in some degree is an attempt to exclude men who have been exposed to silica hazard in other jurisdictions.

Two suggestions made by the Referee regarding the certificate of fitness were accepted by the Commissioner. One was that, to prevent possible misuse, each certificate should have attached to it a photograph of the person to whom it is issued. The other was that Section 16 (6) of the Metalliferous Mines Regulation Act should be amended to forbid the employment of any workman in a mine or in rock-crushing or ore-crushing (unless the ore or rock is wet) without a temporary certificate of fitness issued after a pre-employment examination. The subsection presently states that a workman may not be employed for more than two months in any 12-month period without a certificate and the amendment would prevent a situation whereby a workman in order to avoid undergoing the required examination spends successive periods of two or three months in one mine after another.

There are no corresponding provisions for medical examinations in the Coal-mines Regulation Act and the Commissioner saw no reason why coal miners exposed to silica dust should be exempt from the protection afforded to their working brothers in the hard-rock mines. He therefore recommended that the Act be amended to insert a section similar to Section 16 of the Metalliferous Mines Regulation Act and that the same requirement be laid down regarding temporary certificates.

Aluminium Dust Therapy

The Commissioner was unable to accede to the request of the miners' union that aluminium dust therapy as a means of preventing silicosis should be made mandatory in all mines by a Board directive.

This treatment, which resulted from the discovery in 1936 by Denny and Robson of the McIntyre mine in Ontario that a minute quantity of metallic aluminium reduces the toxicity of silica or quartz in the tissues chiefly by coating the quartz particle with an insoluble and impermeable coating, has since 1943 been made available to employees of the mining industry of Canada who are exposed to a silica hazard. It has been adopted in most of the mines in British Columbia. The procedure followed is that fine aluminium powder of a particle size below 5 microns is blown into the air of the drying room in the concentration of 1 gram per 1,000 cubic feet of room volume and inhaled by the men for a period of about 10 minutes while they are changing their clothes before going underground.

Set out in the report is a short survey of the experimental and clinical work done by McIntyre Research Ltd. in studying the effects of aluminium among hard-rock miners in Ontario and industrial workers exposed to high silica dust concentrations in various industries such as ceramics in Pennsylvania, and the conclusions reached regarding its use.

These indicate that aluminium powder cannot be regarded as a cure for silicosis and that its primary use is as a preventive measure but that there is no definite evidence as yet that it will prevent silicosis. It is pointed out that it would take years to assess its value as a prophylactic measure because it requires an average of 18 years for a case to develop in the mines of Ontario. Experience in its use, however, as demonstrated in several thousand cases over an average period of three years, has indicated no toxic or harmful effects, that a certain percentage of silicotic patients showed functional improvements, and that a high percentage showed symptomatic improvements, e.g., disappearance of cough, shortness of breath, tightness in the chest and weakness. Most showed a gain in weight.

These reports emphasize that the use of aluminium does not take the place of dust control. Rather, aluminium is to be used only to take care of the small percentage of silica dust which is not removed by accepted modern methods. Mine operators who use aluminium dust therapy under a licence from McIntyre Research Ltd., which patented the process, are bound by the licence agreement to reduce and keep dust concentrations to the lowest possible level, subject to the cancellation of the licence. Dust control, ventilation and aluminium prophylaxis should, the reports state, go hand in hand.

On the other hand, experts in other countries took a less optimistic view. The report of the proceedings of the third International Conference of Experts on Pneumoconiosis convened by the ILO at Sydney, Australia, in 1950 contains the following comment on aluminium dust therapy:—

> There was no conclusive evidence before the Conference that the inhalation of aluminium in any form prevents the development of silicosis in man. There was no evidence before the Conference that aluminium powder is of value as a therapeutic agent in human silicosis or that it is harmful when used for this purpose. There was some evidence that under certain conditions the inhalation of aluminium in industrial processes may be harmful and, further, there was experimental evidence that in animals the inhalation of the aluminium dust aggravates pulmonary tuberculosis.

Further, a 1950 bulletin of the United States Bureau of Mines entitled "Review of Literature on Dusts", in which some 657 publications are summarized, states as a general conclusion: "It has been recommended that general application of aluminium therapy in industry be delayed until adequately and impartially controlled clinical observation demonstrates its effectiveness in preventing or alleviating silicosis in man."

In view of the foregoing material, the Commissioner agreed with the Board's Silicosis Referee that benefits of aluminium dust therapy have not yet been well enough established to warrant the Board's making its use mandatory in all mine operations.

Silicosis Compensation

Only one of several suggested amendments to the provisions which set out the conditions (residence, length of exposure, etc.) under which silicosis is compensable was accepted. The suggestion was that the word "uncomplicated" should be deleted from Section 8(6)(d) which laid down the requirements for the filing of a claim for compensation but stated that "this provision shall not prevent an allowance by the Board of any case due to uncomplicated silicosis that the Board considers should in justice be allowed". It was submitted that this limitation had resulted in injustice and hardship in several cases of silicosis complicated by tuberculosis. The Commissioner, with the concurrence of the Mining Association of British Columbia, recommended that the discretionary powers of the Board be extended to permit allowances in cases of silicosis complicated by tuberculosis and that the same amendment should be made in Section 8(7) with respect to pneumoconiosis. He considered, too, that the amendment should be retrospective in effect. (In 1952 these sections were amended to delete the word "uncomplicated" but the amendment was not made retroactive.)

Before leaving the subject, the Commissioner placed on record the Board's method of awarding compensation for silicosis. Pensions are awarded under Section 8 which reads: "Where a workman suffers from an industrial disease and is thereby disabled from earning full wages at the work at which he was employed... the workman . . . shall be entitled to compensation". The Board interprets the phrase "at the work at which he was employed" to mean "in the industry in which he was employed."

Briefly stated, if a workman who has established a claim for silicosis continues to work at his regular job and to earn full wages, his claim is held in suspense and he is paid nothing. If the silicotic condition progresses and is accompanied by a substantially lessened capacity for work,

reflected in a reduction of wages, but the man continues to work *in the industry*—not necessarily at the work at which he was employed—he is paid 66⅔ per cent of his wage-loss, that is, two-thirds of the difference between what he is now earning and the amount he would have earned at his regular job. Should the time come when the man is advised to leave the mine, he is examined by the Board's Silicosis Referee, his loss of function or reduced capacity for work is established, and he is awarded a life pension for permanent partial disability. The award is made on the basis of physical loss of function and not on the basis of loss of earnings.

The amount of disability is fixed at 50, 60 or 100 per cent. The Board considers that where a man suffers a substantially lessened capacity for work, but is able to work fairly regularly at light work, the minimum pension award should be 50 per cent of total disability. If, on an annual examination, it is shown that the disability has increased to the extent that the man loses considerable time through absence from work, the pension award is increased to 60 per cent. When it becomes apparent that the man is no longer able to work, he is given a 100 per cent disability award. Should tuberculosis be diagnosed at any stage of the silicotic condition, the man is at once classified as a 100 per cent disability case and awarded a pension accordingly.

Pneumoconiosis

Pneumoconiosis, a general term for all dust diseases of the lungs, is scheduled as an industrial disease attributable to exposure to dust in a number of specified occupations. This term includes the conditions known as asbestosis (caused by inhalation of asbestos dust) and silicosis. Under this item in the schedule, disabling silicosis is compensable when it is caused by the inhalation of silica dust in occupations other than mining. From 1943 to 1950, 20 claims for silicosis and two for asbestosis in other than the mining industry were paid by the Board. The Commissioner suggested that the Board should undertake an educational program in industries other than mining in which men are exposed to the hazards of silica or asbestos dust to make them aware of the hazard and to impress on them the need for periodical medical examinations.

Tuberculosis

With respect to tuberculosis, the Commissioner did not recommend any change. All types of tuberculosis (formerly only pulmonary) are covered in the schedule, subject to the limitation that an employee engaged in a hospital or similar institution or in public health work is not entitled to compensation for tuberculosis which is contracted or appears in the first six months of employment unless he was free from the disease on taking the employment, as evidenced by a negative tuberculin test. On consideration of the Board's view that this limitation is a reasonable protection for the hospitals of British Columbia (since nurses and other hospital workers come from other provinces where they may have been infected with tuberculosis) the Commissioner reached the conclusion that the six months' waiting period in the schedule is justified and rejected the plea of the B.C. Provincial Government Employees' Association for its removal.

Hernia

Several changes in Section 16, which sets out the conditions under which hernia is compensable, were recommended. Industry generally opposed the amendments.

One recommendation was the deletion of the subsection which requires a workman to be operated upon within two weeks of the occurrence of the hernia. This was not practical, the Commissioner stated, due to lack of available hospital accommodation.

Further, in the proviso to Section 16 which reads:—

> Provided that in case there has been excusable failure on the part of the workman to comply with the provisions of this section the Board may pay compensation if it is of the opinion that the claim in justice should be allowed, but no compensation shall be payable for a period greater than seven days prior to the date of an operation to effect a cure or for more than forty-two days thereafter for uncomplicated hernia

the Commissioner recommended that, for greater clarity, "may" should be changed to "shall" and all words after "allowed" should be struck out. In his opinion, no time limit should be imposed in case of uncomplicated hernia but that each case should be decided on its merits and compensation paid for such period of disablement as the Board deemed proper. No limit is imposed upon compensation payable in complicated cases and a Board directive issued in 1943 states that a workman 50 years of age or over who undergoes a hernia operation is deemed, for purposes of compensation, to have had complicated hernia.

Neurosis

With respect to suggestions that the Board did not compensate for disability due to a traumatic neurosis, the Commissioner noted that in compensation administration an incapacitating neurosis occasioned by physical injury or even by shock alone is deemed to be compensable as a "personal injury by accident". From the evidence of the Board's Chief Medical Officer and from a consideration of a number of cases, he found these complaints unfounded. Where it is definitely shown that a workman is suffering from a neurosis due to his injury, it is the Board's policy to compensate for it.

Heart Conditions

Disagreement with the Board's policy in heart cases was expressed by claimants and industry, depending on whether a claim was accepted or rejected. In such cases the Board must decide whether the heart injury or death from heart failure did or did not result from trauma or unusual exertion in the course of employment. It seemed to the Commissioner, in view of existing differences in medical opinion, that each case has to be dealt with on its merits.

Prosthetics, Eye-Glasses, Orthopaedic Shoes

Beyond stating that he did not consider the $10 allowance given to a workman for the purchase of glasses from the optical company "overly generous", the Commissioner did not find any basis for complaint with respect to the supplying of appliances and orthopaedic shoes by the Board.

Medical Questions

After dealing with specific complaints, the Commissioner went on to examine more general criticism of the administrative policies of the Board and particularly of the decisions of the Medical Division, against which "the heavy artillery of those attacking the Board's administration of the Act was directed".

Summing up, the Commissioner stated:—

> I am satisfied upon the evidence that the charges of incompetence . . . are without foundation, and I so find. Dr. Murphy and his medical staff are honestly and conscientiously carrying out their manifold, onerous, and, no doubt, at times, vexatious duties. That does not mean, however, that they are infallible. Their medical opinions have been challenged before me both by doctors and by lay complainants.
>
> On the medical side of compensation administration the field for conflict is wide indeed. Medicine, like law, is by no means an exact science. Honest differences of opinion may be held and strongly defended, each side convinced of the righteousness of his own viewpoint. Therein lies the real kernel of the many and varied criticisms I heard . . .

From the many hundreds of individual cases brought before him the Commissioner found that conflicts of opinion between compensation claimants or their doctors and the Board doctors fall into several well-defined categories, each of which he examined, keeping in mind the necessity or otherwise of providing for the right of appeal to a Medical Appeal Board.

These categories in which *bona fide* medical disputes may and do arise were as follows:—

(1) Did the disability arise from the accident or the disease from the man's occupation?

(2) What treatment, including surgical operative techniques, is to be permitted by the Board?

(3) Is an injured man or his own doctor to be allowed to consult a specialist of his or their own choice?

(4) Should the Board follow the advice of the specialist selected?

(5) Is an injured workman to be allowed a free choice of treatment by other than qualified medical doctors?

(6) When has an injured workman made his maximum recovery and is he fit to return to work?

(7) What is the percentage of his residual disability?

In examining the treatment to be permitted by the Board, the report discussed the proper method of diagnosing, treating and operating upon intervertebral disk lesions, a subject on which the Board doctors were under attack during the inquiry, and the Commissioner concluded that the Board's policy with respect to this type of operation seemed reasonably consistent with presently existing majority opinion.

The Commissioner found nothing to suggest that the arbitrary authority of the Board in regard to the selection of specialists is being abused but remarked that "the fact that such power is vested in the Board does not meet with general approval". Unions complained that the Board channelled cases to a certain group of specialists, often against the wishes of the injured man or his doctor. He pointed out that under Section 25 the Board, acting on the advice of its medical staff, has a very wide authority over medical

care and who should administer it. "The Board pays the bills and should, within reason, call the tune."

With regard to changing doctors, the Board's policy is to grant a workman's request if it appears reasonable and if he has obtained the consent of the doctor of his first choice. In the Commissioner's opinion, the Board should continue to exercise a reasonable degree of control in relation to change of doctors but if the injured man is dissatisfied with his original doctor he should be allowed a change.

The Commissioner could not suggest that the Board should be bound to follow the advice of the specialist selected. Under the present system the Board consults two or more specialists, weighs their various conclusions, together with the opinions of its own medical officers, and a decision is reached. This was preferable, the Commissioner felt, to binding the Board to accept the opinion of specialists who do not act in concert and after joint consultation but as individuals expressing several opinions.

The question of whether a workman is to be allowed a free choice of treatment by other than qualified medical doctors involved the question of treatment by chiropractors, chiropodists and naturopaths.

In 1943 the Act was amended to permit treatment by "persons authorized to treat human ailments." By regulation, however, the Board limited recourse to chiropractors, chiropodists and naturopaths by directing that a workman must first have the permission of a physician before obtaining such treatment.

During the inquiry the Board, of its own initiative, revoked the regulation with respect to chiropractors and naturopaths, permitting compensation patients to go directly to them for treatment, subject to the condition that treatment in excess of two weeks will not be paid for unless authorized by the Board. This provision permits Board doctors to check the progress of the treatment.

From the evidence the Commissioner was satisfied that the Board should remove the restriction with respect to chiropodists. He left it to the Board to determine if it was necessary to keep a close watch on the progress of treatment by chiropodists, suggesting that the potential hazard seemed relatively minor, if indeed it existed at all.

Medical Appeal Board

One basic fact emerged from the great mass of evidence before the Commissioner: that disputes concerning contentious medical questions have arisen and will continue to do so. Having given "anxious thought" to the problem, he reached the conclusion that in the public interest some independent and impartial tribunal should be set up to resolve these disputes speedily, cheaply and finally.

"The present referral system to individual specialists . . . results, in my view of the evidence, in interminable delays, in an unnecessary expenditure of money and leaves in its wake many cases of neuroses precipitated by endless frustration and anxiety," he stated.

The Chairman of the Board conceded that the present system was "haphazard" but felt that if a Medical Appeal Board were created it would result in a deluge of contentious claims. The Commissioner did not agree. From an analysis of the type of claims which might be appealed, he estimated that there might be 200 cases in the first year or two but that after a period the number would be much less. Experience in the States of Washington and Oregon, which have such appeal boards, supported this view. It should not be forgotten, the Commissioner pointed out, that the vast majority of cases go through the routine procedure from claim to payment without incident and without contention.

After noting that in the Alberta, New Brunswick, Ontario and Saskatchewan Acts there is provision for the reference of a disputed medical question to a Medical Referee or Medical Board of Review and that New Brunswick, Nova Scotia and Prince Edward Island permit appeals to the Courts on questions of law or jurisdiction, the Commissioner stated:—

> In this province the principle of medical review recognized elsewhere is already operative and has been for many years. References to specialists by the Board in controversial cases is a form of review. Those who favour a Medical Appeal Board are seeking to formalize and regulate the present haphazard and unsatisfactory review procedure and to create a tribunal with power to bind the Board by its decisions.

Industry generally, except the Canadian Pacific and Canadian National Railways, felt that an Appeal Board was unnecessary and impracticable. A large number of unions opposed the idea and the Commissioner remarked that their opposition seemed to stem from fear that employer groups would also exercise the right to go to an independent board in contested cases. Other powerful unions, however, requested the creation of such a board. Members of the Workmen's Compensation Board also expressed opposition.

After answering some of the arguments against the establishment of a Medical Appeal Board, the Commissioner pointed out that no one would be forced to appeal unless he so wished. If industry does not consider an Appeal Board practicable, it does not have to seek its decisions. If, on the other hand, a large number of workmen think it practicable and necessary, and the Commissioner felt that the facts supported that view, they should have an opportunity to use its independent judgment to resolve disputed medical issues.

Constitution and Jurisdiction of Board

A Medical Appeal Board should, in the Commissioner's opinion, consist of three members. There should be a permanent chairman, a general practitioner of long experience, who should be appointed by the Lieutenant-Governor in Council, on the recommendation of the Minister of Labour, for a term of five years. The other two members should be selected in each appeal from a roster of certified specialists, one to be selected by the appellant and the other by the Board.

The present system of consulting a specialist could continue and an appeal be made to the Medical Appeal Board when that procedure was deemed essential to a final resolution of the problem. The decisions of the Appeal Board would be final and binding in relation to the facts and circumstances existing at the time of the decision. They would not stultify the Board's powers to reopen and review a case should there be a later material change of the facts and circumstances.

The jurisdiction to be exercised by the Appeal Board should be to diagnose the nature as well as determine the extent of the workman's functional disability. The evaluation of functional disability in terms of compensation is not within the medical field.

The Commissioner did not consider it wise or expedient to have the actual treatment of an injured workman subject to appeal. That decision should be left wholly with the Board. He illustrated the field of jurisdiction of the Medical Appeal Board as follows:—

> Let us once more call on John Doe—now long suffering—to illustrate my point. He injures his back and his own doctor diagnoses a disk lesion. This may, or may not, be supported by a specialist. The Board's doctors, however, in either event do not agree that the neurological findings support the diagnosis of nerve pressure. An appeal is taken to the Medical Appeal Board and it is decided that undoubtedly the man's pain and incapacity are due to a herniated disk. At that point their jurisdiction ceases. They have decided a disputed issue as of that moment. The case is then back with the Board in exactly the same position as if the Board's doctors had agreed with the original diagnosis.
>
> The questions which then arise concerning treatment, operative techniques, and so on are all the responsibility of the Board, from which there should be no appeal.
>
> The man is operated upon and later is awarded compensation based on loss of function of 40 per cent of total. That is disputed and becomes, unless settled, a problem for the Medical Appeal Board. The Board's estimation of residual functional disability is either confirmed or modified. The case then is back with the Board as if the Medical Appeal Board never existed, except for the two decisions it gave which, it is assumed, the Board doctors ought to have given in the first place.

In summary, the Commissioner stated that an enactment like subsections (a), (b) and (d) of Section 27 of the Alberta Act with provisions added embodying the right of the Board to decide preliminary questions of fact (on which the medical determination might be based) and excepting treatment from the appeal provisions would carry out his concept of the jurisdiction that ought to be vested in a Medical Appeal Board. The Board should be required to accept and act upon the decisions of the Medical Appeal Board. The right to appeal should extend to both employers and employees and it should not be given retrospective effect.

Procedure of Medical Appeal Board

The Commissioner suggested that time limits be set in order that appeals might be heard and decided upon expeditiously. He proposed that notice of appeal should be brought within 10 days after notification of a Board decision, the notice to be accompanied by a physician's certificate indicating that the issue is a *bona fide* medical dispute and giving sufficient particulars to define it. Notice should be served on the permanent chairman who would be required to notify the Workmen's Compensation Board and the employer or employee, as the case might be. The other two members should be selected by the appellant and the Board within five days after being requested to do so by the chairman and the Board should meet and decide the dispute within 15 days.

The Medical Appeal Board should determine its own procedures except that in all cases the workman should be present with his doctor, if he has one. The appellant and the Board should have the right to

present such medical evidence as the Medical Appeal Board deemed relevant and it should be able to call in specialists and to conduct tests as it might consider necessary. The opinion, giving reasons for decision, should be written and delivered to the Board and to the appellant. The Commissioner suggested that requirements concerning procedure might be laid down in regulations.

Payment should be from the Accident Fund and on a per diem basis. The Commissioner suggested $50 for the first day's hearing and $35 for each succeeding day. Witness fees and costs of tests should be paid from the Accident Fund.

In conclusion the Commissioner stated:—

> This Medical Appeal Board is a new departure in Canada, and of necessity it will take a little time to "shake down" and to discover and iron out the wrinkles. The main thing is to get the principle established and the rest will follow in due course. If it is found impracticable and unworkable after a fair try, then it can be eliminated without anybody being very badly prejudiced in the testing period.

Complaints Against Medical Division

Unions complained that the Board's medical officers erred in not extending to claimants the benefit of the doubt in border-line cases. Industry groups complained with equal emphasis that the benefit of the doubt had been extended too freely to claimants. The Commissioner commented on this score: "I presume over the long haul each would cancel out the other and justice in the main be done."

It seemed to him, from the evidence as a whole, that the Board doctors, generally speaking, give the benefit of the doubt to the workmen with due regard to the impartiality of their positions. In this they are carrying out the general policy of the Board. If there is error, it would seem to fall upon the side of, and benefit, the injured workman. This opinion was borne out by the fact that there has been a drop since 1943 in the ratio of rejected cases to the total number of claims reported.

The Commissioner's conclusion was:—

> From a consideration of the whole evidence directed against the Medical Division of the Board, it appears to me that the number of complaints, while of extreme importance to the complainants, are relatively very few when viewed in the broad perspective of the thousands of cases going through the hands of the Board's doctors.

He stressed the necessity, however, of their getting away from the daily atmosphere of routine work to take post-graduate or refresher courses and "become refreshed in learning and perhaps in spirit as well".

Methods of Determining Compensation

In discussing the functions of the Claims Division, the Commissioner reviewed the historical background of the British Columbia Act, recalling that it followed practically verbatim the Ontario Act which, in turn, was drawn largely from English statutes and the Act of the State of Washington.

He pointed out that there are two alternative methods of determining compensation awards. One is to evaluate the loss of function on a purely physical basis as a percentage of total disability. The other method is based on the difference between the average earnings of the workman before the accident and the average amount he is earning or is able to earn in some suitable employment after the accident.

Under the first method the degree of incapacity is determined, e.g., the loss of an arm at the shoulder is regarded as a loss equal to 76 per cent of total disability. The average wage of the claimant at the time of the injury is calculated and the percentage that his physical impairment bears to the normal is regarded as the measure of the loss of his average wage. The claimant then receives two-thirds* of that loss, i.e., the man who has lost an arm receives two-thirds of 76 per cent of his average wages. His future earnings do not affect his pension, notwithstanding the fact that he might later receive a higher wage than he was receiving at the time of the accident. In many instances a claimant is paid compensation when he has no immediate wage-loss.

The wage-loss method requires a constant check on and supervision of the actual wages being earned by the pensioner. An injured man who loses an arm at the shoulder but is re-employed at the same wage as when injured receives no pension nor does he until he suffers a subsequent wage-loss due to his injury.

The wage-loss method was tried in Ontario from 1935 to 1938 and was abandoned as unworkable under the Canadian system of administration. In England, the principle of basing compensation on loss of earnings was discarded in 1946 when the Workmen's Compensation Act became an integral part of a comprehensive

*In 1952 the percentage rate was raised to 70.

system of national insurance and the method of basing compensation on the degree of disablement due to the injury was adopted.

Chief Justice Sloan described the philosophy underlying each of the two procedures and the basic distinction between them, as follows:—

> The wage-loss theory deals with the actual experience of an *individual*. It endeavours to measure not only his physical disability, but his mental attitudes, his educational background, his ambitions, initiative, and other intangibles in an effort to ascertain his future earning ability on a labour market theoretically ready to absorb him at a wage commensurate with his residue of physical ability and his degree of mental acumen and adaptability.
>
> The physical-impairment theory based on loss of function alone does not concern itself with the individual as such. For instance, it makes no distinction in evaluating loss of function between the amputation of a hand of a labourer and that of a linotype operator. Both are rated as suffering from the same degree of loss of function, although the occupational incapacity in the one case bears no relation to the other.
>
> The physical-impairment theory is based upon mass values and mass averages. Some injured men under this method get relatively more than they would under an individual valuation basis; others get less. Collectively, the long-term average takes care of the differences and in the main the result is that the average injured workman receives a just recompense for loss of wages, real or potential, over a period of years.

In 1942 the Act provided for the payment of compensation for permanent partial disability according to the wage-loss theory ($\frac{2}{3}$ of the difference in earnings before and after the accident) but the Commissioner found that in practice the Board used the physical-impairment method and he recommended that the Act be amended to validate the method actually used.

This recommendation was thought to be implemented by a 1943 amendment which reads as follows:—

> But where the Board has deemed or deems it more equitable the impairment of earning capacity may be estimated from the nature and degree of the injury having regard to the workman's fitness to continue in the employment in which he was injured or to adapt himself to some other suitable employment or business.

Of this amendment the Commissioner stated:—

> It will be seen that by the terms of the amendment the Board may not evaluate compensation from "the nature and degree of the injury" solely, but must also "have regard to the workman's fitness to continue in the employment in which he was injured or adapt himself to some other suitable employment or business". In other words, potential wage-earning capacity has been annexed to and is an added factor to be considered when estimating the degree of residual physical function "from the nature and degree of the injury". It is a mixture of two alternative and mutually exclusive theories and does not therefore implement the recommendations I made.

The Commissioner then went on to say:—

> It is common ground that the Board now, as in 1942, does not attempt to evaluate compensation awards on the difference between the average wage at the time of the injury and the actual or potential wages after the injury. The p.p.d. award is made now, as it was in 1942, by translating the degree of physical impairment into a more or less arbitrary percentage of loss of earning capacity by the use of a disability schedule where applicable. That practice is now common in all Canadian provinces.

The Commissioner considered, therefore, that the Act should be amended with retrospective effect to validate the present method of calculating compensation in permanent partial disability cases solely on the basis of physical loss of function and proposed that the following section be substituted for Section 22(1):—

> 22(1) Where permanent partial disability results from the injury, the impairment of earning capacity shall be estimated from the nature and degree of the injury and the compensation shall be a periodical payment to the injured workman of a sum equal to sixty-six and two-thirds per centum of the estimated loss of average earnings resulting from such impairment and shall be payable during the lifetime of the workman, or in such other manner as the Board may determine.
>
> (2) The Board may compile a rating schedule of percentages of impairment of earning capacity for specified injuries or mutilations which may be used as a guide in determining the compensation payable in permanent disability cases.
>
> (3) Where the Board deems it more equitable, the Board may award compensation for permanent disability having regard to the difference between the average weekly earnings of the workman before the accident and the average amount which he is earning or is able to earn in some suitable occupation after the accident, and the compensation shall be a periodical payment of sixty-six and two-thirds per centum of such difference, and regard shall be had to the workman's fitness to continue in the occupation in which he was injured or to adapt himself to some other suitable employment or business.

A like amendment would have to be made with respect to compensation for temporary partial disability. These amendments would bring the Act into line with the Ontario Act as it is now being interpreted by the Ontario Board.

Industry generally opposed the amendment. The Canadian Manufacturers' Association took the position that Section 22(1)

should remain in its present form and that the Board should administer it according to its terms, i.e., should use the wage-loss method, or alternatively, if the present method was continued, some provision should be made for an "after the event" check to permit a pension fluctuation according to earned wage of the pensioner, having due regard to the variable purchasing power of the wage dollar. Of this scheme, the Commissioner commented:—

> It is difficult to see how the two independent methods can be harnessed together. . . Weighing the evidence and conflicting view-points as best I can, it is my conclusion that it would be wiser to stay with our present system. It is at least "a devil we know" and has over a long period of years worked reasonably well in the interests of the injured man. Industry has, under this system, paid too heavily in some claims and too little in others. On the whole, and taking the collective result as one must, I think industry at large by the use of this method has not been unfairly burdened. A justifiable complaint probably could be made by an injured individual who does not receive all he should. After all is said on the subject, he has the most to lose. I leave it at that.

Percentage Rate

Union groups were unanimous in requesting that the percentage rate of payment for disability be increased to 75 and upwards to 100. Industry was in general strongly opposed to any increase in the 66⅔ percentage rate.

The Commissioner rejected the request for an increase to 100 per cent, stating that, in making the request, unions clearly lacked appreciation of the historical background and the fundamental principles of the Act. He therefore set out in his report what he had said in 1942 concerning "the complete and abrupt transition" which the present system of collective liability had effected in the field of personal injury liability. Stating that "for labour to attempt now to charge industry with 100-per-cent wage-loss is to destroy the basic foundations upon which the Act was built", he again reviewed the contrast between the benefits now enjoyed by labour under the Act and a workman's position under the "harsh and unsympathetic rigours of the common law".

> The adoption of a workmen's compensation scheme was done with the deliberate purpose of abandoning common-law duties, rights, obligations and remedies. Other rights different in concept and exclusive in operation were substituted. Both workman and employer had each to forego common-law rights in a compromise for the common good. The primary right relinquished by labour was the chilly one of attempting to recover damages at common law from an employer protected by a wall bristling with almost impregnable defences.
>
> Under the Act an injured workman is entitled to compensation notwithstanding the fact that his employer is not in the slightest degree negligent, and in almost 100 per cent of injury cases the workman is now entitled to be paid compensation in contrast with the common-law recovery of damages in only 20 to 30 per cent of injury cases, and only then after a protracted and anxious bout with the law.
>
> * * *
>
> In the case of a man totally disabled through no fault of an employer but, for example, by an accident caused by his own carelessness or that of a fellow workman, he receives his compensation granted him for life regardless of subsequent disability or sickness which would have ended his working career in early life, regardless of old age with its like result. His pension is not subject to the exigencies of strikes, lockouts, industrial depressions, seasonal unemployment. . . His compensation continues unabated throughout all these uncertainties and vagaries which beset the industrial worker. He pays no union dues, has no expense for working clothes and equipment. His compensation is free from income tax. He has, in some measure, security. In addition to these benefits, he receives free to him medical and hospital care when required and without limitation on its cost. He knows that if his injury is likely to have a fatal termination, members of his family are provided for by dependents' allowances. These benefits are substantial and are the fruits of the Act.
>
> The permanent partial-disability cases are beneficiaries to a proportionate degree of these benefits. Those individual p.p.d. cases who are re-employed at their pre-accident wage are, in addition, receiving compensation payments.
>
> Industry did not agree to bestow these benefits nor to disarm itself of the weapons of defence it was entitled to use at common law without exacting some concessions from labour. Labour makes its major contributions by an original 45-per-cent deduction of wage-loss now lowered to 33⅓ per cent, by a waiting period, and by foregoing any money claims based on pain and suffering.

The rate of compensation as fixed by the original Act was 55 per cent. It was increased to 62½ per cent in 1935 and to 66⅔ per cent in 1938. In considering whether a further increase was advisable, the Commissioner pointed out that the general theory underlying considerations relating to the payment of compensation is that, subject to a maximum and minimum, the pension should be sufficient to provide a standard of living for higher-paid workers above the subsistence level and for lower-paid workers not less than the subsistence level. Comparing the economic position of a man injured in 1938 with one injured in 1952, the Commissioner found that while wages have slightly more than doubled the purchasing

power of a person's income may have actually declined when compared with 1938. Ontario and Saskatchewan raised the percentage to 75 during this period.

The Commissioner's conclusion was that the rate ought to be increased about five per cent and he recommended that it be raised to 70 per cent.

Maximum and Minimum Earnings

In accordance with the principle expressed by Sir William Meredith, when reporting on the draft Ontario Act, that the ceiling on earnings should represent the maximum amount earned in a year by the highest paid wage-earner, the Commissioner found that the maximum of $2,500 was out of line with prevailing wage levels in the province and recommended that it be raised to $3,600. He noted that, whereas in 1943 only 12 per cent of claimants received wages equalling or exceeding $2,500, now 59 per cent are in that category. Industry, with the exception of the coal-producing companies, did not oppose "a reasonable increase".

With respect to the minimum payment of $12.50 a week, industry opposed any change and labour sought an increase to $20. The Commissioner's recommendation was that the minimum should be raised to $15 a week.

Increased Benefits

Widows and Dependants

After weighing the relevant factors, the Commissioner was of the opinion that, within the principle of the Act, allowances should be increased. He recommended that widows' pensions be increased from $50 to $75 a month, children's allowances from $12.50 to $20 a month, allowances to orphan children from $20 to $30 a month and allowances to other dependants from $50 to $75 a month, the increases to orphans and crippled dependent children to be made retroactive.

The Commissioner could not, however, recommend an increase for widows and pensioners in receipt of compensation based on earlier awards. While he recognized "the sorry plight the shrinking dollar may visit upon a disabled workman and his dependants", he felt that industry now operating should not be called on to bear part of the burden of accidents which happened perhaps years before. He pointed out that, when the percentage of disability was established, the value of the dollar was a constant on both sides of the equation. "To say . . . that future fluctuations in the purchasing power of the dollar must govern the amount of compensation cheques is, in my opinion, an unsound proposition". For these reasons he considered that the burden of relief should be borne not by industry but by the state.

In explanation of his recommendation that increased benefits, except those to orphans and crippled children, should not be retroactive in effect, the Commissioner stated that, when a permanent injury or fatality occurs, the industrial class in which the workman was employed is assessed and pays a sufficient sum to set up capital reserves adequate to provide the funds required to pay compensation awards. By the use of actuarial tables, it is theoretically possible to estimate the exact sum required to be set aside so that, by the expenditure of the capital sum plus interest, the fund and the Board's liability to the beneficiary cease at the same time.

If any increase in benefits were given a retrospective effect, it would require the setting up of large sums for additional capital reserves. Thus industries would be saddled not only with assessments to pay their own accidents but with a large additional sum to set up capital reserves to pay added compensation to workmen injured in other assessment periods and for whose dependants many of the present industrial classes may have no responsibility whatever. In the Commissioner's view, to charge industry with increases in pensions in respect to past accidents would be entirely contrary to the scheme of the Act.

Widows with dependent children complained that they were unable to pay hospital insurance premiums from their allowances. Commenting that "one can well imagine the difficulties facing a widow in these days of the inflated dollar trying to live on $35 or $40 a month," the Commissioner recommended that the hospital insurance premiums of present and future widows and orphans should be paid from the Accident Fund.

Funeral Expenses

The sum of $150 allowed for funeral expenses seemed to the Commissioner inadequate under present-day conditions and he recommended that it should be increased to $250. In addition to the allowance, the Board assumes the cost of transporting a workman's body to any part of British Columbia up to a sum of $100.

Subsistence Allowance

A further recommended increase was in the subsistence allowance which the Board may make to an injured workman undergoing treatment away from home. The allowance is supposed to represent not the actual cost of subsistence when away from home but the difference between living at home and away from home and its purpose is to assist a workman who has to maintain two places of residence. The Commissioner was satisfied that the maximum of $3.50 a day laid down in the Act was insufficient and recommended an increase to $4.50, making the comment, however, that he felt that the determination of the maximum upwards or downwards as economic conditions warrant should not be fixed by the Act but left to the discretion of the Board. Industrial groups were not in favour of any increase and labour thought that the allowance should be increased to $4.50 or $5 a day.

Cost of Increases

Regarding the added cost of these increases to industry and, in turn, to the consumer of the goods produced by the industries charged, the Commissioner said:—

> I have, in considering these matters, not lost sight of the fact that this province is a producer of primary products far beyond the capacity of a local consumer's market to absorb and that we must therefore sell our goods—such as lumber—on highly competitive world markets and at world prices. We can, by adding too great an overhead to our production costs, be priced out of our markets with consequent calamitous results, not only to industry, but to labour as well. To endeavour to strike a just balance is a delicate business and can only be speculative at best.

He estimated the added cost, based on 70 per cent of wage-loss and according to the 1950 experience, as follows:—

Raise maximum from $2,500 to $3,600	$ 2,224,000
Raise minimum from $12.50 to $15	120,000
Raise widows' pensions from $50 to $75 a month	550,000
Hospital insurance premiums for widows and orphans	50,696
Raise children's pensions from $12.50 to $20 a month	100,000
Raise orphans' pensions from $20 to $30 a month	2,700
Raise other dependants from $50 to $75 a month	15,000
Raise subsistence allowance to $4.50 per diem	42,446
Raise funeral expenses from $150 to $250	16,300
Total	$ 3,021,142

Waiting Period

The original Act of 1916 provided that an injured workman could not recover compensation for the first three days of his disability no matter how long he was incapacitated. In 1925 the Act was amended to provide that, when the disability was of more than 14 days' duration, compensation should be paid for the three-day "waiting period". In 1946 the 14 days were reduced to six days.

In the inquiry labour groups pressed for the elimination of the waiting period. Industry considered the six days too short a period and suggested a return to 14 days.

The Commissioner did not consider that any change should be recommended. He pointed out that a waiting period was intended to cut down petty claims with attendant increased compensation costs and to prevent malingering. It is also a form of contribution by employees to the Accident Fund.

Second Accident Fund

Since neither industry nor labour seemed well informed about the second accident fund, the Commissioner reviewed the purpose of the fund and the extent to which it has been used in recent years.

The second accident fund is set up under the authority of Section 34(1)(d) of the Act, which permits the Board to provide a reserve fund to be used to meet the loss arising from any disaster *or other circumstances* which, in the opinion of the Board, would unfairly burden the employers in any class. The phrase "or other circumstances" is deemed wide enough to cover second accident injuries.

The Commissioner explained the fund as follows:—

> The purpose of this fund is to relieve employers in a class of the total cost of a second accident occurring to a man already suffering from an injury and thus to encourage employers to employ injured men without fear of being saddled with an unfair assessment should he sustain a second injury.
>
> The best illustration of how the Second Accident Fund is applied is the "eye cases". Assume a workman has an accident, as the result of which he becomes industrially blind in one eye. He is re-employed in another industry, and through another unfortunate accident loses the sight of his remaining eye. Instead of assessing the class in which he

was re-employed the full sum necessary to compensate him as a total disability, that class is charged as if the man had only lost an eye. The balance is charged to the Second Accident Fund.

Since the second accident fund is maintained by assessment on all industries, the cost of second-injury cases is spread over all classes instead of being charged to one. Many perplexing problems arise in determining if second disabilities are due to new injuries or are mere aggravations of the original injuries. In these matters the Board must exercise a reasonable discretion, the Commissioner stated.

Hospital Insurance

On the subject of medical costs, the Commissioner considered a complaint from the B.C. Loggers' Association that in 1951 industry was called upon to pay approximately $1,200,000 in hospital costs which it contended should have been borne by the Hospital Insurance Fund in return for premiums paid by injured workmen.

The Hospital Insurance Act went into effect on January 1, 1949, and during the first year of its operation the Board under agreement with the Hospital Insurance Commissioner paid for hospital care of injured workmen at the rate of $8.50 per day. In 1950, the Act was amended to provide that an injured workman under the Workmen's Compensation Act was not a beneficiary. Since that time, notwithstanding the fact that a workman has paid his hospital insurance premium, the Board has been required to pay the actual cost of his hospitalization and treatment.

The Commissioner stated that the insurance of employed persons against industrial accidents is recognized as being separate from the insurance of employed persons against the cost of general hospital care because two different risks are involved. The risk of industrial accident or of contracting an occupational disease is related directly to the industry in which a person may be employed and the cost of this insurance program is borne by the employer. The risk of sickness requiring general hospital care is not related to employment and is supported by contributions of the individual and the province. In only eight of the 24 hours is industry expected to insure the workman. This principle is also recognized under the Saskatchewan Hospitalization Act.

Further, the Commissioner pointed out, the separation of the risk of industrial accident from that of ordinary sickness is internationally recognized and, in countries where separate insurance programs are not established, a separate contribution is required from the employer for workmen's compensation.

Fatal Injury When No Dependants

As in 1942, the Commissioner rejected a labour request for an amendment to provide that when a workman without dependants is killed, the appropriate class should be assessed the sum of $1,000 and this sum should be paid into the Rehabilitation Fund. In his view, such an amendment would introduce a new theory into the compensation field, a theory which views compensation as the collection of some form of monetary penalty from industry instead of part indemnity to dependants for the actual wage-loss suffered by the death of the workman.

(First of two instalments. The second instalment will appear in the May issue.)

Accident Prevention Facilities in Manufacturing Establishments

Of 6,670 manufacturing establishments surveyed, 86 per cent provide facilities for the prevention or treatment of industrial accidents

Facilities for the prevention or treatment of industrial accidents and diseases were reported by 86 per cent of the 6,670 manufacturing establishments which participated in the Labour Department's annual survey of working conditions as at October 1, 1951. The 5,763 establishments which reported that they provided some form of accident prevention or medical facilities employed 745,000 plant workers, or 95 per

cent of the 786,000 workers in manufacturing covered by the survey. The fact that the percentage of workers employed in establishments having safety and health facilities is greater than the percentage of such establishments indicates that these facilities are more common in the larger plants.

More than 40 per cent of establishments with approximately 65 per cent of the plant workers covered by the survey reported that they had employees who were trained in first aid. More than 20 per cent of establishments with 46 per cent of the employees had joint worker-supervisor safety committees. As a rule, trained safety engineers are employed only by the comparatively larger firms. This is borne out by the fact that only eight per cent of the reporting establishments had such officials but these same establishments had 35 per cent of the employees.

Similarly, only 1·7 per cent of the reporting plants had full-time plant doctors; but they employed slightly more than 15 per cent of workers covered. Slightly more than 10 per cent of the factories reported having full-time plant nurses but the number of employees in these was approximately 50 per cent of those dealt with in the survey.

Almost nine per cent of the establishments dealt with in the survey reported that they required their employees to undergo recurring medical examinations; the employees of these plants made up slightly more than 28 per cent of those covered.

The accompanying table gives information on the frequency with which safety and health facilities are provided in the various sub-groups of the manufacturing industry.

The information given in this table bears out the observation made above that safety and health provisions are more frequently provided in the larger establishments. For example, in the non-ferrous metal products group, nine plants (five per cent of the total number of establishments) employing nearly 17,000 plant workers (or 48 per cent of those employed in the group) have full-time plant doctors. Full-time plant nurses are provided by 18 per cent of the plants in this industry, these plants employing nearly three-quarters of the industry's workers.

In the rubber products industry, in which the average size of establishment is relatively large, ninety per cent of the workers are in plants which employ full-time nurses, more than three-quarters of the workers are in plants which have worker-supervisor safety committees and almost two-thirds are in establishments employing safety engineers.

In the paper-products industry, three-quarters of the plant workers are in establishments having worker-supervisor safety committees and more than half are in plants having safety engineers.

Labour Minister Urges Government Workers to Avoid Accidents

After reviewing figures of accidents among government employees which required workmen's compensation, Hon. Milton F. Gregg, Minister of Labour, urged all workers in the government service, regardless of their occupation, to be more careful and to take no unnecessary chances of accident.

"There is need among government workers for more safety consciousness," Mr. Gregg said. "Most accidents could have been prevented by a little forethought, a little more care, a little greater safety consciousness on someone's part."

Statistics of accidents to federal employees are kept by the Government Employees' Compensation Branch, Department of Labour. The Branch has sponsored an intensive safety campaign throughout government departments.

A recent report on compensable accidents among federal employees indicates an accident rate of between eight and nine per cent, i.e., the number of compensable accidents is eight to nine per cent of the number of employees covered by workmen's compensation.

During the fiscal year 1951-52, there were 12,857 claims made on provincial workmen's compensation boards, through the Government Employees' Compensation Branch, on behalf of federal government employees (L.G., March, p. 370).

Federal employees covered under the Government Employees' Compensation Act include not only civil servants but also employees of many Crown corporations.

4th Session of Textiles Committee

Group warns that international trade competition should not lead to worsening of conditions of employment. Canadian named vice-chairman

"It is essential that international competition for trade in textile goods should not lead to a worsening of conditions of employment or a lowering of standards of living and in particular that it should not lead to an abandonment of social policies considered as basic," the International Labour Organization's Textiles Committee* has declared in a resolution adopted at the group's fourth session in Geneva from February 2 to 13. The vote on the resolution was 67 to none, with 37 abstentions.

Representatives of the Governments, employers and workers of 23 countries attended the meeting. Canadian government delegates were S. H. McLaren, Executive Director, Unemployment Insurance Commission, and Miss Ruth A. Hamilton, Adviser on Women's Employment, UIC.

A Canadian delegate, H. F. Irwin, was appointed vice-chairman of the session for the employers. The session was presided over by Henry Hauck of France, representative of the ILO Governing Body.

The resolution also recommended:—

That the ILO Director-General, David A. Morse, continue to take all possible steps, in consultation with the international organizations concerned, to achieve this goal;

That the attention of all organizations concerned with the international textile trade be drawn to "the essential principle that basic social standards must be safeguarded";

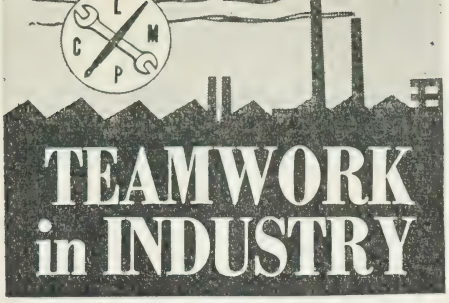
That Governments be urged to take whatever individual or collective action may be feasible and appropriate, other than action tending to restrict international trade.

The Committee approved by 82 votes to 20, with two abstentions, a series of conclusions relating to the employment of women in the textile industry.

While it could not agree on a definition of "guaranteed wage", the Committee recognized that "structural, cyclical, seasonal and other changes in manufacturing activity may endanger the stability of income of workers in the textile industry and that any reasonable and practicable step should be taken to reduce this risk of instability."

Countries sending delegations to the session were: Argentina, Australia, Belgium, Brazil, Canada, Chile, China, Denmark, Egypt, Federal Republic of Germany, Finland, France, India, Italy, Japan, Mexico, Netherlands, Norway, Peru, Sweden, Switzerland, the United Kingdom and the United States.

*Industrial Committees were inaugurated in 1945 by the ILO Governing Body to deal with problems of some of the most important international industries.



Majority of Governments Favour Recommendation On Holidays with Pay

The majority of 40 Governments replying to an ILO questionnaire have indicated they favour a paid holiday of two weeks a year for persons employed in industry and commerce. Most of them agreed that the ILO's general conference should adopt a formal Recommendation on the subject.

The question of holidays with pay is listed for "first discussion" at the 36th International Labour Conference opening June 4 at Geneva.

In preparation for the discussion, the International Labour Office asked governments for their views on the contents of the proposed Recommendation. On the basis of the replies, the Office drafted a number of preliminary conclusions which will be submitted to the Conference.

The proposed Recommendation should provide, the Office's conclusions suggest, that workers be granted, where conditions permit, an annual paid holiday of not less than 12 working days (not less than ten working days in the case of a five-day week) after one year of continuous employment. It should also provide that the right to a holiday proportionate to the number of full months of service be acquired after six months' continuous service.

The first in a series of open meetings was held recently by the LMPC at Yarrow's Ltd. in Victoria. All employees were invited to attend and watch the committee at work. Labour and management representatives spoke briefly to the group and explained the purpose and objectives of the LMPC.

The guests did not actively take part in the proceedings but had previously submitted questions that they particularly wanted to hear discussed. During the meeting discussions were held on the credit union health plan, the pension plan, staging work in the dry dock, reports of sports events in the yard paper, and Yarrow's group insurance plan.

* * *

More than 100 suggestions have been submitted to the jointly-administered labour-management suggestion plan at the Great Lakes Paper Co. in Fort William. The plan has been in operation for one year. To date, 27 awards ranging from the minimum of five dollars to $100 have been paid. The value of several other suggestions has not yet been calculated and they are being held for review.

A labour-management committee of ten members, six management and four labour, administer the plan. One labour member is chosen from each of the four international unions representing employees at the mill. The employees have been enthusiastic about the plan. All hourly-rated employees are eligible for cash awards ranging from five to one thousand dollars. Salaried employees, with the exception of company officers and certain specified officials, are also eligible.

* * *

Labour-management production committees have resulted in the saving of thousands of dollars by increasing production efficiency and helping to improve fire, health and safety records in many plants, Arthur Hemming said recently. Mr. Hemming, Executive Secretary of the Trades and Labour Congress of Canada, was addressing a meeting of the Niagara Peninsula Branch of the Engineering Institute of Canada.

Mr. Hemming spoke as a representative of labour in a panel discussion. Other speakers were W. A. Campbell of Canadian Westinghouse Ltd., representing management, and E. V. Brown of Ridley College, representing the public.

During his address, Mr. Hemming said: "Labour and management have come to realize that neither is a separate entity working apart from the other but that both are completely dependent on the other.... Even greater labour-management co-operation must make itself manifest if Canada is to remain the great country it is today, if Canada is to maintain its place as one of the great industrial countries in the world and if increased production is to be attained."

* * *

During March, a network of 64 Canadian radio stations carried *Third Dimension,* a dramatized broadcast on labour-management co-operation presented under the auspices of the Labour-Management Co-operation Service.

The story revolves around a newspaper reporter assigned to prepare a feature story on labour-management relations in a plant where there is an LMPC. He is skeptical that labour and management can work together. He is told of an incident that had threatened the firm's existence and of the solution to the problem found by the LMPC. He talks with union and management representatives and is told of the positive benefits to be gained from co-operation.

The title of the broadcast is taken from an analysis of co-operation by the president of the company. He describes the conventional view of labour-management relations as an uneasy balance of toleration, with no attempt made to work together. He then explains what happens when labour and management develop into a team: "When labour and management start sharing ideas —start seeing each other's problems—start talking each other's language—a whole new creative force is released. So—you've got *not* just labour, *not* just management, you've got co-operative action. And that's what I call the Third Dimension."

Establishment of Labour-Management Production Committees (LMPCs) is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions set up LMPCs, the Service provides publicity aids in the form of booklets, films and posters.

Industrial Relations and Conciliation

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during February. The Board ordered two representation votes and allowed the withdrawal of one application for certification. During the month, the Board received five applications for certification.

Representation Votes Ordered

1. The West Coast Seamen's Union (Canada), applicant, and M. R. Cliff Tugboat Co. Ltd., Vancouver, respondent. The Board ordered a representation vote following consideration of the application for certification (L.G., March 1953, p. 418) (Returning Officer: D. S. Tysoe).

2. Forbes Rhude, applicant, the American Newspaper Guild, respondent, and The Canadian Press, respondent. The Board ordered a representation vote following consideration of the application for revocation or certification (L.G., Feb. 1953, p. 239) (Returning Officer: F. J. Ainsborough).

Application for Certification Withdrawn

International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada, applicant, and the Canadian Broadcasting Corporation, respondent. At the request of the applicant, the Board allowed the withdrawal of the application (L.G., Feb. 1953, p. 239).

Applications for Certification Received

1. Local No. 244, Building Service Employees' International Union, on behalf of a unit of toll collectors and maintenance employees employed by Burrard Inlet Tunnel and Bridge Co., North Vancouver (Investigating Officer: D. S. Tysoe).

2. International Association of Machinists, on behalf of a unit of maintenance employees employed by Colonial Airlines, Inc., at Dorval Airport, Que. (Investigating Officer: C. E. Poirier).

3. The West Coast Seamen's Union (Canada), on behalf of a unit of unlicensed personnel employed on vessels operated by Car Barge Towing Co., Limited, Vancouver (Investigating Officer: G. R. Currie).

4. National Association of Broadcast Engineers and Technicians, on behalf of a unit of employees of Radio Station CKVL, Verdun, Que. (Investigating Officer: L. Pepin).

5. International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada, on behalf of a unit of production employees of the Canadian Broadcasting Corporation (Investigating Officer: F. J. Ainsborough).

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During February the Minister appointed Conciliation Officers to deal with the following disputes:—

(1) J. C. A. Turcotte; Wolfe Stevedores Limited; Empire Stevedoring Co. Ltd.; North American Elevators Ltd.; Sorel Dock Stevedoring Co. Ltd.; Brown & Ryan Limited; and Eastern Canada Stevedoring Co. Ltd. and National Catholic Syndicate of Longshoremen of Sorel, Inc. (Conciliation Officer: L. Pepin).

(2) Westward Shipping Limited, Vancouver, B.C., and Seafarers' International Union of North America, Canadian District (Conciliation Officer: D. S. Tysoe).

(3) Yukon Consolidated Gold Corporation and Dawson Miners' Union, Local 564, International Union of Mine, Mill and Smelter Workers (Conciliation Officer: G. R. Currie).

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations and the Industrial Relations Branch of the Department.

(4) Red River Grain Company Limited, St. Boniface, and Malt and Grain Process Workers, Local 105, International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America (Conciliation Officer: R. H. Hooper).

(5) Canadian Pacific Air Lines Limited (Accounting Department), Vancouver B.C., and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (Conciliation Officer: G. R. Currie).

Settlements Reported by Conciliation Officers

(1) Canadian National Railways and Canadian Pacific Railway Company (Vancouver Hotel Company Limited) and Local No. 882, International Union of Operating Engineers (Conciliation Officer: G. R. Currie) (L.G., March 1953, p. 419).

(2) Canadian National Railways (Oshawa Railway Company and Thousand Islands Railway Company), and Oshawa Railway and Thousand Islands Clerical Association (Conciliation Officer: F. J. Ainsborough) (L.G., March 1953, p. 419).

Conciliation Board Appointed

During the month the Minister established a Board of Conciliation and Investigation to deal with matters in dispute between British Columbia Coast Steamship Service (Canadian Pacific Railway Company), Canadian National Steam-

(Continued on page 606)

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The branch also acts as the administrative arm of the Canada Labour Relations Board in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certifications given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; three officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Collective Agreements and Wage Schedules

Recent Collective Agreements

Mining

Metal Mining—*Falconbridge, Ont.—Falconbridge Nickel Mines Limited and The International Union of Mine, Mill and Smelter Workers, Local 598.*

Agreement to be in effect from September 12, 1952, to September 11, 1953. Either party may require the other party to enter into negotiations for the renewal of the agreement on 10 clear days' notice given within the period of two months immediately prior to its expiry date.

Check-off: compulsory for all employees. In addition to union dues the company will also deduct monthly from the pay of each employee the sum of 50 cents presently payable to the Union Welfare Fund.

Hours: 8 per day 5 days a week, a 40-hour week; delays in the hoisting and lowering schedules at the company's mines in excess of 15 minutes shall be paid for at straight time.

Overtime: time and one-half for work in excess of 8 hours in any one day or in excess of 40 hours in any scheduled work week, except where such excess is due to regular change of shift; double time for work on 7 (previously 6) *paid holidays.*

Vacations with pay: one week after one year's service, 2 weeks after 3 (previously 5) years' service and 3 weeks after 20 years' service. Employees with less than one year's service will be entitled to one week with pay equal to 2 per cent of the total wages earned during the preceding year.

Hourly wage rates: retroactive to August 31, 1952, all wage rates are increased by 7½ cents per hour. This increase is in addition to certain changes in individual wage rates agreed upon prior to the signing of the agreement.

Off-shift differential: employees shall be paid an off-shift premium of 4 cents per hour for work during the afternoon shift hours, 6 cents for work during the evening shift hours, and 8 cents per hour for work during the night shift hours, provided in each case that such off-shift hours were not scheduled for any other shift hours.

Apprentices: the company agrees to reimburse apprentices who have successfully completed an approved course for electricians, machinists, plate workers or carpenters, an amount not exceeding one-half of the cost to the apprentice of such course, provided that the cost to the company shall be limited to $100 and that the apprentice is in the employ of the company on the completion of the course.

The company will not hire or create any third or fourth classes of tradesmen; those who are presently in the third and fourth classes will be upgraded as they qualify and as vacancies occur.

Provision is made for *seniority rights* and *grievance procedure.*

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and through the Industrial Relations Branch of the Department. A number of those recently received are summarized here. Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Manufacturing

Rubber Products—*Toronto, Ont.—Seiberling Rubber Company of Canada Limited and The United Rubber, Cork, Linoleum and Plastic Workers of America, Local 118.*

Agreement to be in effect from January 1, 1953, to December 31, 1953. No later than November 1, 1953, negotiations for revision or extension of the agreement shall begin; if satisfactory conclusions are not reached by February 1, 1954, the agreement shall continue in effect until cancelled by either party on 30 days' notice.

Check-off: voluntary but irrevocable for old employees, compulsory for new employees.

Hours: 8 per day, Monday through Friday, a 40-hour week. Maintenance employees who work on Saturday and/or Sunday will be granted comparable shifts off during the following work week. *Overtime:* time and one-half for work in excess of 8 hours in any one continuous shift and for work between 8 a.m. Saturday and 8 a.m. Monday; double time for work on 8 specified *paid holidays.*

Vacations with pay: one week after one year's service, 2 weeks after 5 years' service and 3 weeks after 15 years' service; employees with less than one year's service will receive 2 per cent of their earnings during the preceding year.

Wages: the previous wage scale shall remain in effect for the duration of this agreement except that in the event that negotiations on a general wage adjustment are entered into by 3 other tire producing companies in Canada, the question of wages shall be considered open for negotiations. Minimum hiring rates (per hour): employees on piece work operations—male $1, female 80 cents, youth 85 cents; employees on day work operations—male 90 cents, female 80 cents; base rates for employees on piece work operations (per hour)—male $1.29½, female $1.10, youth $1.07. (The above hiring rates are 5 cents and the base rates 8 cents per hour higher than the previous rates.) Regardless of age or sex, equal pay for equal results shall prevail.

Off-shift differential: employees on the second and third shifts will be paid a shift bonus of 4 cents per hour.

Welfare: the company will continue in effect its program with reference to sickness, hospitalization and group insurance.

Provision is made for *grievance procedure, seniority rights* and a *Safety Committee.*

Fine Grade Paper—*Ontario and Quebec—Eight Fine Grade Paper Companies and The International Brotherhood of Pulp, Sulphite and Paper Mill Workers, International Brotherhood of Paper Makers and International Association of Machinists.*

Memorandum of agreement, executed as of September 30, 1952, renews the previous agreements between the above parties for one year, from May 1, 1952, to April 30, 1953, with the following changes and additions:—

Hours and overtime: effective as of the commencement of the first pay period following January 1, 1953, the hours of work shall be reduced from 48 to 44 per week; time and one-half will be paid for all work in excess of 44 hours, based on a 2-week average for shift workers, and for work on an employee's scheduled or designated days off.

Wages: the hourly wage rates shall be adjusted to provide the same take-home pay for 44 hours as was previously paid for 48 hours. To compensate for the "loss to the employees of leisure time" in the interval between the signing of the agreement and the introduction of the shorter work week, the company will pay to each employee 3 cents per hour for each straight time hour worked during that period. In the first pay period after December 1, 1952, all employees on the payroll as of December 1, 1952, who have been continuously employed since September 30, 1952, will be paid the difference between $20 and the amount to which they are entitled under the preceding provision, this amount to represent advance payment in full of the 3 cents per hour payment for the month of December 1952.

Shift differential: effective as of the commencement of the first pay period after September 30, 1952, a shift differential of 2 cents per hour on the second shift and 3 cents on the third shift will be established for all employees on shift work. In the case of one company a shift differential of 3 cents per hour, paid previously on each of 3 shifts, is to be incorporated in the hourly rate for incumbents of shift base labour jobs as of the date of signing this agreement (except for mechanical trades) and no additional shift differential paid.

Pulp and Paper—*Province of Ontario—Twelve Pulp and Paper Companies and The International Brotherhood of Pulp, Sulphite and Paper Mill Workers, The International Brotherhood of Paper Makers and Seven Other Unions Affiliated with The American Federation of Labour.*

This memorandum of agreement, signed September 26, 1952, following negotiations and conciliation proceedings, renews the collective agreements in force between the above parties (*see* L.G., Sept. 1951, p. 1246) for a further period of one year, from May 1, 1952, to April 30, 1953, with the following revisions:—

Overtime: an employee required to work on his scheduled or designated day or days off will be paid time and one-half for such work.

Wages: effective November 1, 1952, all wage rates shall be increased by 8 cents per hour; of this increase 4 cents per hour is to be retroactive to May 1, 1952, in the case of employees in the employ of the companies as of September 26, 1952.

Off-shift differential: effective October 1, 1952, employees on the second shift will be paid a shift bonus of 3 cents and those on the third shift a bonus of 5 cents per hour.

Printing and Publishing—*Hamilton, Ont.—Certain Printing Firms and The International Typographical Union, Local 129.*

Agreement to be in effect from November 1, 1952, to October 31, 1953, and for such reasonable time thereafter (not exceeding 30 days) as may be required for the negotiation of a new agreement.

Union security: closed shop.

Hours: 8 per day Monday through Friday, a 40-hour week.

Overtime: time and one-half for the first 3 hours of work before or after a regular shift and for work on Saturday, or another regular off day, till 12 noon, double time thereafter and for all work on Sundays and on 8 specified *paid holidays.* Employees called back after having left the office shall be paid $1 for such callback and overtime rates for all time worked.

Vacations with pay: two weeks after one year's service.

Minimum hourly wage rates: journeymen $1.85 for day work and $2.12½ for night work; effective May 1, 1953, the rates will be increased to $1.90 for day work and $2.18 for night work; apprentices, first 6 months, 30 per cent of the journeymen's scale, with an increase of 5 per cent every 6 months until 85 per cent of journeymen's scale are reached during the twelfth 6 months. Work between 7 a.m. and 6 p.m. shall be day work and work between 6 p.m. and 7 a.m. night work. Regularly designated split shifts running from day into night hours, and vice-versa, shall be paid for at the regular night rate. In no case shall an employee receive pay for less than a full shift, except when discharged for cause or excused at his own request. A superannuated member may be permitted to work at a rate not less than the journeymen's rate, provided that not more than one superannuated member shall be employed in any office at any one time and that he will not be allowed to work in any office where there are no journeymen employed.

Severance pay: in the event of consolidation or suspension all employees affected shall receive severance pay of not less than 2 weeks' pay at regular rate.

Apprentices may be employed in the ratio of one to every 4 journeymen, 2 apprentices to 7 journeymen, and 3 apprentices to 12 journeymen. No office will be permitted more than 3 apprentices. No apprentice shall be employed on overtime work unless the number of journeymen working overtime on the same shift equals the above ratio. No apprentice may leave one office and enter

the services of another employer without the written consent of the president of the union.

Seniority: priority standing shall be the determining factor in lay-offs and in filling vacancies, provided the employee concerned is competent to do the required work. In addition, employees may claim new shifts, new starting times, new slide days and have choice of vacation schedule in accordance with their priority standing.

Provision is made for the *settling of disputes.*

Steel, Iron and Coke—*Sydney, N.S.—Dominion Iron and Steel Limited and United Steelworkers of America, Local 1064.*

Agreement, dated December 4, 1952, to be in effect until March 31, 1954, and from year to year thereafter, subject to 30 days' notice.

Union security: when hiring new employees the company will give consideration to former union members, if available, and to residents of the immediate vicinity, it will encourage new employees to become members of the union.

Check-off: voluntary but irrevocable.

Hours: 8 per day 5 days a week, a 40-hour week.

Overtime: time and one-half for work in excess of the scheduled standard work shift (provided it exceeds 15 minutes) or the standard work week and for work on Sundays by employees of certain specified shops who have heretofore been similarly paid; double time for work on 8 specified *paid holidays.* Employees not qualifying for the holiday allowance, who work on any of the 8 holidays shall be paid time and one-half for such work.

Vacations with pay: one week after one year's service, 2 weeks after 3 years' service and 3 weeks after 15 (previously 25) years' service. The minimum number of shifts which must be worked to obtain full vacation credits is 252, less shifts not worked because of accidents, sickness, union duties, jury duty, etc.

Hourly wage rates in effect March 31, 1952, shall be amended as follows: retroactive to April 1, 1952, they shall be increased by 8 cents per hour. Commencing November 30, 1952, "the present cost-of-living bonus shall be incorporated in the wage rates". Commencing April 5, 1953, all wage rates in effect on April 4, 1953, shall be increased by 3 cents per hour. Where female help is employed, the principle of equal pay for equal work shall apply.

Cost-of-living bonus: effective April 5, 1953, the company will compare the Dominion Bureau of Statistics' cost-of-living index published in March 1953, with that published in September 1952 (187·6), and will pay an adjustment for any increase in the index on the basis of one cent for each 1·3 rise. Such payment will be continued during the following 12 months, regardless of rises or declines in the index.

Off-shift differential: effective October 5, 1952, employees will be paid a shift premium of 3 cents per hour for work on the 4 p.m. to 12 midnight shift and of 5 cents per hour for work on the 12 midnight to 8 a.m. shift. Effective January 3, 1954, the shift premiums will be increased to 5 and 7 cents respectively. (The previous agreement did not provide for an off-shift differential.)

Job classification program: "The Company undertakes to put into effect, as of the first Sunday in October 1954, job classification with a 4 cent increment between adjacent classifications, using the Co-operative Wage Study Plan as the guiding principle."

Welfare: effective October 5, 1952, the company will contribute 1¼ cents per hour for all hours worked to the Dominion Steelworkers' Mutual Benefit Society for all employees who are members of the society and covered by the agreement.

Provision is made for *grievance procedure, seniority rights* and the *safety and health* of employees.

Railway Cars—*Montreal, P.Q.—Canadian Car and Foundry Company Limited (Dominion and Turcot Plants) and Brotherhood of Railway Carmen of America, Lodges 322 and 930.*

Agreement to be in effect from September 1, 1952, to August 31, 1953, and thereafter from year to year, subject to notice. This agreement is similar to the one previously in effect (L.G., Feb. 1952, p. 174) with the following changes:—

Hours: effective November 27, 1952, hours of work are reduced from 9 per day and 45 per week to 8½ per day and 42½ per week; the standard work week for heating system attendants is reduced from 54 to 48 hours

Hourly wage rates are increased, effective November 27, 1952, by from 14 to 16 cents per hour.

The former *escalator clause* is not included in this agreement.

The *shift differential* for work between 7 p.m. and 7 a.m. is increased by 2 cents per hour, from 5 to 7 cents.

Farm Machinery—*Brantford, Ont.—The Cockshutt Farm Equipment Limited and The International Union, United Automobile, Aircraft and Agricultural Implement Workers of America, Local 458.*

Agreement to be in effect from June 20, 1952, to June 20, 1953, and thereafter from year to year, subject to notice.

Union security: union shop for new employees.

Check-off: compulsory for all employees.

Hours: 8 per day 5 days a week, a 40-hour week. Where three 8-hour shifts are worked males will be entitled to 20 minutes for lunch and females to 30 minutes, both with pay.

Overtime: time and one-half for work in excess of the full working day or the full working week and for work on Sundays (except where part of regular shift) and on 8 specified *paid holidays.* Employees required to work 7 continuous days of the calendar week will be paid at the rate of time and one-half for the seventh day. An employee who is absent without valid reason will be required to make up accumulated lost time to the 40-hour week basis before being paid overtime rates.

Rest periods and wash-up time: employees (except shift workers where 3 shifts are worked) shall be allowed a 10-minute rest period each half shift. The factory whistle will blow at 5 minutes to the regular quitting time and employees may either leave the plant immediately or remain to wash up.

Vacations with pay: one week after one year's service, 2 weeks after 5 years' service and 3 weeks after 15 years' service. Employees with between 3 and 12 months' service shall be entitled to 2 per cent of their earnings during the first 11 pay periods of the current calendar year (employees are paid bi-weekly). All vacation pay shall be subject to deductions on a *pro rata* basis for any unauthorized absence from work in excess of one day per month.

Wages: the scale of wages previously in effect shall be maintained for the duration of the agreement. Female employees will be paid the same wages as male employees, provided they attain the same results.

Off-shift differential: employees on the afternoon shift will be paid a shift bonus of 5 cents and those on the night shift a bonus of 7 cents per hour.

Pension, welfare plan, and apprenticeship standards are covered in separate agreements.

Provision is made for the continuance of a *Health and Safety Committee,* and for *seniority rights* and *grievance procedure.*

Trade

Dairy—*Calgary, Alta.—Union Milk Company Limited and The International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, Local 987.*

Agreement to be in effect from November 1, 1952, to October 31, 1953, and thereafter from year to year, subject to 60 days' notice.

Union security: maintenance of membership.

Check-off: voluntary.

Hours of work, effective November 16, 1952: for drivers on commission basis—5 days per week, 40 weeks of the year and 6 days per week, 12 weeks of the year during June, July and August; there shall be no milk deliveries on Sundays, except when Christmas Day and New Year's Day fall on a Saturday or Monday; during the forty 5-day weeks the second day of rest shall be rotated each week with each man receiving Saturday, Sunday and Monday off each 6 weeks. For ice cream and butter departments—5 days, 40 hours, per week, 36 weeks per year and 5½ days, 44 hours, per week, 16 weeks per year; however, permanent employees shall receive time off in lieu of the extra half day worked during the 16-week period in May, June, July and August; the second day of rest during the 5-day week period shall be consecutive with Sunday. For all other employees—5 days, 40 hours, per week; where work is performed on a 7-day basis, the days of rest shall be consecutive; where Sunday is a regular day of rest the second day of rest shall rotate each week. (The hours provided in the previous agreement were: for drivers on a commission basis 5 days on, one day off, or 10 days on, 2 days off; for all other employees an average of 44 hours per week throughout the year.)

Overtime: time and one-half for work in excess of the above hours and double time, or another day to be added to the annual vacations, for work on 8 specified *paid holidays.*

Vacations with pay: after 30 days' service one-half day for each 23 days worked, after one year's continuous service one week, plus one-half day for each additional 23 days worked, after 2 years' continuous service 2 weeks and after 20 years' continuous service 3 weeks.

Monthly wage rates: special dairy help—pasteurizer, milk grader and tester, buttermaker, cream grader and tester, pasteurizer helper and ice cream mix maker $208.20 to $228.20; experienced dairy help—relief man, head checker, bottle filler, bottle washer, storage men, can washer, truck drivers, garagemen, stable men $193.20 to $208.20; experienced plant staff (female) $158.20 to $173.20. Inexperienced dairy help and plant staff will be paid for the first 3 months $15 and for the second 3 months $7.50 less than experienced employees. Milk route salesmen—base pay of $197.20 plus commission of one cent on all units sold between 8,001 and 10,000 units per month, 1¾ cents on all units sold between 10,001 and 12,000, and 2½ cents on all units sold over 12,000 per month (one retail route unit when sold to the householder equals one quart of milk or one pint of creamee or one-half pint of cream; when sold to restaurants, hospitals and institutions it equals 2 quarts of milk or one quart of creamee or one pint of cream); route reliefmen—base pay of $228.20 plus average commission earned on routes assigned to his swing; route supervisors—base pay of $240.70 plus average commission earned by route reliefman; experienced route helpers $188.20 to $198.20; wholesale route salesmen—base pay of $220.20 plus commission of 1½ cents per unit on all units sold over 5,000 per month (one wholesale route unit equals one gallon of any product sold); wholesale route reliefman—base pay of $248.20 plus the average commission earned on routes assigned to him. Butter, sour cream and cottage cheese shall not be included as units; when sold at retail prices the commission on butter will be one cent per pound, on sour cream 2 cents per carton or pint and on cottage cheese 2 cents per carton; when sold at wholesale price the commission will be one-half and one cent respectively.

Escalator clause: in addition to the above rates employees will be paid a cost-of-living bonus on the basis of $5.40 per month for each 5 points increase in the Dominion Bureau of Statistics' cost-of-living index above 179. The bonus is to be adjusted quarterly, up or down; no bonus will be paid if the index falls to 179.

Provision is made for *seniority rights* and *grievance procedure.*

Service

Laundering, Dry Cleaning and Dyeing—*Montreal, P.Q.—Burnett Limited and The Laundry Workers and Cleaners' Syndicate for the District of Montreal, Local 3.*

Agreement to be in effect from February 16, 1952, to February 15, 1955, and thereafter from year to year, subject to notice.

Union security: maintenance of membership.

71839—6

Check-off: the company agrees to deduct monthly union dues from the pay of all employees who so authorize and to remit same to the union.

Hours: for production employees—45 per week to be worked Monday through Friday; however, if required to work on Saturday morning straight time will be paid for such work; for maintenance employees—54 hours (5½ days) per week. The hours in either case are to be scheduled by the company.

Overtime: time and one-half for work in excess of 50 hours per week in the case of production employees and of 54 hours in the case of maintenance employees; double time for work on 4 specified *paid holidays* to all employees.

Vacations with pay: one week after one year's continuous service and 2 weeks after 5 years' continuous service.

Hourly wage rates: marking department, piece work average 80 cents to $1 per hour, helpers 50 to 70 cents; dry cleaning 75 cents to $1, helpers 60 to 70 cents; wet wash 75 to 90 cents, helpers 65 to 75 cents; spotting 80 cents to $1.25, helpers 70 to 80 cents; pressers and finishers—wool, piece work average $1.25 to $1.50 per hour, hourly rate 80 cents to $1, apprentices 70 to 80 cents; silk, piece work average $1 to $1.25 per hour, hourly rate 80 cents to $1, apprentices 70 to 80 cents; flat work 70 to 80 cents, helpers 50 to 65 cents; mangle 45 to 50 cents; shirts, piece work average 75 to 90 cents, helpers 50 to 70 cents; tailors, piece work average $1.25 per hour, hourly rate 80 cents to $1; dressmakers 80 cents to $1, helpers 60 cents; minor repairs 50 to 55 cents, helpers 45 to 50 cents; assembling and packing 60 to 90 cents, helpers 50 to 55 cents; furniture cleaners 80 to 95 cents, helpers 60 to 70 cents; rug cleaners and washers 70 to 95 cents, helpers 60 to 70 cents; dyers $1.25, helpers 65 to 75 cents; route salesmen $27 to $33 per week plus 4 per cent commission, helpers $35 per week.

Cost-of-living escalator clause: all full-time employees who were in the employ of the company at the time the agreement was concluded will be granted, in addition to the above rates, a cost-of-living bonus of 30 cents per week for every complete point of increase in the Dominion Bureau of Statistics' cost-of-living index above 191.5 (index figure for January 1952.) Adjustments are to be made every 3 months, upwards or downwards, but in no event shall a decrease in the index below 191.5 affect the above wage rates.

Provision is made for *seniority rights* and *grievance procedore.*

Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,* include the amendment of eight agreements and the correction of one other. In addition to those summarized below, they include: the amendment of the agreement for trade and office employees at Arvida and the correction of the agreement for food products manufacturing and wholesale food trade at Quebec published in the *Quebec Official Gazette,* January 31, 1953, and the amendment of the agreement for tannery workers in the province gazetted February 7.

A request for a new agreement for the building trades at Three Rivers and requests for the amendment of the agreements for the building trades at Hull, at Sherbrooke and at St. Jérôme were published January 31. A request for a new agreement for the men's and boy's clothing industry and for tannery workers in the province and a request for the amendment of the agreement for the printing trades at Montreal were published February 7. Requests for the amendment of the various agreements for the building trades throughout the province, for the building materials industry in the province and for the ornamental iron and bronze industry at Montreal were published February 14.

Orders in Council were also published approving the constitution and by-laws of certain joint committees and others approving the levy of assessments on the parties to certain agreements.

*In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the Labour Gazette, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the Labour Gazette monthly since June, 1934.

Mining

Building Materials Industry, Province of Quebec

See below under "Manufacturing".

Men's and Boys' Shirt Manufacturing Industry, Province of Quebec

An Order in Council dated January 29 and gazetted February 14, amends the previous Orders in Council for this industry (L.G., Feb. 1952, p. 178; Jan. 1953, p. 97).

Industrial jurisdiction is amended by the deletion of the provision applying to the manufacture of work shirts for boys from 6 to 14 years of age.

Territorial jurisdiction: Zone I comprising the Island of Montreal and the area within a radius of 10 miles of its limits is unchanged. However, Zone II (the entire province with the exception of Zone I) is now subdivided into two parts as follows: Zone II-A, firms employing 50 or more production workers; Zone II-B, firms employing less than 50 production workers.

Hours: 42 per week, Monday through Friday, in Zone I; 46 per week Monday through Friday and on Saturday till noon, in Zones II-A and II-B. (Weekly hours are reduced by 2 in either case.)

Overtime: time and one-half for work in excess of regular hours shown above. Overtime work is permitted only up to and not after 9 p.m. Monday through Thursday. Overtime is also prohibited, in the 3 Zones, during July and August, on Sundays and during lunch hours. In Zone I work on Saturday is now prohibited. No work will be done on any of 11 specified holidays 3 (previously 2) of which are *paid holidays* after 3 (previously 6) months of continuous service with the same employer. In Zone I work may be done on Saturday, between 8 a.m. and 12 noon of the same week in which a religious holiday occurs, and such work will be remunerated for at time and one-half.

Minimum hourly or piece-work wage rates for Zone I, as published in this amendment and shown below, are unchanged from those previously in effect, as follows: female operators, finishers, pressers, examiners and general hands from 35 cents per hour in first 3 months to 55 cents after 18 months. The general average for the above employees, after one year of service, will be 60 cents per hour in Zone I, 54 cents in Zone II-A and 51 cents in Zone II-B, instead of 60 cents in Zone I and 54 cents in Zone II, as previously. Minimum rates for apprentice markers and cutters from 50 cents per hour during the first 3 months to 85 cents after 3 years; after 4 years of service—electric knife cutters $1, hand knife cutters, markers $1.10; general factory workers (male) from 45 cents per hour in first 6 months to 65 cents after 24 months; pressers (male and female) on creasing machines of S. and R. type (pressing bands, cuffs and facings) and pressers of wool shirts on Hoffman press (after 2 years) 80 cents, apprentice pressers from 45 cents per hour in first 6 months to 80 cents after 2 years; layers from 45 cents per hour in first 6 months to 65 cents after 2 years; dividers from 40 cents per hour in first 6 months to 55 cents after 18 months. Minimum rates of Zone II-A will be those of Zone I, less 10 per cent, and the rates of Zone II-B will be those of Zone I, less 15 per cent. (Previously the rates published for Zone II, now subdivided into Zones II-A and II-B, were from 5 to 10 cents per hour less than those rates of Zone I.)

Cost-of-living bonus: in addition to the above rates, effective immediately, all employees are entitled to a fixed cost-of-living bonus as follows: female employees (with one month of service or more) 6 cents per hour; (with one year of service or more) 8 cents per hour; male employees—fully skilled markers and cutters 10 cents per hour, other male employees (less than one month of service) 8 cents per hour; (with one month of service or more) 10 cents per hour.

Compensation for the reduction in regular working hours: employees paid on an hourly basis will receive an increase of 2½ per cent in the case of one-hour reductions, and of 5 per cent in the case of two hours or more; piecework employees will receive an increase of 5 per cent. Compensation will be computed on the fixed cost-of-living bonus shown above.

Cost-of-living escalator clause: for each one-point rise or fall in the *consumer price index* over and above 115.8 points (index for December 1952) as published by the Dominion Bureau of Statistics, minimum rates will be increased or decreased by one cent per hour. There will be no reduction below the initial base index of 115.8 points. Adjustments will be made quarterly commencing April 1 and will be based on the index published for the preceding month. However, the April 1953 revision will only take effect if the index published for March exceeds that published for January by 3 or more points; subsequent revisions are not affected by this provision.

Provision is made for employers in all Zones, who have granted since August 1, 1952, any wage readjustment above the minimum rates provided above. Such readjustment may be taken as proportional credit when computing the readjustment provided for in this amendment.

Vacation with pay: one week with pay after one year of continuous service as previously in effect; two weeks with pay, or one week with pay plus 7 statutory holidays with pay after 3 (previously 5) years of continuous service. This amendment also provides that the 7 statutory holidays with pay mentioned above will not include any of the 3 paid holidays provided for all employees with three months' service.

Other provisions include regulations governing home workers.

Uncorrugated Paper Box Industry, Province of Quebec

An Order in Council dated January 21 and gazetted January 31, amends the previous Orders in Council for this industry (L.G., April 1950, p. 516; April 1951, p. 544; April 1952, p. 452, July, p. 929, Nov., p. 1480, and previous issues) by the addition of one firm to the list of contracting parties in the Montreal District.

Another Order in Council dated January 29 and gazetted February 7, further amends the previous Orders in Council for this industry as follows:—

Specified holidays in Zones I and II: as previously in effect, 8 specified holidays are observed in French plants and 7 in English plants. However, the number of *paid holidays* is now increased from 4 to 6 in both French and English plants.

Minimum hourly wage rates for female employees in set-up department—minimum rates range from a low of 67 cents per hour for hand labeller, gummer operators,

71839—6½

etc. to a high of 78 cents per hour in Zone I, 64 to 74 cents per hour in Zone II; folding department—from a low of 67 cents for stripper, packer, folder, machine feeders and operators of machines not classified, to a high of 69 cents per hour for stitcher operators in Zone I, from 64 to 66 cents in Zone II. (The minimum rates are in most cases 5 cents per hour higher than those previously in effect.) Basic rates for female employees are now as follows: from 50 cents per hour in first 3 months to 57 cents in third 3 months in Zone I, 48 to 54 cents in Zone II. (These rates are 2 to 5 cents per hour higher.)

Minimum hourly wage rates for male employees in set-up department range from a low of 93 cents per hour for machine operators not classified, to a high of $1.17 per hour for creasing operators, scorers and cutter on knife (first class) in Zone I, 88 cents to $1.11 in Zone II; folding department—from a low of 86 cents for packer and tier to a high of $1.31 for die maker in Zone I, 82 cents to $1.24 in Zone II; general—from a low of 86 cents per hour for watchmen to a high of $1.17 per hour for electricians and machinists (first class) in Zone I, from 82 cents to $1.11 in Zone II. Weekly minimum rates for chief enginemen (second class) $53.56; (third class) $45.86 in Zone I, $50.88 and $43.57 in Zone II. (The above rates for male employees are from 6 to 10 cents per hour higher for hourly rated workers and from $3.23 to $3.97 per week higher for weekly rated workers.) The basic wage scale for male employees 18 years and over is increased by 5 cents per hour and is now as follows: from 60 cents per hour in first 3 months to 80 cents in fourth 3 months in Zone I, 62 to 76 cents per hour in Zone II; male employees under 18 now receive from 53 cents in first 3 months to 62 cents in third 3 months in Zone I, 50 to 59 cents per hour in Zone II. (Previously 50 to 60 cents per hour in Zone I and 47 to 57 cents in Zone II.)

Printing Trades

Minimum hourly wage rates are from 5 to 14 cents per hour higher than those previously in effect and now range from a low of $1.13 per hour for feeders on platen presses to a high of $1.91 for journeymen pressmen on multicolour cylinder presses in Zone I, from 93 cents to $1.50 per hour in Zone II. Minimum rates for apprentices are unchanged from those previously in effect and the classification helper is not included in the present scale of wage rates.

Building Materials Industry, Province of Quebec

An Order in Council dated January 21 and gazetted January 24 amends the previous Orders in Council for this industry (L.G., June 1950, p. 872, Aug., p. 1185, Dec., p. 2067; Nov. 1951, p. 1539; Feb. 1953, p. 283) by replacing the name "The Canadian Terrazzo and Mosaic Contractors' Association" with the name "Montreal Tile, Terrazzo and Marble Employers' Association" and the names of two additional employers.

Marble Industry

Hours in Zone I (Island of Montreal and within a radius of 15 miles) are unchanged at 40 per week for marble cutters and their apprentices; 45 for other qualified tradesmen, 60 for watchmen.

Overtime in Zone I: time and one-half until 10 p.m., double time between 10 p.m. and 7 a.m. and for work on Sundays and 8 specified holidays; triple time for work on 3 additional *paid holidays*. Eligibility of employees to paid holidays is governed by certain specified conditions. (Previously time and one-half for work till midnight, double time between midnight and 7 a.m. and for work on Sundays and 11 specified holidays, only 2 of which were paid holidays.) In addition, this amendment also provides time and one-half for work on Saturdays between 7 a.m. and 5 p.m., double time for work after 5 p.m. If work starts at 12 noon, or at whatever hour it starts in the afternoon or evening, such work will be paid for at regular rates till 10 p.m., thereafter double time. (Previously regular rates were paid during the first 5 hours for work started after 12 noon, time and one-half for the next 2 hours, double time for the eighth and succeeding hours; for work after midnight, time and one-half up to the eighth hour, during the eighth and succeeding hours, double time.)

Minimum hourly wage rates in Zone I: hand cutter $1.68; carborundum machine operator, terrazzo caster $1.62; machine cutter, hand and machine polisher, compressorman, saw setter, bed rubber face, bed rubber end, craneman $1.46; sawyerman on gang saws (first 3 months) $1 (previously $1.01), (after 3 months) $1.41; helper and labourer $1, apprentice marble cutter from $1 in first year to $1.48 in fourth year; apprentice, carborundum machine operator from $1 (previously $1.01) in first 6 months to $1.46 in third 6 months; apprentice polisher—first 3 months $1, thereafter $1.46; watchman $40 per week. (The above rates represent increases ranging from 6 to 30 cents per hour for hourly rated workers and an increase of $10 per week for watchmen.)

Cost-of-living escalator clause formerly governing this part of the agreement (L.G., March 1950, p. 345) is not included in this amendment.

Other provisions include apprenticeship regulations.

Construction

Building Trades, Montreal

An Order in Council dated January 21 and gazetted January 24, amends the previous Orders in Council for this industry (L.G., June 1952, p. 781; March 1953, p. 432).

Part "C"—Marble, Tile and Terrazzo Trades

Hours remain unchanged at 40 per week.

Overtime: time and one-half for work done in addition to the regular day's work; double time for work between 10 p.m. and 8 a.m. (The above provisions are unchanged.) However, this amendment provides that time and one-half will be paid for work on Saturday between 8 a.m. and 5 p.m.; double time for work after 5 p.m. and for work on any of 8 specified holidays; triple time for work on 3 additional *paid holidays*. (Previously double time was paid for work on any of 9 specified holidays and triple time for work on 2 additional paid holidays.) Employees are entitled to paid holidays provided they have completed at least one month of service with the same employer and have not been discharged more than 15 days before the holiday.

(Continued on page 596)

Legal Decision Affecting Labour

Magistrate's Court dismisses charge that city of St. Jean had employed carpenters without the certificates required by the parity committee

The Magistrate's Court at St. Jean, Que., on December 22, 1952, dismissed the action brought against the City of St. Jean by the parity committee for the construction trades, which charged that the City had employed workmen to construct an enclosure around a municipal baseball park who did not have the certificate of qualification required by a by-law of the parity committee.

(Under the Quebec Collective Agreement Act, a parity committee may set up a committee of examiners for the trade and require employees subject to the decree to hold certificates of competency.)

The Magistrate held that the workmen were unskilled labourers, who were not required by the by-law to hold a certificate, and that in any case the decree did not apply to municipal construction work.

Giving written reasons for judgment, Magistrate Chabot stated that a by-law of the parity committee makes a certificate of qualification compulsory for all employees subject to the decree except unskilled labourers. If they became carpenters or joiners and worked within the territory under the jurisdiction of the parity committee they would be required to obtain a certificate.

The Magistrate stated that the persons who erected the enclosure around the baseball field on May 8, 1952, were unskilled labourers regularly employed by the City. He did not believe that in building the fence they became "carpenters" or "joiners" subject to the decree. He maintained that the mere fact of working with hammer or saw did not make a workman a carpenter; the nature of the work and the finished product, the particular skills it demands, indicate his capacity. Since the term "carpenter" was not defined in the decree, Magistrate Chabot referred to the dictionary definition and concluded that putting up a fence was not a carpenter's work.

Even if this job could be considered a type of work to be reserved for skilled carpenters, the Court held that the decree and the rules adopted by the parity committee were not applicable, because the work was performed for and by the City. Magistrate Chabot stated that the decree excluded from its application any work performed in the repair and upkeep of municipal buildings, the construction, repair or maintenance of conduits, sewers, or pavements and similar work when performed under the direct control of municipal authorities. He held that this enumeration of municipal works in the decree was not restrictive. It would be absurd if the City's labourers could be employed without any certificate of competency in work which required great skill but could not nail planks together to build an enclosure. In his view, the exemption of municipal corporations from the decree must be interpreted broadly because municipalities represent the public interest, which must take precedence over the private interest of a particular group.

On these grounds, the action of the parity committee was dismissed.—*Comité Paritaire des Métiers de la Construction de St-Jean* v. *Cité de St-Jean*, Rapports Judiciaires de Québec [1953], C.S. Montreal, Nos. 1 and 2, 70.

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

A British Columbia conciliation board has recommended that the union agree to compensate the company for the costs involved if any employee takes legal action against the company in connection with the payment of compulsory union dues. The employees' nominee on the board signed the report; the employer's nominee did not.

The board recommended the compulsory check-off of union dues for all new employees.

The board was appointed in connection with a dispute between Kirkland and Rose Limited, Vancouver, and Local 580, Retail, Wholesale and Department Store Union (CIO-CCL). Board Chairman was H. J. Young; employer's nominee, R. J. Killam; employees' nominee, Grant MacNeil.

Recent Regulations, Federal and Provincial

Alberta adopts new CSA Safety Code for the Woodworking Industry, the first province to do so, and revises safety regulations for gas and oil wells and grain elevators. British Columbia issues minimum wage orders for the refrigeration trade and the road transport industry

Alberta has adopted the new CSA Safety Code for the Woodworking Industry as regulations under the Factories Act.

Under the same Act, the regulations governing the construction, operation and maintenance of machinery and equipment in grain elevators were revised to add new safety requirements, including provisions for employees' belt lifts. In Alberta and Saskatchewan, similar regulations for the safety of workers in gas and oil well drilling were issued. Traumatic deafness was added to the schedule of industrial diseases under the British Columbia Workmen's Compensation Act.

Two new minimum wage orders in British Columbia set a minimum wage for the first time for the refrigeration trade and established a higher minimum and punitive overtime rates for the road transport industry.

The regulations under the Alberta Tradesmen's Qualification Act which provide for the issuance of certificates of proficiency in the beauty culture trade were revised.

FEDERAL

Canada Veterans Benefit Act

The Veterans Benefit Regulations were consolidated and re-issued with some changes on January 22 by P.C. 1953-93, effective on that date and gazetted February 11.

PROVINCIAL

Alberta Factories Act

Woodworking Industry

The new Safety Code for the Woodworking Industry recently issued by the Canadian Standards Association (L.G., Mar., p. 444) has now been adopted as regulations under the Alberta Factories Act, by an Order in Council (O.C. 62-53) made January 12 and gazetted January 31.

The Code, which was prepared by the CSA at the request of the Canadian Association of Administrators of Labour Legislation, sets out rules for the safe installation, maintenance and operation of machinery in the woodworking industry, which includes cooperage operations and the making of veneer, but not sawmill or logging operations.

General rules for plant layout require machines to be located so that the operator has sufficient space to handle the material without interference from or to other workmen or machines and without having to stand in an aisle. The minimum clearances suggested for saws, jointers and shapers are set out in an appendix to the Code.

Woodworking machinery must be firmly secured to substantial floors or foundations or, in the case of small units, to strong benches or tables in such a way that they cannot be unintentionally moved or overturned. Whenever possible, heavy-duty machines are to be located on the ground floor in order to prevent vibration due to high operating speed. The appendix outlines the method of cushioning the machine foundation to eliminate undue vibration and noise.

Machines must be adequately lighted. Supplementary lighting must be provided when necessary at the point of operation, that is, the point where the cutting, shaping, or boring operation takes place.

Floors and aisles must be kept in good repair, free from protruding nails, splinters, holes, unevenness and loose boards. In the working area around machines, floors must be treated to prevent slipping. Provision must be made for the removal of shavings and sawdust. Aisles must be at least three feet wider than the width of the widest vehicle or load, if used for one-way traffic, and three feet wider than twice the width of the widest vehicle or load, if used for two-way traffic. Aisleways must be marked by painted lines or some similar method.

Before setting out specific requirements for various types of woodworking machines, the Code gives general rules for machine construction, driving power, speed and machine control. The height of the working surface of each machine must be such as to give the operator most efficiency and

least fatigue. The appendix recommends a height of 36 inches for circular saws, shapers and jointers, and 42 inches for band saws. Each machine must be free from sensible vibration when the largest tool is mounted and run idle at full speed. Arbors and mandrels must have secure bearing and be free from play. Wooden bandsaw wheels must not be used. Saw frames must be constructed so as to limit the size of saw that can be mounted, in order to avoid overspeed due to mounting too large a saw. Rip saw and crosscut saw gauges or fences must be constructed so as to ensure proper alignment with the saw. Hinged saw tables must be constructed so that they can be secured in any position and in true alignment with the saw. All belts, pulleys, gears, shafts and moving parts must be guarded to prevent anyone from becoming entangled.

It is recommended that woodworking machines be driven by individual motors. Each machine must be equipped with a mechanical or electrical power control to make it possible for the operator to cut off the power without leaving his place. On machines operated by electric motors, there must be means for making the controls inoperative while repairs are being carried out. On machines driven by belts and shafting, a locking-type belt shifter or equivalent device is required. Operating treadles must be covered by an inverted U-shaped metal guard, fastened to the floor, of adequate size to prevent accidental tripping. Automatic feeding devices should be installed on machines whenever possible.

Circular saws may not be operated at a speed greater than 10,000 peripheral feet per minute unless specially tensioned for higher speeds. The manufacturer is required to mark upon the saw the size, rpm and speed at which it should operate. A table of revolutions per minute for various sizes of saws to produce but not exceed the maximum speed is included in the appendix.

General maintenance rules emphasize the importance of systematic inspection of all machines and safety equipment to ensure that defects are discovered and corrected promptly. Dull, badly set, improperly filed or improperly tensioned saws must be immediately removed from service as soon as they begin to cause the material to stick, jam or kickback when it is fed to the saw at normal speed. Twists or kinks in saws must be promptly removed by a saw smith. Blades to which gum has adhered must be cleaned immediately. All knives and cutting heads must be kept sharp, properly adjusted, and firmly secured. Bearings must be kept free from lost motion and well lubricated.

The Code requires the installation and compulsory use of guards wherever possible. If special operations require the removal of the guard, it must be replaced immediately upon completion of the work. Employees must not be permitted to remove a guard or to operate a machine without a guard except with the consent of the foreman in each specific instance.

Machines should not be used for operations of such variety as to necessitate the removal of safeguards suitable for the usual service. The specific operations involving special hazards should be assigned to machines appropriate for such work.

Detailed rules are set out for the guarding and safe operation of various woodworking machines and tools. These constitute the main part of the Code. The rules govern the construction and use of circular saws, band saws and band resaws, jointers (hand planers), tenoning machines, boring and mortising machines, wood shapers, planing, moulding, sticking and matching machines, lathes and automatic shapers, sanding machines, routers and roll-type glue spreaders. It is stated that the mention of specific machines does not exclude other woodworking machines from the requirement that suitable guards and exhaust hoods must be provided to reduce hazards to a minimum.

A separate section of the Code deals with veneer machinery, including steam vats and soaking pits, log-handling equipment, drag saws, and veneer cutters and wringers. The sides of steam vats must extend at least 36 inches above the floor, working platform or ground. Where large vats are divided into sections, substantial walkways must be provided between sections, with a standard handrail 42 inches high, removable if necessary, on each exposed side. Where the size of the stock handled will permit it, vat sections should not be larger than eight feet. Vat covers may be removed only from the portion of the vat on which men are working, and a portable railing must be placed at this point to protect the operators. No workman may ride or step on logs in steam vats.

The floor surface at the sides of vats where loading and unloading is done must be constructed to prevent slipping. Employees working at the vats must be provided with and required to wear footwear with soles and heels that will not slip. If required to work over vats, they must wear a safety belt attached to a life line which is fastened so that they cannot

fall into the vat. Mechanical handling equipment must be provided for removing the logs from the vat, and hydraulic equipment for draining it. Until the vat has been drained, no employee may stand on the vat and unloading may not begin. If draining of the vats is not desired, each vat must be fitted with a cradle which can be mechanically raised to permit the logs to be transferred safely to other handling devices.

The buildings in which vats are located should be heated in cold weather to keep the amount of steam at a minimum. Proper means of ventilation must be provided. High ceilings with roof ventilators are desirable; where ceilings are low, exhaust fans must be supplied.

All gears, sprockets, chains and other dangerous parts of log-handling equipment must be enclosed with standard guards. The Code urgently recommends the use of log trolleys or cranes except where the stock handled is very small. All hoisting equipment should be tested and inspected frequently.

Drag saws and veneer cutters and wringers must be provided with guards and specific safety devices. Whenever veneer slicers or rotary veneer-cutting machines have been shut down to insert logs or to make adjustments, the operator must make sure that the machine is clear and that other workmen are not in a hazardous position before he starts the machine. Operators are forbidden to ride the carriage of a veneer slicer.

Equally specific requirements are laid down for the construction and use of cooperage machinery.

The Code also contains rules for the clothing to be worn by operators of woodworking machinery. Gloves, flowing garments, loose sleeves and neckties are not to be worn by machine operators. Where there is danger of kickback from any operation, anti-kickback aprons must be supplied and worn. Where there is danger from dust or flying chips, the employer must provide proper eye protection in accordance with the CSA Code for Head and Eye Protection.

Grain Elevators

The regulations under the Alberta Factories Act governing the construction, operation and maintenance of machinery and equipment in grain elevators, established by O.C. 1089-31, were reissued to include new provisions setting out safety requirements for employees' belt lifts. The former regulations were repealed and replaced by O.C. 83-53, made January 19 and gazetted January 31.

Only minor changes were made to the provisions of the earlier regulations dealing with the guarding of moving parts of machinery, the covering of grain bins and hoppers, the construction of ladders and the construction and operation of manlifts. New sections require workplaces to be adequately lighted and grain augers to be guarded, and prohibit unauthorized persons from riding on manlifts.

The most important change in the regulations was the addition of new provisions governing belt lifts used to carry employees in grain elevators. The belt lift machine (head drive assembly) must be supported on steel, wood or concrete beams or slabs having a factor of safety of not less than six. An adequate platform is to be provided for servicing the machine, protected by a standard guard rail and having a permanent ladder or stairway to the upper landing. There must be an externally operated electrical disconnect switch close to the machine.

The belt lift equipment must be set on a substantial foundation and securely fastened at top, bottom and intermediate landings. The guiding structure, to be made of steel, must have a factor of safety of not less than six.

Where the distance between landings exceeds 20 feet, a permanent ladder must be installed on or adjacent to the structure to permit escape from the belt lift in case of power failure. The belt and head pulley must be designed to withstand safely a live load of 200 pounds for each belt step with a factor of safety of not less than eight. The maximum permissible speed of lifts is 80 feet per minute.

To carry the workmen, steps with an anti-slip surface and each able to bear safely a load of 250 pounds are to be securely fastened to the belt in such a way that they remain at right angles to the belt in ascending and descending. Step treads must be at least 10 inches deep and 12 inches wide and uniform in size. Handholds with a gripping surface of not less than seven inches and at least two-inch clearance from the belt must be secured to the belt approximately four feet above each step. Each step or handhold must have a corresponding handhold or step. Handholds must be constructed so that they cannot be grabbed by an employee in a direction other than that for which they were designed.

The regulations require the provision of an automatic brake applied by gravity or springs and electrically released, capable of stopping and holding the belt with the greatest unbalanced load within two feet.

No chain, belt, clutch or other than a direct mechanical connection may exist between the brake pulley and the head pulley.

The belt must have a manually-operated starting and stopping device, readily accessible throughout the entire travel of the belt lift and arranged so that it must be pulled in the direction of belt travel to stop the belt lift.

Another compulsory feature of belt lift equipment is an automatic limit switch to shut off the power and stop the belt lift within two feet if an employee rides a step more than 18 inches above the upper landing. No provision may be made for re-starting the machine except from above the upper landing.

The holes in the floor through which the belt lift passes must be clear of the steps by a distance of seven to nine inches on each side, measured parallel with the plane of the belt, and clear of the outside edge of the step by a distance of 14 to 15 inches, measured at right angles to the plane of the belt. Floor openings must be guarded by standard railings with staggered openings or swinging self-closing gates opening away from the belt lift.

On the "up" going side of the belt lift, the floor openings must be equipped with funnel-shaped shear guards, bevelled at an angle of not less than 60 degrees from the horizontal and having their lower edge not less than three feet from the centre line of the belt in any direction in front of the plane of the belt, except where a vertical wall interferes. Where there is a projection between landings or above a landing within three feet of the centre line of the belt, a similar shear guard must be provided. Shear guards are to be made of smooth metal not lighter than 16 gauge.

A mounting platform must be provided at the lowest landing on the "up" going side of the belt, high enough to meet the steps when they are level. All landings on both sides of the belt must have a landing area at least two feet wide and must be adequately lighted.

The regulations forbid any person other than an employee to ride on a belt lift, or more than one person to ride on one step at the same time. No freight may be carried on a belt lift.

When an inspector discovers unsafe equipment, material, tools or working conditions which are not specifically covered by the regulations, he is authorized to order the employer to make the changes necessary to remove hazards and reduce the possibility of accidents. Employers are required to comply with such orders.

Plans of employees' belt lifts must be submitted to the Chief Factory Inspector of the Department before installation is commenced.

Alberta Tradesmen's Qualification Act

The regulations under the Tradesmen's Qualification Act for the beauty culture trade, in which work is prohibited without a subsisting certificate, were reissued with some changes. The new regulations, replacing those made in 1949 (O.C. 1058-49), were approved by O.C. 82-53 on January 19 and gazetted January 31.

Changes were made in the provisions for the issuing of certificates. As before, an applicant for a certificate of proficiency must present testimonials from his employers or instructors to establish that he has had at least two years' practical experience in the trade or one year's experience and approximately 1,400 hours of instruction in a Beauty Culture Trade School. He must then pass a practical and a theoretical examination, obtaining at least 75 per cent of the allotted marks.

Previously, an applicant presenting the required testimonials could be granted a temporary certificate, valid for three months only, during which period he was required to present himself for examination. No certificate may now be issued without examination, but a candidate who obtains between 60 per cent and 75 per cent of the marks in the examination may be granted a temporary certificate valid for a period not exceeding 12 months, during which time he must prepare for re-examination. An unsuccessful candidate may not be re-examined for at least six months.

More detailed provisions are set out for the licensing of apprentices. As before, an apprentice certificate may be issued to any person upon application, authorizing him to work under the direct supervision of a beauty parlour operator holding a valid certificate of proficiency. It is now provided that an apprentice may hold a certificate for a two-year period and must then take an examination. If he fails to secure a certificate of proficiency or a temporary certificate, he may be granted another apprentice certificate good for six months only and must then present himself for further examination.

Under the former regulations, all beauty culture operators were required to renew their certificates annually upon payment of a $1 fee. Certificates now will remain in effect unless suspended or revoked for cause. However, a certificate valid for a limited period may be issued in any case where it is considered proper by the Minister of

Industries and Labour. A certificate may be cancelled if it is established that a testimonial or statutory declaration presented was false or irregular.

Another new section provides that every certificate issued must be accompanied by an identification card indicating the status of the certificate. The holder of a certificate is required to produce his certificate or identification card at the request of any authorized official.

Where the name of the holder of a certificate is changed through a change in marital status, the certificate must be forwarded to the Department for the necessary alteration.

Alberta Workmen's Compensation Act

Gas and Oil Wells

Revised safety regulations governing the erection of derricks and the operation and maintenance of gas and oil well drilling equipment have been issued by the Workmen's Compensation Board in Alberta. The new regulations, gazetted January 31 and effective from March 15, replace Regulation No. 14 of 1949.

As previously, the regulations lay down the general requirement that any derrick, buildings, machinery, tools or other equipment must be constructed, protected, placed and operated so as to afford reasonable safety to persons employed in or around gas or oil wells. Spudding in or drilling operations are prohibited until all moving parts of machinery are completely guarded, all platforms, stairways and handrails securely fastened in position and the escape line with escape buggy installed at the derrick platform. Where gas and oil wells are being drilled, the casing to be set and cemented is now required to be of the depth, size and type specified on the licence to drill issued by the Petroleum and Natural Gas Conservation Board.

For the purpose of preventing blow-outs, new provisions have been included requiring the operator of a well being drilled to install and use adequate control equipment to shut off the open hole completely and to surround and close off the drill pipe, casing and tubing. The controls for such equipment must be located at least two feet outside the substructure. Except where loss of circulation occurs through unforeseeable circumstances, sufficient drilling fluid must be kept in the well at all times to prevent the possibility of the well blowing out of control.

With some minor changes from the earlier regulations, safety requirements are set out in detail for cellars, derricks, platforms, ladders, auxiliary means of escape, safety belts and lines, oil and gas storage tanks, rotary drilling rigs and certain other equipment. A new section deals with safety valves and pumps. Another new provision requires hand tools to be kept in good repair.

New rules designed to guard against fire or explosion were added. The use of heating or lighting apparatus with a flame or exposed electrical element is prohibited in the doghouse. Steam boilers must be at least 150 feet away from the well head. Tanks supplying fuel to other than diesel motors may not be located within 75 feet of the well head. Unless a rig is adequately lighted by natural light, no drill pipe may be disconnected during a drill stem test if there is any possibility of gas or oil being present in the pipe. In addition to the regular means of attachment, every test plug must be attached by a safety line to the links when above the derrick floor. Fires may not be located and persons are prohibited from smoking within 75 feet of a well head.

A new provision requires rigs to be properly lighted to provide a minimum illumination of five foot candle power on the whole of the derrick floor, three foot candle power at the fourble boards, mud pumps and cat-walk, and one foot candle power at the shale shaker, stairways and other working areas. A section added to the regulations in 1949, giving specific rules for electrical wiring and equipment, is omitted and the new regulations contain only the general requirement that electrical installations must be of a type approved for the purpose by the Alberta Electrical Inspection Department and must comply with the Canadian Electrical Code.

Safety equipment to be supplied by the employer now includes safety goggles as well as safety belts, gas masks and hard hats. Workmen are required to wear goggles when engaged in the mixing of chemicals, the chipping, tapping, hammering or grinding of metal, welding operations, or cleaning by the use of compressed air. The hard hats to be worn by all workmen while on the derrick floor and during the erection or dismantling of derricks must now be supplied with suitable winter linings during the months from November to March inclusive.

Every driller employed on a gas or oil well drilling rig is required to hold a certificate of competency in first aid approved by the Workmen's Compensation Board. Employers must provide and maintain a Standard First Aid Kit and carrying stretcher at each place of employment. These first aid provisions are new.

British Columbia Hours of Work and Minimum Wage Acts

Road Transport

The Board of Industrial Relations has revised its hours and minimum wage orders for the road transport industry.

"The transportation industry", defined in general terms to cover the transport of goods by road, was added to the schedule of the Hours of Work Act in 1935. A regulation issued in that year exempted the industry from the limits set by the Act to the extent that workers were permitted to work six additional hours in a week, provided that their daily limit did not exceed ten hours. From 1935 on, minimum wage rates were fixed for the various categories of workers in the industry, depending on the number of hours worked.

In 1948, on the basis of 13 years' experience, the Board instituted a new method of regulation, applying the principle of punitive overtime rates instead of setting actual limits on hours. Minimum Wage Order 9 (1948) set a minimum rate of 75 cents an hour for the main group of transport workers, drivers and their swampers and helpers, and established overtime rates for hours worked in excess of specified limits. The Order required time and one-half the regular rate to be paid for the first 2½ hours in excess of 8½ in a day, double time for work done in excess of 11 hours, and time and one-half for hours worked in excess of 47 in a week, provided that the weekly overtime did not include overtime calculated on a daily basis. In 1950 (L.G., 1951, p. 245) the Board followed the same policy with respect to regulation of the taxicab industry, substituting punitive overtime rates for a strict limitation of weekly hours.

In its recent revision of the orders covering road transport, the Board reworded the definition of "the transportation industry" to make it apply specifically to truck-drivers and motorcycle operators, their swampers or helpers, and warehousemen.

A minimum wage order for these employees set a higher minimum hourly rate and established the same overtime provisions as had been included in Minimum Wage Order 9. Actual hours limitations under the Hours of Work Act were removed for all such employees except bread and milk delivery men.

New Minimum Wage Order

Male and Female Minimum Wage Order No. 26 (1953) establishes a new minimum wage for truck-drivers and motorcycle operators, their swampers or helpers, and warehousemen. It does not apply to employees covered by a minimum wage order for the logging industry, to drivers of vehicles for passenger transportation, or to warehousemen covered by another Order of the Board.

The minimum wage of 75 cents, formerly set by Order 9 for truck-drivers and their swampers or helpers, has been raised to 80 cents per hour. This group includes drivers employed in the delivery of milk or bread for whom the minimum hourly rate was formerly 48 cents. The 80-cent rate applies also to warehousemen, who were not specifically mentioned in earlier orders. The minimum wage for motorcycle operators is now 55 cents per hour. Previously, rates ranged from 30 to 48 cents, depending on the number of weekly hours and whether or not a motorcycle was equipped with a sidecar or wheeled attachment.

Overtime rates for an employee covered by the Order (except one engaged in the retail delivery of milk or delivery of bread) are one and one-half times his regular rate of pay for the first two and a half hours, or less, worked in excess of eight and one-half hours in a day; double time for all hours worked after 11 in a day; and in the case of any overtime not covered by these two provisions, one and one-half times his regular rate for all hours worked in excess of 47 in a week. As before, the overtime rates may be varied by permit from the Board to meet the conditions of the "long distance haul" or for other reasons (e.g., to provide payment on a mileage, tonnage or trip basis). No overtime rates are set for drivers of vehicles engaged in the delivery of milk and bread, and their swampers or helpers, since their hours of work are restricted by Regulation No. 23B and Regulation No. 17C, described below.

An employer who has asked an employee to report for work must, as before, pay him his regular rate of pay for the entire period spent at the place of work in answer to the call. A new "daily guarantee" provision requires an employee to be paid a minimum of two hours' pay if there is no work and four hours' pay if he commences work. The Board has power to vary this provision.

Another new provision stipulates that, when a mechanical breakdown or road blockade immobilizes a truck at a distance greater than 100 miles from the driver's home terminal, employees operating the truck will be paid at straight time unless they are actively engaged in making repairs. Straight time will continue to the

end of the shift on which they are working. While the delay continues, employees will be paid for one regular shift each day.

If the employee provides his own vehicle, he is to be paid, in addition to the minimum wage, all reasonable costs in connection with the vehicle while it is actually being used on the employer's behalf.

Payment of wages up to a date not more than eight days prior to the date of payment must be made at least semi-monthly.

The customary requirements for keeping of records and the posting of the order are included in the new Order, which was made on January 30 and gazetted February 19.

Hours of Work Orders

Related regulations made on February 16 under the Hours of Work Act were gazetted February 19, to take effect on March 30, the date on which the new Minimum Wage Order No. 26 comes into force.

Regulation No. 22A amends the schedule to the Hours of Work Act to re-define "the transportation industry" in more specific terms. Instead of including all operations in or incidental to the transporting of goods, "by any means whatever, other than by rail, water or air", the definition now states that the expression means "the occupations of truck-driver and motorcycle operator, and their swampers or helpers, and warehouseman". Messengers and drivers of horse-drawn vehicles are no longer dealt with as part of the transportation industry. Delivery work by bicycle or on foot in the mercantile industry is already covered by the Order for that industry, Order 24 (1949).

Regulation No. 23A permits male and female employees covered by Minimum Wage Order 26, that is, truck-drivers and motorcycle operators, and their swampers or helpers, and warehousemen (excluding bread and milk delivery men), to work, over and above the eight and 44 hours laid down in the Act, whatever hours are necessary to meet the requirements of the transportation industry. Previously, limits imposed were 10 hours in a day and 50 hours in a week. As stated above, the Board now attempts to regulate hours by means of the overtime rates set in Minimum Wage Order 26.

Regulation No. 13A exempts employees covered by the new minimum wage order from Regulation No. 13, which requires the posting of notices of hours at which work begins and ends, shifts, rest intervals, etc.

Regulation No. 23B makes the same provision as in a former order for working hours of drivers engaged in retail milk delivery. Milk delivery men may work 15 hours in excess of 44 in a week, provided that not more than 10 hours are worked in a day nor more than 350 hours over a period of seven weeks.

Persons employed in the delivery of bread are subject to a special exemption issued in 1948 (Regulation No. 17C) permitting them to work up to 48 hours in a week.

Refrigeration Trade

Minimum wage rates of $1.25 per hour were established for the refrigeration trade by a new minimum wage order, No. 22, made on January 30, and effective March 30. The trade includes all work usually done by refrigeration journeymen in connection with the installation, maintenance and repair of refrigeration and air-conditioning equipment and controls.

The order applies to every male worker in the refrigeration trade except employees who are permanently employed at maintenance work in industrial or manufacturing establishments, public and private buildings, or who are employed solely in a supervisory, managerial or confidential capacity. Lower wage rates for handicapped or part-time employees or apprentices may be prescribed by the Board in the written permits for their employment.

The order requires the payment of time and one-half the regular rate for all hours worked in excess of eight in a day or of 44 in a week where daily hours do not exceed eight. Where other hours limits have been set or approved by the Board, the overtime requirement does not apply until the employee has completed the hours so established. The Board may vary the overtime provisions in the case of industrial undertakings exempted in whole or in part by the Hours of Work Act or regulations from the operation of the Act.

The "daily guarantee" section provides that an employee reporting for work at the request of an employer must be paid his regular rate of pay for the entire period spent at the place of work, with a minimum of two hours' pay.

The order contains the customary provisions requiring semi-monthly payment of wages, the posting of the order and work schedule, and the keeping of records.

British Columbia Metalliferous Mines Regulation Act

Safeguards with respect to the extension of working hours in quarries and metallurgical works were provided for in the revision of a recent regulation under the Metalliferous Mines Regulation Act per-

mitting longer hours than eight in 24 for the purpose of changing shifts. This regulation, approved by O.C. 2878 on December 2 (L.G., Feb. 1953, p. 290), has now been replaced by a regulation issued under authority of O.C. 146 on January 19 and gazetted January 29.

Under the earlier regulation, employment for whatever period longer than eight hours was necessary for a change of shift was permitted during the currency of an existing collective agreement provided that this was not forbidden by the agreement. The regulation now makes the extension of hours permissible where there is a collective agreement only with the consent of the Minister of Mines and on condition that the longer period of employment for an employee does not occur more than once during any 28-day period and then not sooner than 14 days after another such longer shift.

As in the previous regulation, where a collective agreement has expired or where there was none in force when the regulation was approved, an employer and his employees must make an agreement permitting longer hours for a change of shift before such longer hours may be worked. It is now further provided that the employer, within 10 days of making such an agreement, must send the Minister a copy, or if the agreement was not in writing, a written summary.

The new regulation, like the former one, does not apply to operations covered by two earlier orders which allow a 10-hour day to be worked in quarries and in placer mining above ground if a permit has been obtained from the Department of Mines.

British Columbia Workmen's Compensation Act

Traumatic deafness was added to the schedule of industrial diseases under the Workmen's Compensation Act by a regulation issued on January 23, 1953, gazetted January 29, and effective from December 1, 1952. The regulation implements a recommendation in the Sloan Report which noted that the Workmen's Compensation Board was paying compensation to men suffering from disabling occupational deafness on the basis that it was an accident and not a disease. The Report stated that occupational deafness is a disease and recommended that, since persons disabled by it are now compensated, it should be included in the schedule of diseases.

The regulation makes traumatic deafness compensable in any industry or process where there is exposure to blasting or other noise which is capable of producing injury to the auditory nerve or middle ear.

Saskatchewan Oil and Gas Conservation Act

New regulations, including safety provisions for the erection of derricks and the operation and maintenance of gas and oil well drilling equipment, were approved by O.C. 304/53 on February 6 and gazetted February 14 under the Oil and Gas Conservation Act, 1952.

The safety regulations follow the same pattern as those issued by the Workmen's Compensation Board in Alberta, which are reviewed on page 588.

Additional precautionary measures to prevent fires are included in the Saskatchewan regulations. As in Alberta, smoking is prohibited within 100 feet of any receptacle used for storage, measurement, or separation of oil or natural gas products, and within 75 feet of an oil or gas well. All fires used for any purpose must be safeguarded by mechanical or other means so as not to cause a hazard to surrounding property. Waste material must be burned or disposed of in such a manner as not to create a fire hazard to the wells, tanks or stations, or to pollute any stream or fresh water stratum. Fires may not be located, or stoves, open flame heaters, electric generators or electric heaters with exposed elements used, within 75 feet of a well or an oil storage tank. The use of heating or lighting apparatus with a flame or exposed electrical element is prohibited in the drilling rig dog-house. Steam boilers and open flame steam generators must be at least 150 feet away from the well head, and all boilers must be approved by the Chief Boiler Inspector. Any engine, motor or electric switch within 150 feet of a well or storage tank must be constructed or enclosed so that it is externally sparkproof.

Except for the fuel tanks actually connected to the operating equipment, storage of gasoline or liquid fuel is not permitted within 75 feet of a well. Drainage from the location of a fuel tank must be directed away from the well. Explosives must be stored in properly constructed magazines at least 500 feet away from any place where drilling or any production operation is being carried on.

As in Alberta, no workman may be required to enter a storage tank or other confined space unless and until all injurious gases have been removed or he has been equipped with approved breathing apparatus. A strong rope able to bear his weight and of adequate length must be fastened to his body and to a substantial support outside the tank. Two men outside the tank must keep close watch over the workman, so that, if necessary, one can

give artificial respiration while the other goes for further aid. The Alberta regulations require only one man to keep watch.

To ensure that the brakes on the drawworks of drilling rigs are in good order, they must be tested by each driller when he comes on shift and examined weekly by the toolpusher or other person authorized by the employer.

Safety requirements are set out for hoisting, casing and rotary drilling lines. Every hoisting line used in well-drilling, well-servicing, and well-abandoning operations must be examined each week by the toolpusher or other authorized person. If its factor of safety is less than five, the line should be replaced.

The safety buggy on the escape line must be tested at weekly intervals. Employers are required to keep a hard-covered book at every drilling rig in which the weekly inspections of the safety buggy, draw works brakes and hoisting line must be recorded. The book is to be readily available to the inspector at all times.

Where a fatal accident occurs in or about a well, the operator must immediately notify the Minister of Natural Resources by telephone or telegraph.

1952 Edition of Department's Publication on Workmen's Compensation Now Available

Workmen's Compensation in Canada, A Comparison of Provincial Laws covers in some detail changes made in all workmen's compensation laws

The Department of Labour has now available for distribution the 1952 edition of its annual publication, *Workmen's Compensation in Canada, A Comparison of Provincial Laws.* This 40-page mimeographed bulletin covers in some detail the changes made in all ten workmen's compensation laws at the 1952 legislative sessions and contains revised tables indicating the scale of benefits now payable under the Acts as amended.

A comparative analysis of the Acts is made under such headings as scope of laws, risks covered, waiting period, medical aid, rehabilitation, and accident prevention. The occupational diseases for which compensation is payable are set out in tabular form and a summary of ILO Conventions and Recommendations on workmen's compensation permits a comparison between ILO standards and the provincial statutes.

Among the major changes in 1952 were the increases in the percentage rate of payment for disability and the annual wage ceiling. Four provinces raised the percentage rate: British Columbia and Quebec from 66⅔ to 70; and Alberta and Prince Edward Island, from 66⅔ to 75. A percentage rate of 75 has been in effect in Saskatchewan since 1945 and in Ontario since 1950. Five provinces increased the annual wage ceiling: Alberta, Nova Scotia and Quebec, from $2,500 to $3,000; British Columbia, from $2,500 to $3,600; and Saskatchewan, from $3,000 to $4,000. Ontario was formerly the only province with a $4,000 maximum.

In Alberta, a one-day waiting period was introduced and, as in Saskatchewan, compensation is now payable from the day following the accident. In Newfoundland, the waiting period was reduced from six to four days.

Higher benefits to widows ($75 a month in British Columbia, the highest payable in any province, and $50 in New Brunswick) were provided for. In Alberta, the monthly payment of all widows receiving compensation because of earlier accidents was brought up to the present level of $50. The British Columbia Legislature directed that the hospital insurance premiums of widows and dependent children should be paid from the Accident Fund. Five provinces—Alberta, British Columbia, Newfoundland, New Brunswick and Saskatchewan—increased the monthly benefit to dependent children. In Alberta, however, the increased allowance is to be paid to the age of 16 instead of 18. A larger sum for the payment of burial expenses was provided for in Alberta, British Columbia, Newfoundland and Nova Scotia.

Manitoba and Ontario broadened the coverage of their Acts.

This publication, prepared by the Legislation Branch of the Department of Labour, is available in both English and French from the Publications Division, Department of Labour, Ottawa.

Monthly Report on Operation of the Unemployment Insurance Act

Statistics* for January, 1953, show claims during the month numbered 223,255 compared with 215,848 in December, 212,293 in January, 1952

Initial and renewal claims for unemployment insurance benefit during January numbered 223,255, compared with 215,848 in December. In January 1952, the total was 212,293.

The monthly report on the Unemployment Insurance Act, issued by the Dominion Bureau of Statistics, shows that on January 31 claimants on the live unemployment insurance register numbered 376,338 (312,756 males and 63,582 females), compared with 303,831 (247,329 males and 56,502 females) on December 31 and 358,091 (273,834 males and 84,257 females) on January 31, 1952. Ordinary claimants constituted 313,425 of those active on January 31; of the remainder, 17,240 were on short-time, 4,438 were on temporary lay-off and 41,235 were seeking supplementary benefit payments.

Adjudications on initial and renewal claims during January totalled 234,892, of which 165,488 were entitlements to benefit. Disallowances were recorded in 53,331 cases, while disqualifications numbered 23,306, including 5,483 on revised and 1,750 on supplementary benefit claims. Chief reasons for disqualification were "not unemployed", 9,766 cases; "voluntarily left employment without just cause", 5,870 cases; and "not capable of and not available for work", 1,949 cases.

Claimants who came on benefit during the month numbered 163,273, compared with 120,101 in December and 154,294 in January 1952.

Benefit payments amounted to $17,502,303 in respect of 5,628,881 days of proved unemployment during January, as against $10,926,557 and 3,586,600 days during December and $13,433,917 and 5,036,971 days during January 1952.

For the week January 31-February 6, 231,331 beneficiaries received $4,352,990 in respect of 1,395,790 unemployed days, compared with 164,159 beneficiaries, $2,928,266, 944,244 days for the week December 27-January 2, and $3,238,244 paid to 216,882 beneficiaries in respect of 1,195,557 days during the week January 26-February 1, 1952.

> Comparison of current employment statistics with those for a previous period serves no useful purpose if made on the basis of numbers alone. Consideration must be given to other relevant factors, such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

The average daily rate of benefit for the week under review this month was $3.12, compared with $3.10 last month and $2.71 for the same week in January 1952.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission show that during January 1953, insurance books issued to 4,439,959 employees who had made contributions to the unemployment insurance fund at one time or another since April 1, 1952.

Employers registered at January 31 numbered 247,319, an increase of 838 since December 31, 1952.

Supplementary Benefit

Out of a total of 53,331 claims disallowed during January, 53,172 were referred for consideration under the supplementary benefit provisions of the Act (159 claims not referred for supplementary benefit were filed prior to December). In addition, 399 renewal supplementary benefit claims were received. Claims allowed totalled 35,775 and claims disallowed, 15,978. Supplementary benefit recipients for the month numbered 33,426; they received $932,343 for a total of 438,175 days.

The average daily rate of supplementary benefit was $2.13.

*See Tables E-1—E-8 at end of book.

Labour Conditions in Federal Government Contracts

Wage Schedules Prepared and Contracts Awarded during February

Works of Construction, Remodelling, Repair or Demolition

During February the Department of Labour prepared 86 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition.

In the same period, a total of 71 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under this heading provide that:—

(a) the wage rate for each classification of labour shown in the wage schedule included in the contract is a mimimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and forty-four in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and forty-four per week;

(d) no employee shall be discriminated against because of his race, national origin, colour or religion, nor because the employee has made a complaint with respect to such discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded under this heading for the month of February are set out below:—

Department	No. of Contracts	Aggregate Amount
Defence Construction (1951) Ltd.	1	$ 28,700.00
Defence Production (January report).....	166	838,606.00
Post Office	11	71,222.88

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:—

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen, and if there is no current rate then a fair and reasonable rate, but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom, then fair and reasonable hours;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no employee shall be discriminated against because of his race, national origin, colour or religion, nor because the employee has made a complaint with respect to such discrimination.)

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour, showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work. These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is, however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

Wage Claims Received and Payments made during February

During February arrears of wages were obtained from one contracting department and from one contractor where there had been failure to pay the wages required by the labour conditions attached to the contracts and the sum of $141.97 was distributed to the two employees concerned.

Contracts Containing Fair Wages Schedules Awarded—February

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.)

Department of Agriculture

Morden Man: Harris Construction Co Ltd, renovation of dam.

Central Mortgage and Housing Corporation

Halifax N S: Harold F Verge, addition & alterations to CMHC office bldg; Herman MacDonald Construction Co Ltd, construction of 2 units—DND married quarters. *Chatham N B:* Maritime Landscape & Gardening Ltd, landscaping. *Chilliwack B C:* J H McRae Co Ltd, installation of electrical distribution system.

Defence Construction (1951) Limited

Dartmouth N S: Harbour Construction Co Ltd, construction of torpedo bldg. *Debert N S:* Standard Paving Maritime Ltd, erection & finishing 8 explosive storage accommodation bldgs & roads. *Greenwood N S:* Kenney Construction Co Ltd, construction of control tower. *Halifax N S:* Mardo Construction Co Ltd, construction of transmitter bldg. *Val d'Or P Q:* Northland Construction Co Ltd, erection & finishing of 12 bldgs. *Angus Ont:* W C Brennan Contracting Ltd, erection of 7 explosive storage bldgs. *Cobourg Ont:* H J McFarland Construction Co Ltd, construction of administration bldg. *Long Branch Ont:* Bennett-Pratt Ltd, construction of 2 gate (guard) houses. *Picton Ont:* H J McFarland Construction Co Ltd, construction of central heating plant. *Shirley Bay Ont:* W H Yates Construction Co Ltd, construction of central stores & services bldg. *Gimli Man:* Prairie Construction Co Ltd, improvements to water & sewer services. *Winnipeg Man:* Leitch Construction Ltd, construction of fire hall, ME garage & headquarters bldg. *Claresholm Alta:* Burns & Dutton Concrete & Construction Co Ltd, construction of extension to officer's mess. *Esquimalt B C:* Farmer Construction Ltd, construction of diesel workshop.

Building and Maintenance

Hamilton Ont: James Kemp Construction, alterations to barrack block, HMCS "Star". *Weston Ont:* Burton's Insulation & Roofing Co, application of built-up roofs, No 1 Supply Depot. *Winnipeg Man:* Wallace & Wallace, renewal of drill hall floor, Bldg No 21, RCAF Station. *Claresholm Alta:* General Construction Co (Alberta) Ltd, repair of access road, RCAF Station. *Comox B C:* Pacific Sheet Metal Works Ltd, application of built-up roofs, RCAF Station.

National Harbours Board

Montreal Harbour P Q: Walter G Hunt Co Ltd, installation of hoists in Shed No 2; Dominion Sprinkler Co Ltd, installation of fire protection system in Sheds 11-15.

Fishing Cove P E I: Norman N MacLean, breakwater extension. *Pictou N S:* Ferguson Industries Ltd,* delivery of pontoon discharge pipes for dredge "PWD No 21"; Ferguson Industries Ltd,* renewals & repairs to tug "Pugwash"; Ferguson Industries Ltd,* renewals & repairs to scow "PWD No 177". *Port Hawkesbury N S:* Port Hawkesbury Marine Railway Co Ltd,* renewals & repairs to scow "PWD No 162". *Bathurst N B:* Northern Machine Works Ltd,* renewals & repairs to dredge "PWD No 9". *Portage Island N B:* J W & J Anderson Ltd, construction of piers. *Saint John N B:* John Flood & Sons Ltd, alterations to Sadim Bldg; Saint John Iron Works Ltd,* supply of land pipes for dredge "PWD No 21". *St Simon N B:*

Diamond Construction Co Ltd, wharf repairs & extension. *Lauzon P Q:* Davie Shipbuilding & Repairing Co Ltd,* repairs to hull, machinery, painting, etc, of tug "Bersimis"; Geo T Davie & Sons Ltd,* repairs to hull, machinery, painting, etc, dredge "PWD No 130". *Marsoui P Q:* Gulf Maritime Construction Ltd, wharf reconstruction. *Montreal P Q:* Charles Duranceau Ltee, erection of Youville Postal Station. *Ruisseau Chapados P Q:* George K Steele, reconstruction of jetties. *Cornwall Ont:* Alphonse Gratton Inc, erection of public bldg (phase 2). *Fort Frances Ont:* Claydon Co Ltd, addition & alterations to public bldg. *Nanticoke Creek Ont:* Detroit River Construction Ltd, construction of breakwaters. *Ottawa Ont:* G T Green Ltd, interior painting, Langevin Block; Robert Strang, painting of military stores bldg; A S Petersen Ltd, construction of implement shed, Forage Plants Division, Central Experimental Farm; Henri Dagenais, alterations to Temporary Bldg No 8. *Penetanguishene Ont:* Russell Construction Ltd, wharf extension. *Port Dover Ont:* Olmsted & Parker Construction Co Ltd, erection of public bldg. *Rockcliffe Ont:* Hart Construction Co Ltd, construction of feed storage bldg for RCMP "N" Division. *Sarnia Ont:* Canadian Dredge & Dock Co Ltd,* harbour improvements (wharf extension). *Toronto Ont:* Toronto Dry Dock Co Ltd,* docking, repairing, painting, etc, of scow "PWD 56". *Wheatley (Muddy Creek) Ont:* N C Srigley, harbour improvements (retaining wall). *Lemberg Sask:* Smith Bros & Wilson Ltd, erection of public bldg. *Regina Sask:* W H McDiarmid Construction Co, construction of RCMP housing. *Campbell River B C:* McKenzie Barge & Derrick Co Ltd, harbour improvements. *Douglas B C:* Ward & Son Ltd, alterations, fittings & traffic signs, Customs and Immigration bldg. *Minstrel Island B C:* Greenlees Construction Co Ltd, wharf improvements. *New Westminster B C:* Star Shipyard (Mercer's) Ltd,* construction of work boat. *Port Alberni B C:* McKenzie Barge & Derrick Co Ltd,* dredging. *Sardis B C:* E H Shockley & Son Ltd, construction of Coqualeetza Indian Hospital. *Skidegate B C:* Greenlees Construction Co Ltd, wharf repairs & improvements. *Steveston B C:* Gilpin-Nash Ltd, construction of fishing harbour (Cannery Channel rock dam).

Department of Transport

Camp Borden Ont: Terminal Construction Co Ltd, construction of hangar aprons & taxi strip. *Earlton Ont:* Betteridge-Construction Co Ltd, construction of equipment garage, dwelling, etc. *Ottawa Ont:* Shore & Horwitz Construction Co Ltd, erection of metal equipment building. *Sudbury Ont:* Carrington Construction Co Ltd, construction of equipment garage, dwellings & related work. *Regina Sask:* Hilsden Smith & Co, construction of equipment garage & related work. *Saskatoon Sask:* W C Wells Construction Co Ltd, relocation of middle marker & glide path. *Terrace B C:* The Jamieson Construction Co, clearing right-of-way & radio range site.

Collective Agreement Act, Quebec

(Continued from page 582)

Minimum hourly wage rates: marble setter, terrazzo layer, tile setter $1.90; hand marble polisher $1.57; terrazzo polishing machine operator (dry) $1.71, (wet) $1.51; apprentice marble, tile and terrazzo setters from $1 in first year to $1.70 in fourth year; terrazzo polishing machine apprentices (dry) from $1.41 in first 3 months to $1.71 after 6 months, (wet) from $1.36 during first 3 months to $1.51 after 3 months. (The above rates are 10 cents per hour higher than those previously in effect with the exception of the rates for apprentice marble, tile and terrazzo setters which remain unchanged at $1 per hour in first year; the minimum rate for apprentices to the above trades during second year is reduced from $1.20 to $1.15 per hour.)

Other regulations amend apprenticeship conditions and also provide that any wage increases or other benefits allowed to those workers of the general trades covered by the present agreement will apply to the employees governed by this part of the agreement.

Building Trades, Joliette

An Order in Council dated January 21 and gazetted January 31, amends the previous Orders in Council for this industry (L.G., Aug. 1947, p. 1175; June 1948, p. 620; June 1949, p. 736; July 1950, p. 1053, Nov., p. 1905; June 1951, p. 829; Aug. 1952, p. 1084, and previous issues) by the addition of "The United Brotherhood of Carpenters and Joiners of America, Local 752", to the list of contracting parties.

Wages, Hours and Working Conditions

Meat Products Industry

Average rise in wage rates of more than three per cent obtained by plant employees in meat products industry in 1952; since 1939, wages have trebled. A decided shift to 40-hour work week occurred in 1952

An average rise in wage rates of more than three per cent was obtained by plant employees in the meat products industry in 1952. Wage increases were widespread in their application. Most workers also benefited by a reduction in working hours. These improvements in working conditions were indicated in the October 1952, survey of wage rates and salaries covering 68 meat packing plants across Canada.

Wage Rates

The general level of average hourly wage rates in the slaughtering and meat packing industry at October 1952, was almost treble that of 1939, with the index attaining a level of 298·8 in terms of the base year. This represents an increase of 3·3 per cent since October 1951, when the index stood at 289·4, considerably less than the gain of 18 per cent that occurred during the previous 12 months.

Wage increases granted to employees of the larger plants during the summer of 1952 accounted for much of this rise. Collective agreements negotiated by the "Big Three" meat packing companies and the United Packinghouse Workers of America provided for increases of five per cent in hourly rates, effective August 1, 1952.

As the terms of these agreements are two years, it is possible that the average rates shown in the accompanying table will remain substantially unchanged until the summer of 1954. On the other hand, wage reopening clauses permit the amendment of the provisions of the agreements relating to wages if notice is given in writing by either party during the early summer of 1953.

Increases in national wage rate averages for the 21 occupations included in this analysis ranged from two cents for female "linkers and twisters" to nine cents for luggers and steamfitters. The average increase was approximately five cents an hour. Much of the variation in increases is due to changes in employment distribution between plants and between provinces and to the variable effect of incentive bonus payments.

Each year, the Economics and Research Branch of the Department of Labour surveys some 16,000 industrial establishments requesting information on wages and working conditions. This year, the survey is divided into two parts, with information on wages and hours being obtained in October and information for certain aspects of working conditions in April.

The present article is one of a series based on results of the October 1952, survey. Succeeding issues of the LABOUR GAZETTE will contain similar articles on other industries.

Workers in the slaughtering and meat packing industry are classified into a considerable number of specialized occupations, the biggest percentage of which are production jobs. Of the 21 more representative occupations shown in the accompanying table, three have been added since the last analysis of wage rates in this industry (L.G., July 1952, p. 967). Employees in these three occupations are principally engaged in the manufacture of lard, margarine and other meat by-products.

On a national basis, average rates for the production jobs varied from $1.42 an hour for smokers, a semi-skilled occupation, to $1.65 for siders, a skilled job category. Other production jobs for which rates are shown include boners, $1.50 an hour; butchers, $1.46; and sausage makers $1.45. Labourers received an average of $1.28 per hour. Two female occupations are covered in this analysis, "bacon wrappers and packers" who received an average of $1.11 per hour and "linkers" and twisters", $1.18.

Average wage rates for non-production workers ranged from $1.43 for luggers to $1.64 for stationary engineers. The three selected maintenance occupations were all skilled with steamfitters averaging $1.60 an hour; carpenters $1.59; and machinists, $1.56.

Differentials in wage rates between regions for comparable work were of modest proportions. This is accounted for by the high degree of uniformity in working conditions characteristic of this industry. The highest rates for individual occupations were paid in the three prairie

AVERAGE WAGE RATES FOR SELECTED OCCUPATIONS IN THE SLAUGHTERING AND MEAT PACKING INDUSTRY, OCTOBER 1952

Occupation and Locality	Average wage rate per hour	Range of rates per hour
	$	$
Bacon Wrapper and Packer, Female		
Canada	1.11	
Quebec	1.05	.85–1.17
Montreal	1.03	.71–1.17
Ontario	1.02	.60–1.22

provinces and in British Columbia. The lowest rates were paid in Ontario and Quebec. Provincial differentials were lowest in the case of some of the unskilled groups such as luggers, stationary firemen and labourers and highest for one of the skilled group, siders. The average differential between the highest paying and lowest paying province was 20 cents an hour.

Hours of Work

Sixty per cent of the meat packing plants employing 75 per cent of the total non-office employees in the industry reported a 5-day week in effect as of October 1, 1952. These proportions are substantially higher than a year earlier, when not quite 60 per cent of Canadian packinghouse workers were on this schedule.

There was a decided shift from a 42- to a 40-hour week during the year and, to a lesser extent, from 44 to 40 hours. A distribution of plants and workers according to the length of the work week is given in the table on the following page.

	Number of:		Percentage of Employees		
	Establishments 1952	Non-office Employees 1952	1952	1951	1949
40 hours	34	13,607	77·1	29·2	1·3
Over 40 and under 44	2	186	1·0	39·3	..
44	10	1,410	8·0	17·8	72·1

Over 45	11	811	4·6	2·8	13·7
Other	..	..	..	1·6	0·1
	68	17,648	100·0	100·0	100·0

Prices and the Cost of Living*

Consumer Price Index, March 2, 1953

The Dominion Bureau of Statistics consumer price index dropped during February to the lowest level since August 1951, decreasing 0·6 per cent from 115·5 at February 2 to 114·8 at March 2. The decline was almost entirely due to lower food prices and a reduction in the price of cigarettes.

The food index moved down 1·0 per cent from 112·7 to 111·6, the lowest point in two years. Decreases for tea, oranges, potatoes and all cuts of beef and fresh pork outweighed higher prices for butter, eggs, tomatoes, ham, bacon and chicken.

Within the clothing group, fractional increases for several items overbalanced narrow declines; the index advanced 0·1 per cent to 109·7.

The household operations series also increased 0·1 per cent to reach 116·7, as a result of scattered slight increases.

A decrease of nearly 15 per cent in the retail price of cigarettes accounted for most of the 1.3-per cent decline—from 116·7 to 115·2—recorded by the other commodities and services series.

The shelter index remained unchanged at 122·5 as an increase of 0·1 per cent in the rent component was offset by an equal decrease in the home-ownership sub-group.

The index one year ago (March 1, 1952) was 116·9. Group indexes at that date were: food, 117·6; shelter, 119·1; clothing, 112·9; household operation, 116·9; and other commodities and services, 116·4.

Cost-of-Living Index, March 2, 1953

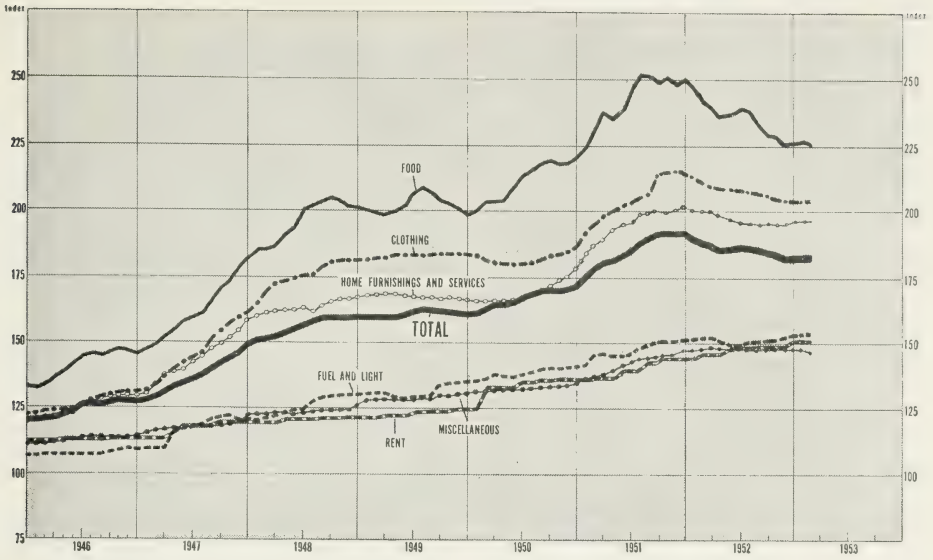
The cost-of-living index (1935-39=100) dropped from 184·9 at February 2 to 184·2 at March 2, 1953. At March 1, 1952, it was 189·1.

Group indexes at March 2 (February 2 figures in parentheses) were: food, 225·7 (227·4); rent 150·7 (150·5); fuel and light, 154·4 (154·3); clothing, 205·5 (205·2); home furnishings and services, 196·3 (196·1); and miscellaneous, 147·9 (149·0).

Group indexes one year ago (March 1, 1952) were: food, 241·7; rent, 146·3; fuel and light, 152·5; clothing, 211·2; home furnishings and services, 200·8; and miscellaneous, 146·9.

City Cost-of-Living Indexes, February 2, 1953

Cost-of-living indexes for seven of the nine regional cities advanced between January 2 and February 2 while two declined. In most centres, increases in meat prices offset decreases in eggs, tea, oranges and potatoes. Higher coal prices were reported in four cities and rents advanced in all cities except St. John's, Halifax and Saint John.



The clothing and home furnishings indexes registered mixed changes, decreases in the prices of men's work pants and increases in broom prices being predominant. Higher rates for hospital accommodation were reflected in higher miscellaneous indexes for St. John's, Halifax and Toronto. Miscellaneous indexes for the remaining cities were unchanged.

Composite city cost-of-living index point changes between January 2 and February 2 were as follows: Montreal, +0·8 to 190·5; Winnipeg, +0·7 to 177·2; Halifax, +0·4 to 173·9; Saskatoon, +0·3 to 182·1; Toronto, +0·2 to 181·5; Saint John, +0·1 to 180·8; Edmonton, +0·1 to 175·7; Vancouver, —0·7 to 187·5; and St. John's, —0·1 to 102·3.

Wholesale Prices, February, 1953

Canada's general index number of wholesale prices dropped 0·3 per cent between January and February and 5·0 per cent

*See Tables F-1 to F-6 at end of book.

since February last year. The February 1953, index was 220·9; in January it was 221·5 and in February last year, 232·6.

Seven of the eight major groups moved lower between January and February. The largest percentage change occurred for non-ferrous metals, the index for this group declining from 169·6 to 168·5 as a result of decreases in lead, zinc and sheet brass which outweighed a small advance in silver.

Vegetable products receded from 202·0 to 200·9 as losses for potatoes, raw rubber, cocoa beans, lemons, flax, rye and oats outweighed advances for onions, rice and milled feeds.

In the animal products group, a change from 239·3 to 239·0 reflected lower prices for fish, raw furs, livestock (notably steers) and fresh meat. These outweighed a firmer price tone for hides, bacon, ham, dairy products and eggs.

Declines in petroleum products and some domestic coals overbalanced advances in building tile and sulphur to lower the non-metallic minerals index from 175·3 to 174·9.

The index for chemicals and allied products registered a drop of 0·3 points to 176·7, mainly as a result of lower prices for inorganic chemicals and paint materials.

A decline in scrap iron resulted in a decrease in the iron and steel products index from 221·5 to 221·4. Wood, wood products and paper declined from 289·8 to 289·7 as lower prices for fir lumber outweighed slight advances in woodpulp, newsprint and cedar shingles.

Fibres and textile products registered the only advance, moving up from 240·3 to 241·1 because of higher prices for worsted yarns, woollen cloth and raw cotton. These outweighed declines in cotton yarn and sash cord.

Canadian farm product prices at terminal markets recorded further weakness in February, the composite index dropping from 226·4 in January to 222·6, a decline of 1·7 per cent. Both field and animal product prices were lower, the index for the former declining from 186·4 to 182·1 as a result of lower prices for potatoes, flax and eastern grains, that for the latter receding from 266·4 to 263·1 as declines for steers and calves outweighed firmer quotations for hogs, lamb, fowl and eggs.

Residential building material prices registered a further moderate decline between January and February, dropping from 283·7 to 282·3. Lower prices for fir lumber were mainly responsible for the change.

Strikes and Lockouts

Canada, February, 1953*

Strike idleness was down from the low figure of the previous month in spite of a slight increase in the number of existing stoppages. More than half the time loss was caused by two disputes, those involving copper refiners and clothing and hosiery factory workers, both at Montreal.

Wages and related questions were the central issues in nine stoppages in February 1953, causing more than 65 per cent of the total time loss. Of the other disputes, five arose over union questions; four over questions affecting working conditions; and one was over discharge of workers.

Preliminary figures for February 1953, show 19 strikes and lockouts in existence, involving 3,757 workers, with a time loss of 23,777 man-working days, compared with 14 strikes and lockouts in January 1953, with 2,136 workers involved and a loss of 31,050 days. In February 1952, there were 22 strikes and lockouts, with 13,048 workers involved and a loss of 47,603 days.

For the first two months of 1953 preliminary figures show 25 strikes and lockouts, with 4,584 workers involved and a loss of 54,827 days. In the same period in 1952 there were 25 strikes and lockouts, involving 17,768 workers and a loss of 118,748 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in February 1953, was 0·03 per cent of the estimated working time; in January 1953, 0·04 per cent; for the first two months of 1953, 0·03 per cent; and for the first two months of 1952, 0·07 per cent.

Of the 19 strikes and lockouts in existence in February 1953, one was settled in favour of the workers, five in favour of the employers, two were compromise settlements and three were indefinite in result, work being resumed pending final settlement. At the end of the month eight stoppages were recorded as unterminated.

(The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes and lockouts of this nature still in progress are: compositors, etc., at Winnipeg, Man., which began on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; and waitresses at Timmins, Ont. on May 23, 1952.)

Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. Statistics given in the annual review issued as a supplement to the LABOUR GAZETTE and in this article are taken, as far as possible, from the government publications of the countries concerned or from the International Labour Office *Year Book of Labour Statistics*.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in December 1952, was 92 and 13 were still in progress from the previous month, making a total of 105 during the month. In all stoppages of work in progress, 62,600 workers were involved and a time loss of 136,000 working days caused.

Of the 92 disputes leading to stoppages of work which began in December, two, directly involving 7,000 workers, arose over demands for advances in wages, and 34, directly involving 1,900 workers, over other wage questions; three, directly involving 300 workers, over questions as to working hours; 17, directly involving 3,500 workers, over questions respecting the employment of particular classes or persons; 35, directly involving 1,600 workers, over other questions respecting working arrangements; and one, directly involving 100 workers, was over questions of trade union principle.

New Zealand

For the third quarter of 1952 figures show 11 strikes, involving directly and indirectly, 2,202 workers and causing a time loss of 2,740 man-days.

United States

Preliminary figures for January 1953, show 350 work stoppages resulting from labour-management disputes beginning in the month in which 200,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 1,250,000 man-days. Corresponding figures for December 1952, are 200 work stoppages involving 80,000 workers and a time loss of 1,000,000 days.

Selected Publications Received in Department of Labour Library

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed, free of charge, by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the Library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the LABOUR GAZETTE.

List No. 57.

Accident Prevention

1. **U.S. Congress. Senate. Committee on Labor and Public Welfare.** *Industrial Safety.* Hearings before the Subcommittee on Health of the Committee on Labor and Public Welfare, United States Senate, Eighty-second Congress, second session, on S.2325, Accident prevention act of 1951, and S.2714, Industrial safety act . . . Washington, G.P.O., 1952. Pp. 319.

2. **U.S. Federal Safety Council.** *Manufacturing Recommended Safety Standards for Federal Installations.* Washington, U.S. Bureau of Labor Standards, 1952. Pp. 41.

Accidents

3. **U.S. Bureau of Labor Standards.** *Slaughtering, Meat-Packing, and Rendering* . . . Washington, G.P.O., 1952. Pp. 37. This pamphlet deals with the danger of accidents to young people in meat-packing plants.

4. **U.S. Interstate Commerce Commission. Bureau of Transport Economics and Statistics.** *Rail-Highway Grade-Crossing Accidents for the Year ended December 31, 1951.* Washington, 1952. Pp. 36.

Apprenticeship

5. **Great Britain. Building Apprenticeship and Training Council.** *Building: Training for Management. February 1952.* London, H.M.S.O., 1952. Pp. 12.

6. **Massachusetts. Advisory Apprenticeship Committee.** *The Apprenticeship Situation in the Metal Trades and Allied Industries in Massachusetts; a Report* . . . Boston, Massachusetts Development and Industrial Commission, 1951. Pp. 32.

7. **New York (State) Apprenticeship Council.** *Apprenticeship Programs and Apprentices in Training in New York State on December 31, 1951.* New York, New York State. Department of Labor, 1952. Pp. 48.

8. **Patterson, William Francis.** *Industrial Training and Mobilization in California.* Address at annual mass apprenticeship completion ceremony, sponsored by joint apprenticeship committees of the East Bay area, Oakland, California, May 28, 1952. Washington, U.S. Bureau of Apprenticeship, 1952. Pp. 12.

9. **U.S. Bureau of Apprenticeship.** *St. Louis, Mo., and Vicinity Machinist and Tool and Die Maker Apprenticeship Standards;* jointly developed by employers and the International Association of Machinists, District No. 9, in co-operation with the Bureau of Apprenticeship. Washington, G.P.O., 1952. Pp. 28.

10. **U.S. Bureau of Apprenticeship.** *Union Participation in Apprenticeship in 32 Selected States and Territories.* Washington, 1951. Pp. 6.

11. **U.S. Bureau of Apprenticeship.** *Your Skill Improvement Program.* Washington, G.P.O., 1952. Pp. 14. This pamphlet is about apprenticeship.

Civil Service

12. **U.S. Bureau of Employee's Compensation.** *What Every Federal Employee should Know about the Federal Employees' Compensation Act.* Washington, G.P.O., 1952. Pp. 5.

13. **U.S. Interagency Working Committee on Incentives, Awards and Rewards.** *A Proposed Government Incentives, Awards and Rewards Program with Respect to Government Employees.* Report . . . submitted to the Chairman, Government Patents Board. March 10, 1952. Washington, G.P.O., 1952. Pp. 27.

Collective Bargaining

14. **California Personnel Management Association. Research Division.** *Trends & Prospects in Union Relations and Bargaining Practices.* A Stenographic brief of an address given before the California Personnel Management Association and the Personnel Section of the Western Management Association by Richard P. Doherty. Berkeley, 1952. Pp. 14.

15. **Daykin, Walter Lesley.** *The Scope of Collective Bargaining.* Iowa City, Bureau of Labor and Management, State University of Iowa, 1951. Pp. 11.

16. **National Planning Association.** *The Lapointe Machine Tool Company and United Steelworkers of America;* a case study by George P. Shultz and Robert P. Crisara. Washington, 1952. Pp. 81. This is a study of the operation of the Scanlon plan for a joint employer-employee committee.

17. **New York (State) Department of Labor. Division of Research and Statistics.** *Wage-Rate Increases provided by Collective Bargaining in New York State during the Two-Year Period 1950-1951.* New York, 1952. Pp. 22.

ships and Union Steamships Limited, Vancouver, B.C., and Seafarers' International Union of North America, Canadian District (L.G., March 1953, p. 419). The Board had not been fully constituted at the end of the month.

Settlements Following Board Procedure

(1) Canadian National Railways (Atlantic, Central and Western Regions), and the Brotherhood of Locomotive Firemen and Enginemen (L.G., Oct. 1952, p. 1352).

(2) Canadian Pacific Railway Company (Eastern, Prairie and Pacific Regions) and the Brotherhood of Locomotive Firemen and Enginemen (L.G., Oct. 1952, p. 1352).

(3) Canadian Pacific Railway Company (dining, cafe and buffet car employees), and the Brotherhood of Railroad Trainmen (L.G., Feb. 1953, p. 240).

(4) Railway Association of Canada (extra gang employees) and Brotherhood of Maintenance of Way Employees (L.G., Dec. 1952, p. 1585).

Strike Following Board Procedure

On February 16 the International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America, called a strike of employees of Searle Grain Ltd.; Pacific Elevators Ltd.; United Grain Growers Ltd.; Kerr Gifford & Co., Inc.; and Alberta Wheat Pool, all of Vancouver, following receipt by the parties of the report of the Board of Conciliation and Investigation, which dealt with the dispute (L.G., March 1953, p. 420). At the time of writing, the strike had not terminated.

[1] Includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies and non-metallic mineral products. The non-durable group includes the remaining manufacturing industries.

[2] Mainly hotels, restaurants, laundries, dry cleaning plants and business and recreational services.

TABLE C-4.—HOURS AND EARNINGS IN MANUFACTURING

(Hourly-Rated Wage-Earners) SOURCE: Man-hours and Hourly Earnings, D.B.S.

Tables C-4 to C-6 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage-earners of the co-operative firms.

November 1, 1952	42·1	131·0	55.15	132·2	116·1	113·9
December 1, 1952	42·5	132·1	56.14	134·5	115·8	116·1
January 1, 1953 (1)	42·3*	133·9	56.64*	135·8	115·7	117·4

NOTE: Average Real Weekly Earnings were computed by dividing the Consumer Price Index into the average weekly earnings index. (Average 1949=100)

* Figures adjusted for holidays. The actual figures are: January 1, 1952, 38·1 hours, $48.43, January 1, 1953, 38·5 hours, $51.55.

(1) Latest figures subject to revision.

D—National Employment Service Statistics

Tables D-1 to D-7 are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751: statistical report on employment operations by industry, and UIC 757: inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

Form UIC 751: This form provides a cumulative total for each month of all vacancies notified by employers, applications made by workers, and referrals and placements made by the National Employment Service. Also reported are the number of vacancies unfilled and applications on file at the beginning and end of each reporting period. Because the purpose of these data is to give an indication of the volume of work performed in various local National Employment Service offices, all vacancies and applications are counted, even if the vacancy is not to be filled until some future date (deferred vacancy) or the application is from a person who already has a job and wants to find a more suitable one.

Form UIC 757: This form provides a count of the number of jobs available and applications on file at the end of business on a specified day. Excluded from the data on unfilled vacancies are orders from employers not to be filled until some future date. The data on job applications from workers exclude those people known to be already employed, those known to be registered at more than one local office (the registration is counted by the "home" office), and registrations from workers who will not be available until some specified future date.

Claimants for unemployment insurance benefits who are subject to a temporary mass lay-off are not registered for employment, and thus are not included in the statistics reported on form UIC 751 nor in the main figures in form UIC 757. A temporary mass lay-off is defined as a lay-off either for a determinate or indeterminate period which affects 50 or more workers and where the workers affected, so far as is known, will be returning to work with the same employer. Commencing 15 days after the date of such a lay-off, claimants still on the live insurance register are registered for employment on their next visit to the office and henceforth are counted in both statistical reporting forms. Persons losing several days' work each week and consequently claiming short-time unemployment insurance benefits are not included in either statistical reporting forms unless they specifically ask to be registered for employment.

Grand Total	**12,744**	**13,080**	**25,824**	**+ 1,525**	**+ 2,127**

Current vacancies only. Deferred vacancies are excluded.

(1)—Preliminary—subject to revision.

(2)—Commencing January 2, 1953, the Standard Industrial Classification Manual of the Dominion Bureau of Statistics replaced the Industrial Classification Manual of the Department of Labour. Since there is a difference in the grouping of the two industry divisions—Transportation, Storage and Communication, and Public Utility Operation, the change in the totals of these divisions can only be recorded in the Grand Total.

TABLE D-3.—UNFILLED VACANCIES AND LIVE APPLICATIONS FOR EMPLOYMENT BY OCCUPATION AND BY SEX AS AT JANUARY 29, 1953 (1)

(Source: Form U.I.C. 757)

Occupational Group	Unfilled Vacancies (2)			Live Applications for Employment		
	Male	Female	Total	Male	Female	Total
Professional and managerial workers	1,470	519	1,989	3,713	964	4,677

* In addition, revised claims received numbered 24,312. † In addition, 23,098 revised claims were disposed of. Of these, 1,864 were special requests not granted, and 1,225 were appeals by claimants. There were 3,432 revised claims pending at the end of the month.

TABLE E-4.—REGULAR AND SUPPLEMENTARY BENEFIT CLAIMS DISALLOWED AND CLAIMANTS DISQUALIFIED

SOURCE: Report on Operation of the Unemployment Insurance Act, D.B.S.

Chief Reasons for Non-Entitlement	Month of January 1953	Month of December, 1952	Month of January, 1952
Claims Disallowed—			
Regular	53,331	26,050	45,842
Supplementary	15,978	7,710	13,857
Claimants Disqualified—*			
Not unemployed	.....	.....	5,746
Disqualification—total	9,766	7,017	.....
6 days or less	5,181	3,879	.....
7 days or more	4,585	3,138	.....
Not capable of and not available for work	1,949	1,515	1,410
Loss of work due to a labour dispute	250	497	2,929
Refused offer of work and neglected opportunity to work	953	846	841
Discharged for misconduct	809	862	853
Voluntarily left employment without just cause	5,870	6,088	5,200
Failure to fulfil additional conditions imposed upon certain married women	1,074	842	1,165
Other reasons †	2,635	1,752	1,739
Total	92,615	53,179	79,582

* Claimants disqualified January, 1953, include 5,483 on revised and 1,750 on supplementary benefit claims.
† These include: Claims not made in prescribed manner; failure to carry out written directions; claimants being inmates of prisons, etc.

TABLE E-5.—ESTIMATES OF THE INSURED POPULATION UNDER THE UNEMPLOYMENT INSURANCE ACT

SOURCE: Report on Operation of the Unemployment Insurance Act, D.B.S.

At Beginning of Month of	Total	Employed	Claimants*
1951—December	3,170,000	3,016,300	153,700
1952—January	3,183,000	2,935,900	247,100†
February	3,195,000	2,876,500	318,500†
March	3,191,000	2,874,600	316,400†
April	3,195,000	2,874,700	320,300†
May	3,086,000	2,867,900	218,100
June	3,089,000	2,945,500	143,500
July	3,108,000	2,985,300	122,700
August	3,147,000	3,034,400	112,600
September	3,169,000	3,067,000	102,000
October	3,186,000	3,093,400	92,600
November	3,205,000	3,093,500	111,500
December	3,268,000	3,106,100	161,900

* Ordinary claimants on the live unemployment register on the last working day of the preceding month.
† Includes supplementary benefit claimants.

Cumulative totals	25		17,768		118,748	0·07

*Preliminary figures.

‡ Strikes unterminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, FEBRUARY, 1953 (1)

Industry, Occupation and Locality	Number Involved		Time Loss in Man-working Days	Particulars (2)
	Establishments	Workers		
Strikes and Lockouts in Progress Prior to February, 1953				
MINING—				
Copper refiners, Montreal, P.Q.	1	200	4,000	Commenced July 14, 1952; for a union agreement; unterminated.
MANUFACTURING—				
Textiles, Clothing, etc.—				
Rayon factory workers, Louiseville, P.Q.	1	460	2,000	Commenced March 10, 1952; for a new agreement providing for increased wages, union shop, check-off and other changes following reference to arbitration board; terminated by February 9; replacement and partial return of workers; in favour of employer.
Clothing and hosiery factory workers, Montreal, P.Q.	2	490	9,000	Commenced November 25, 1952; for a new agreement providing for increased wages and other changes following reference to arbitration board; unterminated.
Miscellaneous Wood Products—				
Wood furniture factory workers, Durham, Ont.	1	60	800	Commenced July 21, 1952; for a union agreement providing for increased wages, union security, two week's vacations with pay and pay for seven statutory holidays following reference to conciliation board; terminated by February 18; replacement and partial return of workers; in favour of employer.
Metal Products—				
Jewellery factory workers, Vancouver, B.C.	5	41	800	Commenced December 8, 1952; for implementation of award of conciliation board for increased wages, pay for nine statutory holidays and other changes in new agreement under negotiations; work resumed at one establishment January 30; unterminated.
CONSTRUCTION—				
Buildings and Structures—				
Carpenters, Fort William, Ont.	1	28	250	Commenced December 17; 1952; for a new agreement providing for increased wages retroactive to Apr. 1, 1952; unterminated.
TRADE—				
Coal handlers, Montreal, P.Q.	1	24	310	Commenced January 8; *re* number of men required on conveyor belt following reference to arbitration board; terminated February 16; return of workers; in favour of employer.
SERVICE—				
Business and Personal—				
Valet service store workers, Oshawa, Ont.	1	6	40	Commenced January 28; for a union agreement providing for increased wages; terminated by February 11; replacement and return of workers; in favour of employer.
Strikes and Lockouts Commencing During February, 1953				
MINING—				
Coal miners, New Waterford, N.S.	1	1,200	1,200	Commenced February 3; dispute *re* long wall working conditions following breakdown of conveyor belt; terminated February 4; return of workers pending reference to umpire; indefinite.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, FEBRUARY, 1953 (1)

Industry, Occupation and Locality	Number Involved		Time Loss in Man-working Days	Particulars (2)
	Establishments	Workers		
Strikes and Lockouts Commencing During February, 1953—*Continued*				
Coal miners, Thorburn, N.S.	1	190	380	Commenced February 22; protesting dismissal of seven miners for violating safety rule in riding coal trip; terminated February 24; return of workers pending negotiations; indefinite.
Iron ore miners, Bell Island, Nfld.	1	452	452	Commenced February 26; protest against temporary shift of workers to jobs in other classifications; terminated February 26; negotiations; in favour of employer.
Coal miners, loaders, New Waterford, N.S.	1	30	50	Commenced February 26; protesting low pressure on conveyor belt; unterminated.
MANUFACTURING—				
Metal Products—				
Machinery factory workers, Toronto, Ont.	1	187	1,000	Commenced February 20; alleged violation of seniority in transfer of workers to lower-rated jobs; terminated February 27; return of workers pending reference to arbitration; indefinite.
Machinists and moulders, Vancouver, B.C.	1	59	250	Commenced February 23; for a new agreement providing for increased wages and payment of one-half premium for medical service plan following reference to conciliation board; unterminated.
TRANSPORTATION AND PUBLIC UTILITIES—				
Other Local and Highway—				
Truck drivers, Windsor, Ont.	1	21	75	Commenced February 9; dispute *re* interpretation of certain clauses in agreement; terminated February 12; conciliation; compromise.
Miscellaneous—				
Grain elevator workers, New Westminster and Vancouver, B.C.	5	275	2,750	Commenced February 16; for a new agreement providing for increased wages, premium for dust, job classification and pay for eight statutory holidays instead of six following reference to conciliation board; unterminated.
TRADE—				
Laboratory supplies warehousemen, Vancouver, B.C.	1	6	9	Commenced February 16; for a union agreement providing for increased wages and date of agreement following reference to conciliation board; terminated February 17; negotiations; compromise.
SERVICE—				
Business and Personal—				
Garage workers, Saint John, N.B.	1	22	396	Commenced February 9; for union recognition and implementation of award of conciliation board providing for increased wages in union agreement; unterminated.
Garage workers, Courtenay, B.C.	1	6	15	Commenced February 12; for a union agreement; terminated February 14; negotiations; in favour of workers.

(1) Preliminary data based where possible on reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

(2) In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

MAY 15, 1953

CURRENT manpower and labour relations REVIEW

Economics and Research Branch, Canadian Department of Labour

Current Manpower Situation

THE highlight of the manpower picture during April was the rapid seasonal expansion of employment in agriculture, construction, shipping and allied industries. There was also a slower but steady growth of employment in manufacturing as that sector of the economy continued to expand in response to growing consumer demand, defence expenditures and general resource development. As a result, employment levels increased noticeably during the month, particularly in the rural districts.

By the first of May only about 41 per cent of all paid workers were in the labour surplus areas, compared with 67 per cent the previous month, and 61 per cent in May of 1952. At the same time, there was a marked increase in the number of persons in the economy working full time. This resulted both from fuller utilization of those already in the labour force and from the usual seasonal additions to the labour force itself. Hiring activity was strongest in the Ontario and Prairie regions, with labour surpluses continuing, although diminished, in most other parts of Canada.

The monthly Labour Force Survey, which provides an over-all picture of current manpower utilization patterns, estimates that, for the week ending April 18, 1953, there were 5,241,000 persons in the civilian labour force, an increase of 49,000 from the figure reported for the week ending March 21. Of this total 4,645,000 were at work for 35 hours or more during the week, an increase of 111,000 from March 21; 296,000 were at work for fewer than 35 hours, a decrease of 29,000; 135,000 had jobs but were not at work, a decrease of 26,000; and 165,000 were without jobs and seeking work, a decrease of 7,000.

Of the 296,000 persons working fewer than 35 hours during the week, about 192,000 were reported as usually working part-time. Of the remaining 104,000, about 24,000 were employed on a short-time basis, approximately 7,000 fewer than in March; some 22,000 were absent because of bad weather, 25,000 because of illness (15,000 fewer than in March) and the remainder were not working full time for various reasons

A Monthly *Labour Gazette* Feature

including temporary lay-offs, vacations or industrial disputes.

Of the 135,000 persons estimated to have jobs but not working at all during the survey week, illness (62,000) was the most important reason for their absence from work. Another 27,000 persons were laid off for the full week, about 12,000 fewer than in the previous month; and 18,000 were away because of vacations.

It was estimated that 165,000 persons were without jobs and seeking work during the survey week. Another 11,000 worked during part of the week but were also actively seeking other work, making a total of 176,000 persons actively seeking work during the week ending April 18, 1953. This is about 8,000 lower than the total for the week ending March 21.

Supplementary information with respect to regional patterns is available from data on registrations for employment collected at local National Employment Service Offices. Between March 19 and April 16, applications on file decreased by 35,500 to a total of 372,000, about the same as that at April 17, 1952.

While the number of applications fell in all regions, the most decisive drop occurred in Ontario, where the number decreased by 13,800 during the month. The Ontario regional total at April 16 (78,600) was also some 23,200 lower than at the comparable date in 1952. All other regions had a higher number of applications on file than a year earlier, but the decline in Ontario was enough to offset the higher year-to-year totals elsewhere.

In Eastern Canada, the Atlantic region, with 59,600 applications on file at April 16, showed a decrease of 1,000 over the month, while the Quebec region (142,700) showed a decrease of 7,100. In Western Canada, the Prairie region (48,600) showed a decrease of 6,700 from March 19 and the Pacific region (43,000), a drop of 7,000.

While employment expansion at this time of the year is largely a seasonal phenomenon, a comparison with 1952 points up the stronger economic situation prevailing this spring. Employment in manufacturing at March 1 was more than six per cent above last year's levels and year-to-year gains of more than five per cent also occurred in the trade and service industries. Labour requirements for the production of defence materials and resource development have been greater this year but a major influence has been the marked increase in consumer demand. In the first quarter of 1953, for example, retail sales were eight per cent higher in value than in 1952 and one component, motor vehicle sales, was up by 20 per cent. Residential construction was also much higher this spring, the number of housing starts being 64 per cent greater than last year. This higher year-to-year demand for consumer goods and housing provided an additional stimulus for continuing high levels of production and employment.

Current Labour Trends Chart this month appears on page 792.

Labour—Management Relations

LABOUR-MANAGEMENT negotiations and conciliation procedures involving important sectors of Canadian industry were in progress during early May. A few significant settlements were reached, notably in the pulp and paper industry and for certain groups of civic employees. In general, the wage level has continued to rise this year, but at a lower rate of increase than in 1952. Meanwhile, the gradual decline in the consumer price index over the same period indicates a steady improvement in the purchasing power of wages of Canadian workers. The improved economic position of the worker has taken place against an industrial background that has included an increase in employment of some three per cent and in production of some nine per cent over the past year.

Wage trends. At March 1, 1953, average weekly earnings in non-agricultural industries reached a record level of $57.47. This represented a rise over a 12-month period of 6½ per cent, compared with an increase of 12 per cent during the previous year.

The Labour Department's annual survey of wage rate changes in 800 representative establishments between October and April shows fewer wage increases this year than last year. The largest proportion of the increases that occurred ranged between 5 and 10 cents an hour, whereas last year, a higher proportion of the wage increases were of more than 10 cents. The accompanying table shows the pattern of wage changes in the six months ending April 1, 1953, compared with the corresponding period a year earlier.

Wage Rate Changes in 800 Establishments

Distribution of Establishments According to Amount of Wage Adjustment

Amount of Change per Hour	Per Cent of Establishments	
	Six Months Ending	
	April 1, 1952	April 1, 1953
Decrease		
Less than 5 cents	0.0	7.9
No Change	41.5	55.2
Increase		
0— 4.9 cents	18.2	7.0
5— 9.9 cents	18.9	20.2
10—14.9 cents	11.4	7.5
15 cents and over	10.0	2.2
	100.0	100.0

The fact that no wage change occurred in many establishments can be attributed in part to the tendency in Canadian industry generally for wage adjustments to be made during the summer rather than the winter months, that is, outside the period covered by the survey. Some of the wage adjustments that occurred during the survey period were the result of 'deferred' increases provided for in agreements signed at an earlier date. Decreases in wages this year were largely the result of the application of cost-of-living wage adjustment formulas, just as last year some of the smaller wage increases were the result of such 'escalator' adjustments.

The survey indicates a rise in the wage rate index of 1.6 per cent during the six months preceding April 1, 1953. This compares with an average rise of 5.6 per cent over the previous six months (April to October, 1952) and a gain of 2.9 per cent over the six-month period October, 1951, to April, 1952. An upward movement of wage levels oc-

cured in all six major industrial groups, as shown in the table on page 644 although in no case did the increase average more than two per cent.

Indexes of Wage Rates for Six Major Industrial Groups

(1939=100)

Industry	October* 1951	April** 1952	October* 1952	April** 1953	Per Cent Increase Oct./52–Apr./53
Logging	246.2	251.3	293.8	294.5	0.2
Mining	220.4	232.5	238.7	239.2	0.2
Manufacturing	261.6	266.2	278.7	284.3	2.0
Construction	217.2	219.0	235.1	237.5	1.0

Service (Laundries)	222.0	237.2	239.6	241.6	0.8
General Average	243.6	249.4	263.3	267.5	1.6

* Annual survey of approximately 15,000 establishments.

** Sample survey of 800 establishments.

Current Bargaining. During April, collective bargaining became general between pulp and paper manufacturers in eastern Canada and unions representing their employees. Two settlements have been reached. The bulk of the employees are represented by the International Brotherhood of Pulp, Sulphite and Paper Mill Workers (AFL-TLC) and the International Brotherhood of Paper Makers (AFL-TLC). These unions, together with other AFL-TLC unions representing small groups of tradesmen such as electricians, machinists, etc., join together in bargaining with groups of manufacturers.

An agreement covering approximately 7,000 employees was reached between the unions and a group of firms in Quebec and Ontario manufacturing fine grades of paper. The agreement provides for a 40-hour work week and a 10-per-cent wage increase effective October 1, 1953. An increase of 3 cents an hour will apply from May 1 but will disappear when the 40-hour week and 10-per-cent increase come into effect in October.

The Canadian International Paper Company, operating mills in New Brunswick, Quebec and Ontario, has agreed to an interim settlement with the unions. This interim agreement involves the adoption of a 40-hour week and a 2½-per-cent wage increase as of May 1, 1953. Another conference between the parties will be held in June to review conditions. Approximately 5,000 employees are affected.

Negotiations during April between the same unions and the Ontario newsprint and pulp group of nine companies operating 21 mills and employing about 15,000 workers failed to produce a settlement. Reference was then made to the conciliation services of the Ontario Government. However, a special committee of international union officers and management representatives will meet again in June to try to reach a settlement without the intervention of a third party. The unions are seeking a 5-per-cent increase in wages and a fourth week of vacation

after 25 years of service. The companies proposed a 3-per-cent reduction in wage rates.

A group of three Quebec newsprint and pulp manufacturers, Anglo-Canadian Pulp and Paper Mills Limited at Quebec, St. Lawrence Corporation at Three Rivers and Dolbeau, and the James McLaren Company at Masson, have offered the unions a standard minimum wage schedule for paper makers on the same base rates as in Ontario, and a 2½-per-cent increase for all other workers. The unions have rejected the offer of the companies and both parties have agreed to defer negotiations until some time in June.

Settlements have not yet been reported between the National Federation of Pulp and Paper Workers, Inc., (CCCL) and two Quebec companies, Consolidated Paper Corporation and Price Brothers and Company. Conciliation board reports were issued in these disputes in February.

Conciliation is in process in the dispute between 160 West Coast logging and lumbering operators, represented by Forest Industrial Relations Ltd., and the International Woodworkers of America (CIO-CCL) representing some 32,000 employees. Union demands include a wage increase, union shop and certain fringe items.

In the municipal field, salary increases and reductions in hours of work were denied by three arbitration boards dealing with Montreal policemen, firemen and civic office employees. The boards recommended integration of part of the present cost-of-living bonus into salaries. A conciliation board has recommended a 6-cent-an-hour increase for 3,000 B.C. Electric Co. employees in Vancouver, New Westminster and Victoria. The Street Railwaymen's Union (AFL-TLC), which had requested a 23-cent increase, has not accepted the recommendation. Also in urban transportation, the dispute between the Montreal Transportation Commission and the Canadian Brotherhood of Railway Employees and Other Transport Workers (CCL), representing 4,000 employees, has been submitted to arbitration.

In water transportation, on the West Coast a conciliation board report has been rejected by the Seafarers' International Union (AFL-TLC) and a strike has been authorized by a membership vote. Another conciliation board has been formed to hear the dispute between the same union and four of the Great Lakes shipping operators. No settlement has been reached, yet, between this union and the Shipping Federation of Canada, Inc., representing deep sea dry cargo operators on the East Coast.

As was reported last month, the United Steelworkers of America are negotiating with several large gold and base metal mines in Northern Ontario and Quebec. Several conciliation hearings are now in progress. The International Union of Mine, Mill and Smelter Workers (Independent) is bargaining for 16,000 employees of International Nickel Company of Canada at Sudbury and Port Colborne. A wage increase and welfare benefits are apparently the main objectives of the union. A conciliation officer has been appointed in the dispute between Consolidated Mining and Smelting Company, Trail and Kimberley, and the same union.

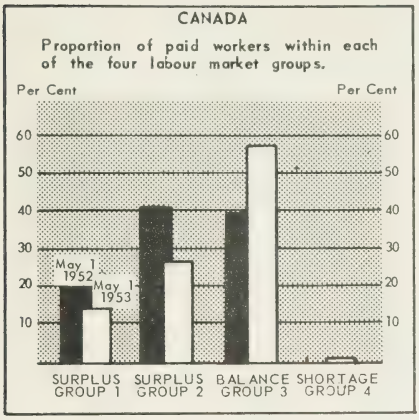
A conciliation board dealing with differences between District 18

of the United Mine Workers of America (CCL) and the Western Canada Coal Operators' Association has recommended no change in wages and that contributions to the miners' welfare fund be increased by five cents per ton of mined coal to a total of 20 cents a ton.

Negotiations in the building trades for several cities throughout the country are in the process of conciliation or arbitration. The United Brotherhood of Carpenters and Joiners of America (AFL-TLC) and the General Contractors' Association have negotiated an agreement covering 45 firms and 3,000 carpenters in the lower B.C. mainland, raising wages by 7 cents to $2.17 an hour. In Hamilton, carpenters received a 10-cent-an-hour increase, in Quebec service trades received 5 cents an hour and in Toronto, the wages of painters were raised 5 cents this year, with a further 5 cents to be added over the next two years.

With the assistance of a federal conciliation officer, the Polymer Corporation Limited, Sarnia, Ont., reached an agreement in April with Local 14, United Gas, Coke and Chemical Workers of America, affecting about 1,600 employees. The settlement included wage increases ranging from 7 to 13 cents per hour and other minor concessions.

Two decisions of interest regarding bargaining rights were announced recently. The Textile Workers' Union of America (CIO-CCL) has been certified at the Drummondville plant of Canadian Celanese Limited, where approximately 4,000 workers are employed. The Ontario Labour Relations Board has dismissed the application of the International Union of Electrical Radio and Machine Workers (CIO-CCL) seeking certification for employees at the Peterborough plant of Canadian General Electric Co. Ltd.



Strikes and Lockouts. There was comparatively little strike activity during the past month. The strike of the grain elevator workers which tied up grain shipments on the West Coast for 80 days was settled early in May. Final settlement was for 7½ cents an hour.

Labour Organization. The Labour Department finds that union membership in Canada, as shown below, has now reached almost 1,220,000.

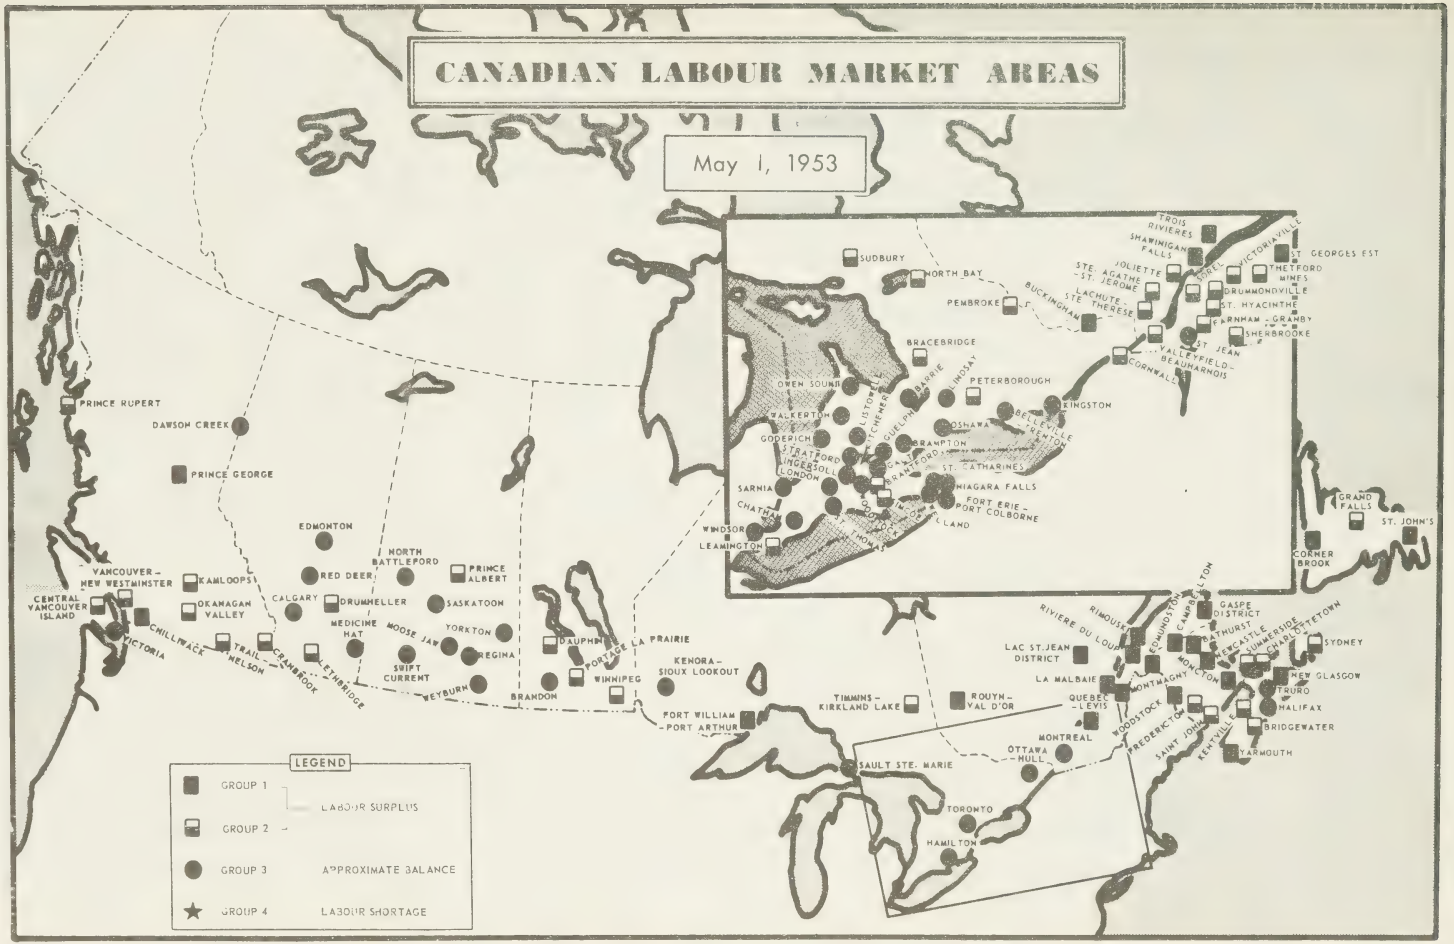
	Number of Branches		Membership	
	Jan. 1, 1953	Jan. 1, 1952	Jan. 1, 1953	Jan. 1, 1952
Trades and Labor Congress of Canada	3,318	3,169	558,722	522,965
Canadian Congress of Labour	1,414	1,337	352,538	330,778
Confédération des Travailleurs Catholiques du Canada, Inc.	451	457	104,486	89,013
American Federation of Labor only (1)	61	61	10,524	9,555
Congress of Industrial Organizations only (2)	9	8	3,000	2,000
Unaffiliated international railway brotherhoods	389	387	41,751	41,385
Other unaffiliated international unions	87	90	61,935	62,592
Other unaffiliated associations, unions and groups	506	543	86,758	87,833
Totals	6,235	6,052	1,219,714	1,146,121

(1) Unions affiliated with the American Federation of Labor but not with the Trades and Labor Congress of Canada. (2) Unions affiliated with the Congress of Industrial Organizations but not with the Canadian Congress of Labour.

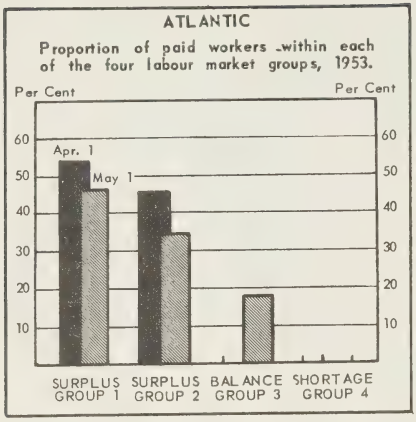
Manpower Situation in Local Areas

THE accelerating pace of employment expansion during April caused a rapid reduction of labour surpluses throughout the country. At May 1, fairly substantial labour surpluses (Group 1) existed in 25 areas, compared with 36 at the beginning of April. The number of areas with moderate labour surpluses (Group 2) decreased from 49 to 42 during the month. These changes were accompanied by a corresponding increase of 17 areas in which the labour market was in approximate balance and the development of labour shortages in one area.

A comparison of the current situation with that of last year, as indicated in the accompanying chart and table, shows that more areas had balanced labour markets this year than last. Since most of the additional areas are the more heavily populated ones, the number of workers living in balanced labour markets is considerably greater than last year. Thus, the number of approximately balanced labour markets increased from 43 to 47 over the year while the percentage of paid workers in these areas rose from 39 to 58. Similarly, the percentage decrease in the number of paid workers in surplus areas was far greater than the decline in the number of these areas.



In evaluating the significance of the number of labour market areas in the various categories of the table below, it is necessary to keep in mind the marked seasonal variations in labour requirements through the year in Canada. Each year, from December to March, labour surpluses develop in a large number of areas. These surpluses decline sharply during the spring months and shortages often occur during the summer and early fall.



Labour Market Areas	Labour Surplus*				Approximate Balance*		Labour Shortage*

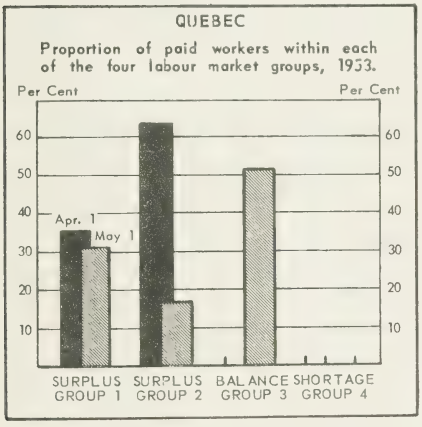
LABOUR SHORTAGE

THE seasonal downward trend in activity in the Atlantic region continued during the early part of April. This development was reflected by a drop in the number of full-time workers from 393,000 to 393,000, in the four weeks ending April 18, and an increase of 9,000 in the number of workers employed less than full-time. At the same time, the labour force was increased by seasonal additions, mainly of female cannery workers. During the latter part of April, however, increased activity in fishing, saw-milling, construction and on the river drive increased labour demand in most areas.

Total employment in the region was lower during the first quarter of 1953 than during the same period last year. Logging employment in New Brunswick, for example, decreased by over 50 per cent and reduced winter wood-cutting curtailed labour requirements for the river drive. Employment reductions such as this were partly offset by year-to-year increases in shipbuilding, saw-milling and canning.



Labour surpluses still existed in most labour market areas in the Atlantic region at the beginning of May, although excessive labour supplies were less pronounced than at the beginning of April. Of the 20 areas in the region, ten were in the Group 1 and eight in the Group 2 surplus categories, and two areas, Halifax and Truro, were in the balanced category. This compares with 13 areas in the Group 1 category, seven in the Group 2 category and none in the balanced category, at the beginning of April. The proportion of paid workers within each Group is illustrated in the accompanying chart.

Metropolitan and Major Industrial Areas. A surplus of labour continued in St. John's, Nfld., since the spring season was not far enough advanced by the end of April to stimulate any appreciable increase in employment. Logging employment declined again during the month, as it did in March, and waterfront activity was temporarily curtailed by heavy ice along the coast. Labour requirements will increase considerably in the coming months, however, as shipping, construction, sea-fishing and canneries increase activity.

Increased hirings in the manufacturing and construction industries reduced the labour surplus in Halifax during April, bringing its labour market into approximate balance. Fish-processing plants and shipbuilding yards were particularly active, the latter showing a year-to-year increase of 12 per cent. Labour supplies increased temporarily in Saint John, following the seasonal decline in water and rail transportation activities, but the labour surplus did not increase sufficiently to change the area from the Group 2 category where it stood in the previous month.

Major Agricultural and Minor Areas. The return of sawmill workers, truck drivers and construction workers to regular jobs during April resulted in bringing Truro from a labour surplus to the balanced category. Bridgewater, Charlottetown and Summerside were the only remaining areas that showed changed labour markets during the month. These moved from the Group 1 to the Group 2 surplus category as spring farming operations were resumed.

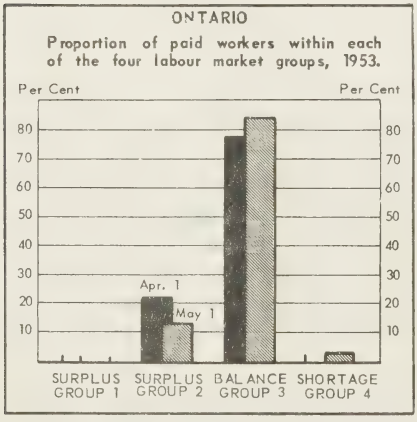
QUEBEC

THE usual seasonal expansion in employment was in progress in Quebec during April. The initial increase occurred somewhat later than in other parts of the country but, by the end of the month, labour surpluses were dwindling rapidly. The number of full-time workers rose from 1,306,000 to 1,346,000 in the four-week period ending April 18, while the number of those employed less than full-time decreased from 70,000 to 62,000. Employment levels continued to exceed those of last year, largely because of the strength of manufacturing industries.

Employment expansion in April resulted principally from resumption of activities in construction, the opening of navigation and the beginning of spring work on farms. In addition, sawmill activity expanded and hiring increased in logging as preparations were made for the river drive.

At May 1, most paid workers were in areas where the labour market situation was balanced, whereas at April 1, most paid workers had been in areas with moderate labour surpluses (Group 2), as shown in the accompanying chart. During April, the proportion of paid workers in areas classified in Group 1 decreased from 36 to 31 per cent. The majority of the areas in the region still reported labour surpluses during the month and at May 1, 12 were in the Group 1 and 11 in the Group 2 categories. Two areas, however, Montreal and St. Jean, moved into the balanced category and the combined number of workers in these areas outweighed that in the other areas.

Metropolitan Areas. The Montreal labour market moved into balance during April, as activity was resumed in the water transportation and construction industries. The steady year-to-year increase in building permits issued in Montreal continued and construction tradesmen seeking work were about a third fewer in number than at the same time last year. Little change occurred in employment in manufacturing, which was about six per cent above the level of the previous year.



Labour surpluses in Quebec City, although still substantial, began to decrease during April. Surpluses were still large among construction

workers although they decreased slightly during the month. Manufacturing employment during the month remained stable at a level slightly higher than last year.

Major Industrial Areas. No change occurred in the classification of these areas during the month but surpluses were gradually being reduced. The four areas in the Eastern Townships remained in the Group 2 category. Textile employment in these areas was steady at only slightly higher levels than last year. A number of textile plants were working short-time. Construction work was, however, rapidly increasing in these areas. Labour surpluses in Three Rivers, Shawinigan Falls, Lac St. Jean district and Rouyn–Val d'Or were beginning to decline from the high level reached during the winter. All four areas remained in the Group 1 category.

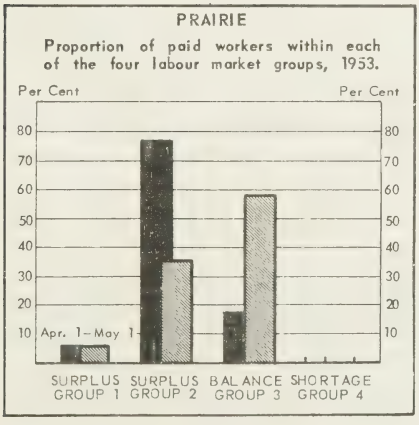
Major Agricultural and Minor Areas. Many men who had been unemployed since the completion of the logging cut were returning to work in agriculture, water transport, sawmilling and construction. The number of areas falling into Group 1 decreased from twelve to seven during the month, while that of areas in Group 2 increased from three to seven. One area, St. Jean, moved into the balanced category during the month. Most of the seasonal employment expansion in these areas, however, will not take place until weather and ground conditions improve in northern areas. At that time, a large number of men will be employed at various development sites. Two of the largest, the Bersimis hydro-electric power site and the Sept Iles iron ore development, are expected to employ many of the workers currently available.

ONTARIO

SEASONAL employment increases during April and early May centred in the construction, agriculture, water transportation and fishing industries. By mid-April, the number of persons working full time reached 1,683,000, an increase of 33,000 from the previous month. Part of this resulted from seasonal additions to the labour force and part from the more regular employment of those already in the labour force.

Although construction, particularly residential and business, was considerably higher than a year ago, local labour supplies were adequate in most areas. Movement of agricultural labour into the construction and manufacturing industries caused some shortages of experienced farm help. The arrival of more than 300 German immigrants in April helped to relieve this situation. In southern Ontario areas, continuing high levels of employment in manufacturing, together with the seasonally expanding industries, absorbed most available labour. By the beginning of May, the only existing labour

surpluses were in some of the northern areas, where logging and sawmilling operations were at a standstill.



During April, labour markets in Ontario continued to move towards a balanced situation. Six areas moved from surplus to balance and a shortage developed in one. Thus, by the first of May, 28 areas had approximately balanced labour markets, ten had some labour surplus and one had a tight labour market. About 84 per cent of the paid workers were in balanced labour market areas, compared with 69 per cent a year earlier and 78 per cent the previous month.

Metropolitan Areas. Although the three metropolitan areas of Toronto, Hamilton and Ottawa–Hull remained in the balanced labour market category, labour demand strengthened in all three centres during April. Nearly all available construction workers in Toronto and Ottawa were employed. There was still, however, a slight surplus of carpenters and unskilled construction workers in Hamilton. Engineers were scarce in all three areas but immigrants from the United Kingdom were gradually filling many of the vacancies.

Major Industrial Areas. Employment levels increased in all the major industrial areas of Ontario during April. Heightened activity in fishing, agriculture and lake shipping brought Sarnia and Welland into the balanced category while increased employment in automobile manufacturing together with growing construction and farming activity absorbed most of the surplus labour in Oshawa. The continuing high level of manufacturing employment and the increasing demands for farm and construction workers in Kitchener brought the area into the shortage category. Some labour surplus continued in the Brantford, Cornwall, Peterborough, Sudbury and Timmins–Kirkland Lake areas.

Major Agricultural and Minor Areas. By the beginning of May, 16 of the 21 major agricultural and minor areas had approximately balanced labour markets. In Leamington and Simcoe, the labour surplus situation will probably not improve substantially until canning operations begin but warm weather should permit spring work to begin in Bracebridge, North Bay and Pembroke within the next few weeks.

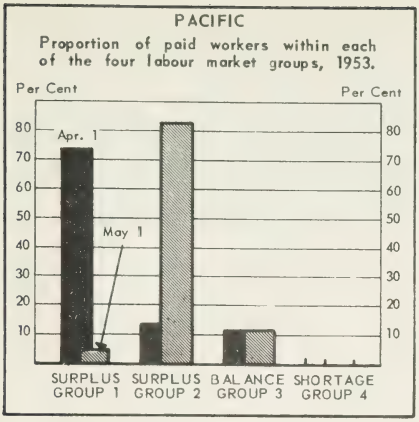
PRAIRIE

EMPLOYMENT began to increase during April as crop seeding began in the southern parts of the Prairie region. By the middle of the month, the number of full-time workers reached 845,000, an increase of 41,000 over the month. Part of this increase resulted from a reduction of 13,000 in the number of persons on short time or on temporary lay-offs and the remainder was attributed to a decline in unemployment and a seasonal increase in the labour force.

Although increasing farm ac-

tivity was mainly responsible for increasing employment, construction work also expanded substantially. The value of construction work in the region this year was expected to exceed the 1952 total by 18 per cent. During the first four months of 1953, the number of houses under construction was more than a third greater than in the same period in 1952. The value of building permits in the larger centres, notably Regina, Calgary, Edmonton and Saskatoon, was also substantially greater this year than last. Although labour requirements were being met in April, difficulties in recruiting sufficient skilled construction workers were anticipated by contractors in a number of areas. The early and sharp decline in coal production caused lay-offs of coal miners, who are, however, being absorbed into farm and construction work.

The general increase in activity resulted in the elimination of labour surpluses in eight of the twenty-one areas in the region. At the beginning of May, one area was in the Group 1, six were in the Group 2 and 14 in the balanced labour market categories. Last year, 16 areas were in the balanced category and five in Group 2. The situation at that time, however, was somewhat unsure because simultaneous harvesting and seeding operations created an abnormal demand for farm workers. The changes during the month in the proportion of paid workers within the four labour market categories are shown in the accompanying chart.



Metropolitan and Major Industrial Areas. The decrease in labour surpluses in Calgary, Edmonton and Winnipeg was relatively small. This was mainly because of rain and late snow during the month, which hampered construction and the deliveries of livestock from rural points. Nevertheless, the reduction was large enough in Calgary and Edmonton to bring these areas into the balanced category. In both areas, the volume of industrial and residential construction in progress was greater than last year. This, together with the hiring for industrial plants now nearing completion, will increase labour requirements this summer.

Fort William–Port Arthur was the only area in the Group 1 category at the beginning of May. Some increase in labour demand stemmed from the opening of lake navigation and the consequent increase in grain shipments. This increase, however, was outweighed by the large number of workers released from pulp cutting camps, who have not yet found other employment.

Major Agricultural and Minor Areas. Spring seeding was well underway by May 1 in most of southern Saskatchewan and Manitoba. Moderate to acute shortages of farm workers were reported in Brandon, Estevan, Moose Jaw, Regina, Saskatoon and Yorkton. In these and other areas, the heavy volume of current or prospective construction has made workers reluctant to apply for farm work.

PACIFIC

THE early part of April saw further slow expansion of outdoor activity, together with post-Easter slackening in retail trade and substantial withdrawal of female workers from the labour force. The number of full-time workers rose from 371,000 to 373,000 in the four-week period ending April 18, while the number of workers employed less than full-

time decreased by 5,000. Following this date, activity in logging, construction and agriculture recovered rapidly from the retarding effects of wet weather. By the beginning of May, increasing labour demand was reported in almost all areas of the region.

Comparison with previous years shows that, for the first time in almost three years, non-agricultural employment declined. The year-to-year drop is slight, amounting to less than one per cent, but it is clear that without the large volume of construction at present in progress, the employment decline over this period would be a good deal greater. Higher employment in construction and, to a lesser extent, in trade largely offset year-to-year employment declines of 30 per cent in logging, 10 per cent in mining, 45 per cent in fish-canning, two per cent in pulp and paper manufacturing and eight per cent in the manufacturing of iron and steel products.

Labour supply was still greater than demand in all but one local area at the beginning of May. There was, however, a decrease in the size of surpluses with the result that a total of three areas moved from the Group 1 to the Group 2 labour surplus category. Since Vancouver-New Westminster was one of these areas, a marked change occurred in the proportion of paid workers within these two groups. As shown in the accompanying chart, the number of paid workers in Group 1 amounted to five per cent of the regional total at the beginning of May, compared with 74 per cent a month earlier.

Metropolitan and Major Industrial Areas. In Vancouver—New Westminster, the movement of workers to remote construction projects, together with a higher level of general activity in the metropolitan area, caused a sufficient decrease in the labour surplus to shift the area from the Group 1 to the Group 2 category. Logging, fishing and fish-canning operations continued at reduced levels. Employment at sawmills was increasing but the present state of export demand for lumber suggests that output this year may be below capacity. On the other hand, the volume of construction in progress was approaching record levels.

In Victoria, there was a further seasonal increase in employment. The level reached, however, was not as high as had been expected because of lay-offs in shipbuilding and temporary delays at several large government and industrial construction sites. Nevertheless, owing to the large volume of work in prospect, shortages of certain kinds of skilled construction workers were expected at an early date.

Minor Areas. Substantial reductions of labour surpluses occurred in almost all minor areas, although none was large enough to bring any area out of the labour surplus categories by the beginning of May. Prince George, where the labour surplus increased, was the only area in which the employment trend was contrary to that of the region. This increase in labour supply occurs each year when the sawmills in the area virtually close down as a result of deterioration of logging roads.

Current Labour Statistics

(Latest available statistics as of May 11, 1953)

Principal Items	Date	Amount	Percentage Change From	
			Previous Month	Previous Year
Manpower				
Total civilian labour force (a)	Apr. 18	5,241,000	+ 0.9	–

Total (Average 1935–39=100)	February	239.6	+ 3.4	+ 9.6
Manufacturing	February	254.7	+ 3.9	+ 9.3
Durables	February	323.2	+ 3.3	+14.7
Non-Durables	February	210.9	+ 4.0	+ 4.5

(a) Estimated by DBS on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs. Labour force estimates are based on a sample survey of 30,000 households chosen by area sampling methods in more than 100 different areas in Canada. They are subject to sampling error. In general the smaller the estimate, the larger the relative sampling error. The estimates, however, do show the numbers in the various labour force categories with sufficient accuracy for practical purposes.

(b) Total applications on file at NES offices exclude registrations from persons known to have a job while applying for another one. Means are also taken to exclude, as far as possible, persons who have secured work on their own since registration. Nevertheless, the figures inevitably include a number of persons who have found employment or who have left the labour force by the time the count is made. On the other hand, not all the persons who are looking for work register at employment offices.

(c) These percentages compare the cumulative total to date from first of current year with total for same period previous year.

Notes of Current Interest

Supreme Court Rejects Tony Poje's Appeal

The Supreme Court of Canada, in a decision handed down April 28, rejected the appeal of Tony Poje, International Woodworkers of America (CIO-CCL) business agent, against a three-month jail sentence and $3,000 fine imposed by the Supreme Court of British Columbia (L.G., Nov. 1952, p. 1489).

The British Columbia court ruled that the union official was criminally in contempt of court in defying a court injunction prohibiting picketing.

In its decision, the Supreme Court commented that those who defy a court order tend to heap scorn on the administration of justice.

February Housing Record Better Than Last Year

Both starts and completions of new dwelling units increased in number in February, compared with February last year, the Dominion Bureau of Statistics has reported.

Starts numbered 2,789, compared with 2,008, while completions totalled 6,161, compared with 4,442. The number of units under construction at the month-end was 49,737, substantially above last year's 37,312.

More Grants Made for Labour Relations Studies

The Labour Department - University Research Committee, made up of representatives of a number of Canadian universities and officers of the federal Department of Labour, met on March 26 to consider applications for research grants during 1953. It is expected that, during the coming summer, six research studies will be undertaken in the field of labour-management relations and with particular reference to the settlement of industrial disputes.

The committee, which directs and administers the program under which these grants are made, was formed early in 1951. Applications are received from university faculty members and graduate students who wish to undertake studies. For approved applications, the research grants are made by the Department.

The program started with two studies in the summer of 1951. In 1952 grants were made for five further studies. The projects have been undertaken in co-operation with provincial labour departments and with employer and labour groups.

More Persons Receiving Old Age Assistance

The number of persons receiving old age assistance in Canada increased during the first quarter of 1953 from 84,776 at December 31, 1952, to 87,675 at March 31.

The federal Government's contributions under the federal-provincial scheme totalled $4,903,990.47 for the quarter, compared with $4,800,505.38 in the preceding quarter. Since the inception of the Act, the federal Government has contributed $21,406,075.86.

During the quarter, 4,116 persons receiving old age assistance were transferred to the administration of The Old Age Security Act, compared with 3,935 in the preceding quarter. Since the inception of the Act, 13,788 recipients have been transferred.

At March 31, 1953, the average monthly assistance in the provinces paying a maximum of $40 a month ranged from $33.49 to $38.03, except for one province where the average was $24.07. In Newfoundland, which pays a maximum of $30 a month, the average was $29.14.

Bookbinders' President, Pilots' Union Founder Die

John B. Haggerty, President of the International Brotherhood of Bookbinders (AFL), who died recently in Miami, has been succeeded by the Brotherhood's First Vice-President, Robert E. Haskin.

The death of another union leader was recently announced. David L. Behncke, founder and first President of the Air Line Pilots Association (AFL), died April 14 in Chicago at the age of 55 years. Mr. Behncke had headed the organization he founded in 1932 until 1951.

In the bookbinders' union, Walter F. Barber, who has been 2nd Vice-President, has been elected to succeed Mr. Haskin; Robert L. Ennis, 4th Vice-President, has been moved up to the 2nd Vice-President's post; and Glenn Moss has been named 4th Vice-President.

UAW Convention Declares Annual Wage Next Target

Walter Reuther, President of the United Automobile Workers of America (CIO), has called for a guaranteed annual wage in 1955 when the union's five-year escalator agreements expire.

Speaking at the opening March 22 of the UAW's 14th international convention in Atlantic City, Mr. Reuther said the guaranteed annual wage attacks problems of unemployment at the root by shifting to the employer the cost of unemployment and by compelling the employer to pay workers as the employer himself is paid—by the year.

Mr. Reuther said that the union in the near future would invite the major automobile corporations to join leading economists of the United States and Canada in a study of annual wage proposals.

"The guaranteed wage, though it must be won in collective bargaining, is far more than a collective bargaining demand," said Mr. Reuther.

"A solution of that problem," he said, "will not only strengthen America; it will have an impact throughout the world, wherever communism exploits the insecurity of workers and wins converts by pointing out that democracy never has solved the problem of mass unemployment."

The delegates passed a resolution by unanimous vote declaring that the annual wage would be their next major objective in collective bargaining. The resolution was a broad policy statement and did not define how it would be carried out. It recommended, however, that the plan be co-ordinated with state unemployment benefits, that it be on a pay-as-you-go basis and that it be administered jointly by company and union.

More than 200 representatives of UAW locals in Canada attended the five-day constitutional convention, the first since April 1951.

On the immediate issue of revising escalator agreements, which have more than two years to run, Mr. Reuther said that unless the automobile companies—Ford, General Motors and Chrysler—granted the union's recent demands for wage and pension improvements in existing contracts, the UAW Executive Board would ask the delegates to authorize rejection of such long-term agreements in the future.

Mr. Reuther, who is also President of the Congress of Industrial Organizations, outlined four conditions which he said must be met in any merger with the American Federation of Labour. These are: (1) the basic industrial union structure of the CIO must remain intact; (2) in advance of the merger there must be agreement on machinery for resolving jurisdictional conflicts that might arise between competing unions; (3) unions that practise or countenance racial or religious discrimination must throw open their membership rolls; and (4) racketeering elements must be expelled from all unions.

The 2,980 delegates, by an almost unanimous vote, adopted a resolution calling for organic unity of all *bona fide* labour organizations. The resolution stated, however, that the unity talks must proceed on the basis of full protection for "the industrial type of organization and other basic principles on which the CIO was founded."

The convention also passed resolutions calling for: a study of new technological developments in the industries in UAW jurisdiction; the elimination of contracting-out in plants where employees with seniority are not fully employed; and the elimination of seven-day operations in powerhouses and the payment of premium pay for Saturday, Sunday and holiday work for all those who must be employed on such operations.

Other topics discussed at the convention were changes in the UAW's constitution to make it easier to prove a member is a Communist and thus ineligible to hold office in the union, and CIO plans for an organizing drive in the mass production industries to increase the present estimated membership of 4,000,000 workers.

The President of the United Steelworkers of America, David J. McDonald, spoke at the convention and denied reports that he was considering a withdrawal of his million-member union from the CIO.

Mr. McDonald said his union would work closely with the UAW in the guaranteed wage campaign, in the fight against communism and in other common interests.

The Canadian delegates to the convention were headed by George Burt, the union's Director in Canada.

Prof. V. Bladen, Toronto, In UAW Advisory Group

Dr. V. M. Bladen, head of the School of Business Administration of the University of Toronto, is one of the ten economists who have accepted places on the Guaranteed Wage Public Advisory Committee of the United Auto Workers (CIO). He is the only Canadian in the group.

The committee will assist the union and its President, Walter P. Reuther, in a study of guaranteed annual wage proposals.

The other nine economic experts are:—

Arthur J. Altmeyer of Madison, Wis., former Federal Social Security Commissioner.

Eveline Mabel Burns, consultant to the New York State Department of Labour, the United States Treasury Department Committee on Economic Security; the Federal Reserve Board and the Social Security Board; Professor of Social Work, Columbia University.

Edward L. Cushman, Director of the Institute of Industrial Relations and Professor of Public Administration, Wayne University, Detroit, Mich.; consultant to the Secretary of Labour.

William Haber, Professor of Economics, University of Michigan; chairman of the Federal Advisory Council on Employment Security.

Alvin H. Hansen, Littauer Professor of Political Economy, Harvard University.

Seymour Edwin Harris, Professor of Economics, Harvard University.

Richard A. Lester, Professor of Economics and Chairman of Social and Economic Institutions, Princeton University.

Charles A. Myers, Professor of Industrial Relations, Massachusetts Institute of Technology; Executive Director, Industrial Relations Section, MIT.

Edwin E. Witte, Professor and Chairman of the Department of Economics, University of Wisconsin.

Steelworkers Seek Raise; Guaranteed Wage by 1954

The Wage Policy Committee of the United Steelworkers of America (CIO) has decided to ask for higher wages in 1953 for its 1,250,000 members in steel producing and fabricating plants, and a guaranteed annual wage in 1954.

The union's President, David J. McDonald, said an increase in the present average steel wage of $2.06 per hour was justified by the rising productivity of the union's members, the continuing high level of prices, the profits of the industry and the economic situation in the country as a whole.

Without specifying the amount of increase it will demand, the Wage Policy Committee was unanimous in declaring that the increase should be consistent with those the union has won each year since 1946. With the exception of 1949, when the union settled for an employer-financed pension and social insurance plan, these increases have ranged from 13 to 18½ cents per hour.

Under the terms of the present contract, the union is free to strike July 1 this year if no agreement on wages is reached by that time.

In Canada, the United Steelworkers of America (CIO-CCL) has asked the major steel producers for a meeting to discuss wage increases for 1953. It named no figure in its initial wage proposal.

The Canadian union achieved wage parity last year with its counterpart in the United States and some observers feel that it will not define its demands until the union in the United States had done so.

Teamsters Guaranteed 2,000 Hours' Work

A contract guaranteeing 2,000 hours of work for 420 employees of the Rice-Stix Dry Goods Company in St. Louis, Mo., was negotiated recently by Local 688 of the International Brotherhood of Teamsters (AFL).

The contract guarantees pay for 50 weeks of 40 hours each, including the regular paid vacation period and paid holidays. Employees can be off work up to two weeks in any one year before the company begins to pay for idle time. The contract runs for five years.

The employees covered are those among the company's 700 warehouse and distribution workers with the highest seniority. As these quit or retire, the next highest in seniority take their place, so that the numbered covered is always 420.

The same local earlier signed a similar five-year contract with the Brown Shoe Co., St. Louis, Mo. In this agreement, a clause guarantees 425 high-seniority employees of the company 40 hours of work a week for 50 weeks—including vacation periods—each year. Overtime is not counted against guaranteed hours. About 475 workers are currently employed at the plant.

Canadian Rubber Workers Seek Pay Equal to U.S.

In addition to a demand for a 20-cents-per-hour general wage increase, the Canadian policy section of the United Rubber Workers of America (CIO-CCL) will start a drive to eliminate wage differentials existing between Canadian and U.S. rubber plants.*

The group, representing some 15,000 workers in 27 local unions in Canada, announced its 1953 economic program in Montreal April 15.

*The United Steelworkers last year gained equality of base wage rates with steelworkers in the United States (L.G., Sept. 1952, p. 1166).

NAM Urges Price Cuts Rather Than Pay Boosts

Benefits of increased productivity should be distributed in the form of lower prices for all consumers rather than higher wages for organized workers, declared the National Association of Manufacturers in the United States recently.

More than 2,500,000 workers, most of them in the automobile, aircraft and railroad industries, are now receiving automatic annual increases of four cents per hour on the basis of increasing productive efficiency in the United States. Unions have estimated that this productive efficiency is increasing at an average rate of two to $2\frac{1}{2}$ per cent each year.

The wages-productivity tie-up was first used in the long-term contract between the United Automobile Workers of America (CIO) and General Motors Corporation.

In its statement, the Association declared that the national interest would be "adversely affected" if there were any widespread adoption of a formula tying wages to productivity.

"No real need exists for attempting to relate wages to productivity in any new way," the Association said, "inasmuch as natural economic forces have over many years assured workers of a nearly constant share of the proceeds of production."

TLC-CCL Unity Unlikely Says Gordon Cushing

Amalgamation of Canada's two leading union organizations is not likely, said Gordon C. Cushing recently in a press interview in Victoria.

The Secretary-Treasurer of the Trades and Labour Congress of Canada said the problem of bringing the TLC and the Canadian Congress of Labour together would be difficult.

"There would be considerable overlap of unions to strengthen out," he said. "In addition, the TLC keeps out of politics while the CCL openly advances the cause of the CCF party."

AFL and CIO Set Up Group to End Raiding

All phases of the problem of labour unity were discussed at a meeting in Washington last month of six officials of the American Federation of Labour and 12 from the Congress of Industrial Organizations, including both presidents.

The labour leaders decided to set up a subcommittee of six—three from the AFL and three from the CIO—to study the possibility of eliminating raiding between affiliates of the two organizations as a prerequisite to achieving labour unity.

A joint statement issued after the meeting said: "We met in good faith to try to achieve labour unity. Both sides came into the meeting with no prior conditions. Both sides agreed to explore all the matters involved on their merits.

"There was a general discussion of all phases of the problem. In particular, the conferees gave consideration to the problem of 'raiding', which, it was agreed, is not conducive to unity. We think the efforts and resources of the labour movement should be used to organize the unorganized."

The six-man subcommittee will also study the structure and jurisdictional lines of the two organizations and prepare a report and an agenda for the next meeting of the full unity committee to be held in Washington in June.

Members of the subcommittee are: President George Meany of the AFL; President Walter P. Reuther of the CIO; William F. Schnitzler, AFL Secretary-Treasurer; James B. Carey, CIO Secretary-Treasurer; Matthew Woll, AFL Vice-President; and David J. McDonald, President of the United Steelworkers of America (CIO).

Mine-Mill Seeks Policy Of "Spread-the-Work"

A "spread-the work" policy will be sought by the International Union of Mine, Mill and Smelter Workers (independent). The fifth annual convention of the union's Canadian members decided to ask that work be divided among all employees as an alternative to layoffs.

The union's annual report said security of employment was one of the organization's most urgent problems. Canadian Director Harvey Murphy said in all bargaining the union should make it a rule to oppose layoffs.

The convention also elected members to the Canadian Council established by the international union at its 1952 annual meeting. Members elected were: Michael Solski and Ray Stevenson of Sudbury, Ont.; Michael Kopinak, Port Colborne, Ont.; L. D. Messmer, Medicine Hat, Alta.; Robert Michel, Calgary; Douglas Gold, Kimberley, B.C.; K. A. Smith, Vancouver; and J. F. Tees, Yellowknife, NWT.

Three members were assigned to the council by the international union. They are: Nels Thibeault, Sudbury; Harvey Murphy, Vancouver; and William Longridge, Calgary.

Teamsters, Machinists Divide Garage Industry

Two of the largest unions in the American Federation of Labour have agreed to divide between them the estimated one million unorganized workers in the garage and service station industry in the United States.

The International Association of Machinists will have jurisdiction over employees who assemble, dismantle, adjust and repair chassis, bodies and all mechanical parts of automotive equipment.

The International Brotherhood of Teamsters will cover employees engaged in storing, washing, polishing, fueling, oiling, greasing, tire service and repair, battery service, receiving, shipping and delivery. It will also take in hostlers, service station attendants, parking lot attendants and salesmen.

The two unions will pool their field staffs and resources in a country-wide co-operative organizing campaign.

Two New Reports Show Grads' Job Opportunities

Two reports have been prepared by the Economics and Research Branch of the Federal Department of Labour which indicate the employment opportunities of university graduates and technical personnel.

One report, *Employment Outlook for University Graduates,* summarizes the comments of deans of university faculties on employment trends they have noted and levels of enrolment in their courses.

Employers' Requirements

The second study, which appears in the *Technical Personnel Quarterly Bulletin,* embodies the results of a survey of employers' requirements over the next four years.

Copies of both reports will be available after June 15 from the Publications Division, Department of Labour, Ottawa.

Canada Year Book, 1953, Ready for Distribution

The 1952-53 issue of the *Canada Year Book* has been released by the Dominion Bureau of Statistics. The official compendium of information on the country's economic and social development, the book contains extensive statistical material and analytical commentary.

This year's edition, thoroughly revised, runs to 1,266 pages and contains 28 chapters. Numerous maps and charts are included.

The regular chapter material has been augmented by a number of special features of current interest. These include an outline of Canada's international activities; the development of public health, welfare and social security in Canada; expansion in the pulp and paper industry and in the mineral industry; a statement of the crude petroleum situation and a review of foreign trade.

A succinct analysis of the administrative functions of federal government departments is also included.

Copies may be obtained from the Queen's Printer at a price of $3 each.

CCCL Regional Council Plans Own Price Index

The Saguenay-Lake St. John Regional Council of the Canadian and Catholic Confederation of Labour has set up a three-man statistics committee responsible for the preparation of a monthly regional consumer price index.

The committee has adopted the same methods used by the Dominion Bureau of Statistics. It will base its findings on the same consumer habits, the same items regarding quality as well as quantity and the same methods for compilation of prices. It will compute the index in the same way.

Centres in Survey

The centres in the Saguenay-Lake Saint-John region where the survey will be conducted are: La Baie des Ha! Ha!, Chicoutimi, Arvida, Kenogami, Jonquière, St. Joseph d'Alma and Dolbeau.

The statistics committee is composed of Roch Tremblay, Rene Perron and Charlemagne Girard.

Machinists Celebrate 65th Anniversary

On May 5 the International Association of Machinists completed its 65th year. The first Canadian lodge, No. 103, at Stratford, Ont., was organized during the IAM's first two years of existence.

Lodge No. 1 of the IAM was organized at Atlanta, Ga., on May 5, 1888, with 19 members. Membership today is estimated at 806,000.

There are 155 Canadian locals with a membership of 37,500.

The May issue of the *Machinists Monthly Journal* commemorates the 65th anniversary of the union's founding.

Working Wives in Canada Up Fourfold in Decade

In the decade between the 1941 and 1951 Census, the number of married women in Canada's labour force increased fourfold, from 85,633 in 1941 to 348,961 in 1951. The 401-per-cent jump dwarfed the 33·5-per-cent rise in the total number of married women and the 40-per-cent increase in the total number of working women.

The flow of married women into the labour market gained rapid momentum during the war years and, because of the high employment existing since the war, has continued.

In 1941, Canada had 2,336,485 married women; fewer than four per cent of them —one out of every 27—were working. In 1951, there were 3,119,824 married women and more than 11 per cent of them—one in every nine—were gainfully employed.

These and other details of Canada's working population are contained in a Dominion Bureau of Statistics bulletin on the 1951 Census, 1951 Census Bulletin 4-5: *The Labour Force, Occupation by Age, Marital Status, Years of Schooling and Class of Workers.* It is available from the Queen's Printer at a price of 25 cents.

Total of Working Women Tripled in U.S. Since 1900

United States women gainfully employed have more than trebled in number since the turn of the century, according to the U.S. 1950 decennial census.

The increase has been steady and, although accelerated by two world wars, was not caused by them, states the Women's Bureau in a statistical report, *Women as Workers,* published by the U.S. Department of Labour.

The 18·75 million women reported to be gainfully employed in April 1952, were only three-quarters of a million fewer than the number of women in the labour force at the end of the Second World War, April 1945.

Since 1940, the occupational distribution of employed women has shown striking changes. The most outstanding have been the decline in the proportion of women employed as private household workers and the increase in the ratio of clerical workers.

The average age of today's working woman is higher—37 years as compared with 26 years at the beginning of the century. Although during the Second World War older women entered the labour market in great numbers, as did women of all ages, the older women have not left. Today there are fewer women working than during the height of the war but there are more older women workers.

Less than a third of the women workers today are single, more than a half are married and the remainder are widowed or divorced. During World War II, for the first time in the labour force history of the United States, married women workers outnumbered single women with jobs. This trend, the report notes, has continued.

In a companion report, *Status of Women in the United States, 1952,* the Women's Bureau says, in general the status of women continued to show improvement during the year. Gains made during previous years have held and women have made definite progress in exerting their civil and political rights and achieving a better employment status.

The report, prepared primarily for the Eighth Assembly of the Inter-American Commission of Women at Rio de Janeiro, discusses women's position in the political scene, in government service and international relations, in employment and in unions. A section on legislation for women is also included.

Copies of both reports are available at the Department of Labour library.

More Persons Receiving Blind Persons Allowances

The number of blind persons in Canada receiving allowances under The Blind Persons Act increased during the first quarter of 1953 from 8,299 at December 31, 1952, to 8,332 at March 31.

The federal Government's contributions under federal-provincial scheme totalled $741,821.15 for the quarter, compared with $740,413.01 in the preceding quarter. Since the inception of the Act, the federal Government has contributed $3,706,666.24.

During the quarter, 105 persons receiving blind allowances were transferred to the administration of The Old Age Security Act, compared with 120 in the preceding quarter. Since the inception of the Act, 540 recipients have been transferred.

At March 31, 1953, the average monthly allowance in the provinces ranged from $37.83 to $39.55. In all provinces the maximum allowance paid was $40 a month.

At its April 13 meeting the Regina Trades and Labour Council (TLC) decided to award two scholarships of $75 each, annually, to students of the Balfour Technical School, Regina.

The first awards will be made for the 1953-54 term and all students will be eligible to compete.

CIO May Re-admit Unions Once Communist-Led

Re-entry to the Congress of Industrial Organizations may be imminent for a group of unions that either withdrew or suffered expulsion when the CIO cleansed its ranks of Communist-led unions.

Louis Hollander, President of the CIO in New York state, late last month met with officials of the Distributive, Processing and Officer Workers of America, formed in 1948 from locals of the Retail, Wholesale and Department Store Union (CIO) that seceded rather than sign non-communist affidavits required by the Taft-Hartley Law. In 1950 this organization also embraced the Food, Tobacco and Agricultural Workers and the United Office and Professional Workers when these unions were ousted from the CIO for communist activity.

Results of the meeting have not yet been made public.

Earlier in the month, the Distributive, Processing and Officer Workers union, at its second triennial convention in New York, authorized its leaders to negotiate with the CIO for re-entry.

Beginning about two years ago, Arthur Osman, President of the union, and David Livingstone, his chief associate, began to eliminate pro-communist leaders of the food and office unions. Mr. Osman has assured the CIO that his union is opposed to communism.

One of the problems connected with a possible re-entry of Mr. Osman's union is that he wants to take his organization into the CIO as an entity while the CIO Retail, Wholesale and Department Store Union, from which his union seceded, is eager to reclaim its lost members.

Management Gains from Safety Program—Shiels

The role of management in accident prevention and the benefits to be gained from a sound prevention program were discussed at the recent annual conference in Toronto of the Industrial Accident Prevention Associations of Ontario.

The IAPA operates in nearly 18,000 manufacturing plants employing about half of the 1,300,000 employees covered by workmen's compensation. These firms, it was pointed out, have experienced only about one-sixth of all fatal accidents.

The 4,000 representatives of industry attending the conference were told by R. G. Anderson, General Manager of the IAPA, that, if the 1921 accident rate had applied in 1952, fatal accidents during the year would have numbered 1,621 instead of the 428 that did occur.

G. K. Shiels, President of the Canadian Manufacturing Association, told the delegates that his organization and the Workmen's Compensation Board are working out a plan whereby higher compensation rates will apply to employers with poor accident records.

The CMA president said that the basic responsibility for accident prevention rests on management and that management does not want to shirk this responsibility. It welcomes the suggestions of plant safety committees and the Workmen's Compensation Board, he said.

Properly co-ordinated accident prevention plans will boost employee morale, increase efficiency and lower production costs, said Mr. Shiels, adding that these are arguments the IAPA should use in recruiting new member firms.

E. E. Sparrow, Chairman of the Ontario Workmen's Compensation Board, noted that in the period 1921 to 1951, fatal accidents were reduced from one in every 3,000 employees to one in every 10,000. Permanent injuries fell from five per thousand to 1·5 per thousand.

The President of the IAPA, N. E. Russell, said the great majority of injuries sustained are due to the individual's inattention to or ignorance of the hazards of his job.

"More and more does the problem of accident prevention become one of educating the individual in the peculiar hazards of his own job and in his personal attitude and behaviour," he said.

Ont. Compensation Board Has New Address

The Ontario Workmen's Compensation Board has moved into new quarters on Harbor St. on Toronto's lakefront.

The new building, designed for beauty and efficiency, provides the best in working conditions for the 900-member staff, including a large modern cafeteria, lounge rooms and air conditioning.

Board employees now handle compensation claims at the rate of almost 900 per day.

Miss Marion J. Flash, Secretary of the Regina Labour Council (CCL), has been appointed to the Saskatchewan Minimum Wage Board. She succeeds Miss Hazel Hansen of Moose Jaw, who has resigned.

Miss Flash is a member of the Canadian Brotherhood of Railway Employees and Other Transport Workers.

Co-operative Union Holds 44th Annual Congress

Approximately 200 delegates and visitors attended the 44th annual congress of the Co-operative Union of Canada at Edmonton, Alta., March 10 to 12. President A. W. Friesen and Vice-President J. T. McDonald were co-chairmen.

The appointment of Breen Melvin as National Secretary to fill the position held by the late A. B. MacDonald was announced. Mr. Melvin had been Assistant Secretary of the Co-operative Union of Canada for several years.

Reporting on the Co-operative Fisheries Conference, Louis Bérubé, Secretary of the School of Fisheries, Ste. Anne de la Pocatière, Que., told the congress that the four leading fishermen's co-operatives in Canada were in the Maritimes, British Columbia, Quebec and Ontario. Representatives of the four had agreed to meet in April to decide on the central marketing of fish in Canada and for export. They would offer encouragement to fishermen in Manitoba and Saskatchewan to develop their provincial organizations, he said.

A Co-operative Trust Company has been sete up in the province of Saskatchewan and is ready to begin operations, according to a report submitted to the congress. The Solicitor of the Co-op Trust Company, W. B. Francis, QC, in presenting the report, stated that the organization of the Trust Company was a national program sponsored by the Co-operative Union of Canada and undertaken by the Co-operative Union of Saskatchewan.

Membership in the Co-op Trust Company is limited to co-operatives of all types, including credit unions. The Trust Company will supplement the functions of credit unions and credit societies by providing a source of funds for loans on a long-term basis. Plans have been formulated whereby, as far as possible, loans will be made in conjunction with credit unions with the credit union recommending the loan and underwriting a percentage of it.

The Trust Company will make available a service in the administration of estates. There is a wide demand for such services by co-operators, Mr. Francis said.

The responsibility of government toward co-operatives should include supervision, to see to it that the co-ops do not step outside the limits imposed by legislation; financial aid, but only to the extent such aid is extended to private business; and some assistance in providing factual information on co-ops to the schools. These were opinions expressed in a panel discussion at the congress.

The panel members said they did not believe governments should organize co-operatives. This should be done by the people themselves when it became apparent there was a need. The government should also not extend financial aid unless it was deemed in the interest of the people as a whole.

A statistical summary of the co-operative associations affiliated with the Co-operative Union of Canada was presented by A. H. Turner, Secretary of the Agricultural Prices Support Board, Ottawa. He reported 822 member-associations with a membership of more than 825,000 affiliated with the union in 1952. Total business transacted by the associations during the year exceeded $685,000,000, or more than $130,000,000 over the year previous. The list of member-associations included both marketing and merchandising co-operatives.

Elections held on the final afternoon returned the following slate of officers and directors: R. S. Staples, Toronto, president; W. McLeod, Regina, vice-president; Geo. Stephenson, Fredericton, Executive board member; A. H. K. Musgrave, Clarksburg; C. C. Janes, St. John's; Louis O'Connor, New London; Alex MacIsaac, Antigonish; J. J. Siemens, Winnipeg; N. F. Priestley, Calgary; T. J. Robertson, New Westminster.

Mr. Staples, who recently resigned as Ontario Manager of Co-operative Life Insurance Company, becomes the CUC's first full-time president.

Older Workers Prefer Work to Retirement

Work rather than retirement was preferred by most older workers participating in 13 pension plans surveyed recently by the Division of Statistics and Research of the New York State Department of Labour. Among those already retired, the reasons given for retirement in most instances reflected necessity rather than choice.

The pension plans covered about 295,000 workers in the New York clothing, construction, electrical equipment, trade and publishing industries. The retired workers under all plans numbered 14,000.

Age and ill health were frequently stated as causes for quitting. Other compelling causes cited by pensioners were unfavourable working conditions in the industry and failing strength or inability to keep up the pace demanded by the job. Despite this latter fact, the survey points out, neither management nor the unions have given

much thought to shifting workers to easier jobs as they grow older and are unable to perform their regular work effectively.

Another study of the problems of retired New York City employees, made by the Mayor's Advisory Committee for the Aged, revealed that 41 per cent of the 732 persons contacted were dissatisfied with retirement. This dissatisfaction was based principally on the inadequacy of their incomes.

About two-thirds of those in the income bracket $1,500 to $2,500 and about one-third of those in the $2,500-and-over bracket found their incomes insufficient to meet the cost of living.

Older Workers Loath To Retire, Survey Finds

A study of union members' attitudes to and plans for retirement conducted recently by Columbia University's Teachers College reveals that the younger industrial worker in the United States often looks forward to retiring from his job while the older worker generally tries to put it off as long as possible.

Carried out at the request of the International Ladies' Garment Workers' Union (AFL), the study found that industrial workers approaching retirement have a deep resistance to retirement and that the reasons for this attitude are cultural, economic, psychological and social.

The study staff interviewed the union's cloak workers in three groups: those 55 to 77 years of age who were still working, those 65 to 78 who had applied for retirement, and those 65 to 85 who had retired. The average age of men in the first group was 61, in the second 68 and in the third 71. Women in the first group were as old as men and somewhat younger in the second and third.

A report on the study said that for many workers, work is more than earning a living; it is a way of life. Often, declared the report, only through work does the individual make social contacts, express his creative interests, make a contribution to society and achieve status in the community.

Only 140 of the 700 employees interviewed indicated that they would have sufficient funds to live on during retirement, the report said. It added that "pensions, alone or with social security benefits, at their best will never equal a regular wage. Therefore, government, by permitting tax exemption for systematic savings set aside for retirement, can provide the incentive and means to enable workers to build economic security in their later years."

The report recommended that unions establish counselling programs to help workers plan for retirement.

The Dominion Bureau of Statistics has published a revised list of post-graduate scholarships and fellowships open to Canadian students. It summarizes the conditions attached to each award and gives the address of the awarding agency.

The list, titled "Post-Graduate Scholarships and Fellowships Open to Canadian Universities" (DBS Reference Paper No. 21), is available from the Queen's Printer at a price of 25 cents each.

Extracts from Hansard of Interest to Labour

Old Age Pensions

March 25

Mr. Gingues:

1. How many persons received old age security pensions in 1952: (a) in Canada; (b) in each province?

2. What amount was paid by the federal government in 1952 for old age security pensions: (a) in Canada; (b) in each province?

Mr. McCusker:

1. As of December 1952:—

(a) 680,579;

(b) Newfoundland, 14,767; Prince Edward Island, 6,525; Nova Scotia, 36,048; New Brunswick, 25,621; Quebec, 146,617; Ontario, 253,188; Manitoba, 40,062; Saskatchewan, 39,947; Alberta, 39,430; British Columbia, 77,930; Yukon and Northwest Territories, 444.

2. (a) $317,031,529.79.

(b) Newfoundland, $6,918,220; Prince Edward Island, $3,119,000; Nova Scotia, $17,030,077; New Brunswick, $12,106,960; Quebec, $68,506,576.66; Ontario, $117,821,-610.43; Manitoba, $18,638,200; Saskatchewan, $18,577,545.70; Alberta, $18,264,040; British Columbia, $35,838,220; Yukon and Northwest Territories, $211,080.

Immigration and Emigration, 1952

March 25

Mr. Higgins:

1. How many persons left Canada in 1952 to take up permanent residence in the United States?

2. How many persons left the United States in 1952 to take up permanent residence in Canada?

Mr. Harris:

1. Statistics not maintained.
2. 14,013. This includes 4,707 returning Canadians.

Mr. Higgins:

1. How many immigrants entered Canada in 1952?
2. How many immigrants left Canada in 1952?

Mr. Harris:

1. 164,498 were admitted to Canada.
2. Statistics not maintained.

Threatened Grain Handlers' Strike

April 1

Mr. Daniel McIvor (Fort William): ... Mr. Speaker, the Minister of Labour and Mr. Frank Hall have been doing a splendid job in handling the threatened strike at the Lakehead. . . My question of privilege is to thank them most emphatically at this time for their most efficient work.

Mr. Howard C. Green (Vancouver-Quadra): Arising out of the remarks of the Hon. Member for Fort William, may I ask the Minister of Labour what is the present situation with respect to the strike on the west coast?

Hon. Milton F. Gregg (Minister of Labour): Mr. Speaker, first as to the Lakehead dispute a conference was held in Ottawa, as I think hon. members know, last Friday and Saturday on my request in connection with the dispute that had developed at the Lakehead on the question of the interpretation of a provision of the agreement which was made last September between the Lakehead Terminal Elevators Association and the Brotherhood of Railway and Steamship Clerks, Freight handlers, Express and Station Employees. The dispute now involves the application of the provision of the agreement respecting the reduction of hours from forty-eight to forty hours per week.

I met five representatives of the Association and five representatives of the Brotherhood who were here last Friday. The discussions, which were assisted by officers of the Department of Labour, terminated Saturday afternoon and the parties authorized the Minister of Labour to make the following statement, which was made:—

> The Hon. M. F. Gregg today announced that the representatives of the grain companies and of the brotherhood of railway and steamship clerks, freight handlers, express and station employees had completed their discussions in Ottawa. Both representatives of the companies and the brotherhood stated that they were moving towards an agreement.

This week the two negotiating parties who were here have been holding meetings, each its own main body, and I hope to have replies from both of them within a few days.

Mr. Green: My question was with regard to the strike on the west coast.

Mr. Gregg: I cannot add very much on that. As hon. members will remember, a proposal was addressed to both parties by our representative, Mr. Wilson, before he left Vancouver, that recommended that agreement on several points be reached, that work be renewed and that the dispute over wage increase be referred to an arbitrator who would be chosen by both parties and whose decision would be final. I have not had a final report as to the views of the two parties regarding that proposal.

Mr. Green: Has the Minister given any thought to having the parties come to Ottawa in the hope that this strike can also be settled?

Mr. Gregg: Before coming to a decision on that matter, I should like to have a reply from the two parties with respect to what is, in my opinion, a very sound proposal for settlement that is now in their hands.

April 9

Mr. Angus MacInnis (Vancouver East): Mr. Speaker, I should like to ask the Minister of Labour whether he can give the House any information on the grain elevator dispute in Vancouver and New Westminster.

Hon. Milton F. Gregg (Minister of Labour): Mr. Speaker, though my hon. friend notified me that he intended to ask this question, I can only tell him that there have been no important new developments to justify me in making anything like an optimistic statement in the House today. . .

Mr. Green: May I ask the Minister this question. Is he unwilling to invite representatives of the parties to come to Ottawa to discuss the situation?

Mr. Gregg: If such a course would appear to us, after careful study, to be the course that should be pursued to bring about a settlement, we would not hesitate a moment to invite them.

April 13

Mr. Angus MacInnis (Vancouver East): Mr. Speaker, there have been reports over the radio and in the newspapers indicating that considerable activity has been taking place in connection with the negotiations with respect to the grain handlers dispute on the west coast. Will the Minister bring the House up to date?

Hon. Milton F. Gregg (Minister of Labour): There is nothing of a definite nature that I can report to the House. In the late afternoon of April 9 the following wire was received from Mr. R. H. Tupper on behalf of the employers. The wire is addressed to Mr. Bernard Wilson, Chief Conciliation Officer, Department of Labour, and reads as follows:—

> Referring your letter March 20th regret delays arising from settlement of Port Arthur differences prevented earlier reply. Am directed by all five elevator companies concerned in dispute in Vancouver and New Westminster to inform you that they leave open their offer to grant two additional statutory holidays, an increase, of 5 cents per hour in present graveyard shift differential, payment of double time for all work done on Sundays and to provide where practicable for proper job rotations provided the union will join with the companies in submitting as the only outstanding difference to be determined the question of wages for arbitration before a judge of the Appeal Court or Supreme Court of British Columbia.

On the next day, the 10th of April, the following wire was sent by Mr. E. C. Sims on behalf of the unions. This wire reads as follows:—

> Re your wire April 9—

I should interject that the terms of the wire I have just read were conveyed to the unions. This wire is also addressed to Mr. Wilson. I continue:—

> —we note the companies have rejected your proposal of March 20th and submitted counter proposal re arbitration. I am instructed to inform you this counter proposal has been rejected and your March 20th proposal will be taken to membership tomorrow for acceptance or rejection. Will inform you of results.

On the next day, the 11th of April, the following wire, addressed to Mr. Wilson, was sent by Mr. Sims:—

> Full general membership meeting held today. I am instructed to inform you that question put re acceptance or rejection of your proposal of arbitration dated March 20. Motion carried rejecting the proposal with twenty-nine dissenting votes. Results of vote indicate same strength as when strike vote taken. Manner of voting decided by motion of membership. Results indicate tie-up to go on indefinitely unless employers change attitude toward wage question and fringe benefits.

Since the receipt of these wires we have continued our efforts to bring the parties together for further negotiations. I can report nothing further this morning.

Mr. Green: Does the Minister still think it would be of no value to invite representatives to come to Ottawa?

Mr. Gregg: I do not think that there would be value in taking that step at this time.

Fair Employment Practices Act

April 13

Hon. Milton F. Gregg (Minister of Labour) moved the second reading of Bill No. 100, to prevent discrimination in regard to employment and membership in trade unions by reason of race, national origin, colour or religion.

He said: Mr. Speaker, in moving this bill for second reading I should like to make a few remarks. The speech from the throne last December declared the Government's intention to introduce a bill which would prohibit discrimination in employment against any person because of his race, national origin, colour or religion in connection with any work, undertaking or business within the legislative authority of parliament. National labour organizations and many other bodies in recent years have advocated such federal legislation...

I believe that equality of opportunity for employment without discrimination on account of race, national origin, colour or religion is a fundamental right which every resident of our democratic state should enjoy. It is a right which this Parliament can well assert and try to protect. The Government is now asking Parliament to make this assertion by the bill I am introducing in respect of all persons in Canada who are employed or seeking employment in activities which come under federal authority. Although this federal sphere of jurisdiction is relatively limited, I believe that the passing of this legislation may have a far-reaching and healthy influence across the whole country.

I think one can say that the underlying principle of the bill is assurance of equality of vocational opportunity. In recent years Canada, as a member of various international organizations, has subscribed to general declarations concerning the basic rights and liberties of the individual. However, because of the divided jurisdiction established by our federal constitution, Canadian representatives have not always been able to make specific commitments with regard to legislation to ensure the protection of human rights.

For example, in 1948 the Canadian delegation to the general assembly of the United Nations voted for the universal declarations of human rights which was adopted by the assembly on December 10 of that year. The head of our delegation

stated that certain important aspects of the declaration lay within the field of provincial jurisdiction in Canada and that the federal Government did not intend to invade that field. Canadian participation in the International Labour Organization has been affected in the same way by the federal nature of our constitution. Canadian delegates to the general conference of the ILO in 1944 approved the adoption of the new declaration of the aims of the ILO which became known afterwards as the Philadelphia charter. This declaration asserts, among other things, the solemn obligation of the ILO to promote among the nations of the world programs which will achieve full employment, higher standards of living, the extension of social security, adequate protection for the life and health of workers, effective recognition of the right of collective bargaining—and this is the one that embraces the principle of this bill—equality of vocational opportunity, and other conditions conducive to human well-being.

Some action has already been taken by this Government to prevent discrimination in employment in those areas of jurisdiction within which the federal authority has power to legislate.

At the last session the Unemployment Insurance Act was amended to provide that it is the duty of the Commission to ensure that there will be no discrimination in referring any worker seeking employment, either in favour of or against any such worker, by reason of his racial origin, colour, religious belief or political affiliation. Then, as a further step in its program, in September last an Order in Council was passed which requires the insertion of a non-discrimination clause in federal government construction and supplies contracts entered into on or after January 1, 1953, to which the government fair wage provisions apply.

This clause expressly forbids the contractor to discriminate against any person because of his race, national origin, colour or religion in the employment of labour for the execution of the contract.

It might be said that discrimination in employment is based on ignorance, prejudice, selfishness, or an attitude of mind which cannot be discovered or changed by legislation. I agree, Mr. Speaker, that there is much to be said for that view. However, I would like to stress the point that the legislation which I am introducing is designed to deal with positive acts of discrimination. There will still be need for continued effort on the part of all those educational, religious, cultural, yes, and government influences, which are now working together and doing so much to create in Canada a climate of opinion in which racial and religious prejudice shall find no place.

The provisions of the legislation will apply to all employers of five or more employees, excluding non-profit educational, fraternal, charitable, religious and social organizations. The legislation applies to employment upon any work, undertaking or business which is within the legislative authority of Parliament to regulate, to crown companies, and to trade unions composed of persons employed upon such works, undertakings or businesses. In effect, the legislation applies in respect of the same industries to which the Industrial Relations and Disputes Investigation Act applies.

The provisions of the bill will prohibit employers from discrimination as defined against any person in respect of employment or prospective employment, and prohibits employers from using the services of any employment agency which in its operations so discriminates against persons seeking employment. The use of advertising in connection with employment which expresses any such discrimination or preference is prohibited. Trade unions shall not so discriminate against any person in the matter of membership.

The legislation will be administered by the Department of Labour and by a division of the work amongst existing staff. It is not anticipated that additional costs for administration will be great.

Provision is made in the legislation for the receipt and investigation of complaints by conciliation officers of the Department, and for the use of industrial inquiry commissions for the purpose of ascertaining the facts, with a view to the adjustment of complaints made under the act. Provision is made for prosecution in the courts for alleged infractions of the act and for the imposition of penalties by way of fine and recovery of lost wages where the offence is proved. This procedure for the handling and disposition of complaints is very similar to the procedures provided under the Industrial Relations and Dispute Investigation Act for the handling and disposition of complaints of unfair labour practices. It is proposed to use the same administrative machinery.

I believe that legislation of this nature to deal with overt acts of discrimination is practical and can be administered. The record of New York state, which pioneered

in the United States in prohibiting discrimination against workers, has established the effectiveness of an act of this kind.

Passed in 1945, the New York law set a pattern for similar laws in ten other states and, I think, for the Fair Employment Practices Act enacted by the province of Ontario in 1951. Experience under the Ontario Act perhaps has been of too limited duration to permit an adequate appraisal of its effectiveness. But there is ample evidence that in 7½ years of its operation the New York law has had an appreciable effect in eliminating discrimination and in broadening job opportunities for minority groups.

Briefly stated, the New York law provides that no person shall be denied the right to earn a living because of his religious belief or his racial or national background. It lays down penalties for acts of discrimination, whether by employers, labour organizations, employment agencies or other individuals.

The term "employer" under the New York Act does not include a non-profit organization or an employer with fewer than six persons in his employ. The Act does not apply to a person employed by his parent, spouse or child, nor to domestic servants.

While punitive powers are provided for the New York Act, to be used when and if needed, the policy of the commission administering the legislation has been to rely on conciliation and persuasion and to avoid legal proceedings wherever possible. The record shows that out of approximately 2,500 cases handled to date the New York commission has had to resort to court action only three times. When one considers this experience in that highly industrialized state it seems a great victory for conciliation and persuasion, with the teeth of the law almost entirely unused.

One might sum up by quoting the following paragraph from the commission's 1951 report on its administration of the law:—

> The commission realizes full well that the problem of employment discrimination which made a law necessary have not been completely solved. It is satisfied, however, that the law is no longer viewed by the general public as an expedient, an experiment, or a controversial document, but as an important instrument in the building of a stronger, democratic state.

The Ontario Act has been in force since the middle part of 1951, and I am advised that in the intervening period, while there have been a limited number of complaints dealt with under the Act, these complaints have been adjusted under the provisions of the Act without the necessity of resort to the courts in any instance.

I am sure, Mr. Speaker, that the principle of this bill will have wholehearted support in this House and amongst the citizens of this country. It is only with this large measure of public support that it will be effective for the purposes for which it is designed.

Following a discussion of the bill on second reading, if it is the wish of the house, I shall move to refer it for study to the standing committee on industrial relations. I am confident that it can be made into an effective ally to the main effort in Canada for ensuring equality of vocational opportunity.

It is as an ally that I view this measure. The main effort against discrimination must continue to be carried on by individual Canadians with the potent weapons of human understanding, of charitable example, and with the application of the golden rule. If this bill becomes law we will see to it that it is used only to augment those weapons.

I commend it to the House.

Mrs. Ellen L. Fairclough (Hamilton West): ... As I said on previous occasions, I think it is important that legislation should be provided to implement the universal declaration of human rights as proclaimed before the general assembly of the United Nations on December 10, 1948. Like the bill which it was my privilege to sponsor earlier, this bill applies only to employment in those fields which fall within the jurisdiction of the federal Government. I am sure that every member of Parliament will be in sympathy with the enactment of legislation which seeks to establish a common basis for all peoples in this nation, regardless of their origin, their religion or the various circumstances and conditions under which they labour ... of course, the members of my party propose to support this motion...

I do hope that the Government is not going to pass this bill and push it to one side, waiting for someone who happens to find out about it to make a complaint under the legislation. I believe that the full effectiveness of this legislation can only materialize if the Government will institute a proper program of education to go hand in hand with the administration of the legislation itself. I believe that very strongly. We are all human, and we know that workers hesitate to make complaints, particularly those who are in menial employment. In many cases they are afraid of their jobs. They need to be

assured that under this legislation it is their right to complain, but not to file complaints indiscriminately. Where there is definite basis for belief that they have been discriminated against they should be encouraged to make known instances and circumstances of such discrimination. I believe that, by removing from them the fear of retribution from employers or others, legislation of this sort can be made properly effective.

In this bill, as in the Ontario bill, provision is made for an industrial inquiry commission to look into such complaints as are made. This of course is an entirely different matter from a standing administrative commission or body to plan not only the administration but the education of workers in this field. I would urge the Minister to give serious consideration to the establishment of a commission which will be charged with this responsibility. I feel that it would not only be a good thing at the federal level to have someone actively engaged in dissemination of information, but it would provide a stimulus to those provinces which have legislation of this order at the present time or who may, I hope, enact such legislation at a later date, to proceed along those lines. I believe that at the present time in the Dominion of Canada only two provinces, Saskatchewan and Ontario, have legislation of this kind. I understand that Manitoba is seriously considering such legislation, and one other was mentioned to me as being keenly interested in this type of legislation.

There should be a permanent administrative body charged with this responsibility, and the establishment of a commission should not depend upon the receipt of complaints which cannot be handled by the ordinary conciliation officers of the Department.

The Minister has spoken of the limited experience which the province of Ontario has had in this matter, and that is quite true. It is my understanding that in the approximately two years that the Act has been operative only ten complaints have been received, and these have all been easily handled. While the province of Ontario did not set up any educational program, it did cover the ground fairly thoroughly in the first instance with letters and information to employers, trade unions, and so on. A great deal can be done to make effective the provisions of this legislation if one specific body is definitely charged with this responsibility. This is the least we can do to make such legislation operative...

Mr. Alistair Stewart (Winnipeg North): Mr. Speaker, I should like to say at once on behalf of the CCF that we support the principle of this legislation. Indeed, I think in days to come it will be recognized that this bill has been something of a landmark in Canadian labour history...

The bill is an attempt by means of conciliation to prevent discrimination in employment. That, I believe, is a proper procedure—although behind that conciliation there must be the force of law and of compulsion. American experience has shown us that in the last resort these measures must be compulsory if they are going to be successful. In those areas where there was no compulsion there was a quite noticeable lack in the efficiency of the legislation as compared with those states, such as the state of New York and other states, where the element of compulsion existed.

One of the reasons we dislike some of the sections in the bill is that they are altogether too permissive. In other words, they are not sufficiently mandatory. We would not like to see the bill pass only to see it by-passed at a later time. There was a suggestion by the Minister which led us to feel that perhaps not as much was going to be done about this legislation as those of us in the CCF would like to have done. Where discrimination is found, discretionary powers are given where we believe the powers should be mandatory and insisted upon. In our opinion the bill would be strengthened if these discretionary powers were removed. In other words, the legislation must have teeth if it is going to be successful.

Then one further obvious and glaring omission has been brought to the attention of most hon. members, in that there is nothing in the legislation concerning discrimination against a person because of sex. There are still a number of men—fortunately, a decreasing minority—who seem to think that women are not people. They look upon women as chattels, an idea which I trust will rapidly disappear. However, this matter of discrimination because of sex is something which can be discussed more fully in committee.

Another weakness now apparent in the bill is that it has not outlawed those wretched application forms which insist that an applicant for work must state his or her religion, his or her ethnic origin, or the place where his or her mother and father were born. The bill would have been much stronger, had some thought been given to this subject, and I believe the

committee should give careful consideration to the outlawing of such stupid questions in applications for employment...

The Minister has told us that there will be a director in this new division, and he added that the cost of the division would not be great. I felt somewhat pessimistic when he made that statement, because I think the Government could make no greater mistake than to burden with the directorate of this division a man who already is doing something else. Whoever is to be the director will find that he has a full-time job. This is one place where I am sure the members of the various parties in the House would not object to an increase in costs of a department, if we knew that the division was going to function properly.

The Minister has said the Government worked with other groups throughout the country to try to create a scheme in which prejudice would have no place. But if we are going to do that properly people will have to be educated; and if we are going to educate them we must be prepared to spend money. I would hope that the director of this division would not be merely an administrative head, but rather one who would conceive it as his duty to act as an educational spearhead in the fight against discrimination all across the country...

Mr. C. E. Johnston (Bow River): Mr. Speaker, I do not intend to take very long to discuss this bill on this occasion. I think it is generally conceded in all parts of the House that the general principle of the bill is going to be accepted as a step in the right direction. Therefore we in this party have no hesitancy in accepting the general principle of the bill...

I do not believe there are very many members of the House who have not had a great number of letters and other communications from women's organizations throughout the country presenting the problem with which they are faced. They contend, and probably rightly so, that one of the faults of the bill lies in the fact that no provision is made against discrimination as to sex. When the bill goes before the committee I think every opportunity should be given to the women's organizations to present their briefs and support their claims. Then the members of the committee will be in a much better position to judge what action should be taken.

There is also another form of discrimination so far as labour is concerned that is not mentioned in the bill and which is becoming very widely practised in this country. I refer to discrimination on the ground of age. It seems to be the current practice of industry now to retire a fellow when he reaches approximately 50 years of age whether or not he has sufficient pension or income to take care of him When he reaches 60 they are mighty sure that he is old enough to retire, and when he gets to be 65 they kick him out...

Mr. David A. Croll (Spadina): Mr. Speaker, . . .It is my view that this bill does credit to this great House of Commons. I am pleased to join with other members in hailing it as the latest step in reducing racial and religious discrimination in this country. I am both pleased and proud to be associated with a Government which is making an earnest effort to maintain this and other basic principles of human rights. By passing the bill we indicate that we are realists and we give a lead to the provinces and to industry. It is now written, it is spelled out, endorsed by Parliament and supported by the Canadian people...

The bill before us at the present time calls for no racial discrimination, particularly with regard to membership in trade unions. The stakes which trade unions have in discrimination being wiped out are certainly as great as those of management. Fortunately Canadian labour unions have directed a strong campaign for the enactment of fair employment practices, and are deserving of much credit for their persistence in this regard. Their resolutions passed at annual conventions, their briefs presented to the Government, their constant vigilance in reporting on discriminatory practices, should not go unnoticed at this time when we are considering this legislation. Nor should the efforts of other groups, religious, fraternal, welfare and minority bodies, who have acted on their own or in co-operation with labour organizations to end discrimination in this country.

This bill does not have as its purpose the abolishment of prejudice; that is to change human nature. It is a law to prevent anti-social manifestation of prejudice. It is possible of enforcement, and it can be determined that men are denied employment because of racial or religious prejudice or for other such reasons. It is a difficult task, but we do it every day before our labour relations boards when men, who have been discharged for union activity, obtain a hearing and are often reinstated. It does need a patient, perceptive approach. I am satisfied that the Department of Labour has sufficient good men in its ranks to do the job conscientiously and well.

The important thing is that the law be enforced. It must not be allowed to sit idle on the statute books, and I am sure it will not.

But enforcement alone is not enough. Authorities agree that the elimination of intolerance depends, in the long run, on a process of continuous education. I appreciate that this matter of education is not one that can be provided for in this bill. I am concerned to raise it at this point as an indication of what remains to be done after this bill has been enacted as law. Education is an indispensable part of the act. It can only be administered with great restraint, and with understanding of some prejudices that, unfortunately, have roots in our Canadian life. There must be recognition that persuasion is generally more potent than coercion in leading men to change their long formed habits...

Mr. Stanley Knowles (Winnipeg North Centre): . . .I noted in particular the suggestion made by a number of members that legislation of this kind being enacted at the federal level may well play a part in encouraging provinces that have not passed legislation of this nature to put such legislation on their statute books. As a matter of fact I feel that that has happened already in the case of my own province of Manitoba. Unions and other interested groups in Manitoba have been trying for a long time to persuade the government of that province to enact fair employment practices legislation. That government has shown itself interested, but has been reluctant to act.

When we met on November 20, 1952 to hear the speech from the throne that opened this session of Parliament it was indicated that there would be fair employment practices legislation at the federal level. Lo and behold, when the Manitoba legislature met a few months later it was announced by the government there that they would follow suit. So I suggest that there is validity in the hope that although this legislation applies only to workers who come under the federal labour jurisdiction, it will encourage those responsible for labour matters at the provincial level to follow suit. I hope it will not be long until legislation of this kind, or even better, will be the rule throughout the country...

Mr. J. W. Noseworthy (York South): . . .I would suggest that the Government could assist in this field by giving financial aid to those agencies whose primary purpose is the breaking down of racial and religious bigotry and prejudice in this country. There are some organizations which have done a great deal toward this cause. But unfortunately there are other organizations of good repute which contribute to disaffection between peoples of different religions and beliefs. I think the Government should give consideration to rendering assistance to such organizations as exist for the primary purpose of breaking down this prejudice and bigotry...

Those who are engaged in the educational field and the breaking down of these prejudices find it most difficult when children, for instance, are taught tolerance in the school and then find intolerance in their homes, in business circles, and in other fields as the rule of life in the world in which they have to live. Anything the Government can do by way of legislation such as this to give assistance to organizations promoting unity will help to build Canadian unity...

Mr. Clarence Gillis (Cape Breton South): ...While we are doing a desirable thing in trying to eliminate racial and religious discrimination, let us not forget for a minute that thousands and thousands of Canadians are walking the streets today because of discrimination against them on the ground of age. The reason for that of course is that companies that have established pension plans are not employing anyone who is not young enough to make a substantial contribution to the pension fund before he reaches retirement age. A citizen of Canada who has reached the age of 40, and who still has about twenty good productive years ahead of him, should not be discriminated against because he happened to become unemployed when he was approximately 40 years of age.

Another instance of discrimination so far as employment is concerned very badly affects ex-servicemen. The Minister, who was Minister of Veterans Affairs for some years, realizes that in every part of the country where there is heavy industry young men may come back from service with war wounds and disabilities incurred during service entitling them to a pension at the rate of 5 or 10 per cent, but in the areas in which they live they are 100 per cent disabled as far as employment is concerned. That is because one of the requirements for employment is that the man pass a medical examination, and when the company's doctor finds that he has a 5 or 10 per cent pension then he is not considered fit for employment in heavy industry and he is not employed...

Mr. Gregg: Mr. Speaker, in closing the debate I need only refer to one or two particular points that were made this afternoon.

First I would like to touch very briefly upon the point made by my hon. friend from Fort William (Mr. McIvor). I want to assure him that this bill will not, and I repeat "not", require our trade unions to accept persons who have proved their intention to propagate subversive activities in Canada, whatever the background of those people may be...

Equally briefly may I refer to the remarks made by the Hon. Member for Cape Breton South (Mr. Gillis)... On the . . . points he made, namely that sex, disability, age—and I would add disabled civilian workers—should be included here, I should like to ask him, between now and the time this bill goes before the special committee, to consider whether or not that cannot be more effectively accomplished by sharpening up the placement services of our National Employment Service. For administrative purposes I should like to keep this bill as simple as possible, so we can get a background of experience in carrying its principle into effect. However, I leave that thought with my hon. friend...

Motion agreed to, bill read the second time and referred to the standing committee on industrial relations.

Co-operative Credit Associations

April 15

Hon. Douglas Abbott (Minister of Finance) moved for leave to introduce Bill No. 338, respecting co-operative credit associations.

Mr. Knowles: Explain.

Mr. Abbott: The purpose of the bill is to authorize the incorporation of co-operative credit associations by special act of Parliament and to provide for the inspection and supervision of these organizations. The bill in a good many of its particulars resembles the Trust Companies Act and the Loan Companies Act with respect to the supervisory and inspection powers of the Superintendent of Insurance.

Motion agreed to and bill read the first time.

Canada's Contribution to Colombo Plan*

April 15

Mr. Catherwood:

1. What was Canada's total contribution to the Colombo plan, during the years ending March 31, 1952 and March 31, 1953?

2. For what purpose was this money used and in what amount?

Mr. Claxton:

1. In addition to the appropriation of $400,000 for technical assistance in each of the two years, Parliament approved a contribution of $25 million for 1951-52 and the same amount for 1952-53 to assist in the economic development of countries in south and southeast Asia under the Colombo Plan.

2. Expenditures or commitments against these capital assistance votes have been made for the following purposes and in the amounts indicated:—

1951-52

India—

(a) $10 million for wheat.

(b) $4·5 million for trucks and buses for the improvement and extension of the Bombay state transport system.

(c) $500,000 for capital equipment for an irrigation and hydro-electric project.

Pakistan—

(a) $5 million for a cement plant in the Thal area where the Pakistan government is carrying out a large-scale refugee colonization scheme.

(b) $2·8 million for railway ties.

(c) $2 million for an air and geological survey of Pakistan's resources.

(d) $200,000 for agricultural machinery and related equipment for a model livestock farm in the Thal area. (This is a joint Canadian-Australian-New Zealand project.)

1952-53

India—

$5 million for wheat.

$3 million for equipment for a hydro-electric project.

$2·2 million for locomotive boilers.

Pakistan—

$5 million for wheat.

$3·4 million for equipment for a hydro-electric project.

$170,000 for three aircraft fitted with special equipment for use in the locust control program.

$500,000 to cover remaining costs of the cement plant project undertaken during the previous year.

Ceylon—

$1 million for fishing vessels, cold storage plant and technical personnel for a fisheries research and development project.

Several of these projects will yield revenue in local currency (counterpart funds) which will, in turn, be used by the Government concerned, in consultation with the Canadian Government, to finance further economic development.

*Information in greater detail is contained in a two-part article, "The Colombo Plan", published by the Department of External Affairs in its monthly magazine *External Affairs*, the first part of which appears in the April issue.

Fatal Industrial Accidents in Canada* During Fourth Quarter of 1952

Industrial fatalities during fourth quarter last year numbered 344, a decrease of 38 from the 382 recorded during previous three months

There were 344† industrial fatalities in Canada in the fourth quarter of 1952, according to the latest reports received by the Department of Labour. This marks a decrease of 38 fatalities from the previous quarter, in which 382 were recorded, including 19 in a supplementary list.

As in previous quarterly articles, Table H-1 contains information as to the number of industrial fatalities classified by main classes of industries and causes. The present table is compiled in accordance with the new cause classification adopted January 1, 1952. This new classification has been drawn up in consultation with the various provincial Workmen's Compensation Boards and will be used in the preparation of statistics to be derived from the federal-provincial accident statistics program, which will deal with non-fatal as well as fatal accidents. As used in the present article, the new classification contains only the major groups of causes.

During the quarter under review there were two accidents which resulted in the deaths of three or more persons in each case. On December 23, a head-on collision between two trains at Ragged Rapids, Ont, resulted in the deaths of five trainmen. Seven seamen aboard the tug *Petrel* were drowned December 27 when the tugboat disappeared in the Gulf of Georgia.

Grouped by industries, the largest number of fatalities, 71, was recorded in the transportation industry. Of these, 33 were in steam railways, 17 in water transportation and 12 in local and highway transportation. In the previous three months there were 55 fatalities listed in this industry, including 20 in local and highway transportation, 12 in steam railways and 11 in water transportation.

There were 65 industrial deaths in the construction industry during the fourth quarter of 1952, of which 27 occurred in buildings and structures, 21 in miscellaneous construction and 17 in highway and bridge construction. During the preceding three months 78 fatalities were recorded in construction, including 43 in miscellaneous construction and 23 in buildings and structures.

Of the 52 accidental deaths reported in manufacturing during the quarter under review, 12 occurred in the wood products group, nine in transportation equipment and seven in the iron and steel industry. In the previous three-month period, 56 fatalities were reported in manufacturing, including 14 in the wood products group, nine in the paper industry and eight in transportation equipment.

In the logging industry, 49 industrial deaths were reported during the fourth quarter of 1952, compared with 37 in the previous three months. In the fourth quarter of 1951, 55 accidental deaths were recorded.

The industrial fatalities recorded in these quarterly articles, prepared by the Economics and Research Branch, are those fatal accidents which involved persons gainfully employed and which occurred during the course of, or which arose out of, their employment. These include deaths which resulted from industrial diseases as reported by provincial Workmen's Compensation Boards.

Statistics on industrial fatalities are compiled from reports received from the various Workmen's Compensation Boards, the Board of Transport Commissioners and certain other official sources. Newspaper reports are used to supplement these data. For those industries not covered by workmen's compensation legislation, newspaper reports are the Department's only source of information. It is possible, therefore, that coverage in such industries as agriculture, fishing and trapping and certain of the service groups is not as complete as in those industries which are covered by compensation legislation. Similarly, a small number of traffic accidents which are in fact industrial accidents may be omitted from the Department's records because of lack of information in press reports.

*See Tables H-1 and H-2 at end of book.

†The number of industrial fatalities which occurred during the fourth quarter of 1952 is probably greater than the figure now quoted. Information on accidents which occur but are not reported in time for inclusion in the quarterly articles is recorded in supplementary lists and statistics are amended accordingly.

Thirty-three persons died as a result of accidents in the mining industry during the quarter under review. Of these, 18 were in metalliferous mining and nine in non-metallic mining. In the preceding three months 54 fatalities were recorded in mining, including 31 in metalliferous mining and 13 in coal mining.

There were 26 fatalities reported in agriculture during the fourth quarter, compared with 30 and 31 during the second and third quarters of 1952 respectively.

In the various branches of the service industry there were 18 fatalities during the third quarter, a decrease of 15 from the 33 recorded in the previous three months.

An analysis of the causes of the 344 fatalities which occurred during the quarter shows that almost one-third of the victims had been "struck by tools, machinery, moving vehicles and other objects". Within this group the largest numbers of deaths were caused by falling trees and limbs (26), automobiles and trucks (14) and trains or other railway vehicles (11). "Collisions, derailments, wrecks, etc." were responsible for 79, or 23·0 per cent of the total deaths during the period. These included 35 fatalities involving automobiles and trucks and 16 that involved watercraft. In the classification "falls and slips" 76 accidents were reported. Of these, 68 were caused by falls to different levels.

In the classification by province of occurrence the largest number of fatalities was recorded in Ontario, where there were 114. In British Columbia, there were 80 and in Quebec, 66.

During the quarter under review there were 116 fatalities in October, 115 in November and 113 in December.

British Labour Ministry Issues Report for 1951

In spite of the continued growth of the total civilian labour force, manpower in Great Britain continued to be short in many industries and services in 1951, especially in those connected with defence and export production, according to the Annual Report of the Ministry of Labour and National Service, recently published.

The situation was eased, however, by the continued recruitment of foreign workers. Altogether, about 36,000 foreigners entered the country on individual permits for employment and another 1,500 Italians were recruited for coal-mining under an official scheme.*

These, together with voluntary workers from Northern Ireland and the Republic of Ireland, did little to offset departures under Commonwealth migration schemes, under which 42,361 migrants, including families and dependents, left the country.

The Ministry intensified its efforts to encourage industry to make the fullest possible suitable use of elderly and disabled workers, and part-time and spare-time labour.

Employment exchanges and youth employment offices filled nearly 2½ million vacancies during the year, compared with almost three million during 1950. Of the two million vacancies filled by adults, over one-eighth were in national economy industries and the defence program.

The appointments service, which places professional, administrative, managerial, technical and scientific personnel, filled nearly 2,600 vacancies and placed 5,835 persons in employment.

Nursing appointments offices found work for more than 9,500 women and men in full-time posts and 1,300 in part-time posts. The 25,000 vacancies in this field at the end of the year formed the lowest total for any year since the end of the war.

In the field of industrial relations, the outstanding event of the year was the replacement of the Conditions of Employment and National Arbitration Order of 1940 by the Industrial Disputes Order for the settlement of trade disputes.

The last part of the report deals with the Ministry's relations with the International Labour Organization, various organs of the United Nations and other international bodies.

*The plan to use Italians in British coal mines came to an end early in 1952 because of the refusal by British miners to accept them in the pits (L.G., April, p. 388).

THE SLOAN REPORT

Second instalment of a review of Chief Justice Sloan's report on his exhaustive inquiry into workmen's compensation in British Columbia

INSTALMENT II

Accident Prevention

Two general complaints brought by the International Woodworkers of America against the Accident Prevention Division of the Board, together with those directed against the Medical Division, accounted for a great mass of evidence and occupied the greater part of the time consumed by the inquiry. The complaints were that the Board, or its Accident Prevention Division, failed to exercise leadership in accident prevention and was weak or lax in its enforcement of the Board's safety regulations.

In deciding whether the Board had discharged its responsibility, the Commissioner divided accident prevention into two main phases, which he described as follows:—

> The first division involves the development of a state of mind of both labour and management, leading to the acceptance of the safety concept as an integral part of the processes of production. The expressions "safety first" and "safety consciousness" reflect this thought. This acceptance of accident-prevention in its true and extended sense means more than mere lip service to a distant ideal; it means the creation by education, publicity, and, in part, inspiration of a burning zeal in both labour and management to reach and maintain safety standards of perfection, not in the distant future, but *now*. It involves the awakening of a spirit of challenge, the unfurling of battle flags in a war against the hazards of machines and against lurking dangers that give no quarter. It involves a never-ceasing attack on causes which relentlessly cripple and kill the man at work.

The British Columbia Workmen's Compensation Act and its administration by the Workmen's Compensation Board were examined by Chief Justice Sloan of the British Columbia Supreme Court acting as a Royal Commissioner. His report, a volume of more than 400 pages, laid before the Legislature in February 1952, summarizes the results of his exhaustive inquiry, which lasted for more than two years, from November 7, 1949, until November 23, 1951.

Because of the wide terms of his Commission, the Commissioner, who had acted in a similar capacity in 1942, dealt with hundreds of submissions from labour, industry and others requesting amendments to the Act or making general or specific complaints against the Board's administrative policies. Sitting for 226 days at Vancouver, Victoria, Trail and Nelson, he heard the evidence of 630 witnesses which, together with the arguments of counsel and others, filled almost 23,000 pages of transcript. More than 1,200 exhibits were filed. In the course of his inquiry the Commissioner inspected rehabilitation centres in Toronto, Montreal, New York, San Francisco, Los Angeles and Orange, N.J.

Consideration of the various issues raised involved not only a detailed examination of every phase of the Board's administration but also a discussion of the history and fundamental principles of the Act.

The report contains a discussion of the two alternative methods which may be used in compensation administration in arriving at the amount of compensation payable for an injury (compensation based solely on loss of physical function or compensation based on wage-loss), explains why, in the Commissioner's judgment, requests for payment of compensation for disability on the basis of 100 per cent of earnings cannot be justified, and gives reasons why increased benefits should not be made retroactive.

Blanket coverage of all occupational diseases was rejected as being in no way superior to the present method of scheduled coverage. The whole field of silicosis was reviewed and the Commissioner recommended that the system of medical examination similar to the one required in metal mines should be made obligatory in coal mines.

Because of the problems posed by recurring medical disputes, the Commissioner recommended that in the public interest a permanent three-man Medical Appeal Board should be established with jurisdiction to decide disputed questions of diagnosis and of the extent of a workman's functional disability.

Charges that the Board had not exercised leadership in accident prevention made it necessary for the Commissioner to examine all phases of the Board's safety work and the Board was commended for its long-continued efforts in this field.

Because the Sloan report contains much information of interest to workers and employers concerned with workmen's compensation, it has been reviewed, by the Legislation Branch, Department of Labour, in as much detail as possible. This is the second of two instalments; Instalment I appeared in the April issue, p. 552.

The second division of accident-prevention lies in a related but different field. This involves factors operating on the physical and material plane and which are subject to the imposition of controls and regulations, the enforcement of which are backed by the power of the State to impose punishments for their non-observance...

Men cannot be made safety-minded by legislation. Unless there is the will to safety, all the regulations in the world will not by themselves prevent accidents. Alternatively, the desire to minimize hazards needs as its aid the promulgation and enforcement of fundamental regulations governing the operations of machines and the conduct of men. These two essentials must both be present in order to have and maintain an efficient accident-prevention program.

Three groups are responsible for the development of an accident-prevention program, the Commissioner stated: the State, speaking through administrative agencies such as the Workmen's Compensation Board, management and labour. Of these he felt the State has the primary responsibility for instilling into management by education and guidance the necessary inspiration to institute and maintain adequate safety programs.

Summing up in regard to management-labour relations in this field, he said:—

> Success of any accident-prevention program, assuming it to be intelligently designed to meet the causes of injury when understood, depends on safe working conditions and upon an active, educated and management-directed co-operation between management and labour, such as joint safety committees, training of supervisors, job training for workmen, job assignments, and pre-assignment physical appraisal.

In his view, the function of a governmental agency such as the Workmen's Compensation Board is to assist actively in the intelligent design of the program by promulgation of necessary safety regulations, by leadership and guidance in the educational field, in the use of all propaganda media, by the efficient use of inspection services, and by the imposition of reasonably severe penalties against both labour and management when the occasion requires such action, as a punishment of the wrong-doer and as a deterrent to others who persistently violate safety codes and the Board's directives. The Board's function should also be to provide consultive services, when beyond the practical or economic means of an industrial operation, to otherwise obtain and to serve as a clearing-house for the accumulation and dissemination of statistics, experiences and information.

The Commissioner then proceeded to examine the record of the Board. Relevant excerpts from annual reports of the Board beginning in 1918 indicated that for many years the Board has been conscious of the need for an adequate program of accident prevention and "has pioneered the path" in the province. A review of the Board's extensive educational activities through the years, including the distribution of circulars, literature and posters, the use of films, the public activities of the Commissioners and the Chief Inspector, the issuance since 1940 of a monthly statement for the logging industry showing principal types and causes of accidents, and the founding and encouragement of independent private voluntary safety organizations to function within the community as a whole, e.g., the B.C. Safety Council, led the Commissioner to conclude that the first complaint—a lack of Board leadership—was unfounded.

> From the foregoing activities in the field of education and guidance in the development of a safety consciousness in both management and labour and from a consideration of all the other evidence

Major Recommendations of Sloan Report

1. An increase from 66⅔ to 70 in the percentage rate of earnings used in computing compensation.
2. An increase from $2,500 to $3,600 in the maximum amount of annual earnings on which compensation is based.
3. An increase in funeral allowances and in monthly benefits to widows and other dependants. Payment of hospital insurance premiums of widows and orphans from the Accident Fund.
4. Removal of limitation on Board's annual expenditure for rehabilitation work.
5. Compulsory coverage of farm workers.
6. Elective coverage of domestic servants.
7. The creation of a Medical Appeal Board.
8. Annual physical examination and issue of certificates of fitness for workers in coal mines.

NOTE: The first four of these recommendations were implemented by the British Columbia Legislature at the 1952 Session (L.G., June 1952, p. 783).

before me, including the mandatory formation of joint safety committees and their functioning, the awakening of labour unions to their responsibilities and many other circumstances too numerous to mention in detail, including, for instance, certification of men using blasting-powder, I have reached the conclusion that in this phase of accident-prevention the Board, through its officials and especially by reason of the long continued efforts of Mr. Francis, has demonstrated a praiseworthy, conscientious and intelligent devotion to its obligation.

Tangible results are always slow in following these endeavours. The acceptance of the necessity for safety programs is of slow growth. The seed takes years to come to fruition. From about 1945 onward, results of an awakened interest can be seen in the reduction of accident-frequency rates...

I am also satisfied that this effort has brought about a better understanding of the problem by both management and labour and a spirit of co-operation engendered that will redound to the common good. I would be remiss, perhaps, if I did not record that the evidence before me shows intense interest in safety programs has been demonstrated by the logging, pulp and paper, and sawmilling industries, with excellent results being achieved through an intelligent and willing co-operation between management and their respective unions. In these groups I would also add the Railway Companies and the Railway Brotherhoods. The bigger the operation, the better the program. In my opinion, the evidence points to the Board as a very real and active factor in this development. The small operators present, as yet, a very real and pressing problem.

In discussing the second phase of accident prevention, the making and enforcing of safety regulations, the Commissioner reviewed the work of the Inspection Service and placed on the record some of the highlights of the activities of the Board's inspectors, eight of whom testified at the inquiry.

He outlined the duties of the Safety Department of the Board as follows:—

> The task of the Safety Department of the Board is to prevent accidental injuries to workmen in all industries covered by the Act by correcting unsafe practices and conditions revealed through inspection of premises and by investigation of accidents, and also by publicizing the humanitarian and economic advantages of accident-prevention efforts, to develop and maintain interest by management and labour in the problem.

The Accident Prevention Staff consists of the Chief Inspector, office staff and 21 field inspectors. Three dust inspectors inspect mines and other premises where a silicosis hazard exists and an industrial hygienist investigates conditions related to all industrial diseases, exclusive of silicosis.

The Board requirements in choosing inspectors are stringent. In every instance extensive experience in the industry to which an inspector is to be assigned is required as well as in most cases a great deal of supervisory experience, together with acceptable personality and knowledge of human behaviour. Each inspector is given the opportunity to broaden his knowledge and ability.

No attempt is made to inspect every industrial operation annually but where serious hazards exist, several inspections are made each year. Of a total of 277 different types of industry, 78 have serious hazards, 121 only moderate hazards and 78 subclasses have practically no hazard. The Board's greatest efforts are concerned with the firms having a serious accident threat. For every industry the Board has at least one inspector who has had some practical experience in it and is familiar with its safety problems. A number of inspectors are qualified in several different fields. Consulting as well as enforcement services are carried on.

Of the heavy burden devolving upon the Board's inspectors, the Commissioner had this to say:—

> Inspectors travel to the most remote parts of the province, wherever men are working regardless of means of transportation, weather conditions, or available accommodation. Hours of work are not considered. Days are spent inspecting premises. Evenings and week-ends are used for meetings, writing reports, or travel.
>
> During 1949 the inspection staff covered approximately 80,000 miles by car, 3,000 miles by chartered aeroplane, 7,000 miles by chartered boat, in addition to the use of public transportation systems by air, water and roads. Many miles were walked on trails, roads, and railways, often with a pack-sack and sleeping bag.

Concerning the evidence of the inspectors who were described as "efficient, practical, hardworking, and sometimes overworked officers of the Board," the Commissioner stated:—

> It is abundantly clear, even from the short excerpts I have made from the evidence of the inspectors that they are highly qualified men with an excellent record of performance. Although I placed their duties arbitrarily in the "material" division of the Board's efforts toward accident-prevention, there can be no doubt that they have all contributed widely and wisely to the development of the safety idea both in management and labour.
>
> The quoted evidence is by no means an exhaustive description of their multitudinous duties and their performance thereof. Viewing the evidence as a whole, this branch of the Board is a credit to it.

Accident Prevention Regulations

The revised Accident Prevention Regulations of the Board adopted in 1950 were described by the Commissioner as more

comprehensive than those of any other province. In addition to several informal discussions with labour and management representing various industries, public hearings were held to consider revision of the regulations concerning the construction, logging and wood-products industries. The care taken in their preparation is shown from the evidence of one of the logging inspectors:—

> I would like to say something about the Accident Prevention Regulations, which I consider to be the finest in evidence anywhere. The Regulations have been added to and changed a great deal since the early days to meet changing conditions but they have all been the result of myself and the other inspectors going around in the woods with notebooks talking to superintendents, operators and loggers, writing down their suggestions, comparing them with other places, investigating accidents, and then talking it over with the others to see what would make a good practical regulation to cure the bad condition. Most of the Regulations in the book are actually based upon some Regulation which was brought in at the time because of a particular accident, and it is for that reason that the work of inspectors in going to inquests and investigating serious accidents is so important.

Enforcement

The Board has power to impose penalties for breach of its regulations in five ways, namely: (a) stop orders; (b) penalty assessments; (c) charging accident cost to employer; (d) disallowance of claims by workman; and (e) fines by court proceedings. The Commissioner dealt with each of these in turn.

The Board's minutes show a record of 53 official stop orders issued between 1931 and 1950, shutting down an entire operation when it was shown that the safety of workmen was threatened. In addition, inspectors have issued at least 100 on-the-spot stop orders a year over this period without a Board resolution. In so doing, the Commissioner considered that they acted without statutory sanction since Section 59(2) confers this power on the Board alone. He recommended that the section be amended with retrospective effect to authorize inspectors to issue interim orders, effective for a period not exceeding five days. During this period the Board might affirm, modify or reverse the order.

Under Section 37, the Board has power to enforce compliance with its regulations and the orders of its inspectors by charging the employer a higher assessment rate. Where Accident Prevention and First Aid Regulations have been complied with, the preferred rate applies, that is, one-half of one per cent less than the regular rate. In case of non-compliance, however, a firm is placed on the regular rate. If it still does not comply with the Board's orders, further increases are imposed. Increases in rates are not regarded as a licence to operate under unsafe conditions. If the hazard is serious, stop orders are issued. The method of penalty assessments is being increasingly used by the Board. Its files indicate that in 1949 a higher rate of assessment was imposed in 374 cases and in 1950 in 485 cases.

When a workman is accidentally injured, the Board has power to charge his employer with the cost of the accident under Section 43 when the accident was due to the employer's gross negligence or his failure to adopt reasonable means for the prevention of accidents or to comply with the regulations or directions of the Board. In such cases, the employer is notified that the Board is considering imposing a penalty and he is given a hearing before it to show cause why it should not be done. The Board's records show that since 1932, 15 firms have been charged with accident costs under this section.

Section 7(3) states that no compensation is payable to an injured workman when the injury is attributable solely to his serious and wilful misconduct. During the period January 1, 1942, to October 31, 1950, 326 claims were rejected because of the workman's non-compliance with the regulations.

Higher Fine Recommended

In discussing fines by court proceedings, the Commissioner stated that in the 1945 revision of the Accident Prevention Regulations the penalty section providing for a fine of $50 for non-observance of the regulations was deleted but that it was again inserted in 1950. In his opinion, a fine of $50 was not of much consequence in cases of flagrant and persistent refusal to obey the Board's regulations and he recommended an amendment increasing the maximum penalty to $500.

The Board invoked the penalty section of the regulations in 1951 when it laid charges against the rigging-slinger in charge of a logging operation on which a fatality occurred. The man was convicted on two charges and fined. The Commissioner saw no reason why the aid of the courts should not be invoked when there was a breach of the regulations by men on the supervisory level. In almost all serious accidents some regulation has not been observed, he stated, and the top man of the job should be held responsible and penalized for not carrying

out his duties of supervision. An analysis of 28 fatal logging accidents in 1950 indicated non-observance of the Board's regulations by supervisors in 18 instances.

Divergent opinions were expressed on the question of whether or not the Board should prosecute a recalcitrant workman. The view of most witnesses was that the Board should not itself seek to discipline a workman. It was felt that this was the obligation of management and supervisors working in co-operation with union leaders.

The Commissioner felt, however, that when the circumstances justify it the Board should not hesitate in the exercise of a wise discretion to prosecute a workman for deliberate and persistent violations of the regulations. He pointed out that a number of the regulations directed to the workman are not solely for his own protection but are for the protection of his fellow-workmen as well. It seemed to him that the Board could and should exercise its police powers against an individual workman who believes it is his inalienable right to so conduct himself at his work that his death, and perhaps that of his fellow-workmen, is the inevitable result of his refusal to abide by safety regulations.

The Commissioner stated that he could appreciate the difficulties faced by management where the discharge of a workman would result in union opposition and the invocation of the grievance procedures in collective agreements. A solution for this situation, suggested by a member of the Board, was that a provision should be included in collective agreements that in effect would state that a workman shall not be guilty of a breach of the agreement if he refuses to work under conditions which contravene the Board's regulations, and that, on the other hand, would protect an employer who discharges a workman for failure to observe these regulations by refusing him the right to seek the aid of the grievance committee. The Commissioner, after consideration, expressed the opinion that this provision should be given statutory recognition and made mandatory. He felt that it would strengthen the hands of both management and labour in the enforcement of safety regulations.

The Commissioner summed up his attitude towards the Board's obligation to institute prosecutions in these words:—

> The power that regulates is the power to enforce these Regulations. In the final analysis that is a power which cannot be delegated. Neither is it a power that should find its sole expression in persuasion. The foundation of power is the legalized right to inflict punishment when the circumstances rightly and properly demand that such action should be taken. To reach any other conclusion is to interpret the Board's Regulations as the mere manifestation of wishful thinking, instead of concrete expressions of the will of the State governing human conduct for the general good and welfare of men exposed to the hazards of our industrial economy.

The Commissioner's conclusions on the second complaint were that the Board had not been lax in enforcing the safety regulations. He thought, however, that its position would be strengthened by:—

(1) Appointing more sawmill, logging, heavy construction and dust inspectors, with the result that more frequent inspections would tend to lower accident-frequency rates.

(2) Making it mandatory for all employers under the Act to supply the Board with particulars of man-hours of exposure in order to facilitate the preparation of accident-frequency statistics.

(3) Encouraging inspectors, where practicable, to be accompanied on a plant tour of inspection by a nominated labour member of the plant joint safety committee. He recommended the adoption of these measures.

Overlapping Jurisdictions

Another matter which the Commissioner considered was that of overlapping jurisdiction between the Board and the inspection services carried on by other Government agencies under various statutes. The latter are designed to protect both workmen and the general public. It seemed to him that neither a mandatory consolidation of all existing inspection forces under one head nor a loosely knit system of voluntary co-operation in the midst of divided authority provided an answer to the problem.

Suggesting that "something between the two would seem to be the most suitable answer", he proposed that the Act be amended along the following lines:—

> Notwithstanding anything contained in this and any other Act, the Board may enter into an arrangement with any Minister of the Crown in the right of the Dominion or Province whereby Inspectors in the employ of these Governments or agencies thereof may, when deemed necessary in the interests of safety and accident-prevention, be authorized and required to carry out the duties and responsibilities of an inspector under the "Workmen's Compensation Act" for the purposes of that Act, and every inspector in the course of such duties and responsibilities shall be under the direction and control of the Board.

The Commissioner went on to say:—

> I have included therein inspectors under the jurisdiction of the federal Government, having in mind those appointed under the "Canada Shipping Act". Longshoremen working on ships loading and unloading cargo, carpenters lining grain-ships, and such like are under our Act and are entitled to compensation when injured while engaged in such occupational duties aboard ship. The Board's inspectors are permitted aboard ships to inspect the hazard of such working conditions by courtesy. As the Board has a responsibility to these men, it seems to me they should be in a position to exercise some control, and the proposed amendment is designed to that end.

Comparison with ILO

Before leaving the subject, the Commissioner referred to Recommendation 31 of the International Labour Organization which sets out the ILO standards with respect to accident prevention. A comparison between the ILO Recommendation and what the Board has done, set out in a table in the report, indicates that the Board has not only fulfilled but exceeded in many instances the ILO standards.

First Aid

In his discussion of the Board's First Aid Department, which consists of a first aid supervisor, an assistant, office staff and two first aid instructors in the field, the Commissioner compared the first aid requirements of the British Columbia Board with those of other jurisdictions and found that the Board had established higher standards than those in effect in any other province. It appeared also that its standards were as good as, if not better than, those of the neighbouring states of Washington and Oregon. This resulted from a change made in 1931 when the Board assisted in organizing the Industrial First Aid Attendants' Association of British Columbia. Under the new system, the Association undertook to give a more comprehensive training than that previously given by the St. John Ambulance Association.

Since 1935 the St. John Ambulance Association has taught similar courses in accordance with Board requirements. Instruction in first aid is given, therefore, by both organizations. A board of examiners consisting of three medical doctors and a layman approves the syllabus of instruction of each organization and examines candidates for certificates of efficiency in industrial first aid in any of its various grades. The Board of Examiners recently adopted a book on practical first aid written by a Board doctor and published in 1950. Candidates are also examined on the material contained in the booklet entitled *The Early Recognition and Treatment of Shock* issued by the National Research Council of Canada.

The Board's First Aid Regulations have been steadily improved. A general revision in 1949 was adopted after review for some months by representatives of industry, first aid men, doctors and safety directors. Factors governing the drafting of the regulations have been the hazard in the particular industry, the number employed, the distance from the doctor, and the communications between the undertaking and the doctor or hospital. In specifying the type of first aid kit and equipment which an employer must maintain, the Board has laid down minimum requirements only, which may be added to as the circumstances demand, and has sought to ensure that the equipment embodies the latest and best devices and materials.

The Commissioner then dealt with the request that first aid attendants should be trained to administer plasma, oxygen and narcotics to men injured in the logging and lumbering industry to prevent the onset of shock. After analysing the reasons for the objections of the medical profession against their use and placing these objections against the possibility of saving lives, he came to the conclusion that the training of first aid attendants should include when, how, and how much plasma should be used; the use of narcotics, subject to control by regulation; and the administration of oxygen. He considered that employment of first aid attendants should be made mandatory by the Board in all hazardous industries employing 75 men or more when engaged in an operation 10 miles travelling distance from the nearest hospital or doctor.

The Commissioner pointed out that the use of oxygen does not present any problem. The administration of a pain-relieving drug such as morphine by a first aid attendant is forbidden by the Opium and Narcotic Drug Act, which makes it an offence to have possession of drugs except under licence. Commenting that, as a result, the first aid attendant is permitted to give a suffering man nothing stronger than an aspirin tablet, the Commissioner stated that it was time that something was done "to relieve this deplorable and entirely unnecessary human suffering".

It was his opinion that, under the powers conferred on the Governor in Council to make regulations, a practicable scheme could be worked out to permit the use of drugs by first aid attendants with whatever safeguards might be thought requisite as to the amount that might be kept on hand, the obligation to report its use, and the maximum dosage to be given.

With respect to possible danger from the use of plasma, it appeared to the Commissioner that no great harm could be done if the amount given were limited to a pint, if first aid men were given proper training in diagnosis of shock and in the technique of administration, and if its use was restricted to isolated areas where doctors are not readily available.

It was the Commissioner's view that first aid attendants should be afforded a higher status than they now enjoy in industry, and he remarked that

> An injured logger would have a great deal of added faith and confidence in the assistance rendered him by a man with more camp prestige than that enjoyed by a man who sweeps the floors, makes the beds, and does other menial jobs. The psychological aspect of this matter cannot be altogether ignored.

The regulations require that a first aid man "shall devote himself exclusively to first aid work, or that work coupled with any other work of a nature which enables him to be in as clean and sanitary condition as is practicable and to remain within reasonable proximity of the first aid equipment or first aid room if one is required." First aid men with no other duties are employed only in the larger camps. The smaller camps generally have first aid time-keepers, first aid bed-makers, or first aid bull-cooks. The Commissioner felt that every encouragement and aid should be given first aid attendants to raise their status by more extensive training until they might perhaps acquire a semi-professional standing, and that the job of first aid attendant could well be combined with accident-prevention work in a plant.

Recommends Telephones

It was suggested that the Board should make it mandatory for crews working in the woods to be connected with the camp by telephone so that transportation could be rushed to bring an injured man to the first aid room. The Commissioner felt that serious consideration should be given to this suggestion. He pointed out that portable radio transmitters were not expensive and would perhaps be of value.

Regarding the suggestion that a helicopter service be established by the Board, he thought that the cost of any such service, if it were organized, should be borne by the state and that it should be made available to all residents of remote areas needing hospital attention. He noted that an air ambulance is operated by the Government of Saskatchewan.

Safety inspectors of the Board serve as first aid inspectors and inspect first aid kits and rooms. From 1943 to 1949, 6,513 written orders relating to first aid were issued by inspectors and from 15,000 to 20,000 were issued directly from the Board's office.

In addition to inspection, each employer is required to send to the Board an annual First Aid Service Report. This form is dealt with by the First Aid Department and if it is found that an employer is not complying with the First Aid Regulations, he is so advised and corrective action is asked. If an employer disregards the Board's warnings or fails to carry out the inspector's instructions, the Board, on the recommendation of the First Aid Supervisor, may raise the employer from the preferred rate to the ordinary rate of assessment. Although it is the policy of the Board to seek in every way to persuade an employer to comply with the regulations before raising the assessment rate, it does use this method and in 1950, 356 employers had their assessment increased.

Over the years and particularly since 1935 the Board through its circulars and posters has sought to inform employers of the special hazards or problems which would confront their first aid men and to make them aware of new techniques.

With the tremendous growth of the lumbering industry in the north country, the Board found it necessary to give correspondence courses in order to have qualified first aid attendants for the many small operations within this territory. Since 1947 instructors engaged jointly by the Board and the St. John Ambulance Association have conducted first aid classes in many centres. In July 1951, 106 candidates were being trained in the area around Prince George and 50 in the vicinity of Kamloops.

In June 1951, the number of valid Industrial First Aid certificates was as follows: AA, 221; A, 877; B, 681; C, 524; total, 2,303.

A scheme for the training of first aid men in the woods, undertaken through the co-operation of the Board, the B.C. Loggers'

Association and the executive of the International Woodworkers of America, was put into effect in January 1948, after a survey of similar training in Washington and Oregon. Instructors have conducted classes all over the province. About 7,000 men have received some training and some 3,500 have been granted St. John Ambulance certificates. The Commissioner commented that this training will probably become a permanent institution.

After referring to the attention given by the Board to first aid in the logging industry and to its earlier efforts in the building of the Alaska Highway, in war work in the shipyards, and in inspections of the waterfront, the Commissioner stated that "I have reached the conclusion that the First Aid Department of the Board deserves praise for the manner in which it is carrying out its duties".

Industrial Hygiene

The report noted that British Columbia is the only province in which the Workmen's Compensation Board directly supervises industrial hygiene. In 1942 he had suggested that the Board organize "a Bureau of Industrial Hygiene as an integral part of accident and industrial disease prevention in the province", and in 1946 the Board set up its Industrial Hygiene Division. Its function is to make industry-wide investigations where thought necessary and bring in regulations as may be required, to investigate particular plants and see that unhealthy conditions are remedied, and to advise the Board doctors in claims for compensation by reason of exposure to toxic materials.

The Commissioner found that the Division was adequately staffed but that with the industrial growth of the province it would before very long need to be expanded. Noting that under Section 36 an annual grant of not more than $50,000 may be made from the Consolidated Revenue Fund towards the expenses of administration of the Act, and that the only contribution made by the province to the Board was an initial grant of $10,000, the Commissioner recommended that the section be amended to permit an annual grant to be made to the Division of Industrial Hygiene. His reason for so recommending was that future activities of the Division, when expanded, would include a consultative service of benefit to industry in many related fields of industrial hygiene, and, as such a service would be in the public interest, the state should bear some part of the cost. In Ontario, the Industrial Hygiene Division is financed by the state and not by industry.

The Commissioner suggested that, since a number of men suffer each year from various forms of contact dermatitis which might be prevented if they used reasonable precautions such as wearing protective clothing and washing the hands frequently, a more extensive educational program relating to the causes and prevention of industrial diseases should be undertaken by the Division.

Rehabilitation

The Rehabilitation Department was opened in 1942, with a staff of one doctor and 15 physiotherapists. Now staffed by five doctors and 40 therapists, it treats an average of nearly 500 patients a day. It is realized that the present accommodation must be enlarged and plans are under way for the construction of a new building.

Concerning the clinic, the Commissioner said: "I was impressed by the equipment at the Vancouver Clinic. With due allowance made for its comparatively small quarters, the Vancouver Clinic measures up very well when compared to the Ontario Rehabilitation Centre at Malton". In his opinion, the Board should give serious thought to the placement of beds in the new Rehabilitation Centre pointing out that the Ontario Centre is divided into two sections, a 120-bed hospital and a clinic. It thus has the advantage of treating patients at an earlier stage than the Vancouver Clinic. The Commissioner went on:—

> I am not unmindful of the present cost of supplying this need, but it seems to me reasonable to assume that as this province continues to grow in population and prosperity, the end result will in time justify this expansion. All I am suggesting at the moment is that at present we should anticipate future needs and the plans be so draughted with an eye to the future. I have no doubt the Board members feel the same way about it.

Referring briefly to the 1951 National Conference on the Rehabilitation of the Physically Handicapped, the Commissioner observed:—

> I have no doubt the Board of this province is ready, able and willing to participate in an integrated program of

rehabilitation such as that envisaged by this National Conference. When the aspirations of the Council are translated into reality, the problem of adequate hospital and other facilities for rehabilitating injured workmen in this province should be resolved without too much difficulty.

At present the cost of physical rehabilitation of injured workmen is chargeable to the Board's Medical Aid Fund and thus is paid for by industry. Financial assistance from the state, either federal or provincial, to a National Rehabilitation program should result in an expansion of the Board's present rehabilitation activities without directly assessing industry therefor.

As regards vocational rehabilitation, the Board has been authorized since 1943 to spend up to $75,000 annually "to aid in getting injured workmen back to work and to assist in lessening or removing any handicap resulting from their injuries".

The Commissioner noted that training facilities had been expanded in recent years. Of particular importance was the opening of the Vancouver Vocational Institute in 1949 at which classes are given in 25 trades. Other facilities used have been the St. John Ambulance Association, the Industrial First Aid Attendants' Association, commercial schools and training-on-the-job. From August 1943, to June 30, 1951, a total of 3,303 claimants was referred to the Department. Of these, 2,203 were successfully rehabilitated, 796 were not rehabilitated and 304 cases were still on file. The report notes that the average cost per man works out to about $335.

Recognizing that rehabilitation should begin as soon after the injury as practicable, one of the Board's counsellors visits the larger hospitals in the Vancouver area weekly. After discharge from hospital the claimant is interviewed many times. The Commissioner considered that too much emphasis cannot be placed on this phase of rehabilitation work and in this connection he found that the previous experience of the Board's Rehabilitation Officer and four counsellors had served to equip them to understand the problems of the handicapped.

Since the workman's attitude toward rehabilitation is determined in the main by the person to whom he is referred for guidance and counselling, the Commissioner felt that

> The Counsellor must become an expert in human relations, seeking to make those handicapped cognizant of the resources within themselves and within their community. . . . Quite frequently it has been found that it is impossible to plan for vocational goals for a handicapped workman until problems in the psychological and social areas have been solved, and unless this philosophy is recognized, it is not always possible to establish that rapport with the man which is essential to his effective rehabilitation.

In considering the question of job placement of handicapped men by the Rehabilitation Department and other agencies working towards the same end, such as the National Employment Service, the Commissioner included in his report an excerpt from the book *New Hope for the Handicapped,* a study of rehabilitation from "bed to job". In this book the authors, Dr. Howard A. Rusk and Eugene J. Taylor, both leaders in the field, demonstrate that although industry as a whole has discriminated against disabled workers because of assumptions that they are less efficient and more accident-prone, the strongest supporters of the utilization of physically impaired workers have been the concerns that have hired large numbers of handicapped workers.

The book points out that

> the factors of training, experience, personality, temperament and the other elements that go to make up the individual are the factors that account for the success of anyone on a job. In only two of these factors does the handicapped worker vary from the able-bodied. The first of these is his physical disability, which has no effect on his ability to perform a task if he is placed selectively on the right job. The second is that he has over-compensated skills that he has developed because of his disability.

The Commissioner decided that the work which the Board is trying to do through its Division of Vocational Rehabilitation should not be circumscribed by the restriction of its expenditure to $75,000 annually and, as requested by various unions, he recommended that the amount to be spent should be left to the discretion of the Board. Industry did not disagree with this suggestion.

Other recommendations of the Commissioner concerning rehabilitation were that further counsellors should be engaged to visit and assist injured workmen in various parts of the province; that one counsellor should be an amputation case of the character of William Gray (who appeared as a witness and who demonstrated "what can be done by a disabled man with a will and courage") to aid other amputation cases to overcome their handicap; and that the services of counsellors should include advising orphans and children dependants of workers killed in industry with respect to becoming established in a suitable occupation. The Board should have authority, the Commissioner suggested, to provide financial assistance to such young people so that they might attend vocational training schools.

Trail Smelter

Submissions were made by the International Union of Mine, Mill and Smelter Workers, Local 480, with respect to specific hazards in connection with work at the Trail smelter and other operations of the Consolidated Mining and Smelting Company of Canada.

One of these was lead poisoning due to the large amounts of lead-bearing dust and fume produced in the smelting process. The union's contention was that the Board had not taken the necessary steps to see that hazardous conditions causing lead absorption were corrected. It urged, too, that lead stippling should be regarded as an industrial disease and that men who are transferred from lead areas to non-hazardous areas because they have showed symptoms of lead absorption should be compensated by the Board for the resulting wage-loss.

It was pointed out in the evidence that the accepted methods of dealing with the problem were to prevent, as far as practicable, the escape of dust and fume into the air, to provide protective equipment for the use of workmen, and to develop a system of medical control.

The Commissioner did not find that the Board had been remiss in its duties in relation to the lead hazard at Trail. It was generally conceded that a dust-hazard exists because the plant, much of it over 40 years old, does not lend itself to the introduction of modern ventilation and engineering equipment. It was expected, however, that much of the difficulty would be overcome with the construction of a new smelter, which should be completed in 1953. In the meantime, it was clear that the company has taken steps to reduce dust concentrations in places where the hazard is unduly high. It has, in addition, a system of regular medical examinations of employees and provides respirators of the most improved design, approved by the U.S. Bureau of Mines, for use by the men in dusty areas.

The Commissioner outlined the procedure followed by the company with respect to tests for "stippling", which are used to find out the individuals who are absorbing lead in amounts likely to cause lead poisoning. He understood "stippling" to mean blood-cells with dots or flecks which, because of lead absorption, are stainable by basic dyes. Two weeks after an employee begins work in a lead-hazard area, he is called in for a test. Subsequent tests are given periodically, depending on the degree of hazard involved and the results of the tests.

As a result of repeated tests and check-ups, 180 men were transferred to non-hazardous areas between January 1949, and July 1950. Many, if not all, were then employed at lower wages because the average rate is higher in areas of higher hazard. The Commissioner did not consider that these men were entitled to compensation. They voluntarily undertook to work in the lead area because the wages are higher and promotion is faster. It is to their physical benefit that they should be moved if they are susceptible to lead in order to prevent the absorption from being serious in effect. In his opinion, they are suffering from neither accidental injury nor occupational disease but are simply constitutionally unfitted for the work in that particular part of the plant.

Men who absorb sufficient lead to bring about symptoms of lead poisoning receive compensation. Only two lead claims involving more than time-loss have been filed with the Board since 1942.

The only matter on which the Board might act, according to the Commissioner, was the neglect of the workmen to wear respirators. It was shown that a company order was practically ignored. Only about 10 per cent of the workmen exposed to hazard wear respirators and the remainder leave them hanging around their necks. The Commissioner felt that this should be the subject of consultations between the Board and the company, with a view to remedying the situation as far as practicable.

Appointment of Advocates

The International Woodworkers of America (B.C. District Council No. 1) requested that "provision be made in the Act for the appointment of advocates, instructed to assist claimants in the presentation of their claims for compensation, and that such officials be given access to the files of the board".

Much of this sort of work is now done by union officials and with favourable results in many cases. The union's request and the Commissioner's resulting recommendation were based on the successful experience of pensions advocates in the Department of Veterans Affairs.

The Commissioner recommended that the Act should be amended to permit the appointment of an advocate in Vancouver and a deputy advocate in Victoria. They should be members of the Bar and should be appointed by the Lieutenant-Governor in Council on the recommendation of the Attorney General. In general, their duties would be to assist claimants in (a) establishing a claim; (b) reopening a claim or rejected claim for review on new facts; (c) preparing and presenting an appeal to the Medical Appeal Board. The Board's files should be at the disposal of an advocate. He should be paid by the Attorney General's Department on such monthly salary basis as may be deemed reasonable. The Commissioner stressed the necessity of the advocate being completely independent of the Board and having nothing more than a professional and objective interest in the claimant.

Workmen's Compensation Board

The Commissioner's comments regarding the Workmen's Compensation Board were as follows:—

> During the inquiry it became necessary for me to examine in detail almost every phase of the Board's administration because of the nature of the complaints I was compelled, by the terms of the Commission, to consider. . . . From the massive body of evidence adduced, it is my considered opinion that the Chairman and Members of the Board are conducting its affairs in a highly commendable manner.
>
> The administrative machinery is well organized and functions efficiently in the vast majority of cases. An organization that handles approximately 70,000 claims a year is bound to run into difficult and problem cases concerning which its judgment might be called into question by those who are affected thereby. It is those types of cases which were brought before me.

Regarding its public relations, the Commissioner's impression was "that the general attitude of workmen and labour unions is more friendly and cordial to the Board than in 1942. There are, of course, some focal points of bitterness existing, but the general 'tone'—if I may so express it—indicates a decided change for the better".

Both industry and labour representatives considered that the salaries of the Chairman, board members and executive officials were not commensurate with their responsibilities. The Commissioner agreed and recommended that substantial increases be provided.

Seventeen amendments to the Act of a general nature were requested by the Board. In the Commissioner's view, they were sound in principle and he recommended their adoption by the Legislature.

German Co-determination Law Analysed

Analysis of recently-enacted Shop Constitution Law of West German Federal Republic, which reintroduces provisions for protection of labour abolished by the National Socialist regime, is reviewed here

Industrial workers in the West German Federal Republic have been given limited rights of "co-determination"—participation in management decisions—by the recently-enacted Shop Constitution Law *(Betriebsverfassungs Gesetz)*.

In the main, the act reintroduces and strengthens provisions for the protection of labour which had been in effect at the time of the Weimer Republic and were abolished during the National Socialist regime.

According to an analysis of the act, published by the German American Trade Promotion Office, New York City, the new Shop Constitution Law attempts to avoid "the process of bureaucratization and degeneration which marked the prior experiment". Its aim is to strike a balance between the claims of labour on the one hand and of employers on the other. Consequently, the rights and obligations of both are clearly defined. The right of management to establish its own policy is preserved and the actual participation of labour in management decisions is restricted to specific instances.

Under the new act, a "workers' council" must be set up in any enterprise having

more than five employees. To ensure that these councils are run on democratic lines, certain conditions are laid down governing their operation. The functions of the councils are threefold, involving joint action with management in solving what are described as (1) the "social task"; (2) the "personnel task" and (3) the "economic task" of the company.

Social Task

Grouped under the social task are all questions relating to the internal affairs of the shop, such as maintenance of order, health and safety, factory rules, welfare and vacation plans.

The new act departs from the 1920 statute in limiting the right of co-determination of the council to the internal affairs of the shop and expressly withdrawing all problems regulated by statute or collective bargaining. Jurisdiction does not extend to wage determination or other matters usually covered by union contracts; determination of wages rests exclusively with the unions.

Where management and the workers' council fail to agree on matters within the scope of the social task, management is free to put into effect its own solution. The workers' council then has recourse to a board of arbitration. If, after mediation, the board fails to reach an amicable solution, it is empowered to impose a final decision.

Personnel Task

Under German law employment contracts are not terminable at will. Depending upon various circumstances, the law of master and servant requires advance notice of termination ranging from two weeks to six months. Dismissal without notice is permitted only for "just cause". Even if the job or the enterprise as a whole should be discontinued, employers are not relieved from the obligation to pay wages for the requisite period. As the protection provided by law is considered ample, workers' councils do not have the right of co-determination in problems of dismissal. Their sole prerogative in this field is the right to be informed of measures taken by management.

As with dismissals, jurisdiction in hiring and in re-defining employment duties remains with management, "which bears the business risk". In all cases, management's decisions are effective without the consent of the workers' council. The council received only a limited right to judicial review of specific measures on clearly defined statutory grounds.

Economic Task

The right of labour to participate in business decisions was warmly contested during the debate on the new legislation in the German Parliament and a compromise, largely inspired by the precedent set by British production committees, was finally adopted.

Basically, the new statute tends to improve labour-management relations and to give added incentive to workers through participation in planning and development, while preserving fully management's final say in all matters of business policy.

To protect management's legitimate prerogatives, in the case of enterprises with 100 or more employees the right of co-determination is invested in a special "economic committee", half of whose members are appointed by the workers' council and half by management.

The economic committee is entitled to be kept regularly informed concerning production and labour methods, the economic condition of the enterprise, turnover, and all events and transactions affecting the employees' interests.

The workers' council itself, however, exercises the right of co-determination, through procedure before a board of arbitration, in the following situations: mass lay-offs, transfer or merger of the business, fundamental change in the nature of the business and introduction of basically new methods not necessitated by market conditions or industrial progress.

Labour Representation on Board of Directors

Equal representation with ownership on the board of directors was pressed by labour but was not embodied in the statute. Only minority rights in certain large enterprises were granted. Organizations which are not of a corporate or quasi-corporate nature are not required to grant labour any representation in management. Even stock corporations are exempt if all of the stock is owned by one individual or one family.

Eligibility to serve as a labour representative is determined by the statute, which attempts a compromise between union demands and objections raised by management. Where labour is entitled to representation by one or two members only —in the case of a board which has not more than six members—the designees must come from the shop. Where the number of directors exceeds this minimum, labour may be represented by outsiders. Thus management can exclude representation by union officials by limiting the number to

six. Concerns incorporated outside of Germany are altogether exempt from the requirements of labour representation on the board.

"On the whole," the analysis concludes, "the statute presents a healthy compromise, tending to foster and promote peaceful and constructive co-operation within the enterprise rather than to stress the opposing interests of labour and management. It is believed that the act affords a sound basis for co-operation between labour unions and workers' councils on the one hand and management on the other, and that the new pattern will operate smoothly and to the advantage of all concerned."

Profit-Sharing, Joint Management Strike Issues at Belgian Plant

The worker's right to share in the profits is the main issue in a strike in progress since December 1 in a machine shop at Bruges, Belgium. Some 1,800 workers are involved.*

The question at issue appears to be as follows: has the worker a right, in addition to his wages, to a share in the fruits of the concern?

The President of the Federation of Christian Trade Unions, commissioned to define the Federation's position with regard to the worker's right to a share in the profits, stated:—

"The main purpose of a trade union is still to defend the interests of the workers; but the labour movement has gradually enlarged this idea by claiming as its due the right to have a say in social and economic matters.

"In our opinion, a company is a community of persons with different jobs but all working towards the realization of a single objective: the product. In the process of production itself we can see no difference between the manager and the employee or worker. They go to make up a community whose purpose is to create the product. We want to see this community recognized, and that is why we wish to create the conditions necessary for the application of joint management. We want a definition of ownership rights and a suitable profit-sharing formula.

"We want to see the management of the concern enlarged by the taking into consideration of factors other than those heretofore recognized. In every company there is a community of fortune among all the elements which play a part in it. Prices, sales possibilities, etc., are of just as much interest to the workers as they are to the manager or director.

"But the solidarity existing in the concern is still too little felt by the worker, precisely because he is not recognized as being a partner and associate.

"As a matter of fact, there is no equality of treatment between employer and worker. Working conditions still correspond much too little to the title of partner and associate and too much to that of hireling. The worker should be able to feel that he is a partner in the concern. Then only can this community of labour blossom forth for the greater good of the establishment.

"It is a good and necessary thing to appeal to the market of capital and to reward it accordingly; but the remuneration should be proportionate, and not disproportionate as is too often the case at present.

"Workers should not be considered as wage-earners but as associates. This is what we mean when we say that the workers are entitled to the respect which is due them.

"Some people want to know whether, if the worker claims his share in the profits, he will also sustain his share of the losses.

"Our answer is this: the worker has always shared in the losses. The risk incurred by all the elements in a concern has always been estimated as being greater than the possible risk of financial deficit required. When unemployment occurs, the worker loses his whole means of existence.

"We have also been asked by what right the workers demand a share in the profits. Our sole right is that of labour, which, for us, represents a right to joint ownership. Legally speaking, the workers have no right; they have only their arguments, their strength and the strike."

Labour Review, Belgian Department of Labour, January 1953, p. 66.

Strikes in Israel and the number of work days lost were fewer in 1952 than in the previous year. In 1952 there were 51 strikes involving 12,285 workers and causing a time loss of 49,619 work days; in 1951, 63 strikes, 8,026 workers and 94,537 work days.

Labour Union Movement in Japan

Account of union growth and activities since end of the war given in recent government pamphlet, "Review of Labour Conditions in Japan"

Since the outbreak of the Korean war the labour union movement in Japan, states a government report, has been compelled to assume a more or less passive attitude "on account of the introduction of a series of anti-communist security measures, such as the 'red purge', involving all main branches of the nation's industry, the dissolution of the Liaison Council of All Trade Unions of Japan, etc., and the consequent organizational readjustment of the unions themselves.

"But," it says, referring to the year ending June 1951, "it resurged with a renewed vigour since the beginning of the year."

The report, *Review of Labour Conditions in Japan,* dated December 1952, has only recently been released by the Public Information and Cultural Affairs Bureau, Ministry of Foreign Affairs, Tokyo, through the office of the Japanese Embassy at Ottawa.

Reversing the trend of the postwar period, labour, says the report, launched during the year an industry-wide offensive, which reached its climax in the spring and summer. Following the Grand Rally of the General Council of Trade Unions of Japan in March, the principal labour unions held their spring meetings as usual. After heated debate, they all, with few exceptions, adopted what has been named the "three principles of peace"—non-separate peace; neutrality; and non-establishment of military bases.

Linked with this so-called "peace struggle" were demands for higher wages and a campaign opposing proposed anti-labour legislation. The campaign, says the report, was "staged under the leadership of the General Council of Trade Unions of Japan with such force as had never been seen in recent years".

A total of 924,000 workers was involved in disputes—160,000 more than in the preceding year, although work stoppages were fewer. Total man-days lost climbed steeply from the previous year's figure of 520,000 to 6,003,000.

No less significant, the report continues, was the struggle in December, the first undertaken in the postwar period by the democratic unions since securing leadership from the leftist unions, said to be comparable only to the "October struggle" of 1946.

No sooner, the report says, did the democratic unions show signs of progress than internal differences arose and the struggle between the right and left wings concerning the peace policy came into the open. The situation was further aggravated by the disruption of the Social Democratic party in October. Eventually there emerged within the General Council of Trade Unions a number of different groups —the Democratic Labour Movement Study Group, the Comradeship Group, the Orthodox Group and others.

The report concludes with a reference to unresolved problems of organization and "integration".

"Along with the question of strengthening the internal organization of the Japan General Council of Trade Unions," it states, "they will constitute an important issue to be solved in the future."

TRADE UNION MEMBERSHIP IN JAPAN

As of	Number of Unions	Union Members	Increase or Decrease from Previous Year	Estimated Rate of Union-ization
				%
June 1947	23,323	5,692,179	2,012,208	46·8
June 1948	33,926	6,677,427	985,248	54·3
June 1949	34,688	6,655,483	— 21,944	55·7
June 1950	29,144	5,773,908	—881,575	45·9
June 1951	27,644	5,686,774	— 87,134	42·6

73211—4

Annual Report of Saskatchewan Department of Labour for 1951

The eighth annual report of the Saskatchewan Department of Labour, covering the calendar year 1951, describes the increased activity of all branches of the Department.

Labour Relations

Applications to the Labour Relations Board, appointments of conciliation boards and informal conciliation cases were all more numerous than in 1950. Whereas during the early years of operation of the Trade Union Act conciliation services were confined to urban centres, they may now be requested in some 20 localities.

This development was in line with the increase in trade union activity throughout the province. Union membership increased by 10 per cent between January 1950, and June 30, 1951, chiefly because of the expansion of existing local unions.

During 1951, the Labour Relations Board held 11 meetings lasting a total of 14 days, at which 105 applications were considered. Out of 79 applications for certification, the Board granted 66, affecting 1,313 employees, and dismissed four. Four were withdrawn and five were pending at the end of the year. Ten representation votes were held, in two of which there was a choice between two unions.

Of the other applications, two were for orders requiring employers to refrain from unfair labour practices or from violations of the Act. One was dismissed and the other was pending at the end of the year. Another application still pending was for the reinstatement of an employee allegedly discharged contrary to the Act and for payment of the resulting monetary loss. There were 16 applications for amendment of orders of the Board, 14 of which were granted, and five applications to rescind orders, all of which were granted. No applications were received during the year for consent to prosecute or for orders compelling an employer to refrain from bargaining with a company-dominated union.

Section 18 of The Trade Union Act provides that a union representing the majority of a unit of employees may agree with an employer to refer a dispute to the Board for a final decision which is binding upon the parties. In 1951 the Board was asked to interpret the seniority clauses in the agreement between the Corporation of the City of Regina and Local 181 of the City Firefighters' Union in a dispute where the union contended that the Corporation had made an appointment in violation of the agreement. The Board's ruling was that the union's interpretation of the clauses was correct. One other dispute submitted to the Board for settlement was later withdrawn.

The Labour Relations Branch supplies informal conciliation where requested by labour or management. During 1951 this service was provided in 60 cases involving 122 employers and 2,997 employees, representing an increase of 13 cases over 1950. Wages and general working conditions continued to constitute the main source of disagreement but disputes over the interpretation of an agreement were more numerous than before. The Branch was successful in securing settlement in 41 cases; seven were pending at the end of the year.

Eight applications for conciliation boards were granted, five after informal conciliation had been unsuccessful and three without prior informal conciliation. Two of the applications were withdrawn when further negotiations brought about settlements. Three boards submitted reports acceptable to the disputing parties, while the other three had not reported at the end of 1951.

Five strikes took place, involving 216 employees and causing a loss of 2,885 man-working days. Most of the lost time was due to a strike of woodworkers in two Regina plants. Wages were the main issue in four of the strikes, while the fifth resulted from a grievance under an agreement.

The legal case arising out of the Board's order directing reinstatement of three employees of the Providence Hospital at Moose Jaw was concluded in 1951, when the Saskatchewan Court of Appeal upheld an earlier judgment quashing the Board's order on the grounds that the union in question had no right to set legal proceedings in motion and that the Board had not followed acceptable legal procedures. (L.G., 1951, p. 981.)

Wages and Hours

The Wages and Hours Branch administers the Minimum Wage Act, Hours of Work Act, Annual Holidays Act, Wages

Recovery Act, Factories Act (in part), Industrial Standards Act, One Day's Rest in Seven Act, Weekly Half-holiday Act, Workmen's Wage Act, and the Female Employment Act.

At the 1951 session of the Legislature, the old Masters and Servants Act was repealed and replaced by the Wages Recovery Act, which contains a similar procedure for the recovery of wages due but omits objectionable features of the old Act by which an employee could have his wages forfeited or be fined and imprisoned for trivial offences.

As a result of the repeal of the Masters and Servants Act, it was necessary to amend the Minimum Wage Act to permit an employer to discharge an employee for just cause without giving one week's written notice. In case of a lay-off, one week's notice must be given.

Another amendment was designed to give the Minimum Wage Board more precise powers in respect to computing and fixing pay for statutory holidays, whether worked or not.

The Minimum Wage Board held seven private meetings and two public meetings during 1951. New minimum wage orders increased the weekly wage from $21 to $24 in the cities and larger towns, and from $18.50 to $21.50 in smaller centres.

Under the Factories Act women and boys under 18 years of age are not permitted to work more than 48 hours in a week or between 6.30 p.m. and 7.00 a.m. without special authorization from the Department. During 1951, 22 permits were issued covering 81 employees, exempting them for a limited time from these provisions.

Seven permits were issued under the Hours of Work Act authorizing employees to work up to nine hours per day in order to have a five-day, 44-hour week. Five authorizations were issued to permit the extension of hours beyond eight per day, without payment of overtime, to facilitate the arrangement of shifts. Eighteen special orders were in effect under the Hours of Work Act, exempting whole industries or groups of employees from the provisions of the Act limiting working hours to eight per day and 44 per week unless time and one-half is paid.

Under the Minimum Wage Act, 47 permits were granted to allow business establishments to exceed their quota of part-time help. The quota of part-time workers set by minimum wage orders is 25 per cent of the full-time workers in an establishment but the Board may exempt an employer from this requirement. Two permits were granted authorizing the employment of a person under 16 years of age in a place of amusement. The Act also provides for the issuing of licences to physically handicapped persons, apprentices and learners, permitting their employment under special conditions. During 1951, 10 licences were issued to law students, 18 to pharmacy students, 30 to student accountants, two to student optometrists and 27 to physically handicapped persons.

The Branch made 4,287 inspections of the premises and records of industrial establishments. This was a slightly smaller number than in 1950 but the number of special investigations increased from 143 to 229.

Two conferences of employers and employees in the baking industry were held at which new industrial standards schedules were drafted. Six schedules were amended, three in beauty culture, one in the electrical industry, one in carpentry, and one in the baking industry.

Apprenticeship and Tradesmen's Qualification

The Apprenticeship and Tradesmen's Qualification Branch is responsible for supervising on-the-job and school training and the general welfare of apprentices. It plans courses and examinations, examines apprentices and tradesmen and issues certificates.

The 1950 Apprenticeship and Tradesmen's Qualification Act and regulations under it came into effect on February 1, 1951. The new regulations, applying to eight cities and the towns of Estevan and Melville, require certificates of status to be held by workers in the designated trades of motor vehicle repair, barbering and beauty culture, plumbing and carpentry. In the other designated trades in which apprenticeship training is given, certificates are issued on a voluntary basis. These trades are sheet metal work, bricklaying, painting, electricity, oxyacetylene welding, auto body repair, plastering and electric arc welding. In 1951, 4,092 certificates were issued to tradesmen, of which 3,700 were in the five trades where a certificate is compulsory.

There was a great increase in the number of examinations held. A total of 102 examinations was given to 1,538 candidates, while in 1950 there were only 37 examinations and 605 candidates and in 1949, 34 examinations and 404 candidates.

One prosecution was initiated to enforce the new provisions requiring the holding of a certificate. The defendant, a tradesman in the motor vehicle repair trade, was

73211—4½

found guilty of working without being the holder of a certificate and of failing to secure a certificate when told to do so.

The Provincial Apprenticeship Board constituted under the new Act held one meeting in 1951 at which it reviewed the progress of the Branch and made general recommendations as to future activities. A new member was added to the Board to represent the technical schools. Of the six other members, two represent employers, two organized labour, one the Department of Education and one the Department of Labour.

During 1951, 216 apprentices were indentured under the Act, 27 more than in 1950. A total of 223 contracts were cancelled and 65 were completed. At the end of the year there were 502 apprentices under contract, 72 fewer than at the end of 1950.

A larger number of apprentices took school training than in any previous year. Courses were offered in carpentry, motor vehicle repair, sheet metal work, plumbing, bricklaying, painting and electricity at Saskatoon; in carpentry, welding and auto body repair at Moose Jaw; and in carpentry, motor vehicle repair and electricity at Regina.

The number of inspections rose markedly from 1950, when there were 2,637 to a total of 5,267 in 1951. Of this number 597 were in connection with apprentices, 1,882 concerned employer registration and 2,788 concerned tradesmen.

Inspection of Boilers, Factories and Elevators

Inspection to ensure the safe construction and operation of boilers and pressure vessels and the safety of factory workers has been recognized as a government responsibility since the early years of the province. In addition to inspecting boilers and pressure vessels, approving pressure vessel designs, examining and licensing stationary engineers and firemen and inspecting factories and grain elevators, the staff of the Boilers, Factories and Elevators Branch also administers safety regulations covering passenger and freight elevators, automobile service station and repair shops, refrigeration plants, the use of liquefied petroleum gas, and pressure welding.

During 1951, 5,638 boilers and pressure vessels (approximately 500 more than in 1950) and 72 refrigeration plants were inspected. Forty-seven boilers and pressure vessels were condemned. A total of 541 examinations for engineers' and firemen's certificates was held. New permanent certificates issued numbered 112, while 1,426 temporary certificates and 1,326 annual registration certificates were granted.

While the number of welders' qualification tests given decreased from 1950, the number of retests and authorizations were both higher. A total of 159 tests and retests was given and 80 authorizations were issued.

The report states that Saskatchewan is the only province which has special safety regulations governing the use of liquefied petroleum gas. Manufacturers of equipment and distributors and their agents have, on the whole, accepted the regulations and violations are usually due to ignorance of the law. During 1951, 803 licences were issued to distributors and 1,350 liquefied petroleum gas installations were inspected.

The number of inspections of grain elevators, 1,810, was almost double the number for 1950. Factory inspections continued to decline, primarily because of shortage of staff. Only 125 factories, including garages, were inspected.

Considerable work was done to ensure the safe operation of passenger and freight elevators. Many new elevators were installed and a large number of old and unsafe elevators were rebuilt to bring them up to the requirements of the regulations and the C.S.A. Elevator Safety Code. A total of 1,166 inspections of elevators was made and 587 elevator licences were issued. Licences issued to elevator operators numbered 273.

Inspection of Electrical Installations

The Electrical Inspection and Licensing Branch inspects all electrical equipment at the time it is installed to see that it complies with the regulations, which embody the standards of the Canadian Electrical Code. During 1951, the number of inspections totalled 55,394—783 fewer than in 1950. A total of 1,190 licences was issued.

There were seven prosecutions under the Electrical Inspection and Licensing Act, two fewer than in the previous year. In most cases the offence was doing electrical wiring without a licence.

Fire Commission and Theatres Branch

The Fire Commission became a Branch of the Department of Labour in 1951, incorporating the former Theatres Branch. The duties of the Branch include fire prevention, the training of volunteer firemen, the investigation of fires, the collection and dissemination of information about fires in the province, and the censorship of motion pictures.

Fourth Session of Textiles Committee

Problems of women's employment in textile industry, guaranteed wages and effects of international trade competition discussed at meeting

Problems of women's employment in the textile industry, guaranteed wages and the effects of international trade competition were discussed at the fourth session of the ILO Textiles Committee* in Geneva, February 2 to 13, 1953.

Twenty-two of the 25 member countries of the Committee sent tripartite delegations to the meeting. These were: Argentina, Austria, Belgium, Brazil, Canada, Chile, Denmark, Egypt, Federal Republic of Germany, Finland, France, India, Italy, Japan, Mexico, Netherlands, Norway, Peru, Sweden, Switzerland, United Kingdom and the United States. China was represented by a government delegate only.

These 23 countries sent 129 delegates and 26 observers to the meeting, a total of 155 persons. Other organizations represented were: United Nations, International Organization of Employers, World Federation of Trade Unions, International Federation of Christian Trade Unions of Textile Workers, and International Federation of Textile Workers' Associations.

The session was presided over by Henry Hauck of France, a member of the ILO Governing Body.

Canadian Delegation

The Canadian delegation was composed of:—

Government Delegates: S. H. McLaren, Executive Director, Unemployment Insurance Commission, Ottawa; and Ruth A. Hamilton, Adviser on Women's Employment, Unemployment Insurance Commission, Ottawa.

Employers' Delegates: H. F. Irwin, Director of Industrial Relations, Primary Textiles Institute, Toronto; and Roger Regimbal, Personnel Manager, Ayer's Limited, Lachute, Que.

Workers' Delegates: Frank Querat, Business Agent, Local 806, Textile Workers' Union of America, Cornwall, Ont.; and Honoré d'Amour, Vice-President, *Federation Nationale des Textiles,* Drummondville, Que.

*ILO Industrial Committees were inaugurated in 1945 to deal with the particular problems of some of the most important international industries.

Plenary Sessions

The Committee held eight plenary sittings. Mr. Irwin, Canadian employers' delegate, was one of the two vice-chairmen.

The general report prepared by the ILO was presented in two parts. The first dealt with action taken in the various countries in the light of the conclusions of the previous sessions and steps taken by the ILO to follow up the studies and enquiries proposed by the Committee. The other dealt with recent events and developments in the textile industry.

A working party was set up to examine the first part of the report. After five sittings it submitted a report containing a proposed classification of resolutions previously adopted and suggesting subjects of current interest for the next sessions of the Textiles Committee. These included full employment, wages and safety.

The working party's report suggested that member governments communicate the conclusions of previous textiles committee meetings to employer and worker organizations in their respective countries and that these organizations bring the conclusions to the knowledge of their branches or members through their periodicals and other channels. The working party also suggested that the attention of governments be drawn to the need for informing the ILO of action taken on previous resolutions. This information, said the report, should be prepared in consultation and if possible in agreement with the employer and worker organizations concerned.

The working party's report was adopted unanimously at the plenary sitting.

The second part of the general report, dealing with recent trends in the textile industry, was discussed in plenary session. Delegates from many countries outlined the difficulties in the industry and what remedial action had been taken, as well as developments of interest.

The workers' group submitted a resolution concerning international trade and social standards in the textile industry. It urged the ILO to take all possible steps, in consultation with the international organizations concerned, to prevent com-

petitive international trade in textile goods from nullifying in part the benefits of international trade by leading to a worsening of conditions of employment and a lowering of standards of living or an abandonment of basic social principles. It invited the ILO to urge all governments to take appropriate action to prevent this condition.

The resolution was adopted by a vote of 67 to nil, with 37 abstentions. The Canadian government delegate abstained, because of the complex character of the question.

The Textiles Committee appointed a steering committee, on which Mr. d'Amour, Canadian workers' delegate, was represented; a subcommittee on problems of women's employment; and a subcommittee on guaranteed wages in the textile industry, of which both Mr. Irwin, Canadian employers' delegate, and Mr. Querat, Canadian workers' delegate, were appointed vice-chairmen.

Subcommittees

A report by the subcommittee on problems of women's employment in the textile industry pointed out that a high proportion of employees are women, many of them married with family responsibilities. Maternity protection measures and welfare and social services were needed to meet women's needs and interests, the report declared.

Workers' delegates urged that women should have equal rights with men to employment and promotion. They considered that the principle of equal pay for equal work should be applied.

Some government and employers' delegates stated that the principle of equal pay for equal work is a matter for collective bargaining without interference of public authorities. While agreeing with the principle of equal pay, the employers' delegates considered that on account of widely differing conditions in various countries, free negotiation should be evolved.

An agreed text of the report was prepared by a working party including Miss Hamilton, Canadian government delegate. The report was adopted at the plenary sitting by 99 votes to nil, with no abstentions.

A memorandum was submitted by the subcommittee recommending suitable agencies for placement of women, the establishment of welfare services, the abolition of night work for women workers, and vocational training and opportunities for promotion of women in the textile industry. It also recommended the adoption of the principle of equal pay for equal work, with job classification and description of duties formulated in accordance with collective agreements or other procedures in the country concerned.

After being amended several times, the memorandum was adopted by a vote of 82 to 20, with two abstentions. The Canadian government delegate voted for the memorandum.

Guaranteed Wages

The subcommittee on guaranteed wages had as a basis for its discussion a report prepared by the ILO on the subject. The subcommittee considered various problems connected with the guaranteed wage and the question of its definition.

It was pointed out that a scheme of guaranteed wages would have the effect of imposing additional charges on employers at a time when they might not be in a position to face such unproductive charges. Some employers' delegates felt that unemployment insurance was a measure suitable to cushion unemployment. Workers' delegates on the other hand felt that the guaranteed wage should carry workers over the short periods of unemployment as it was not sufficient to refer to the possibilities of the use of unemployment insurance.

A working party produced a memorandum, adopted by the subcommittee, which considered the definition adopted by the Iron and Steel Committee in 1949 to be the closest approximation to a common understanding. This definition reads in part: "A guaranteed wage scheme may be defined as an arrangement whereby an employer, having undertaken to provide employment at the ordinary rates of pay for a specified number of hours, days or weeks, pays a specified amount of wages if, the worker being available, neither his customary work nor reasonable alternative work is available."

The memorandum pointed out that even this definition contains elements of obscurity. For example, in certain countries "wages" are defined differently, extent and scope of benefits paid to partially or wholly unemployed workers vary and no standard practice regarding advance notice of termination of employment prevails.

It was considered that further study should be given to the question in various countries as soon as possible. The memorandum stated that the most suitable method of considering guaranteed wage schemes in the textile industry would appear to be by collective bargaining. Where this is not appropriate, existing voluntary or customary methods might be employed.

The subcommittee's report was accepted by unanimous vote at the plenary sitting.

Other Resolutions

The Textiles Committee adopted a resolution inviting the Governing Body of the ILO to recognize Spanish as one of the Committee's official languages. This resolution was passed by 57 votes to nil, with 35 abstentions. The Canadian government delegate abstained.

Concerning the agenda of the next meeting of the Committee, a resolution was passed asking the Governing Body to give consideration to the inclusion of the following items: labour-management relations; problems of productivity; annual and public holidays with pay; reduction of hours of work (subject to reservations by the employers' group); and problems of apprenticeship. This resolution was adopted by 93 votes to four, with two abstentions.

121st Session of ILO Governing Body

The report of the Meeting of Experts on Productivity last December (L.G., Jan., p. 50) will be circulated to governments, employers' and workers' organizations and various inter-governmental groups, it was agreed at the 121st session of the ILO Governing Body in Geneva, February 20 to March 7.

The experts had recommended that the report be widely publicized but had agreed that it should remain confidential until the Governing Body had examined it.

At the Governing Body's session, S. H. McLaren, Executive Director, Unemployment Insurance Commission, substituted for Dr. Arthur MacNamara, Canadian Government Member of the Governing Body. He was assisted by Paul Goulet, Director, ILO Branch, Department of Labour, and by Bruce Williams and Kenneth McIlwraith of the Canadian Permanent Delegation to the United Nations at Geneva.

The Governing Body also decided to communicate to governments and to interested bodies the report of the Meeting of Experts on the Suppression and Prevention of Dust in Mining, Tunnelling and Quarrying.

Fernando Garcia Oldini, Chilean Minister to Switzerland, was elected Chairman of the Governing Body to complete the term of Fernando Cisternas, who had returned to Chile. Mr. Oldini will serve as Chairman until June 1953.

The Committee on Freedom of Association reported on 26 cases, of which 17 were dismissed, conclusions were reached on four and five were adjourned. The debate on this report revealed general agreement among the government, employer and worker members that the Committee should be asked to review the whole procedure governing the handling of complaints and report its recommendations to the Governing Body.

The Financial and Administrative Committee brought forward the 1954 budget, providing a net expenditure of $6,311,368, which is $87,802 more than the 1953 budget. The Governing Body adopted this budget, which will now go before the annual conference of the ILO in June for final approval.

The Governing Body decided to postpone until a later session consideration of the report of the Allocations Committee and the report of a special subcommittee set up last year to conduct a general review of the Industrial Committees.

The Governing Body expressed its satisfaction with the progress of the ILO's Technical Assistance Program. The Technical Assistance Committee pointed out that the program had developed significantly in 1952.

The appointment of two Canadians to ILO Committees was approved: Donald M. MacKay, Director, Indian Affairs Branch, Department of Citizenship and Immigration, to the Committee of Experts on Indigenous Labour; and R. A. Stewart, of the Canadian Federation of Agriculture, to the Permanent Agricultural Committee. In each case the appointment is for a period of three years.

The Joint Maritime Commission of the ILO was enlarged by the addition of three shipowner and three seafarer members. This is a bipartite Commission, consisting of equal numbers of shipowners and seafarers, and its membership will now total thirty.

The Governing Body at this session also discussed reports of the Technical Meeting on the Protection of Young Workers in

(Continued on page 721)

One of the principal objectives of the newly-formed LMPC at Uplands Dairy Ltd., Toronto, will be to maintain closer staff-management relationships. The staff has been growing and management looks to the LMPC as a desirable form of contact with all employees. A letter to each employee explains the situation as follows: "We are not a large company where special personnel is delegated to look after employee relations. Being the size we are . . . puts us in a position where it is very important that we should maintain and improve the pleasant and efficient relations which we enjoyed when we had possibly a third of our present number."

The principles under which the LMPC will operate are:—

1. "To stimulate, develop and implement everyone's participation—for the good of our service and all those identified with it, as well as to increase the satisfaction of the public we serve.

2. "To work in an advisory capacity as a fact-finding, evaluating and planning agency, the LMCC (LMPC) will serve as a channel through which the thoughts of management and employees are brought closer to each other. By doing this we will endeavour to use the abilities and resources of all concerned with a common problem."

The letter was signed jointly by representatives of the Company and the participating union, Local 647 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (AFL-TLC).

* * *

The LMPC at the Alliance Paper Mills in Merritton, Ont., has introduced a plan to improve working habits and reduce accidents in the mill. Each foreman and safety guide is to make notes on all bad safety practices they find. Each man will make at least one monthly report to the personnel department. The reports describe only the bad practices found and not the names of those involved. The committee will discuss these reports and take action to improve work habits in the mill.

One department in the plant has also started an informal discussion system for the superintendent and the employees. Every two weeks a small group meets with the superintendent to discuss production problems and customers' orders. The meetings have helped to bring out any mistakes made during the manufacturing process.

* * *

Writing in *Yarrows Review,* employee magazine at Yarrows Shipyard in Esquimalt, B.C., Frank Sellors, labour representative on the LMPC, said:—

"In the first place LMPC's are not a drastically new idea, but have been in operation on this continent for some years. We have all read reports of their great success in some quarters; in fact one was in operation in Yarrows Limited during the later war years.

"I have always been firmly convinced that such committees can be a wonderful factor for the common good, if, firstly, we will all approach our problem with an open mind—ready to trust and be trusted. Secondly, promise yourself you will wholeheartedly get behind your committee with all possible assistance.

"Without that assistance this committee cannot function. You must remember that each employee committeeman represents your viewpoints, your ideas, and whilst I am speaking for the shipwrights and joiners today, any member of that craft may be voicing my thoughts soon owing to the periodic changing of committeemen, as provided in the By-Laws.

"Again from the standpoint of an employee, I would like to mention one vital point that was so strikingly illustrated by Mr. Hubert Wallace, our general manager, at our initial meeting. Mr. Wallace said 'I will possibly say things you don't like and you will possibly say things I don't like, but, at least let us say them.' . . . That is the situation we have here, a direct invitation to sit around the table with business management and discuss the affairs which concern our joint livelihood. I know what progress that means after 50 years in the labour market."

Establishment of Labour-Management Production Committees (LMPCs) is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions set up LMPCs, the Service provides publicity aids in the form of booklets, films and posters.

Industrial Relations and Conciliation

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during March. The Board issued six certificates designating bargaining agents and granted one application for revocation of certification. During the month, the Board received five applications for certification.

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

Applications for Certification Granted

1. West Coast Seamen's Union (Canada), on behalf of a unit of unlicensed employees of the deck, engineroom and steward's departments of towing vessels operated by M. R. Cliff Tugboat Co. Ltd., Vancouver (L.G., April 1953, p. 574).

2. National Association of Broadcast Engineers and Technicians, on behalf of a unit of employees of The Brookland Company Limited employed at Radio Station CHEX, Peterborough (L.G., March 1953, p. 418).

3. National Association of Broadcast Engineers and Technicians, on behalf of a unit of employees of The Brookland Company Limited employed at Radio Station CKWS, Kingston (L.G., March, 1953. p. 418).

4. Building Service Employees' International Union, Local No. 244, on behalf of a unit of toll collectors and maintenance employees of Burrard Inlet Tunnel and Bridge Company, North Vancouver, B.C. (L.G., April 1953, p. 574).

5. International Association of Machinists, on behalf of a unit of maintenance employees of Colonial Airlines, Inc., employed at Dorval Airport, Que. (L.G., April 1953, p. 574).

6. West Coast Seamen's Union (Canada), on behalf of a unit of unlicensed employees of the deck, engineroom, and steward's departments and barge employees employed on vessels and barges operated by Car Barge Towing Company, Limited, Vancouver (L.G., April 1953, p. 574).

Application for Revocation of Certification Granted

The Board considered the result of the vote ordered (L.G., April 1953, p. 574) and revoked the certification of the American Newspaper Guild as the bargaining agent of a unit of editorial employees, including office boys, employed by the Canadian Press.

Applications for Certification Received

1. International Association of Machinists, on behalf of a unit of clerical employees of Colonial Airlines, Inc., New York, employed by the company in Canada (Investigating Officer: C. E. Poirier).

2. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, on behalf of a unit of employees of The Algoma Central and Hudson Bay Railway Company, Sault Ste. Marie, Ont. (Investigating Officer: F. J. Ainsborough).

3. Saskatchewan Wheat Pool Employees' Association, on behalf of a unit of employees of Saskatchewan Co-operative Producers Limited, Flour Mill Division, Regina (Investigating Officer: J. S. Gunn).

4. Canadian Wire Services Local 213, American Newspaper Guild, on behalf of a unit of editorial employees of the Canadian Broadcasting Corporation (Investigating Officer: F. J. Ainsborough).

5. National Association of Broadcast Engineers and Technicians, on behalf of a unit of television production employees of the Canadian Broadcasting Corporation (Investigating Officer: F. J. Ainsborough).

In a survey of 1,442 collective agreements in effect in the United States in 1952, the U.S. Bureau of Labour Statistics found that 89 per cent of them provided that disputes over the interpretation or application of the agreements shall be referred to arbitration. The contracts covered 5,581,000 workers and the arbitration provisions applied to 91 per cent of these employees.

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During March the Minister appointed Conciliation Officers to deal with the following disputes:—

(1) Canada Steamship Lines Limited and Seafarers' International Union of North America, Canadian District (Conciliation Officer: R. Trépanier).

(2) Canadian National Newfoundland Steamship Service, Canadian National Railway Company and Canadian Merchant Service Guild, Inc. (Conciliation Officer: W. L. Taylor).

(3) Colonial Steamships, Limited; N. M. Paterson & Sons, Limited; Upper Lakes and St. Lawrence Transportation Company Limited; and Seafarers' International Union of North America, Canadian District (Conciliation Officer: F. J. Ainsborough).

(4) National Harbours Board, Montreal, and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (Conciliation Officer: L. Pepin).

(5) National Harbours Board, Quebec, and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (Conciliation Officer: L. Pepin).

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The branch also acts as the administrative arm of the Canada Labour Relations Board in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certifications given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; three officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

(6) Giant Yellowknife Gold Mines Limited and Yellowknife District Miners' Union, Local No. 802, International Union of Mine, Mill & Smelter Workers (Conciliation Officer: D. S. Tysoe).

(7) The Shipping Federation of Canada, Inc., Montreal, and Seafarers' International Union of North America, Canadian District (Conciliation Officer: R. Trépanier).

(8) Canadian National Newfoundland Steamship Service, Canadian National Railway Company (unlicensed personnel) and Canadian Brotherhood of Railway Employees and Other Transport Workers, Division 285 (Conciliation Officer: W. L. Taylor).

(9) Canadian National Newfoundland Steamship Service, Canadian National Railway Company (pursers and chief stewards) and Canadian Brotherhood of Railway Employees and Other Transport Workers, Division 286 (Conciliation Officer: W. L. Taylor).

Settlements Reported by Conciliation Officers

(1) Yukon Consolidated Gold Corporation and Dawson Miners' Union, Local 564, International Union of Mine, Mill & Smelter Workers (Conciliation Officer: D. S. Tysoe) (L.G., April, p. 574).

(2) Giant Yellowknife Gold Mines Limited and Yellowknife District Miners' Union, Local No. 802, International Union of Mine, Mill & Smelter Workers (Conciliation Officer: D. S. Tysoe) (see above).

Conciliation Boards Appointed

(1) J. C. A. Turcotte; Wolfe Stevedores Limited; Empire Stevedoring Co. Ltd.; North American Elevators Ltd.; Sorel Dock & Stevedoring Co. Ltd.; Brown & Ryan Limited and Eastern Canada Stevedoring Co. Ltd., and National Catholic Syndicate of Longshoremen of Sorel, Inc. (L.G., April, p. 574). (The Board had not been fully constituted at the end of the month.)

(2) Red River Grain Company Limited, St. Boniface, and Malt & Grain Process Workers, Local 105, International Union of United Brewery, Flour, Cereal, Soft Drink & Distillery Workers of America (L.G., April, p. 575). (The Board had not been fully constituted at the end of the month.)

(3) The Shipping Federation of Canada, Inc., Montreal, and Seafarers' International Union of North America, Canadian District (see above). (The Board had not been fully constituted at the end of the month.)

(4) Canadian National Newfoundland Steamship Service, Canadian National Railway Company (unlicensed personnel) and Canadian Brotherhood of Railway Employees and Other Transport Workers, Division 285 (see above). (The Board had not been fully constituted at the end of the month.)

(5) Canadian National Newfoundland Steamship Service, Canadian National Railway Company (pursers and chief stewards) and Canadian Brotherhood of Railway Employees and Other Transport Workers, Division 286 (see above). (The Board had not been fully constituted at the end of the month.)

Conciliation Board Fully Constituted

(1) The Board of Conciliation and Investigation established in February to deal with matters in dispute between British Columbia Coast Steamship Service (Canadian Pacific Railway Company), Canadian National Steamships and Union Steamships Limited, Vancouver, B.C., and Seafarers' International Union of North America, Canadian District (L.G., April, p. 575), was fully constituted in March with the appointment of Philip Fleming, Victoria, B.C., as Chairman. Mr. Fleming was appointed by the Minister in the absence of a joint recommendation from the other two members, Richard A. Mahoney and Jack Price, both of Vancouver, who were previously appointed on the nominations of the company and the union respectively.

Conciliation Board Reports Received

During March the Minister received the following reports of Boards of Conciliation and Investigation:—

(1) Canadian Overseas Telecommunications Corporation (operators), Montreal, and Overseas Communications Union, Local 272 (L.G., Jan., p. 54). Text of the Board's report is reproduced below.

(2) Gatineau Bus Company Limited, Hull, P.Q., and Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division 591 (L.G., Feb., p. 239). Text of the Board's report is reproduced below.

(3) Canadian National Railways (Atlantic, Central and Western Regions) and the Brotherhood of Locomotive Firemen and Enginemen (L.G., April, p. 606). Text of the Board's report is reproduced below.

(4) Canadian Pacific Railway Company (Eastern, Prairie and Pacific Regions) and the Brotherhood of Locomotive Firemen and Enginemen (L.G., April, p. 606). Text of the Board's report is reproduced below.

Report of Board in Dispute between

Canadian Overseas Telecommunication Corporation

and

Overseas Communication Union, Local 272

The Hon. Milton Gregg
Minister of Labour
Ottawa, Ont.

Dear Sir:

The Board of Conciliation and Investigation appointed to endeavour to bring about agreement between Canadian Overseas Telecommunications Corporation (Employer) and Overseas Communication Union, Local No. 272, begs leave to present its report.

The Board held a series of meetings with the parties jointly and separately in Montreal. While the negotiations were carried on in an atmosphere of courtesy and co-operation, and although agreement was reached on a few minor points, the major issues were left unsettled at the close of the discussions. Subsequently, the Board itself held a number of meetings and is pleased to recommend certain terms for those parts of the agreement which were not settled. In the following report the items that were before the Board on which agreement was reached are reported along with the Board's recommendations on the disputed items. Where either of the Board members disagreed with the majority, this is noted as an addendum to the appropriate section. However, where a Board member agrees with a recommendation, it should not be implied that he joins in all the supporting reasons that are set forth in the report.

Article 1 (Section 5)

This section provides for preferential treatment for Union members in certain matters relating to hiring, promotion, and layoff. Subsection (c) of Section 5 provides that the rest of Section 5 shall not apply to employees after 15 years of employment. Subsection (c) is, therefore, contradictory in principle with the rest of Section 5 of Article 1. It appears to have been inserted in the contract originally to protect a very limited number of long-service employees, non-members of the Union. The union professes not to be worried by these few, but does object to the clause as an invitation to 15 years service men to withdraw from the Union.

On March 19, 1953, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with matters in dispute between Overseas Communication Union, Local No. 272, and Canadian Overseas Telecommunication Corporation, Montreal.

The Board was under the Chairmanship of Prof. H. D. Woods, Montreal, who was appointed on the joint recommendation of the other two members. The nominee of the company was Theodore R. Meighen, QC, Montreal; the union nominee, A. Andras, Ottawa.

The text of the Board's report is reproduced herewith.

The Board's Recommendation

It appears that a simple compromise can meet the purposes of both parties. The Board therefore recommends that subsection (c) of Section 5 of Article 1 be deleted from the contract, and that it be replaced by a clause guaranteeing that present employees with 15 years service who are not union members shall not be subject to the other provisions of Section (5).

Article 1 (Section 6)

This article provides for the check-off of dues from the pay of all union members and of any new employees. The Union wishes to have this include assessments and to cover all employees. The section, as now written, contains an important element of voluntarism. The Company is not required to impose on an employee any condition which is not either explicitly (for new employees) or implicitly (through voluntary membership by old employees) accepted freely by the employee himself. It would seem desirable to retain this element by rejecting the compulsory check-off for all employees. At the same time, the extension of the check-off to cover assessments in no way impairs the principle.

The Board therefore recommends that Section 6 of Article 1 be amended to read . . . "the equivalent of their Union dues *and assessments*".

Article 1 (Section 7)

This article empowers any dues-paying employee to be excused the obligation on written notice to the corporation and the Union within the ten-day period prior to the termination of the agreement. The Union wishes this deleted and the Company wants it retained. Much has been written in the dispute over union security provisions and undoubtedly much more will be written on this subject. Yet, in many actual cases, the criterion of need appears to be about as satisfactory as any. This criterion is used in the following recommendations.

The Board's Recommendation

In this contract, the Union is protected by a preferential clause (which on the Board's recommendation is to be strengthened) and by the check-off of dues from union members, and all new employees. The Union has close to 100 per cent membership and has the natural protection of highly skilled occupations. The sanctions against membership default both within the contract and the professional group are strong. The reason of "tidying up the contract" is hardly sufficient as long as one party strongly disagrees.

The Board recommends no change in Section 7 of Article 1.

Article 7 (Section 2)

The dispute regarding proposed changes in this Article was settled by the parties to the degree that they agreed to withdraw it from further consideration by the Board.

Article 9 (Section 1)

The Union is asking that a forty-hour week of five days with portal-to-portal pay be introduced. At present, the men are not paid for the half-hour meal time; which means that they are working a 37½-hour week. To bring this up to 40 hours they work an extra 7½-hour day every third week. If paid for the meal time, they would work a full 40 hours each week, and the extra day in the third week would not be necessary.

The Board's Recommendation

The elimination of this extra day appears to be an objective of the Company. In their memorandum, they refer to the impossibility of making the change "for the time being". Nevertheless, the Board was impressed by the difficulties of staffing such a change without substantial additional overtime payments. The Board recommends no change in the contract on this point.

(Mr. Andras dissents from this recommendation and in turn recommends that the present arrangement be continued not later than June 1, 1953 by which time the Company should have solved its staff problem sufficiently to be able to introduce the 40-hour week.)

Article 10 (Sections 3 and 5)

The Union is requesting changes in these two sections so as to make the Queen's birthday a paid holiday increasing the present eight to nine. The principal reason advanced is that the communications industry has always been in the lead with regard to paid holidays, and now that eight paid holidays have become common the Company should establish a lead again.

The Board's Recommendation

The Board was not strongly influenced by the Union case in this item and is not prepared to recommend an extension of holidays.

Article 10 (Section 8)

The Union is asking for three changes as follows:—

(1) That the wage differential for the shift from midnight to 8:00 a.m. be increased from 50¢ to $1;
(2) That a differential of 50¢ be established for the shift from 4:00 p.m. to midnight;
(3) That the chief delivery clerk be no longer treated as an exception in the application of shift differential provisions.

The Board's Recommendation

The Board accepts the Union's reasoning that shift differentials are paid to compensate the employee for "the disruption of normal life which work on these shifts entails". Industry generally has recognized this inconvenience by differentials to these two shifts with a higher rate going to the night shift. But the reasoning advanced by the Union in the general case is a sufficient answer to the claim for the Chief Delivery Clerk. The disruption caused by reporting one hour early as a normal practice must surely be a minor inconvenience compared with that experienced in working on the night shift. Whether special compensation is justified is a question, and certainly it could be very little. On this point of a shift differential the Board is not prepared to recommend any change.

The principal reason advanced by the Company against granting the Union request was that the differential was

included in the overall wage and equalized by alternating shifts. However, the Company has recognized the principle and applied it in their night shift premium. The Board feels that the specific night shift differential is the sounder method since there can then be no question of accidental discriminatory allocation of the differential. Furthermore, the extra compensation is directly tied to the inconvenience experienced. This would mean recognition of a differential for the shift from 4:00 p.m. to 12:00 midnight. Since there are a number of overlapping work assignments which would lead to complicated administrative arrangements, the Board suggests a very simple formula as follows.

The Board recommends that Article 10 (Section 8) of the old agreement be altered to read . . . " . . . falls wholly or in part between the hours of 8:00 p.m. and 8:00 a.m., he shall receive . . ."

(Mr. Andras disagrees and recommends the following shift differentials: Shift including any time from 8:00 p.m. to midnight, 50¢; Shift including any time from midnight to 8:00 a.m., 75¢; Shift falling in both the above periods would receive the rate for the shift in which the major time is worked.)

Article 10 (Section 9)

This article provides for a special bonus of $3.50 per shift for the engineer on duty at Yamachiche if he is the only engineer on duty. The Union is asking that it be increased to $1 per hour or $8 for the shift. This is supported on the grounds of increased base rates of pay which mean that the $3.50 is in effect becoming a smaller actual and relative differential. The Company disputes this on the ground that it was initially unnecessary and was retained with great reluctance by the present Company.

The Board's Recommendation

The case of the Union is strong provided the original differential was soundly based. It seems perfectly logical that increases in daily rates should be matched by equal percentage increases where the original differential was related to the difference in the work involved when there were two engineers or when there was only one engineer per shift. Possibly a systematic job evaluation study would show the original agreement to be unsoundly based. But in lieu of this or any other substantial proof, an adjustment appears to be justified.

The Board recommends that the parties adjust the hourly bonus for engineers at Yamachiche so that the ratio of the shift bonus to the shift salary will be approximately the same at present as it was at the time it was established.

Article 13

The Union is requesting that the Corporation be limited at Yamachiche and Drummondville to hiring only persons with a certain level of competence. The Corporation asserts the necessity to determine qualifications.

The Board's Recommendation

The desire of the Union to maintain certain professional standards is appreciated. Nevertheless, the position of the management is understandable. The Company has had great difficulty in finding adequate staff. In addition, the industry is undergoing significant technological changes which may alter job content considerably. Under the circumstances, fixing hiring standards on requirements of the past seems unsound. It should be noted that this request is not to establish job security for present employees, although this problem is perhaps a factor in Union thinking.

The Board, therefore, recommends no change in Article 13.

Article 15

The Union is asking that the three houses at Yamachiche, presently rented by the Corporation to senior employees, be provided free of any charge. The Union quotes the policy of providing free houses to the manager and assistant manager, free accommodation to unmarried staff, and the complete absence of rent for Company accommodation at Bamfield.

The Board's Recommendation

It is clear to the Board that the apparent discrimination is a cause of friction. Nevertheless, the situations at Bamfield and Yamachiche are sufficiently different that comparison has little significance. Furthermore, the rentals charged for the houses at Yamachiche are well below current market values for comparable accommodation in similar locations. The Board therefore recommends no change in Article 15.

(Mr. Andras disagrees and recommends that the Union's request be granted.)

Article 17—Salaries

The Union requested a 12 per cent increase, retroactive to September 30, 1952 (termination date of the previous agreement). In support of this request, it advanced the following reasons:—

(a) The new consumer price index of the Dominion Bureau of Statistics has

shown approximately a 4 per cent increase from April 1, 1951 to the present;

(b) The previous settlement, effective 1951, was not sufficient to compensate for the real income losses suffered by the employees because consumer price level rises from April 1, 1950 to April 1, 1951 (the interval between the expiration of the former agreements with the previous companies and the effective date of the first agreement with the successor company).

(c) The employees should share in the growing prosperity of the country based on changes in gross national product per head.

The Company representatives were prepared to agree to an adjustment based upon the changes in the cost of living from the effective starting date of the previous contract (April 1, 1951), and retroactive to that date. The Company was prepared to leave to the Board the decision as to whether the old cost-of-living index or the new Consumers Price Index should be used to determine the adjustment.

The Company opposed any further increases on the following grounds:—

(a) The Union had accepted the April 1, 1951 settlement rates, and this renders adjustments based on experience prior to that date invalid.

(b) In the adjustment of the two salary scales and the other conditions found in the two contracts which were replaced in the 1951 agreement, the previous Conciliation Board has recommended in favour of accepting those features of the two earlier contracts most favourable to the men.

(c) The Board, in the 1951 settlement, had recommended a general increase in addition to the adjustments required to bring the two groups of employees onto a common standard. Taken together these recommendations, which had been accepted by the Corporation, were generous indeed.

The Board's Recommendation

1. Both parties have recognized the justice of a claim for a cost-of-living adjustment, and the Company agrees that this should be retroactive to April 1, 1951. Of the two indices it seems logical to accept the new Consumers Price Index of the Dominion Bureau of Statistics since one of the principal reasons for its introduction was to achieve greater accuracy. On this basis, the Consumer Prices have risen slightly less than 4 per cent in the period. The Board therefore recommends a 4 per cent increase retroactive to October 1, 1952.

2. The Board cannot accept the reasoning of the Union as justification for the full 12 per cent rise. Nevertheless, it does recognize that the employees of this Corporation have a right to share in the national prosperity and in the annual improvements therein. In recent decades it has become increasingly apparent that additions to the national per capita income are being reflected in general wage increases rather than in consumer good price reductions. The Board is not implying that this method of determining the ratios of income distribution will continue indefinitely; but it must recognize the pattern in the current year. Some adjustment beyond that required to maintain real income in spite of consumer price changes seems justified.

The argument of the Company that the "generous" settlement of two years ago precludes the necessity for anything but cost-of-living adjustments at the present time cannot be fully accepted. There was nothing in the previous recommendation referring to the future position of the employees of this Company relative to employees elsewhere. But a failure to adjust more than for a cost-of-living increase would, in fact, weaken the position of the Canadian Overseas Telecommunication's employees relative to other industries where wage increases have been effected.

On its part, the Union has not made a very convincing case for increases beyond the cost of living and an adjustment in conformity with the general increase in the national product. The additional increase should, therefore, be limited to this fraction. A fair approximation would be about 3 per cent. Since this is slightly higher than statistical average increases in the national product, the Company should be compensated through the retroactivity allowance.

The Board therefore recommends a payment of 3 per cent additional, retroactive to January 1, 1953.

(Mr. Andras disagrees with the recommended pay adjustments and recommends a 10 per cent increase retroactive to October 1, 1952.)

Respectfully submitted,

Report of Board in Dispute between

Gatineau Bus Company Limited

and

Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division 591

On March 24 the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with matters in dispute between the Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division 591, and the Gatineau Bus Company Limited, Hull, Que.

The Board was under the Chairmanship of the Hon. Mr. Justice Edouard Tellier, Montreal. The other two members were Wilbrod Bherer, Advocate, Quebec, and C. L. Dubin, QC, Toronto, nominees of the company and union respectively.

The text of the Board's report is reproduced herewith.

To the Hon. Milton F. Gregg,
Minister of Labour,
Department of Labour,
Ottawa.

Hon. Sir:

In the matter of the Industrial Relations and Disputes Investigation Act and request for Conciliation Officer in dispute affecting the Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division 591, applicant, and the Gatineau Bus Company Limited, Hull, P.Q. respondent.

The Conciliation Board appointed to hear the above dispute has completed its investigation and has the honour to make the following Report:—

The Board was composed of the Hon. Mr. Justice Edouard Tellier, Montreal, as Chairman, Mr. C. L. Dubin, QC, Toronto, Nominee of the Union, and Mr. Wilbrod Bherer, Advocate, Quebec, Nominee of the Company.

The Board was appointed to endeavour to settle differences between the Company and the Union, as a result of several amendments proposed by the latter to the agreement which expired on the 1st of September 1952.

Following the receipt of the amendments from the Union, a Conciliator officer was appointed to endeavour to settle the different points in dispute. Although several of the amendments proposed by the Union were agreed between the parties, the following still remained in litigation and are the subjects of the present report:—

A. Statutory Holidays.
B. Lay-over time.
C. The week's vacation with pay after 15 years' service.
D. Wage rates.

The Board met in Montreal and in Hull.

A

Statutory Holidays

At the present time the employees of the Company receive, in addition to Sundays, two statutory holidays at premium rates (0·10) for operators and time and one-half for garage employees, namely New Year's Day and Christmas Day.

The Union is asking that both operators and garage employees shall be paid time and one-half for works performed on the following days, namely: New Year's Day, Good Friday, May 24, July 1, Labour Day, Thanksgiving Day, Remembrance Day and Christmas Day.

The contentions of the Union on this point are that other companies are already giving their employees from five to ten holidays during the year and quotes the names of numerous transit companies in different provinces which grant such holidays at various additional rates of wages, but the above quotations refer to only two Quebec companies, namely Chambly & Fortin Transports Ltd. and Hull City Transport, the latter operating in the same area than the present company. As a matter of fact, the garage employees of the Gatineau Bus are already receiving time and one-half for works done on Sundays,

New Year's Day and Christmas Day and the operators are receiving a premium or 0·10 per hour for the same days. Besides, the operators are paid time and one-half for all works performed in excess of nine hours. The above facts seem to place the employees of the Company in a better position than the employees of Hull City Transports Ltd., which operates in the same area and also, to a certain extent, in a better position than the employees of Chambly and Fortin Transports Limited who receive only a premium of 0·10 per hour, although it is true they are granted six holidays instead of two, but no proof was offered whether they receive increased pay for works performed on Sundays, as in the present case.

In the present circumstances, therefore, the Board is of the opinion that the present condition should not be disturbed. On this particular point, the three members of the Board are unanimous.

B

Lay-over Time

The Union is asking that all lay-over time requiring an operator to remain in charge of a bus, shall be paid at regular wage rates.

Although this demand would seem to apply to all lay-over time, the Union, in its brief and at the hearing admitted that same should apply to regular scheduled runs and not on charter and special work.

The company agrees, on this point, to the following amendment:—

"All lay-over time requiring an operator to remain in charge of a bus, less than half an hour, shall be paid for at regular wage rates".

Such amendment will be to the benefit of the employees to a certain extent and the three members are of the opinion to recommend same.

C

The Week's Vacation After 15 Years' Service

The Union contends that three weeks' vacation with pay should be granted annually to all employees who have fifteen or more complete calendar years of continuous service. The Union quotes, in support of its contentions, a long list of companies engaged in transit industry through Canada, except the Province of Quebec, whom are granting at least three weeks' vacations after a certain number of years of service and which vary according to the localities referred to. No mention, however, is made about the holidays granted to employees with less than five years of service.

The Chairman and Mr. Bherer, Nominee of the Company, are of the opinion that the present holiday arrangements, namely one week vacation with pay after one year and two weeks after five years, should not be disturbed.

Mr. Dubin, Nominee of the Union, disagrees, on this point, with the other members on the Board and recommends that the request of the Union should be granted.

D

Wage Rates

On this particular point, the question of whether or not the Company is a wholly Quebec corporation was again, but slightly, raised, and so to compare the rates paid by Company in the transit business in Quebec and by other companies on other Provinces in the country. Although the Board is of the opinion that the present Company is rather a wholly Quebec Corporation by the nature and the extent of its operation, that fact should not be considered as establishing a permanent obstacle for Quebec employees to ask, only, for the highest rates paid in Quebec in a similar industry. In this particular case, some consideration should be given to, at least, the wage structure of Ottawa where the Company operates, although to a small degree.

After careful consideration of all relevant factors, after study of the briefs filed by the parties, the Chairman of the Board and Mr. Dubin, Nominee of the Union, are of the opinion to recommend an increase of ten cents (0·10) per hour in the basic rates retroactive to September 1, 1952, date of the termination of the agreement.

Mr. Bherer, Nominee of the Company, disagrees on this point. A separate report will be filed by Mr. Bherer.

All of which is respectfully submitted.

(Sgd.) Edouard Tellier,
Chairman.
(Sgd.) C. L. Dubin,
Member.

Montreal, 17th March, 1953.

Minority Report

To the
Hon. Minister of Labour of Canada:

On the recommendation of the employer, pursuant to the Provisions of the Industrial Relations and Disputes Investigation Act, you have appointed me a member of the Board of Conciliation and Investigation, in this matter. I now respectfully submit my report.

The Board sat in Chambers with the Chairman and also held a public hearing

in Hull. At the public hearing the parties to the dispute were present, and each submitted a brief with annex, to support its contention.

There were many points at issue but only four retained our attention since the other ones had been mutually agreed upon by the parties during the negotiations.

1. Premium pay for work done by garage employees and bus operators on Sundays and the following Statutory holidays:—

Christmas Day
New Year's Day
Good Friday
June 24
July 1
Labour Day
Thanksgiving Day
Remembrance Day.

It is common practice in the private industry, to pay a premium to employees over their regular rate of pay, for work done on Sundays and some other holidays that are not considered as regular work days. The employers have agreed to that because they are free to have their employees working or not on those days. Those days are not regular work days. Over-work and undue fatigue might be caused if employees were working on Sundays. The premium is agreed to prevent work being done on those days.

A public enterprise such as a bus transportation company is not free to operate or not on Sundays, and the above-mentioned holidays. These days are regular work days. The employees working on those days have another day during the week for relaxation and rest. There is no reason to warrant payment of a premium for regular work done on a regular day of work during the regular hours of work.

It is no common practice in the bus transportation industry in the Province of Quebec, to pay a higher rate on the above-mentioned days for work done. The employer is already paying a premium to garage employees (time and one-half), and to bus operators (10¢), for work done on Sundays, Christmas and New Year's Day. I see no justification for increasing this benefit.

2. Lay-over time.

The bargaining agent submitted grievances on this point. When an employee has to wait at the end of a run for the next departure, sometimes 10, 15 minutes, he is paid at the rate of 50¢ per hour, instead of the regular rate. The Union claims that this is wrong and that the employee being on duty should be paid the regular rate. I partly agree to that contention of the Union and I would suggest that:—

"All lay-over time requiring an operator to remain in charge of a bus less than half an hour shall be paid for at regular wage rates".

3. Three weeks vacation with pay.

The bargaining agent wanted to obtain for the employees having 15 years or more of continuous service, an additional six days holiday with pay based on an 8-hour day, to be granted annually.

This is not a common practice in the interurban bus industry in the Province of Quebec. Not one single case was mentioned. Since the employer does not want to agree to that, I am of the opinion that it should not be imposed on it.

4. Wage Rates.

The actual rates of pay for bus operators are:—

1st year.....	$ .94	per hour
2nd year.....	.96	per hour
3rd year.....	1.00	per hour

The union has requested the company to grant an increase of 30¢ over those rates from the 1st of September 1952.

The garage employees' rates vary from 73¢ to $1.11 per hour. The Union has requested an increase over those rates varying from 30¢ to 49¢ per hour effective from the 1st of September 1952.

The company contends that no increase whatsoever is justified at the present time.

The employer has submitted that the total cost of such an increase in the rates of pay would amount to $60,000 per year. I think we have to accept the statement of the company on this point.

On the other hand, the company has submitted a statement of affairs and a statement of operation under the signature of its auditors, P. S. Ross and Sons, showing a surplus of $2,688 for the last year, without providing for any return on its assets used in giving the service to the public estimated at $400,000. I accept as being true to facts, the statement filed by the company. Its auditors are a reliable firm of public accountants and I am sure that they have shown the affairs of the company and the result of its operations so as to reflect the real situation of the company.

I have come to the conclusion that the company is not in any way capable of increasing its wage bill by increasing the wage rates of its employees. The employer is actually paying its employees at a rate that is in accordance with rates obtained for similar work in the Province of Quebec.

It is even paying more than almost every other company operating similar services in the Province of Quebec.

The operations of the company are subject to the supervision and control of the Quebec Transportation Board, and for this reason I think the Quebec standard should be the guiding rule in appraising the situation of the employees of the company.

I must take into account the situation of the company in giving my opinion on a dispute, I feel in duty bound to examine the ability to pay of the employer if I am to impose on him an added financial burden by increasing the cost of its labour. Coming to the conclusion that the company is unable to pay more because it does not have the revenue to do so, I cannot agree to increase the rates of pay of its employees, not even recommend it.

I think that the matter should be submitted to the Board of Transportation of Quebec. The Board has the authority to grant more revenue to the company by increasing its rate for the transportation of passengers, the Board of Transportation is the primary authority to consult in this matter of rates and added revenue.

I feel that if I was suggesting an increase in the rates of pay of the employees of the company, I would not help solving a dispute, on the contrary I think I would simply aggravate it. The employees would then think that they are entitled to an increased rate of pay and the company would not have the money to pay for it. I am of the opinion that between the company and its employees, a better way to solve their differences will be found if they are let free to decide what is best to them under the actual circumstances. The employees are surely interested in the good of the company. They must share the responsibility of maintaining its ability to continue its operation on a sound basis.

The whole respectfully submitted.

(Sgd.) Wilbrod Bherer.

Quebec, March 20, 1953.

Report of Board in Dispute between

Canadian National Railways (Atlantic, Central and Western Regions)

and

Brotherhood of Locomotive Firemen and Enginemen

To:
The Hon. the Minister
of Labour of Canada.

The Board of Conciliation and Investigation constituted for the investigation of the above-mentioned dispute, respectfully submits the following report:—

Following the amendment of the statement of matters referred to the Board by Instrument of the Hon. Minister dated the 11th day of November 1952, the Board met again with the parties at Montreal on November 17, 18 and 19, 1952 at Toronto on December 3 and 4, 1952, and again at Montreal on January 5, 1953. Between the last mentioned date and the day of the resumption of the sittings on February 9, 1953, the parties renewed their discussions toward settlement on the urging of the Members of the Board, and we are now pleased to be able to report that the matters in dispute have been substantially settled by the Railway and the Brotherhood.

Attached hereto and marked Schedule "A" is a copy of the initial Memorandum of Understanding. Attached hereto and marked Schedule "B" is the Memorandum of Agreement relating to the Atlantic and Central Regions of the Canadian National Railways Company but excluding the Newfoundland District. Attached hereto and marked Schedule "C" is the Memorandum of Agreement covering adjustment in the basis of compensating Locomotive Firemen, Helpers and Hostlers while on annual vacation with pay with respect to the Atlantic, Central and Western Regions of the Railway but excluding the Newfoundland District. Attached hereto and marked Schedule "D" is the Memorandum of Agreement with respect to the Newfound-

On March 21, 1953, the Minister of Labour received the reports of the Boards of Conciliation and Investigation appointed to deal with matters in dispute between the Brotherhood of Locomotive Firemen and Enginemen and (1) Canadian National Railways (Atlantic, Central and Western Regions) and (2) Canadian Pacific Railway Company (Eastern, Prairie and Pacific Regions).

The Conciliation Board affecting the employees of the Canadian National Railways was under the Chairmanship of the Hon. Mr. Justice G. A. Gale; the other members of the Board were: T. R. Meighen, QC, Montreal, and the Hon. Charles P. McTague, QC, Toronto, nominees of the company and union respectively.

The Conciliation Board in the dispute affecting the employees of the Canadian Pacific Railway Company had the same chairman and the same trade union nominee. The nominee of the Canadian Pacific Railway Company was Norman L. Mathews, QC, Toronto.

The text of the reports is reproduced herewith.

land District, Atlantic Region, of the Railway. Attached hereto and marked Schedule "E" is the Memorandum of Agreement covering adjustment in the basis of compensating Locomotive Engineers, Firemen, Helpers and Hostlers while on annual vacation with pay with respect to the Newfoundland District of the Railway. Attached hereto and marked Schedule "F" is the Memorandum of Agreement with respect to the Western Region.

All of which is respectfully submitted this 9th day of March 1953.

(Sgd.) G. A. Gale,
Chairman.
(Sgd.) T. R. Meighen,
Member.
(Sgd.) C. P. McTague,
Member.

Schedule "A"

Canadian National Railway Company

Memorandum of Understanding setting forth the basis of settlement of all matters respecting increase in rates of pay and revision of rules governing working conditions for Locomotive Engineers, Newfoundland District, Locomotive Firemen, Helpers, Hostlers and Hostlers' Helpers, Atlantic, Central, Western Regions, and Newfoundland District, submitted by the Brotherhood of Locomotive Firemen and Enginemen in their request of February 1, 1952 and the proposals submitted by the Railway as negotiated at Montreal 1952-1953.

1. Increase of 12 per cent on present basic wage rates for all employees represented by the Brotherhood of Locomotive Firemen and Enginemen, effective April 1, 1952.
2. Present differentials, including those between lines east of Edmonton and west of Edmonton, not to be changed.
3. An increase of 13 per cent over the rates in effect prior to April 1, 1952 for Locomotive Firemen and Helpers in Yard Service, Hostlers and Hostlers' Helpers, effective February 16, 1953.
4. The wage scale for Locomotive Firemen and Helpers in Freight Service on the Western Region to be extended as follows:—

   350,000 to 400,000 lbs.
   400,000 to 450,000 lbs.
   450,000 to 500,000 lbs.
   500,000 lbs. and over.

5. Escalator Clause, out.
6. The minimum allowance for housing and taking locomotives out to be reduced to 15 minutes.
7. The term of the agreement shall be for one year from February 16, 1953.

For the Employees:

(Sgd.) Thomas Mattingly,
Chairman.
Negotiating Committee.

For the Railway:

(Sgd.) R. Hayes,
Chairman,
Negotiating Committee.

Dated at Montreal, February 9, 1953.

Schedule "B"

Canadian National Railway Company
Steam Lines
Atlantic and Central Regions
excluding
Newfoundland District

Memorandum of Agreement setting forth the basis of settlement of all matters respecting increase in rates of pay and revision of rules governing working conditions for Locomotive Firemen, Helpers, Hostlers and Hostlers' Helpers submitted by the Brotherhood of Locomotive Firemen & Enginemen in their request of February 1, 1952 and

the proposals submitted by the Railway, as negotiated at Montreal, P.Q., 1952-1953.

The agreement between the Canadian National Railways, Atlantic and Central Regions, and Brotherhood of Locomotive Firemen and Enginemen, effective March 1, 1933, is amended to the extent as indicated herein:—

Rates of Pay—

All lines east of Armstrong and Port Arthur excluding Lines in New England, United States & Canada Railroad, Champlain & St. Lawrence Railroad and St. Clair Tunnel Company.

Rules governing service of Locomotive Firemen, Helpers, Hostlers and Hostlers' Helpers—

All lines east of Armstrong, Port Arthur, Detroit and St. Clair Rivers including Lines in New England, United States & Canada Railroad, Champlain & St. Lawrence Railroad and St. Clair Tunnel Company.

Rates effective as of dates indicated.

Rules effective February 16, 1953.

PASSENGER SERVICE

Article 1

A. Rates of Pay effective April 1, 1952:

Weight on Drivers	Firemen or Helpers				Helpers	
	Coal and Diesel		Oil		Electric

Article 9

A. Rotary Snow Plows:

Rates of pay for firemen operating rotary snow plows shall be $11.31 per day of eight (8) hours or less; overtime at three-sixteenths ($\frac{3}{16}$ths) of daily rate.

HOSTLERS

Article 12

Effective April 1, 1952 rates of pay of Hostlers and Hostlers' Helpers will be increased by 12 per cent.

A. Rates of Pay effective February 16, 1953:

	Per Day
Outside Hostler	$12.06
Inside Hostler	11.38
Outside Hostler's Helper	10.70

Article 18

Housing and Taking Engine Out:

Firemen or helpers will be paid a minimum of fifteen (15) minutes at rate for class of service for putting engine in, and fifteen (15) minutes for taking engine out, at points where men are required to do this work, but when it takes more than fifteen (15) minutes actual time will be paid for, exclusive of minimum day, but payment under this rule is not to make a double payment when terminal delay is paid for.

Interpretation ... Time allowed for taking out engines or housing engines on arrival, applies only to places where no hostlers are employed for that purpose, unless firemen or helpers are requested by official in charge to do this work at centres where hostlers are employed, when time can be claimed for housing or taking engine out if work is performed.

Article 20

Attending Court:

Firemen or helpers attending Court or Coroner's Inquest on legal cases for the Company, or subpoenaed by the Crown in such cases, will be paid actual mileage locomotive makes or time lost.

When no time is lost, pay will be allowed at the rate of $9.97 per day of eight hours for each period of twenty-four hours, and if required during a lay-off period of sixteen hours or more, a full day's pay will be allowed, but if required during a lay-off period of less then sixteen hours, pay will be allowed *pro rata* with a minimum of half a day.

Men on the spare list who do not lose their turn will be paid actual time with a minimum of half a day, but if they lose their turn they will fall to the bottom of the list and be paid a full day.

Actual reasonable expense incurred will be allowed.

The Court witness fees and mileage will be assigned to the Company.

Article 56

Duration of Agreement:

This agreement shall continue in effect for one year and thereafter, subject to sixty (60) days' notice from either party of a desire to cancel or revise same, which notice may be served at any time after ten (10) months from the effective date, February 16, 1953.

For the Employees:

(Sgd.) L. H. LANGLEY,
General Chairman.
(Sgd.) A. E. MATTHEWS,
General Chairman.

For the Company:

(Sgd.) W. E. ROBINSON,
Vice-President & General Manager, Atlantic Region.
(Sgd.) A. J. LOMAS,
Vice-President, Central Region.

Approved:

(Sgd.) THOMAS MATTINGLY.
(Sgd.) W. L. DRUCE.
(Sgd.) J. GRAHAM.
(Sgd.) W. E. GAMBLE.
Negotiating Committee.

Signed at Montreal, February 10, 1953.

600,000 to 650,000 lbs.	12.07	11.44
650,000 to 700,000 lbs.	12.07	11.44
700,000 to 750,000 lbs.	12.25	11.62
750,000 to 800,000 lbs.	12.25	11.62
800,000 to 850,000 lbs.	12.43	11.62
850,000 to 900,000 lbs.	12.43	11.62
900,000 to 950,000 lbs.	12.61	11.80
950,000 to 1,000,000 lbs.	12.61	11.80
1,000,000 lbs. and over	12.79	11.80

SNOW PLOW SERVICE

Article 9

A. Rotary Snow Plows:

Rates of pay for Engineers and Firemen operating snow plows shall be as follows: Engineers $13.32; Firemen $11.31 per day of eight (8) hours or less; overtime at three-sixteenths ($\frac{3}{16}$ths) of daily rate.

HOSTLERS

Article 12

Effective April 1, 1952, rates of pay of Hostlers and Hostlers' Helpers will be increased by 12 per cent.

A. Rates of Pay effective February 16, 1953:

	Per Day
Outside Hostlers	$12.06
Inside Hostlers	11.38
Outside Hostlers' Helpers	10.70

Article 18

Housing and Taking Engine Out:

Engineers and Firemen or helpers will be paid a minimum of fifteen (15) minutes at rate for class of service for putting engine in, and fifteen (15) minutes for taking engine out, at points where men are required to do this work, but when it takes more than fifteen (15) minutes actual time will be paid for, exclusive of minimum day, but payment under this rule is not to make a double payment when terminal delay is paid for.

Interpretation ... Time allowed for taking out engines or housing engines on arrival, applies only to places where no hostlers are employed for that purpose, unless engineers and firemen or helpers are requested by official in charge to do this work at centres where hostlers are employed, when time can be claimed for housing or taking engine out if work is performed.

Article 20

Attending Court:

Engineers, Firemen or Helpers attending Court or Coroner's inquest on legal cases for the Company, or subpoenaed by the Crown in such cases will be paid actual mileage locomotive makes or time lost.

When no time is lost, pay will be allowed at the rate of $11.47 for Engineers and $9.97 for Firemen or Helpers per day of eight hours for each period of twenty-four hours, and if required during a lay-off period of sixteen hours or more, a full day's pay will be allowed, but if required during a lay-off of less than sixteen hours, pay will be allowed *pro rata* with a minimum of half a day.

Men on the spare list who do not lose their turn will be paid actual time with a minimum of half a day, but if they lose their turn they will fall to the bottom of the list and be paid a full day.

Actual reasonable expense incurred will be allowed.

The Court witness fees and mileage will be assigned to the Company.

Article 56

Duration of Agreement:

This agreement shall continue in effect for one year from February 16, 1953, and thereafter, subject to sixty (60) days' notice from either party of a desire to cancel or revise same, which notice may be served at any time after ten (10) months from the effective date.

For the Employees:

(Sgd.) M. Carey,
General Chairman.

For the Company:

(Sgd.) W. E. Robinson,
Vice-President &
General Manager,
Atlantic Region.

Approved:

(Sgd.) Thomas Mattingly.

Report of Board in Dispute between

Canadian Pacific Railway Company (Eastern, Prairie and Pacific Regions)

and

Brotherhood of Locomotive Firemen and Enginemen

To:
The Hon. the Minister
of Labour of Canada.

The Board of Conciliation and Investigation constituted for the investigation of the above-mentioned dispute, respectfully submits the following report:—

Following the amendment of the statement of matters referred to the Board by Instrument of the Hon. Minister dated the 11th day of November, 1952, the Board met again with the parties at Montreal on November 17, 18 and 19, 1952, and again at Montreal on January 5 and 6, 1953. Between the last-mentioned date and the day of the resumption of the sittings on February 9, 1953, the parties renewed their discussions toward settlement

on the urging of the Members of the Board, and we are now pleased to be able to report that the matters in dispute have been settled by the Railway and the Brotherhood.

Attached hereto and marked Schedule "A" is a copy of the Agreement between the parties with respect to Firemen (Helpers) and Hostlers employed in Canada on the Eastern Region. Attached hereto and marked Schedule "B" is a copy of the Agreement between the parties with respect to Firemen (Helpers) and Hostlers employed in Canada on the Prairie and Pacific Regions. We are informed that under Part I of each Agreement, the employees thereby involved will receive an average increase of wages of approximately 12 per cent.

All of which is respectfully submitted this 9th day of March, 1953.

(Sgd.) G. A. Gale.
(Sgd.) C. P. McTague,
Member.
(Sgd.) Norman Mathews,
Member.

Schedule "A"

Canadian Pacific Railway Company

Memorandum of Agreement between the Canadian Pacific Railway Company and the Brotherhood of Locomotive Firemen and Enginemen on behalf of Firemen (Helpers), Hostlers and Hostler Helpers employed in Canada on the Eastern Region.

This Agreement is in complete settlement of matters in dispute between the Brotherhood of Locomotive Firemen and Enginemen and the Canadian Pacific Railway Company as a result of the notice from the B. of L. F. & E. dated February 1, 1952 for:—

(1) An increase in wage rates of $2.80 per day.
(2) Escalator clause.
(3) Representation rule, and
(4) Initial terminal delay, Eastern Region,

and the Notice from the Company under date of February 1, 1952 for:

(1) Necessary revisions to provide that a Fireman who takes his engine from a shop track or other similar point where he performs service in getting the engine ready will appear on duty 30 minutes before time ordered for and will sign appearance book; 30 minutes to be allowed at *pro rata* rates for preparatory service.
(2) Revise and clarify certain clauses in the diesel agreement governing preparatory time and time allowance for helpers on engines operating through terminals.
(3) Revision of Article 35 to remove restriction on starting time of firemen in yard service, and
(4) Clarification of Clause (C) of Article 35 in connection with a regularly assigned yard fireman who starts a second shift within a twenty-four hour period.

The current collective agreement is revised as follows:—

Article 1

Rates of Pay per Day of 100 Miles

Classification by Weight on Drivers (Pounds)	Passenger	Freight	
	All Engines	Coal and Diesel-Electric	Oil
	$	$	$
Less than 140,000 lbs.	9.97	10.77	10.61
140,000 lbs. to 170,000 lbs.	10.15	10.95	10.79
170,000 lbs. to 200,000 lbs.	10.24	11.13	10.97
200,000 lbs. to 250,000 lbs.	10.33	11.31	11.15
250,000 lbs. to 300,000 lbs.	10.33	11.49	11.49
300,000 lbs. to 350,000 lbs.	10.42	11.67	11.67
350,000 lbs. to 400,000 lbs.	10.51	11.85	11.85
400,000 lbs. to 450,000 lbs.	10.60	12.03	12.03
450,000 lbs. to 500,000 lbs.	10.68	12.21	12.21
500,000 lbs. and over	10.77	12.39	12.39

Oil differential not to apply on engines weighing over 215,000 lbs. on drivers.

The following rates will apply for firemen in freight service between Cartier and Fort William on M4, P2 and R Class engines.

	Coal	Oil
M4	$11.10	$10.89
P2, R	11.47	11.47

Minimum Day in Passenger Service — In all passenger service, the earnings from mileage, overtime, or other rules applicable, for each day service is performed, shall be not less than ten dollars and eighty-eight ($10.88) for Firemen

Watching Engines — Firemen watching and caring for engines on outside shop tracks at terminals, or when ordered from terminals, to watch engines at outside points:
Per day of 8 hours or less $10.72
Overtime 3/16 of the daily rate per hour

ARTICLE 34

Hostlers Service
(a) Hostlers, per day of eight (8) hours or less $11.38

If hostlers are employed in handling engines between passenger stations and roundhouses or yards or on main tracks they will be paid per day of eight (8) hours or less $12.06

If men are employed to assist hostlers in handling engines between passenger stations and roundhouses or yards or on main tracks they will be paid per day of eight (8) hours or less $10.70

ARTICLE 35

Yard Service
(a) Rates of Pay per day of eight (8) hours:

Classification by Weight on Drivers

Less than 140,000 lbs.	$11.07
140,000 lbs. to 200,000 lbs.	11.21
200,000 lbs. to 300,000 lbs.	11.35
300,000 lbs. to 400,000 lbs.	11.53
400,000 lbs. to 500,000 lbs.	11.71
500,000 lbs. and over	11.89

Clause (i) to be revised to read as follows:

"Where an independent assignment is worked regularly the starting time will be during one of the periods provided in sections (f) or (h)."

NOTE: Exceptions to the above may be made to cover local requirements in isolated cases where mutually agreed to between the appropriate officer of the Company and the General Chairman. No change shall be made in the established application of this rule.

VACATION RATES

Firemen (Helpers)

	Coal and Diesel Electric (Per Day)
Passenger Service (117 miles at $10.24)	$ 11.98
Through Freight and Spare Board (110 miles at $11.13)	12.24
Wayfreight Service (110 miles at $11.53)	12.68
Yard Service (108-1/3 miles at $11.21)	12.14

	Oil (Per Day)
Passenger Service (117 miles at $10.24)	$ 11.98
Through Freight and Spare Board (110 miles at $10.97)	12.07
Wayfreight Service (110 miles at $11.37)	12.51
Yard Service (108-1/3 miles at $11.21)	12.14

Hostlers

Inside Hostlers	$ 11.38 per day
Outside Hostlers	12.06 per day
Assistant Hostlers	10.70 per day

This Agreement is effective February 16, 1953 and will remain in effect as amended from February 16, 1953 until February 15, 1954 and thereafter until revised or superseded, subject to 60 days' notice by either party, which notice can be served at any time after December 15, 1953.

For the Brotherhood of Locomotive Firemen and Enginemen:

(Sgd.) J. GRAHAM,
General Chairman.

Approved:

(Sgd.) THOMAS MATTINGLY,
Vice-President.

For the Canadian Pacific Railway Company:

(Sgd.) G. N. CURLEY,
General Manager.

Montreal, Que., February 25, 1953.

Schedule "B"

CANADIAN PACIFIC RAILWAY COMPANY

Memorandum of Agreement between the Canadian Pacific Railway Company and the Brotherhood of Locomotive Firemen and Enginemen on behalf of Firemen (Helpers) and Hostlers employed in Canada on the Prairie and Pacific Regions.

This Agreement is in complete settlement of matters in dispute between the Brotherhood of Locomotive Firemen and Enginemen and the Canadian Pacific Railway Company as a result of the notice from the B. of L. F. & E. dated February 1, 1952 for:—

(1) An increase in wage rates of $2.80 per day.

(2) Escalator clause.

(3) Representation rule,

and the Notice from the Company under date of February 1, 1952 for:

(1) Necessary revisions to provide that a Fireman who takes his engine from a shop track or other similar point where he performs service in getting the engine ready will appear on duty 30 minutes before time ordered for and will sign appearance book; 30 minutes to be allowed at *pro rata* rates for preparatory service.

(2) Revise and clarify certain clauses in the diesel agreement governing preparatory time and time allowance for helpers on engines operating through terminals.

(3) Revision of Article 35 to remove restriction on starting time of firemen in yard service, and

(4) Clarification of Clause (C) of Article 35 in connection with a regularly assigned yard fireman who starts a second shift within a twenty-four hour period.

The current collective agreement is revised as follows:—

Article 1

Rates of Pay per Day of 100 Miles

Classification by weight on drivers (Pounds)	Passenger	Freight
	$	$
Less than 140,000 lbs.	9.97	10.77
140,000 lbs. to 170,000 lbs.	10.15	10.95
140,000 lbs. to 170,000 lbs. M4	10.15	11.10
170,000 lbs. to 200,000 lbs.	10.24	11.13
200,000 lbs. to 250,000 lbs.	10.33	11.31
200,000 lbs. to 250,000 lbs. P2, R3 bed	10.33	11.47
250,000 lbs. to 300,000 lbs.	10.33	11.49
300,000 lbs. to 350,000 lbs.	10.42	11.67
350,000 lbs. to 400,000 lbs.	10.51	11.85
400,000 lbs. to 450,000 lbs.	10.60	12.03
450,000 lbs. to 500,000 lbs.	10.68	12.21
500,000 lbs. and over	10.77	12.39

(a) Watching and caring for engines. Firemen per hour $1.27

(b) While held for special service, if time lost, eight (8) hours to be allowed per day of twenty-four (24) hours .. Firemen per hour $1.27

(c) Attending court on request of Company, if time lost, eight (8) hours to be allowed per day of twenty-four (24) hours. Firemen per hour $1.27

Rotary Plow Service;—

Rotary plow service per day of eight (8) hours or less; overtime pro rata:

East of Crowsnest and Lake Louise $11.13
Valley 11.20
Mountain 11.73

Article 2

Road Service;

(b) In all passenger service the earnings from mileage, overtime, or other rules applicable for each day service is performed shall be not less than ten dollars and eight-eight cents ($10.88) for Firemen.

Article 35

Yard Service;

Firemen's rates per day of eight (8) hours:

Classification by Weight on Drivers

Less than 140,000 lbs. $11.07
140,000 lbs. to 200,000 lbs. 11.21
200,000 lbs. to 300,000 lbs. 11.35
300,000 lbs. to 400,000 lbs. 11.53
400,000 lbs. to 500,000 lbs. 11.71
500,000 lbs. and over 11.89

Clause (h) to be revised to read as follows:

Where an independent assignment is worked regularly the starting time will be during one of the periods provided in clauses (e) and (g).

Note: Exceptions to the above may be made to cover local requirements in isolated cases where mutually agreed to between the appropriate officer of the Company and the General Chairman. No change shall be made in the established application of this rule.

Article 42

Hostlers

(a) Rate per day of eight (8) hours or less; overtime shall be paid on the minute basis at one and one-half times the hourly rate.
Hostlers $11.38

VACATION RATES

Firemen (Helpers)—			
Passenger Service	(117 miles at $10.24)	$11.98	per day
Through Freight and Spare Board	(110 miles at $11.13)	12.24	per day
Wayfreight Service	(110 miles at $11.53)	12.68	per day
Yard Service	(108-1/3 miles at $11.21)	12.14	per day
Hostlers		$ 11.38	per day

NOTE: On the British Columbia District to the daily rates specified above for Road Locomotive Firemen in passenger and freight service, a flat amount of 33 cents per day will be added in lieu of Mountain and Valley differentials.

This flat amount will also be applied to road Locomotive Firemen engaged in assisting service on Field Hill (between Field and Lake Louise) and to Road Locomotive Firemen on the Esquimalt and Nanaimo Railway..

This Agreement is effective February 16, 1953, and will remain in effect as amended from February 16, 1953 until February 15, 1954 and thereafter until revised or superseded, subject to 60 days' notice by either party, which notice can be served at any time after December 15, 1953.

For the Brotherhood of Locomotive Firemen and Enginemen:

(Sgd.) J. GRAHAM,
General Chairman.

Approved:

(Sgd.) THOMAS MATTINGLY,
Vice-President.

For the Canadian Pacific Railway Company:

(Sgd.) C. E. LISTER,
Acting

Canadian Railway Board of Adjustment No. 1 Releases Decision in Recent Dispute

The decision in a case heard January 13, 1953, by the Canadian Railway Board of Adjustment No. 1 has been released.

The dispute concerned the claim of a locomotive fireman for a minimum day plus arbitraries, a total of 119 miles, after he had been on duty and been paid for only 22 miles due to involvement in a level crossing accident.

Case No. 631—Dispute between Canadian National Railways (Western Region) and Brotherhood of Locomotive Firemen and Enginemen concerning the claim of a locomotive fireman for a minimum day, plus arbitraries.

On December 4, 1951, according to the joint statement of facts presented to the Board, the engineer and fireman were ordered to bring an engine from Neebing to Port Arthur. En route they were involved in a crossing accident with an automobile, which resulted in the death of two occupants of the car, both acquaintances of the fireman. At Port Arthur, the fireman did not feel able to continue his regular freight run because of his experience. He booked sick and was released.

He submitted a claim for a minimum day of 100 miles plus arbitraries, a total of 119 miles. Payment was made for actual time on duty, one hour and 45 minutes, representing 22 miles. The claim, therefore, was for 97 miles.

The railway declared that when it was necessary for a crew to bring an engine the nine miles from Neebing to Port Arthur for an assignment out of the latter terminal, payment for the run was made on the basis of initial terminal delay from the time required to report for duty at Neebing until departure from the outer switch at Port Arthur.

It contended that Port Arthur and Neebing have always been considered as one terminal for the purposes of dispatching engines from Neebing for assignments out of Port Arthur. The engineer in the case, who had continued the run, claimed and was paid on this basis. Had the fireman continued the run, he would have claimed and been paid the same mileage as the engineer. Therefore his claim for a minimum day was not justified.

The Brotherhood contended that Neebing and Port Arthur are separate designated terminals and are considered joint terminals only for the exercise of seniority by enginemen assigned to these Lakehead points.

Citing articles in the agreement covering firemen, helpers and hostlers which state that road mileage commences and ends at the outer switch of terminal yards, and that 100 miles or less and eight hours or less shall constitute a day in freight service, the Brotherhood contended that the fireman was entitled to a basic day of 100 miles from the outer switch of Neebing yard to the outer switch of Port Arthur yard.

The Board decided that the case was based on inability of the fireman to continue on duty out of Port Arthur as a result of an occurrence in the performance of his duty for which he had no responsibility and that under these circumstances the claim for a minimum day appeared justified.

The contention of the Brotherhood was sustained by the Board, which also recommended that the two parties concerned confer together to arrive at a mutually satisfactory understanding concerning the movement of engines between Port Arthur and Neebing.

Saskatchewan Department of Labour

(Continued from page 692)

A new Fire Prevention Act was passed in 1951 which consolidated previous legislation. The work of the Branch increased during the year, both in educational activities and inspection of buildings for fire hazards.

The Branch inspected 4,031 buildings, including all schools, hospitals, hotels, churches, oil storage tanks and warehouses in 58 towns, 137 villages and 55 hamlets. In cities, 68 special inspections were made of hotels, hospitals and nursing homes. In addition, 112 special investigations were made into fires, many of which were of a suspicious nature. A total of 1,333 formal orders was issued to remedy fire or life hazards. There were 81 lightning rod inspections.

Fire prevention activity also took the form of volunteer firemen training in 12 centres, fire brigades conferences, civil defence schools, film showings, public meetings, and meetings with hospital boards, school boards, boards of trade, and municipal councils.

All manufacturers, wholesalers, retailers and installers of oil burners must hold a licence issued by this Branch. A total of 9,686 licences was issued in 1951. Seventy-two licences were issued to manufacturers or installers of lightning rods.

The theatres division inspects and licenses theatres and public halls under the Theatres and Cinematographs Act to ensure that their equipment for the projection of films is safe. A total of 1,237 inspections was made in 1951.

Seventy-one persons took examinations for projectionists' certificates and all but five were successful. Operators' licences were issued during the year to 980 persons. There were 122 licensed apprentices serving under qualified operators.

ILO Governing Body

(Continued from page 695)

Asian Countries, of the Latin-American Manpower Technical Conference, of the Committee on Industrial Committees, of the Committee on Standing Orders and the Application of Conventions and Recommendations, and of the International Organizations Committee. The agenda was decided for the second session of the Committee of Experts on Indigenous Labour and the program of meetings for the balance of the year was approved.

The 122nd session of the Governing Body and its Committees will be held in Geneva from May 26 to June 1.

Collective Agreements and Wage Schedules

Recent Collective Agreements

A pension plan and severance awards are provided under an agreement between Firestone Tire and Rubber Company of Canada Ltd. and United Rubber, Cork, Linoleum and Plastic Workers of America, summarized below. Under the pension plan employees are paid a pension of $80 a month at age 65, after 25 years of service, subject to certain deductions, including one-half of any statutory old age or disability benefit payments. Severance awards are provided for certain employees ineligible for any company-sponsored pensions.

Manufacturing

Rubber Products—*Hamilton, Ont.—Firestone Tire and Rubber Company of Canada Limited and United Rubber, Cork, Linoleum and Plastic Workers of America, Local 113.*

Agreement, entered into September 26, 1952, following strike (L.G., Nov. 1952, p. 1547), to be in effect from January 25, 1952, to January 25, 1954, and thereafter from year to year, subject to notice. However, should economic conditions warrant, either party shall have the right to re-open the general wage scale once between May 1, 1953, and January 25, 1954.

Union security: union shop for new employees.

Check-off: compulsory for new, voluntary but irrevocable for old employees.

Hours: 8 per day 5 days a week, a 40-hour week. *Overtime:* time and one-half for work in excess of 8 hours in any 24-hour period (except in the case of a change of shift) and for work between 7 a.m. Saturday and 7 a.m. Monday; double time for work on 8 specified *paid holidays.* Production employees shall not be required to work between 7 a.m. Saturday and 7 a.m. Monday during the period June 15 to September 15, 1953.

Vacations with pay: after one year's service one week, after 5 years' service 2 weeks and after 15 years' service 3 weeks. Employees with more than 3 months but less than one year of continuous service will receive 2 per cent of their earnings.

Wages are increased by 8 cents per hour effective as of the date of return to work after the strike. Employees who return to work and who were on the active payroll on January 25 and also on June 3, 1952, will each receive $50 retroactive pay; those hired between the two dates will receive pay on a *pro rata* basis. Authorized day work rates used by piece workers shall be 80 per cent of piece work base rates. There shall be no differential in job classification rates solely by reason of an employee's age or sex.

Off-shift differential: employees on shift operations will be granted a premium of 3 cents per hour for work on the afternoon shift and a premium of 5 cents per hour for work on the night shift.

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and through the Industrial Relations Branch of the Department. A number of those recently received are summarized here. Agreements made obligatory under the Collective Agreement Act in Quebec and schedules under Industrial Standards Acts, etc., are summarized in a separate article following this.

Provision is made for *grievance procedure* and *seniority rights.*

Pension Plan and Severance Award Agreement

This separate agreement entered into on September 26, 1952, subject to the approval of the Board of Directors and the shareholders of the company and subject to obtaining and retaining such approval of the Pension Plan by the relevant tax authorities as would entitle the company to deduct the amount of its contribution to the Pension Fund as an expense before taxes under the applicable tax laws, is to continue in effect at least until January 25, 1957. During the term of this agreement or of any renewal thereof the unions shall not make any demands that this pension agreement be changed in any respect or terminated or that a new Pension Plan or additional severance awards be established for the employees.

Pension Plan

Normal Retirement: any employee who has been in active employment on or after the effective date of the plan, has attained his normal retirement date (the first day of the month next following an employee's 65th birthday or the effective date of the plan, whichever is later) and has 15 or more years of credited service at the time of his retirement, shall be eligible for a pension upon his retirement; the monthly amount of such pension shall be $3.20 for each year of his credited service up to a maximum of 25 years. Retirement shall not be compulsory at any stated age but an employee who has attained his normal retirement date may be retired at the discretion of the company if he is unable to perform efficiently the requirements of his job classification.

Early Retirement: any employee who has attained age 60 but not his normal retirement date and who has 20 or more years of credited service may retire with the consent of the company and shall be eligible for a pension. The monthly amount of such pension shall be $3.20 for each year of his credited service up to a maximum of 25 years, reduced by six-tenths of one per cent for each complete month to elapse from his retirement to his normal retirement date.

Total and Permanent Disability Retirement: an employee who becomes totally and permanently disabled while accumulating seniority with the company after the effec-

tive date of the plan and prior to his normal retirement date and who has 20 or more years of credited service shall be eligible for a disability pension of $50 per month during the continuance of such total and permanent disability.

Deductions: there shall be deducted from the amount of pensions payable to each retirant under the above provisions:—

(a) one-half of any statutory benefit (old age or disability benefit payments) to which he is entitled;

(b) the full amount of any benefit, annuity, pension or payment payable to such retirant after retirement on account of injury or occupational disease;

(c) the full amount of any benefit, annuity, pension or payment of similar kind payable to such retirant after retirement under any other plan of the company to which the retirant is or upon application would become entitled, provided, however, that the amount of such deduction shall be decreased by the amount which shall be attributable to any contribution which the retirant shall have made to the source or fund of such payment.

Administration: the plan shall be administered by a Board of Administration appointed by the company. The Board shall have such authority and perform such duties, consistent with this plan, as may be determined from time to time by the company.

Financing: the company shall establish a Pension Fund which shall consist of a trust fund or funds and/or an Insurance Company or Government Annuities Branch contract or contracts for the purpose of providing the pension benefits under the plan. The company shall maintain in the Pension Fund assets of an amount estimated, on a sound actuarial basis, to be sufficient to pay all pensions theretofore awarded to retirants under the plan.

Severance Awards

The company will pay a severance award to any employee who is released from employment because he is physically or mentally unable to perform the work of his classification or that of another classification to which he might be eligible for transfer, provided he has five or more years of credited service but is ineligible for any company-provided pension. The severance award shall be payable in a lump sum and shall be equal to two per cent of the employee's total earnings for the period of his credited service. In the case of union officials who received no compensation from the company during any period of authorized absence while on union business and in the case of employees whose credited service includes any period during which they were absent for service with the armed forces and received no compensation from the company, the total earnings for the purpose of calculating any severance award shall include the compensation which they would have received had they been available for regular employment during such periods.

Paper Products—*Vancouver, B.C.—Pacific Mills Limited (Vancouver Converting Plant) and International Brotherhood of Pulp, Sulphite and Paper Mill Workers, Local 433.*

Agreement to be in effect from November 1, 1952, to October 31, 1953, and thereafter from year to year, subject to 60 days' notice.

Union security: union shop for new employees with maintenance of membership for all.

Hours: 8 per day, an average of 40 hours per week. *Overtime:* time and one-half for work in excess of 8 hours in any one day or of 40 hours average per week and for all work on Saturdays (except for employees regularly engaged on maintenance), Sundays and on 2 specified unpaid holidays; double time and one-half for work on 7 (previously 6) specified *paid holidays.*

Vacations with pay: one week after one year's continuous service, provided an employee has worked two-thirds of the full-time hours available on his job during the year; employees who have qualified for 3 one-week vacations will be granted an additional week and those who have qualified for 15 one-week vacations a third week. Employees with less than one year's service but who have worked two-thirds of the full-time hours available on their job during the preceding year will be granted one week; those who do not so qualify will be allowed one-eighth of a day for each full week of work performed during their employment.

Hourly wage rates for certain classifications: bag plant—bag machine adjuster $1.51 to $1.73; bag machine tender, male $1.38 to $1.45, female $1.14 to $1.24; bag baler $1.41; tissue plant—machine adjuster $1.58 and $1.64; roll loader and adjuster helper $1.38 to $1.44; coremaker, towel folder operator $1.45; case sealer $1.38, metal edger operator (female) $1.25; maintenance—mechanic $1.42 to $1.87, carpenter-storekeeper $1.42 to $1.75, painters $1.48 to $1.75; printing plant—Kidder pressman, Austill pressman $1.55 to $1.90, aniline pressman $1.45 to $1.66, three colour 48-inch aniline press $1.45 to $1.76, plate maker $1.43 to $1.53, head plate man $1.61 and $1.75; main plant—gummerman $1.56 to $1.70, helpers $1.44 and $1.46, waxerman $1.58, female help $1.14 to $1.22, men's base rate $1.38. (The above rates are in most cases from 3 to 6 cents per hour higher than the previous basic rates.)

Night shift differential: a shift differential of 6 cents per hour will be paid for night work.

Provision is made for *seniority rights, grievance procedure* and the *safety and health* of employees.

Metal Products—*Montreal, P.Q.—Canadian Vickers Limited (Engineering Division) and International Brotherhood of Boilermakers, Iron Ship Builders, Welders and Helpers of America, Local 271, International Association of Machinists, Local 631, Sheet Metal Workers' International Association, Local 116, and United Association of Journeymen and Apprentices of the Plumbing and Pipefitting Industry of the United States and Canada, Local 825.*

Agreement to be in effect from August 18, 1952, to August 17, 1953, and thereafter from year to year, subject to notice.

Union security: maintenance of membership.

Check-off: voluntary but irrevocable.

Hours: 9 per day Monday through Friday, a 45-hour week. Where the working force is placed on three 8-hour shifts employees will be allowed a 20-minute lunch period without deduction of pay. *Overtime:* time and one-half for work in excess of regular working hours on any one shift and for work on Saturdays; double time for work on Sundays and on 7 specified holidays, 5 of which are *paid holidays* (previous agreement provided for 4 paid holidays).

Vacations with pay shall be in accordance with Ordinance No. 3 and amendments (one week after one year's service). After 2 years' accumulated service (as calculated from January 1, 1946) employees shall receive 2 extra days' pay, after 3 years 3 extra days' pay and after 4 years 4 extra days' pay; after 5 years' accumulated service employees shall receive an additional week's vacation with pay. In calculating accumulated service full credit will be allowed to employees who temporarily left the company to serve in the Armed Forces.

Hourly wage rates for certain classifications: boiler and plate shop—marker off $1.52 to $1.67, boilermakers $1.52 to $1.58, blacksmiths $1.42 to $1.58; welders, licenced $1.50 to $1.58, unlicenced $1.35 to $1.48; union melt operators $1.50 to $1.58, burners $1.31 to $1.40, caulkers $1.40 to $1.50, chippers $1.28 to $1.36, drillers $1.28 to $1.38, slingers $1.12 to $1.30; helpers, sweepers and labourers $1 to $1.19; machine shop—attendants (tool crib, stores) $1.10 to $1.22, clerks $1.10 to $1.47, cranemen $1.25 to $1.41. drillers $1.16 to $1.46; grinders, millwrights $1.33 to $1.61; planer $1.47 to $1.61, toolmakers $1.39 to $1.66; sheet metal shop—layout $1.50 to $1.65, sheet metal $1.40 to $1.50; assembler, machine operator $1.30 to $1.40; trainee sheet metal $1.19 to $1.40, helper $1 to $1.19; copper and pipe shop—coppersmith $1.53 to $1.68, slab man $1.50 to $1.60, pipefitters and plumbers $1.40 to $1.50, trainees $1.19 to $1.40, lathe hand $1.30 to $1.40, labourers $1 to $1.19.

Dirty work: certain specified dirty work will be compensated by an additional 15 cents per hour above the regular rates.

Night shift differential: men working on regular night shifts will be paid at the rate of time and one-eighth.

Apprentices shall be properly indentured. The number of apprentices shall be limited to one for every 5 journeymen. On completion of 8,800 hours of service apprentices shall receive the journeymen's rate.

Provision is made for *grievance procedure, seniority rights* and the *safety and health* of employees.

Aircraft—*Toronto, Ont.—De Havilland Aircraft of Canada Limited and the International Union, United Automobile, Aircraft and Agricultural Implement Workers of America, Local 112.*

Agreement to be in effect from September 1, 1952, to August 31, 1954, and subject to notice, "it shall continue in effect for a further two years period without change and so on from year to year thereafter".

Check-off: compulsory for all employees. This provision will become null and void should there be any strike or other collective action to stop or interfere with production.

Hours: 8 per day Monday through Friday (for boiler engineers any 5 days of the week), a 40-hour week. *Overtime:* time and one-half for work in excess of 8 hours at a stretch on any regular working day and for work on Saturday; double time for work on Sundays (boiler engineers will be paid time and one-half for work on Saturday and Sunday) and double time and one-half for work on 8 specified *paid holidays.*

Rest and wash-up periods: a rest period of 10 minutes at a time mutually agreed upon and a wash-up or clean-up period of 5 minutes before the end of the work shift will be maintained.

Vacations with pay: employees who have been on the company's payroll for not less than 3 months prior to June 1 of any year that the agreement is in effect will be entitled to a vacation with pay on the following basis: after one year's service to one week with pay equivalent to 2 per cent of their earnings during the preceding year, after 2 years' service to one week with pay equivalent to 3 per cent, after 3 years' service to 2 weeks with pay equivalent to 4 per cent and after 15 years' service to 3 weeks with pay equivalent to 6 per cent of their earnings during the preceding year (the last provision is new).

Hourly wage rates for certain classifications: group 1—tool and die maker, flight service engineer, class I inspector, $1.80 to $1.90; group 2—class II inspector, jig and fixture maker, senior heat treater, engine mechanic, flight service mechanic, steamfitter and plumber, $1.67 to $1.77; group 3—radio or radar installer, class III inspector, various classes of mechanics (power plant, tube bending, airframe, salvage, instrument, hydraulic, woodworker, etc), tool and cutter grinder, $1.58 to $1.68; group 4—upholsterer, sub-assembler, airframe erector, welder, bench hand, die cleaner, cable splicer, drop hammer mechanic, $1.52 to $1.62; group 5—sheet metal machine operators, moulder drop hammer operator, tube bender, production workers, progress chaser, maintenance service operator, trades helpers, $1.46 to $1.56; group 6—bath operator, stock chaser, stores clerk, truck driver (licensed), $1.41 to $1.51; group 7—paint remover, doper, assembler, parts stamper, drill operator, riveter, $1.36 to $1.46; group 8—labourer, cleaner and sweeper, $1.26 to $1.36; boiler engineer, second $1.68, third $1.58, fourth $1.48. Leadhands shall be paid 10 cents and chargehands 20 cents per hour extra while engaged in either category. (The above basic rates are from 14 to 17 cents per hour higher than the previous rates. However, part of this increase is due to the incorporation into the new rates of the cost-of-living bonus paid under the previous agreement.)

Escalator clause: in addition to the above rates employees will be paid a cost-of-living bonus of one cent per hour for each 1·3 points rise in the Dominion Bureau of Statistics' cost-of-living index above the figure of 186·1 (previously 180·9). Adjustments will be made upward and downward but in no event will a decline in the index below 186·1 provide the basis of a reduction in the wage rates.

Improvement factor: on March 1 and September 1, both in 1953 and 1954, employees will be granted a 2 cents per hour across-the-board increase as an improvement factor.

Off-shift differential: employees engaged on off-shifts will be paid a premium of 10 cents per hour.

Transportation allowance: the company will continue to provide a bonus of 3 cents per hour on all pay rates as a transportation allowance, such bonus to be included in the calculation of overtime payments.

Welfare plan: the company will contribute to the Group Insurance Plan a flat rate of 2 cents per hour, based on a 40-hour week.

Provision is made for *grievance procedure, seniority rights* and the *safety* of employees.

Porcelain Insulators—*Hamilton, Ont.—Canadian Porcelain Company Limited and National Union of Vitric and Ceramic Workers, Local 249 (CCL).*

Agreement to be in effect from October 15, 1952, to October 15, 1953, and thereafter from year to year, subject to notice.

Check-off: voluntary but irrevocable.

Hours: the regular work week shall be one of 42½ hours, for day workers 8½ per day, Monday through Friday, and for shift workers 8 hours per shift. *Overtime:* time and one-half for the first 4 hours of work in excess of standard working hours in any one shift or week and on Saturdays, and for all work on 8 specified *paid holidays;* double time after the first 4 hours of overtime Monday through Saturday and for all work on Sundays. The above overtime rates for Saturdays and Sundays do not apply to watchmen, boilermen and continuous shift workers. Employees required to work 2 or more hours of overtime before or after completing a standard shift will be paid a meal allowance of $1.

Rest periods: employees engaged on the day shift will be granted two 10-minute rest periods each day.

Vacations with pay: one week after one year's continuous service, two weeks after 3 years' continuous service and 3 weeks after 15 years' continuous or 25 years' total service, provided the latest period of continuous service has been 5 years or longer.

Basic hourly starting wage rates (non-incentive work): job evaluation grade No. 5 $1.50, grade No. 6 $1.45, No. 7 $1.40, No. 8 $1.35, No. 9 $1.30, No. 10 $1.25, No. 11 $1.20; after 3 months the above rates are increased by 5 cents per hour. (The above starting rates are 15 cents per hour higher than the previous starting rates; however, the previous agreement provided for an increase of 5 cents per hour after one month and an additional increase of 5 cents per hour after 3 months.)

Night shift differential: regular night shift workers will be paid a shift bonus of 7 cents per hour for work on the second shift and 9 cents per hour on the third shift.

Welfare plans: the company agrees to maintain its present group life, accident and sickness and hospitalization plan for the duration of the agreement and to pay the same proportion of the cost on the same basis as before.

Seniority: after 3 months' service employees shall be allotted seniority on a departmental basis and after 12 months' service they shall be placed on a plant-wide seniority list. Union officials shall hold top plant-wide seniority during their term of office for purposes of lay-off and recall.

Provision is made for *grievance procedure* and the *safety and health* of employees.

Construction

Roads—*Province of British Columbia—Certain Firms, Members of The Road Builders and Heavy Construction Association and The International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers, Local 213.*

Agreement to be in effect from January 2, 1952, to January 1, 1955, and thereafter, subject to 60 days' notice. However, negotiations regarding wages only may be opened each year on the anniversary date of the agreement, on 60 days' notice; if agreement is not reached during such negotiations, the agreement as a whole shall be terminated in order to permit the parties to declare or authorize a strike or a lockout.

Union security: closed shop.

Hours: 8 per day Monday through Friday, a 40-hour week. Any time required for servicing equipment, before or after a shift, shall be paid for at the regular rate. On jobs outside a radius of 25 miles from the Vancouver city hall or on jobs where camps are maintained 44 hours a week may be worked at straight time. *Overtime:* time and one-half for the first 2 hours in excess of 8 hours per day Monday through Friday and for work in excess of 4 up to and including 10 hours worked on Saturday; (the first 4 hours on Saturday may be worked at straight time); double time for work in excess of 10 hours in any one day Monday through Saturday and for work on Sunday and on 9 holidays. No work is to be performed on Labour Day. Where by mutual agreement truck drivers agree to service equipment on Sunday the first 4 hours so worked shall be paid for at time and one-half. Truck drivers on "A" frames working with sections of the heavy construction industry shall continue to be paid the extra overtime rates usually paid by those sections.

Shift work: when additional shifts are required and continued for 3 or more consecutive nights 8 hours' pay will be granted for 7½ hours on the second or 7 hours on the third shift. This shall not apply where circumstances prohibit the working of a normal shift.

Vacation pay will be provided as required by provincial law.

Minimum hourly wage rates: turnowagon, $2.20; bottom dumps, $2.10; dumptor operators, $1.78; Euclid type trucks, $1.78 to $1.98; dump trucks, $1.57 and $1.67; semi-trailers, spray trucks, $1.78; low bed, $1.78 and $1.88; fuel and water wagons, $1.57 and $1.67; loadermobile under 5 tons capacity, winch trucks up to 5 tons capacity, $1.67; man-haul (class A licence), $1.75; pickup to 2,000 pounds, $1,52; flatbed "A" frames up to and including 3 tons capacity, $1.57; over 3 tons capacity and those working steadily 60 per cent of the time with special trades, $1.98. The rates for tunnel work underground are 10 per cent higher than the above rates.

Out-of-town jobs: truck drivers required on out-of-town jobs will receive transportation, meals not exceeding $5 daily on boats or trains and $4 daily in restaurants, and travelling time up to 8 hours in 24 (including Saturday, Sunday and statutory holidays) when travelling during working hours; if night travel is necessary a sleeper will be provided. If company vehicles are

used for transportation to out-of-town jobs and driven at the driver's discretion straight time rates only will apply.

Provision is made for *grievance procedure.*

Trade

Retail Stores—*Bell Island, Nfld.—Bell Island Business Men's Association and The Retail Clerks' International Association, Local 1621.*

Agreement to be in effect from October 1, 1952, to September 30, 1953, and thereafter from year to year, subject to 60 days' notice.

Hours: 4 days of 7½, one day of 9½ and one day of 3½ hours, a 43-hour week, provided the Bell Island Shops Act is amended to provide for store opening hours to conform to the above schedule; otherwise the hours shall revert to 3 days of 7½, 2 days of 9½ and one day of 3½ hours, a 45-hour week. The above hours shall not apply to the 6 clear working days preceding Christmas Day. During July and August the 7½-hour days shall be reduced by one hour. The hours for drug stores and restaurant employees shall be mutually agreed upon by the proprietors and the union. *Overtime:* time and one-half for work in excess of the daily hours agreed upon and for work on whole holidays. The minimum overtime payment shall be $1. Statutory holidays shall be observed in accordance with the Shops Act, 1940, as amended.

Vacations with pay: after one year's service 12 days, after 10 years' service 18 days. Employees with more than 6 months but less than one year of service will receive one day for each completed month of service. Longer vacations with pay will be allowed if taken during January, February and March.

Sick leave: employees will be entitled to paid sick leave on the basis of one week with full pay and one week with half pay for each year of continuous service. Further sick leave pay shall be at the discretion of the employer.

Minimum weekly wage rates: first year $13.50, second year $15, third year $16.50, fourth year $18, fifth year $19.50, thereafter $21; fore-ladies $23, sales ladies performing bookkeeping duties $2 over shop experience rates. (The above rates are $2.50 per week higher than the previous rates.)

Uniforms, where required, shall be furnished by the employees. Laundering and cleaning expenses shall be borne by the employer.

Provision is made for *seniority rights* and *grievance procedure.*

Service

Professional Establishments—*Vancouver, B.C.—The Vancouver General Hospital and Hospital Employees' Federal Union No. 180 (TLC).*

Agreement to be in effect from January 1, 1953, to December 31, 1953, and thereafter from year to year, subject to notice.

Union security: maintenance of membership for old and union shop for new employees (except X-ray technicians).

Hours: 8 per day 5 days per week over a 2-week work period, an average of 40 (previously 44) hours per week in any 2-week period with the following exceptions: for clerical positions the hours of work shall not exceed an average of 39 per week in any 2-week period; for X-ray technicians and junior photographers the present hours are to remain in force. *Overtime:* time and one-half for work in excess of an employee's regular hours. For clerical employees periods of less than one-half hour in excess of normal hours do not constitute overtime.

Statutory holidays: employees will be entitled to 11 specified holidays and, in addition, to the Day of the Queen's Coronation, provided the latter is declared a public holiday. Employees required to work on public holidays will receive comparable time off with pay, such time off to be taken within 30 calendar days prior to or subsequent to the holiday. Where this proves to be inoperable an employee may accumulate up to 3 working days to be taken in addition to the regular annual vacation. If comparable time off cannot be granted employees will be paid time and one-half in addition to the regular wages for time worked on a public holiday.

Rest periods: a 15-minute rest period each normal work day will be granted to all employees with the exception of female laundry employees and X-ray technicians who will be allowed two 10-minute rest periods each 8-hour shift.

Vacations with pay: after one year's continuous service 2 weeks, after 10 years' continuous service 3 weeks. Employees with more than 6 months but less than one year of continuous service will receive vacation time on a *pro rata* basis. The above does not apply to X-ray technicians who will receive 4 calendar weeks.

Sick leave: after 3 months' service regular employees shall be eligible for sick leave credits with pay on the basis of 1½ days per month, cumulative, retroactive to the first completed calendar month of their employment. Employees with accumulated sick leave to their credit shall turn over to the Hospital any moneys received from the Workmen's Compensation Board; they will then receive full pay up to the value of the accumulated sick leave and be deducted from their accumulated sick leave one-third of the time they were absent.

Superannuation: all employees shall be retired upon reaching the maximum superannuation age. To comply with the Municipal Superannuation Act the Hospital will make every effort to engage employees within the qualifying ages of the Act.

Monthly wage rates for certain classifications: anaesthesiology department—oxygen therapy attendant $260.75 to $285.50, anaesthesiology attendant $164.25; dietary department—cooks $193.50 to $291.75, butcher $285.50, kitchen helpers $164.25 to $230, waitress, kitchen maid $143.75 to $158.25; housekeeping department—internes' residence attendant $221.25, building housekeeper $170, linen sorter, ward assistant, maid $143.75 to $158.25; laundry department—washman $273.25, extractor man $254.75, laundry helper $230, checker, starcher, dampener, pressing operator $164.25; maintenance department—electrician $342.50; elevator mechanic, carpenter, plumber $328; service man $304, painter $303.25, gardener, splint man $254.75, utility man $236.25; nursing department—sterilizer $223.75 to $242.25, nurse aide $164.25, home matron $143.75 to $158.25; orderly division—orderlies $223.75 to $273.25, barber $239.75; radiology department—dark room developer (male) $233.50

to $267, radiology attendant $164.25, technicians $192.25 to $283.75; clerical positions —junior clerk, female $158.25 to $176, male $174.25 to $192.75; clerk, female $176 to $205.25, male $192.75 to $223.75; senior clerk, female $187.75 to $222.75, male $254.75 to $291.75; stenographer, information clerk, vari-type operator $176 to $205.25; payroll clerk, bookkeeper $187.75 to $222.75; chief clerk $298 to $335. (The above rates represent increases of approximately 2 per cent for female and 3 per cent for male employees over the previous rates.)

Off-shift differential: employees on the evening and night shifts will be paid 20 cents per shift extra.

Uniforms will be supplied by the Hospital to all employees required to wear same, with the exception of X-ray technicians.

Seniority: in the release, transfer or promotion of employees efficiency and required qualifications shall be the primary consideration; where such requirements are equal, seniority shall be the determining factor.

Provision is made for *grievance procedure.*

Professional Establishments—*Vancouver, B.C.—The Vancouver General Hospital and Employees' Federal Union No. 180 (Nursing Section).*

Agreement to be in effect from January 1, 1953, to December 31, 1953, and thereafter from year to year, subject to notice.

Hours: 8 per day not to exceed 80 (previously 88) hours in a 2-week scheduled period. *Overtime:* hours worked in excess of 80 in a 2-week schedule will be compensated by comparable time off or at the rate of time and one-half if comparable time off cannot be granted.

Statutory holidays: employees will be entitled to 11 specified holidays and, in addition, to the Day of the Queen's Coronation if the latter is declared a public holiday. Employees required to work on public holidays will receive comparable time off with pay, such time off to be taken within a period of 30 days prior to or subsequent to the holiday. Where this proves to be inoperable an employee may accumulate up to 3 days to be taken in addition to the regular annual vacation.

Rest periods: all graduate nurse employees will be granted a 15-minute rest period each 8-hour shift.

Vacations with pay: after one year's continuous service 3 (previously 4) weeks. Employees with more than 6 months but less than one year's continuous service will receive a partial vacation on a *pro rata* basis.

Sick leave: after 3 months continuous service regular employees will be granted sick leave with pay on the basis of 1½ days per month, cumulative, retroactive to the first completed calendar month of their employment.

Superannuation: in order to comply with the terms of the Municipal Superannuation Act the Hospital will make every effort to hire persons within the qualifying ages of the Act.

Monthly wage rates: head nurse $244.75 to $281.50; assistant head nurse, admitting nurse $232.50 to $269.25; general duty nurse $226.50 to $263.25. (An increase of approximately 2 per cent over the previous rates.)

Off-shift differential: nurses engaged on the evening and night shifts will receive 20 cents extra for each shift worked.

Seniority: in the release, transfer or promotion of nurses, efficiency will be the primary factor. Seniority will also be considered.

Provision is made for *grievance procedure.*

Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,* include the extension of one new agreement and the amendment of 13 others. In addition to those summarized below, they include: the amendment of the agreements for retail food stores at Quebec and for oxide miners at Red Mill, published in the *Quebec Official Gazette* February 28; for garages and service stations at Sherbrooke, for the building trades at Sorel, for barbers and hairdressers at Trois-Rivières and for the printing trades at Montreal, in the issue of March 14, as well as the amendment of the agreements for barbers and hairdressers at St. Hyacinthe and at Roberval, gazetted March 21.

Requests for the amendment of the agreements for trade and office employees at Jonquière, for the printing trades and for the metal trades at Quebec were published February 21; for garages and

*In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the LABOUR GAZETTE, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the LABOUR GAZETTE monthly since June, 1934.

service stations and for funeral service employees at Montreal in the issue of February 28; for barbers and hairdressers in the counties of Joliette, *et al* and at Rouyn-Noranda, in the issue of March 7. A request for the correction of the agreement for the men's and boys' clothing industry in the province and requests for the amendment of the agreements for barbers and hairdressers at St. Hyacinthe, for the building trades at Hull, for hospitals, etc., in some eastern counties of the province and for plumbers at Trois-Rivières were gazetted March 14. A request for a new agreement for the retail trade at Dolbeau and Mistassini and requests for the amendment of the agreements for barbers and hairdressers at Trois-Rivières, for the building trades at Joliette and for the printing trades at Montreal were all published in the issue of March 21.

Orders in Council were also published approving the constitution and by-laws of certain joint committees and others approving the levy of assessments on the parties to certain agreements.

Mining

Building Materials Industry, Province of Quebec

See below under "Manufacturing".

Manufacturing

Printing Trades, Montreal

An Order in Council dated March 12 and gazetted March 21 amends the previous Orders in Council for this industry (L.G., May 1949, p. 604; June 1951, p. 827; June 1952, p. 780; Jan. 1953, p. 97, March, p. 432, and previous issues). Another amendment to this agreement was gazetted March 14, 1953.

Territorial jurisdiction is amended by providing that firms in the town of L'Assomption and within a radius of two miles of its limits which were publishing and printing one or more weekly newspapers as of December 31, 1952, will be included in Zone II.

Ornamental Iron and Bronze Workers, Montreal, Trois-Rivières and Sherbrooke Districts

An Order in Council dated March 5 and gazetted March 14 amends the previous Orders in Council for this industry (L.G., Feb. 1951, p. 233; June, p. 827; Aug., p. 1107; Oct., p. 1377; Jan. 1952, p. 55).

Minimum hourly wage rates in Zone I (Montreal District). mechanics, erectors $1.50 per hour; fitter, blacksmith $1.33; helper (shop or field) $1.17. (The above rates are from 6 to 12 cents per hour higher than those previously in effect.)

Building Materials Industry, Province of Quebec

An Order in Council dated February 19 and gazetted February 28 amends the previous Orders in Council for this industry (L.G., June 1950, p. 872; Aug., p. 1185; Dec., p. 2067; Nov. 1951, p. 1539; Feb. 1953, p. 283; April, p. 582).

Marble Industry

Minimum hourly wage rates in Zone II: hand cutter $1.38; carborundum machine operator, compressorman $1.06; hand and machine polisher, bed rubber face, bed rubber end, craneman $1; saw setter 94 cents; helper and labourer 81 cents; sawyerman on gang saws from 75 cents in first 3 months to $1 after 3 months; quarrymen—drill runner, channel runner 88 cents, helper 75 cents; labourer (crusher plant) 81 cents; watchman $37.50 per week; apprentice marble cutters and setters from 88 cents in first year to $1.25 in fourth year; apprentice carborundum machine operators 88 cents in first 6 months to $1 in third 6 months; apprentice polishers 88 cents in first 3 months, thereafter $1. (The above rates are from 15 to 28 cents per hour higher than those formerly in effect and the rate for watchman is $7.50 per week higher.)

Construction

Building Trades, Montreal

An Order in Council dated March 5 and gazetted March 14 amends the previous Orders in Council for this industry (L.G., June 1952, p. 781; March 1953, p. 432, April, p. 582).

Asbestos Insulation

Minimum hourly wage rates: mechanic $1.85; junior mechanic $1.45; apprentices from 95 cents per hour in first year to $1.25 in third year. (The above rates are from 5 to 15 cents per hour higher than those previously in effect.)

Vacation with pay provisions are those which are applicable to all building trades at Montreal as follows: 2 per cent of gross earnings during vacation with pay credit period. (7 consecutive days off for continuous employment with one employer between May 1 of one year and April 30 of next.) Vacation credit stamps redeemable from the Minimum Wage Commission.

Building Trades, St. Hyacinthe

An Order in Council dated March 5 and gazetted March 14 amends the previous Orders in Council for this industry (L.G., Jan. 1951, p. 54; April, p. 546; and previous issues). The word "ouvriers" is replaced by the word "Métiers" in the name of the contracting union.

Industrial jurisdiction now provides that structural iron work is governed by the present agreement, when the cost of such operations, including wages and material, is less than $25,000. The clause specifying that construction contracts signed before the enforcement of the present agreement are not bound by its provisions, but are subject to the terms of the agreement in force when signed, is deleted.

Hours: 48 per week as formerly. However, hours are now distributed as follows: between 7 a.m. and 6 p.m. Monday through Thursday, 7 a.m. to 4 p.m. Friday. Employees may be required to work Friday to 6 p.m. and from 7 a.m. till noon Saturday, at regular rates, to make up 48 hours in the week.

Overtime is unchanged at time and one-half for work beyond the standard hours of the day, in excess of 48 hours per week, or

for work on Sunday or any of 8 specified holidays. However, in cases of necessity, overtime work not exceeding one-half hour per day may be done at regular rates.

Minimum hourly wage rates in most cases are 30 cents per hour higher (escalator clause, L.G., Oct. 1949, p. 1248) and the new minimum rates for certain classifications are now as follows: bricklayer, plasterer and mason $1.40 in Zone I, $1.20 in Zone II; plasterer's, mason's, bricklayer's helpers, truck and tractor drivers (60 hours), fireman (on the job), hod carriers, cement mixer operator $1 in Zone I, 90 cents in Zone II; whitewasher, demolisher, labourer $1 in Zone I, 85 cents in Zone II; carpenter, joiner, weatherstrip layer, window, window-frame and steel partition erector, saw setter on the job, caulker and joint pointer, cement finisher, lather (wood and metal), steam, gasoline, electric shovel operators, grader operators, crane operators $1.25 in Zone I, $1.05 in Zone II; journeyman electrician, journeyman pipe mechanic, etc., marble layer $1.25 in Zone I, $1.10 in Zone II; junior journeyman electrician, blacksmith $1.15 in Zone I, $1 in Zone II; tinsmith-roofer $1.25 in Zone I, $1 in Zone II; junior journeyman pipe mechanic, etc., painter, paperhanger, glazier, etc. $1.15 in Zone I, $1.05 in Zone II; driller, millwright, compressor operator $1.10 in Zone I, 95 cents in Zone II; terrazzo and tile layer $1.30 in Zone I, $1.15 in Zone II; iron reinforcement erector (specialized) $1.25 in both Zones; ornamental iron erector $1.20 in Zone I, $1.10 in Zone II, helpers $1.05 in Zone I, 95 cents in Zone II; stucco layer $1.45 in Zone I, $1.25 in Zone II; construction and maintenance men on electric and telephone lines—linemen $1.10 in Zone I, $1 in Zone II; apprentices to all trades from 80 cents in first year to $1 in fourth year in Zone I, 70 to 90 cents in Zone II. New classifications are added to the wage scale as follows: electrician (contractor personal services) $1.75 in Zone I, $1.50 in Zone II, pipe mechanic, plumber, etc. (contractor personal services) $2 in Zone I, $1.80 in Zone II; structural steel erector and welder $1.80 in both Zones; journeyman (senior rating in plumbing and junior rating in steamfitting, or vice versa) $1.20 in Zone I, $1.10 in Zone II. In the municipalities of St. Hilaire, St. Hilaire-East, Otterburn Park and Marieville the minimum rates will be those of Zone I as above, less 5 cents per hour. The above minimum rates may be reduced by 10 cents per hour in the case of handicapped persons, subject to approval of parity committee. Employees living in Zone I and required to work in Zone II will be paid the rates of Zone I. A premium of 15 cents per hour will be paid for work done 55 feet or more above ground, outside steeples, towers, etc.

Minimum weekly rates for permanent employees are $13 to $14 per week higher than those previously in effect as follows: in Zone I—skilled workers $48, labourers $43; Zone II—skilled workers $45, labourers $40.

Escalator clause: 5 cents per hour upward or downward for each 5-point increase or decrease in the consumer price index established by the Federal Bureau of Statistics, on the basis of 115 points. Adjustments to be made quarterly from January 1, 1953. (This provision does not apply to municipal or school corporations.)

Other provisions include regulations governing board and lodging, ratio of apprentices and handicapped persons to total number of employees, travelling time and the period during which vacation is to be given.

Building Trades, Trois-Rivières

An Order in Council dated March 5 and gazetted March 14 makes obligatory the terms of a new agreement for the building trades in the Trois-Rivières District between *L'Association des Constructeurs de la Mauricie Inc.* and *L'Union Nationale Catholique des Charpentiers-Menuisiers, Inc.* of Trois-Rivières; *L'Union Nationale Catholique des Journaliers Inc.* of Trois-Rivières; *L'Union Nationale Catholique des Electriciens, Inc.* of Trois-Rivières; *L'Union Nationale Catholique des Peintres, Inc.* of Trois-Rivières; *L'Union Nationale Catholique des Briqueteurs, Plâtriers et Maçons, Inc.*

MINIMUM HOURLY WAGE RATES FOR THE BUILDING TRADES, TROIS-RIVIÈRES DISTRICT

Trades	Hourly rates Zones		
	I	II	III

(The above rates are 5 cents per hour higher than those previously in effect for common labourers and 10 cents per hour higher in all other cases.)

of Trois-Rivières; *Le Syndicat National Catholique des Finisseurs de Ciment des Trois-Rivières, Inc.; Le Syndicat National Catholique des Charpentiers-Menuisiers Inc.* of Shawinigan Falls. Agreement to be in effect from March 14, 1953, until June 1, 1953, and thereafter from year to year, subject to notice.

Industrial jurisdiction: agreement applies to construction, repair, maintenance, demolishing or transport of buildings, roads, bridges, dams, streets, wharves, sidewalks, earthworks, sustaining walls, sewers, viaducts, tunnels, wells, canals, locks, parks, playgrounds, aqueducts, gas mains and of any parts thereof. It also applies to steel construction operations which cost less than $25,000, including wages and material, as well as bridge construction for the Public Works Department. It does not apply to permanent employees engaged in the maintenance of manufacturing or industrial establishments who are governed by a labour contract effective for a minimum period of 6 months. (Maintenance work includes minor repairs only, but not new construction.) Other exemptions include: maintenance employees of steam railroads and power companies who are governed by a collective agreement with said companies; road works for the Roads, Colonization or Mines Departments of the provincial Government which are governed by Fair Wages Schedule, Order in Council No. 800, April 24, 1929, as amended; roads, camps, etc. governed by Ordinance No. 39 of the Minimm Wage Commission; cities, towns and municipal corporations as regards repair and maintenance on their own buildings, construction, etc., of aqueducts, sewers, pavings and other similar operations unless such works are carried out by contractors or sub-contractors by the job for the said cities ,towns, etc.

Territorial jurisdiction: the counties of Maskinonge, St. Maurice, Laviolette, Champlain and Trois- Rivières divided into three zones as follows: Zone I—cities of Trois-Rivières, Cap-de-la-Madeleine, Grand Mère, Shawinigan Falls, the municipalities of Shawinigan South, Shawinigan East and Almaville, the town of La Tuque and all other municipalities of 8,000 persons, or more; Zone II—municipalities of 3,000 or more but less than 8,000; Zone III—the balance of the territorial jurisdiction with the exception of Zones I and II.

Hours: 8 per day.

Overtime: time and one-half for work in excess of 8 hours per day; double time for work on Sunday or any of 9 specified holidays. (Agreement specifies no work on any of the foregoing holidays.) Between May 1 and October 1, employees may work 10 hours per day, to a maximum of 48 per week, at regular rates. Specific employees as mortar makers, hod carriers, etc., may work 10 hours per day, to a maximum of 60 per week, at regular rates.

Minimum hourly wage rates: new minimum wage rates are shown in the accompanying table. Employees living in Zone I or II and working in Zone II or III will be paid the rates of the Zone in which they live. Minimum rates for apprentices, not shown on table, are included in the terms of this agreement and their rates are 5 cents per hour higher than those previously in effect.

Vacation: 7 continuous days' with pay after one year of continuous service as provided for under Ordinance No. 3 of the Minimum Wage Commission.

Construction contracts granted and signed before the effective date of this agreement will be governed by the agreement in force at the time such contracts were signed.

Other provisions include apprenticeship regulations, board and lodging.

Industrial Standards Acts, etc.

Recent proceedings under the Industrial Standards Acts, etc.* include four new schedules, one of which is made binding for the first time, and the amendment of two others, all summarized below.

ONTARIO

Construction

Carpenters, Belleville

An Order in Council dated February 5 and gazetted February 21 makes binding the terms of a new schedule for carpenters at Belleville, to be in effect from March 3, 1953, during pleasure. The terms of this schedule are similar to those previously in effect and summarized in the Labour Gazette, Jan. 1951, p. 65, with the exception of the following:—

*In six provinces—Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan and Alberta—legislation provides that, following a petition from representatives of employers and employees in any (or specified) industries, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all zones designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. References to the summaries of these Acts and to amendments to them are given in the Labour Gazette, August, 1951, p. 1110.

Minimum wage rate is increased from $1.40 to $1.65 per hour for work done during regular day periods and from $2.10 to $2.47½ per hour for *night work*. (Regular hours remain unchanged at 8 per day, 40 per week.)

Plumbers, Welland

An Order in Council dated February 5 and gazetted February 21 makes binding the terms of a new schedule for the plumbing and heating industry at Welland, to be in effect from March 3, 1953, during pleasure.

Hours: 8 per day Monday through Friday, 40 per week. (Previously 44 hours per week.)

Overtime: time and one-half for work in excess of regular working hours or for work in excess of 8 hours in any 24-hour period when employed on shift operations; double time for work on Sunday or any of 7 (previously 8) specified holidays. No overtime work without a permit from the advisory committee. (Previously all overtime was paid for at time and one-half.)

Minimum wage rate for work done during regular periods is increased from $1.25 (L.G., Oct. 1947) to $2.10 per hour. Employees on a night shift are entitled to 8 hours' wages for 7 hours of work.

The advisory committee may fix a lower minimum rate for handicapped persons.

Electricians, Sarnia

An Order in Council dated February 19 and gazetted March 7 makes binding the terms of a first schedule for the electrical repair and construction industry at Sarnia, to be in effect from March 17, during pleasure.

Hours: 8 per day Monday through Friday, 40 per week. Provision is made for shift work.

Overtime: double time for work outside regular working periods and for work on Saturday, Sunday or any of 8 specified holidays. No overtime will be worked without a permit from the advisory committee except for 2 hours to be performed immediately following the working period of a regular working day. No permit will be issued for overtime work on a holiday except in cases of extreme necessity.

Minimum wage rate: $2.05 per hour during regular working periods. Employees on night shift will be paid 8 hours' wages for 7 hours' work.

The advisory committee may fix a lower minimum rate for handicapped persons.

Sheet Metal Workers, Windsor

An Order in Council dated February 19 and gazetted March 7 makes binding the terms of a new schedule for sheet metal workers at Windsor, to be in effect from March 17, 1953, during pleasure.

Hours: 8 per day Monday through Friday, 40 per week. Provision is made for shift work.

Overtime: double time for work in excess of regular hours and for work on Saturday, Sunday or any of 7 specified holidays. Overtime work will be performed only with the permission of the advisory committee and such permission will only be granted in cases of extreme necessity.

Minimum wage rate is increased from $1.50 (L.G., Nov. 1948) to $2 per hour. Employees are entitled to 8 hours' pay for 7 hours' work on night shift. Lower minimum wage rates may be fixed by the advisory committee for handicapped persons.

ALBERTA

Manufacturing

Bakery Products, Calgary

An Order in Council dated January 19 and gazetted January 31 amends the previous Orders in Council for this industry (L.G., April 1950, p. 519; April 1952, p. 456).

Minimum weekly wage rates for male and female (inside employees) are increased by $4.05 per week for male employees and by $1.80 per week for female employees and the new rates for certain classifications are now as follows: male employees—ovenmen, doughmen and cake bakers $52.20 per week; dividermen, mouldermen, bench hands $49.95; bread racker, wrapping machine operator, janitors and cleaners $43.20; head shipper $45.90; apprentices $34.20 in first 6 months to $46.80 in eighth 6 months, thereafter as per schedule; female employees—checkers and packers in bread shop $35.10; rackers and bread wrappers $33.75; bench work in cake shop, cookie and doughnut machine operators $36.45; cake depositor operator $39.15; wrappers, finishers, etc., in cake shop $33.75. Inexperienced employees (male and female) will be paid 10 per cent less than the regular rate set for their classification during first 3 (previously 6) months of employment, 5 per cent less during the second 3 (previously 6) months; after 6 (previously 12) months they will receive the regular rate of the classification.

Bakery Salesmen, Calgary

An Order in Council dated January 19 and gazetted January 31 amends the previous Orders in Council for this industry (L.G., April 1950, p. 520, Oct., p. 1682).

Hours: daily maximum of 9 per day, as previously in effect. However, the weekly maximum number of hours is reduced from 48 to 44. Working hours will not extend beyond 1 p.m. (previously 2 p.m.) on Wednesdays, beyond 7 p.m. on Saturdays, as previously, or beyond 6 p.m. (previously 7 p.m.) on the other days of the week. When a statutory holiday occurs in any calendar week, such week will be considered a 36-hour week instead of a 40-hour week, as previously.

Minimum weekly wage rate for serviceman is increased from $41.50 to $46.80 per week. (Other minimum rates are not affected by this amendment.)

Legal Decisions Affecting Labour

Employees under Quebec decree not entitled to pay for "paid" holidays falling on Sunday. British Columbia board of police commissioners required to follow recommendation of conciliation board. Charges of "featherbedding" have been examined by United States Supreme Court

In Quebec, the parity committee for the building materials industry has lost its appeal against a decision of the Superior Court that an employer was not required to pay his employees for Christmas Day, 1949, and New Year's Day, 1950, when they fell on Sunday, although they were "paid holidays" under the decree. The Supreme Court of British Columbia has ruled that, under the Municipal Act, the report of a conciliation board is binding on police commissioners and the policemen in a municipality, whether or not policemen are properly described as employees. In two cases, the United States Supreme Court has interpreted the anti-featherbedding provisions of the Taft-Hartley Act as not covering certain practices in the printing trades and the musicians' union.

Quebec Court of Queen's Bench, Appeal Side . . .

. . . finds employees not entitled to pay for "paid" holidays under a decree if they fall on Sunday

The Quebec Court of Queen's Bench, Appeal Side, at Montreal on January 14 dismissed the appeal of a parity committee of the building material industry from a judgment of the Superior Court refusing the committee's claim for payment for the two statutory holidays, Christmas and New Year's Day, when they fell on a Sunday.

Mr. Justice Bissonnette gave reasons for the Court's decision. He stated that a decree under the Collective Agreement Act for the ornamental iron and bronze industry was applicable to the case. Section 10 of this decree provided that Christmas and New Year's Day should be statutory holidays with pay. The parity committee charged with enforcing the decree claimed that workers covered by it should be paid for the two holidays when, as happened in 1949-50, they fell on a Sunday.

Mr. Justice Bissonnette examined various sections of the decree to discover the purpose of the provision for two holidays with pay. Section 3 establishes a normal work week of 44 hours. Section 4, dealing with overtime work, sets a rate of pay of time and one-half for hours worked beyond eight in a day and double time for hours worked on Sundays or on the two statutory holidays, Christmas and New Year's Day.

His Lordship considered that the purpose of these provisions was to ensure that employees work 44 hours per week and that they receive a higher rate of pay if they work longer than this minimum. If Christmas was a week day, it would not be possible for them to work 44 hours that week and to receive the minimum amount of pay that the decree was supposed to ensure. For this reason the decree provided that employees should receive pay for the two statutory holidays. However, when the two days were Sundays, the work week was not interrupted and employees could still work the normal 44 hours. Since they were not losing any of their normal weekly wage, they were not entitled to pay for the two holidays, if they did not work on those days. If employees were paid for the two days, their normal weekly wage would be exceeded. Mr. Justice Bissonnette did not consider that the decree contemplated a bonus of this sort.

His Lordship held that the provision in the decree that employees be granted the two holidays with pay was not an absolute requirement, since Section 4 provided for overtime pay to employees who worked on

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

those days. He could not believe that the holiday pay provided for in Section 10 could be a bonus to be given in addition to overtime pay to employees who worked on the holidays. He repeated his view that Section 10 merely ensured that employees should not lose any of their normal weekly wage when the work week was shortened by a statutory holiday.

The other four judges hearing the case concurred in Mr. Justice Bissonnette's reasons for decision. *Comité Conjoint des Matériaux de Construction* v. *Boucley,* Les Rapports Judiciaires de Québec, [1953] BR Montreal 185.

Supreme Court of British Columbia . . .

. . . issues order requiring police commissioners to carry out conciliation board's recommendations

The Supreme Court of British Columbia on January 12 granted the application of the Saanich Municipal Employees' Association, Local 374, for an order requiring the Board of Police Commissioners to carry out the recommendations of a conciliation board appointed to settle certain matters in dispute between the Commissioners and the policemen of Saanich. The Court held that the Municipal Act made the report of the conciliation board binding on both parties to the dispute, even though the relation between the Board of Commissioners and the policemen might not be that of employer and employee.

Mr. Justice Macfarlane described the facts of the case in his reasons for judgment. The plaintiff, Local 374 of the Saanich Municipal Employees' Association, was the certified bargaining agent for all the policemen of Saanich except those in a confidential position and those who had authority to hire or fire employees. The union and the Board of Police Commissioners had concluded a collective agreement on April 3, 1951, to be effective from April 1, 1951, to March 31, 1952. It contained the provision that during the two months before April 1, 1952, either party, by giving 10 days' notice, might require the other to enter into negotiations for the revision of the agreement. The Board and the union did negotiate during the two-month period but were unable to reach agreement on all the matters at issue. The British Columbia Labour Relations Board referred the matter to a conciliation board on April 5, 1952, according to the provisions of the Industrial Conciliation and Arbitration Act. The conciliation board was instructed to endeavour to find terms acceptable to both parties for a collective agreement.

There were three matters at issue between the parties to be determined by the conciliation board. The union demanded a 25-per-cent wage increase across the board, an extra 10 cents per day for each five years of service, and a change in the uniform, namely, the substitution of slacks and a suitable type of ankle boots for breeches and leggings. With its labour member dissenting, the board recommended a 15-per-cent wage increase. The labour representative stated that he could not subscribe to anything less than a 20-per-cent increase. The board was unanimous in recommending that the union's request for 10 cents per day for each five years of service be granted and that the change requested in the uniform be made when the supply of breeches and leggings became exhausted. The Board of Police Commissioners refused to accept the last two recommendations.

The union brought an action for a declaration that the recommendations of the conciliation board were binding, because of a 1949 amendment to the British Columbia Municipal Act, Section 528B, which reads:—

> Where a Conciliation Board has been appointed under the Industrial Conciliation and Arbitration Act to deal with a dispute between a municipality or Board of Police Commissioners and the firemen or policemen employed by the municipality or Board of Police Commissioners, a recommendation of the Conciliation Board shall be binding in every respect upon the municipality or Board of Police Commissioners and upon the firemen or policemen employed by the municipality or Board of Police Commissioners.

The Board of Police Commissioners contested the action on the ground that the ICA Act had no application because the relation between the Board and the policemen was not that of employer and employee. Decisions of the appeal courts of Saskatchewan and Nova Scotia were cited as authorities for this argument, *Bruton* v. *Regina City Policemen's Association* (L.G., 1945, p. 1011) and *Rex* v. *Labour Relations Board* (L.G., 1951, p. 1697). These judgments supported the view that policemen are not employees of a municipality but are the holders of offices of trust under the Crown appointed to perform the duties imposed upon them by common or statutory law in the interests of the public at large.

Mr. Justice Macfarlane pointed out that the two cases cited were quite different from the case at bar, since they dealt with the jurisdiction of labour relations boards and the question of whether policemen have

the right to bargain collectively in the same way as ordinary employees. In this case, the union was already certified as the policemen's bargaining agent and no question as to whether they were employees or not had been raised before the conciliation board.

His Lordship pointed out that the Board of Police Commissioners had not objected when the Labour Relations Board appointed a conciliation board to assist in settling the dispute. Section 528B of the Municipal Act declared the decision of the board to be binding in every respect upon the Board of Police Commissioners. Mr. Justice Macfarlane stated that, while the use of the word "employed" in this section might not be an accurate description of the relationship between the Commissioners and the policemen, the legislature had used it to describe the existing relationship and obviously intended to make the conciliation machinery of the ICA Act available to policemen. Since the amendment was made to the Municipal Act, its whole purpose was to extend the conciliation machinery to the particular people covered by the Municipal Act. Therefore the defendant's objection that the ICA Act did not apply to policemen lost its force.

The Board of Police Commissioners also argued that the recommendation as to clothing did not come within "conditions of employment" which are properly subject to collective bargaining. Since policemen are required to wear the uniforms supplied, His Lordship held that the recommendation did deal with a condition of employment.

The Court accordingly granted the union's application for a declaration that the recommendations of the conciliation board were binding and issued an order requiring the Board of Police Commissioners to carry them out. *Saanich Municipal Employees' Association, Local 374* v. *Board of Commissioners of Police of District of Saanich,* [1953] 8 WWR (NS) 230.

Supreme Court of the United States . . .

. . . holds Typographical Union's practice of bogus typesetting not a violation of Taft-Hartley Act

On March 9, 1953, the Supreme Court of the United States affirmed the judgment of the Court of Appeals which upheld a ruling of the National Labour Relations Board that a typographical union had not violated the anti-featherbedding provisions of the Taft-Hartley Act by insisting that newspaper publishers pay printers for setting type which was not to be used.

Three of the judges dissented from the judgment of the Court. Delivering the decision of the majority, Mr. Justice Burton gave the history of the case. The petitioner was the American Newspaper Publishers Association, a corporation which includes more than 800 newspaper publishers who represent more than 90 per cent of the circulation of daily and Sunday newspapers in the United States. In November 1947, the Association filed charges with the National Labour Relations Board that the International Typographical Union was engaging in several types of unfair labour practices. The Regional Director of the Board issued a complaint, including a charge that the union was engaging in an unfair labour practice contrary to Section 8(b)(6) of the National Labour Relations Act, which reads:—

> It shall be an unfair labour practice for a labour organization or its agents. . . to cause or attempt to cause an employer to pay or deliver or agree to pay or deliver any money or other thing of value, in the nature of an exaction, for services which are not performed or not to be performed.

The trial examiner recommended that the union be ordered to cease and desist from several of its activities but that the featherbedding charge be dismissed. The Board accordingly dismissed the charge. In an action brought by the publishers for review and modification of the Board's ruling, the Court of Appeals for the Seventh Circuit upheld the Board's decision to dismiss the charge against the union under Section 8(b)(6) of the Act. This judgment was appealed to the Supreme Court.

Mr. Justice Burton gave an explanation of the practice to which the publishers objected, which is a feature of the long battle carried on by the union to retain as much typesetting work for printers as possible. When a newspaper advertisement is set up in type it is impressed on a cardboard matrix or "mat". These mats are distributed at little or no cost to other publishers and used as moulds for metal castings from which to print the same advertisement, so that no compositors are necessary except those who make up the original form. The union long ago secured the agreement of newspaper publishers to permit their compositors to set up duplicate forms for all local advertisements in the same manner as if the mat had not been used. This reproduction work, known as "setting bogus", has become a recognized idiosyncrasy of the trade. Printers receive

their regular wages for the "bogus" work, which is fitted into slack periods and so interferes little with the regular work. The publishers who set up the original composition for the mats find the system advantageous because it burdens their competitors with costs comparable to their own. Reproduction work generally takes from two to five per cent of the printers' time. By 1947, detailed regulations for reproduction work were included in the General Laws of the ITU and so became a standard part of all employment contracts signed by its local unions.

He then pointed out that the Court below had held that the union in insisting upon payment of wages to printers for "setting bogus" did not violate the Act because it called for payment for work actually done and not "for services which are not performed or not to be performed". In the view of that Court, "setting bogus" was work performed and it remained for the parties to the agreement to determine its worth to the employer.

Mr. Justice Burton agreed that the Taft-Hartley Act did not make the practice illegal. He stated that at the time Congress was considering the anti-featherbedding provisions of the Taft-Hartley Bill, the constitutionality of the Lea Act penalizing featherbedding in the broadcasting industry (also known as the Petrillo Act) was being challenged in the Courts. The United States District Court for the Northern District of Illinois held it to be unconstitutional, and the appeal from that judgment to the Supreme Court was pending throughout the debate on the Taft-Hartley Bill. The constitutionality of the Lea Act was not upheld until the day the Taft-Hartley Act was passed. For this reason the sponsors of the Taft-Hartley Bill wished to avoid the controversial features of the Lea Act. As first introduced, the Taft-Hartley Bill included a broad definition of featherbedding like that in the Lea Act, which included a condemnation of practices requiring an employer to employ "persons in excess of the number of employees reasonably required by such employer to perform actual services". When the Taft-Hartley Act was finally passed, the prohibition was limited to a demand for payment where no work at all is done, Mr. Justice Burton considered.

He referred to an explanation of the section given by Senator Taft in June 1947, in the Senate:—

> It seems to me that it is perfectly clear what is intended. It is intended to make it an unfair labour practice for a man to say: "You must have 10 musicians, and if you insist that there is room for only six, you must pay for the other four anyway." That is in the nature of an exaction from the employer for services which he does not want, does not need, and is not willing to accept.

Mr. Justice Burton emphasized that in that illustration the service for which pay was to be exacted was not performed and was not to be performed by anyone, and that the last sentence must be read in that context. There was no suggestion that the four extra musicians were to do anything for their pay. He concluded:—

> Section 8(b)(6) leaves to collective bargaining the determination of what, if any work, including *bona fide* "made work," shall be included as compensable services and what rate of compensation shall be paid for it.

The Court accordingly affirmed the judgment of the Court of Appeals sustaining dismissal of the complaint under Section 8(b)(6).

Mr. Justice Douglas dissented from the decision of the Court, since he held that the reproduction of advertising matter which is set up only to be thrown away could not be considered a service performed for the newspaper. The employer was being compelled to pay for work which was not only unwanted but wholly useless. He considered that this practice, even though established by long custom in the printing trade, was outlawed by the Taft-Hartley Act.

Mr. Justice Clark and the Chief Justice together gave another dissenting judgment. In their view, to consider the wasteful practice of "setting bogus" as work was to make Section 8(b)(6) meaningless. To carry out the purpose of the statute, "services" must be interpreted so as to exclude "contrived and patently useless job operations not to the employer's benefit." *American Newspaper Publishers Assn.* v. *National Labour Relations Board,* [1953] 31 LRRM 1.

Supreme Court of the United States...

...holds union's demand for hiring of local band when travelling band engaged not violation of law

In a judgment similar to the preceding, also given on March 9, the Supreme Court of the United States held that a musicians' union did not violate the anti-featherbedding provisions of the Labour-Management Relations Act by demanding that a chain of theatres employ a local orchestra to play before and after the program and during the intermissions whenever a travel-

ling band was employed, although the management did not need or want the services of the local orchestra.

As in the other case, Mr. Justice Burton gave the Court's reasons for decision, while dissenting opinions were given by Mr. Justice Jackson, Mr. Justice Clark and the Chief Justice.

Mr. Justice Burton described the general background of the matter at issue. For generations professional musicians have faced a shortage in local employment needed to yield them a livelihood. The American Federation of Musicians, to which practically all professional performers and conductors in the United States belong, uses its control of professional talent to help individual members and local unions by insisting that travelling band contracts be subject to its rules.

Article 8(4) of its by-laws provides:—

> Travelling members cannot, without the consent of a local, play any presentation performances in its jurisdiction unless a local house orchestra is also employed.

He then described the facts of this case. Until about 1940, the Palace Theatre in Akron, Ohio, one of an interstate chain of theatres, regularly employed a local orchestra of nine union musicians. Between 1940 and 1947 the local musicians were no longer regularly employed but rehearsed periodically at the theatre and were available when required. Whenever a travelling band appeared there, the local musicians were paid a sum equal to the minimum union wages for a similar engagement although they did not play. After the passing of the Taft-Hartley Act in June 1947, local musicians were not used or paid on the occasions when travelling bands performed.

In October 1947, the local union opened negotiations to induce the theatre management to employ a pit orchestra of local musicians to play overtures, "intermissions", and "chasers" (while patrons were leaving the theatre) whenever a travelling band was employed. The union required acceptance of this proposal as a condition of its consent to local appearances of travelling bands. When the management refused, a travelling band cancelled its engagement.

In 1949, the union made several new proposals for using the local orchestra, which were turned down by the theatre on the ground that the local orchestra was not necessary or desired. Accordingly, in July 1949, the union again refused to consent to the appearance of a travelling band.

In 1949, the management of the theatre chain filed charges with the National Labour Relations Board that the union was violating Section 8(b)(6) of the Act, and the Regional Director of the Board issued a complaint. The trial examiner recommended dismissal of the complaint, since he was not convinced that the union's demands were an "attempt to cause" any payment to be made "in the nature of an exaction". The Board, with one member dissenting, ordered dismissal of the complaint, but on different grounds. The Board held that Section 8(b)(6) did not apply to cases where a union sought actual employment for its members, even though the employer did not want their services.

The case went before the Court of Appeals for the Sixth Circuit, which held that the union was engaged in a practice declared unfair by Section 8(b)(6) even though it was seeking actual employment for its members.

Mr. Justice Burton accepted the finding of the Board that the union was not seeking merely "stand-by" pay which it had received before the passing of the Taft-Hartley Act. Since 1947 the union had consistently requested actual employment in connection with travelling band and vaudeville appearances. It had suggested various ways in which the local orchestra could earn pay for performing competent work and had offered to consent to the appearance of travelling bands, which are controlled by the Federation, on those terms.

The Court held that this was not an unfair labour practice. Mr. Justice Burton concluded:—

> We are not dealing here with offers of mere "token" or nominal services. The proposals before us were appropriately treated by the Board as offers in good faith of substantial performances by competent musicians. . . Payments for standing-by" or for the substantial equivalent of "standing-by" are not payments for services performed, but when an employer receives a *bona fide* offer of competent performance of relevant services, it remains for the employer, through free and fair negotiation, to determine whether such offer shall be accepted and what compensation shall be paid for the work done.

Mr. Justice Jackson, dissenting, considered that the union's action did constitute an unfair labour practice since it was a form of exaction from the employer in return for unnecessary services. To hold that the anti-featherbedding provision of the Act has not been violated so long as some exertion is performed or offered by the employees, no matter how useless or

unwanted, would be to make it empty and meaningless. "Congress surely did not enact a prohibition whose practical application would be restricted to those without sufficient imagination to invent some 'work'," Mr. Justice Jackson stated.

He found the case different from the printers' case, in that the Typographical Union was adhering to an old custom maintained through the years by mutual consent to which other terms of employment have long since been adjusted, while in the case at bar the musicians's union was attempting to evade the law by substituting for the practice specifically condemned by statute a new device for achieving the same result. Mr. Justice Jackson considered that "such subterfuge should not be condoned".

He also emphasized that the payments demanded by the union constituted an "exaction" because of the control of talent exercised by the union. The employer was in the entertainment business but could not have any talent to exhibit unless he accepted the union's demands.

Mr. Justice Clark and the Chief Justice dissented from the judgment of the Court for the same reasons as in the printers' case. They made no distinction between the two types of "featherbedding", between "modern make-work gimmicks and featherbedding techniques encrusted in an industry's lore". *National Labour Relations Board* v. *Gamble Enterprises, Inc.*, [1953] 31 LRRM 7.

Recent Regulations under Provincial Legislation

In Newfoundland, general minimum wage of 50 cents an hour is set for male workers. In Ontario, workmen's compensation regulations are changed to bring new occupations under the Act. In Alberta, regulations governing the examination and licensing of barbers are revised

The first order made by the Newfoundland Minimum Wage Board sets a minimum rate of 50 cents an hour for all adult males in the province who are paid at an hourly rate. An overtime rate of at least 75 cents an hour must be paid for time worked after 10 hours in a day and for any work done on Sunday. Several occupations were brought under the Ontario Workmen's Compensation Act and the section of the regulations laying down conditions for the payment of compensation for tuberculosis for hospital employees was repealed. In Alberta, new regulations under the Tradesmen's Qualification Act make some changes with respect to the examination and licensing of barbers.

Alberta Factories Act

The new safety regulations governing the erection of derricks and the cleaning, repairing, operation and maintenance of gas and oil well drilling plants, rigs and equipment, which were recently issued under the Alberta Workmen's Compensation Act (L.G., April 1953, p. 588), have also been issued as regulations under the Factories Act, by O.C. 253-53, approved on February 23 and gazetted February 28. The regulations which the new provisions replace were similarly in effect under both Acts.

Alberta Tradesmen's Qualification Act

The regulations governing the examination and licensing of barbers under the Tradesmen's Qualification Act were revised by O.C. 285-53 on March 2 and gazetted March 14. The new regulations are similar to those recently issued for the beauty culture trade (L.G., April 1953, p. 587).

To carry on the trade, a certificate is required of one of the following types: certificate of proficiency, temporary certificate of proficiency, and apprentice certificate. The qualifications for these

certificates have not been changed. Limited proficiency certificates, formerly issued to persons attaining a certain degree of proficiency and employed exclusively in hair cutting, are no longer to be granted.

As before, an applicant for a certificate of proficiency must establish that he has had at least two years' practical experience in the trade. Time credit of up to one year may be allowed for school training. A candidate must also pass a practical and theoretical examination, obtaining at least 75 per cent of the allotted marks. A candidate who obtains between 60 and 75 per cent of the marks in the examination may be granted a temporary certificate, valid for a period not exceeding 12 months (formerly six months), during which time he must prepare for re-examination.

An apprentice certificate is granted for a period of two successive years and enables the apprentice to receive training under the direct supervision of a barber holding a certificate of proficiency. At the end of two years the apprentice is examined and, if he is successful, is granted a certificate of proficiency or a temporary certificate. If not, he may be issued another apprentice certificate good for six months, after which he must be re-examined.

More detailed provisions are set out with respect to the review of an examination of an unsuccessful candidate by a Board of Appeal. As before, the application for review must be submitted to the Department of Industries and Labour within 30 days. A fee of $5 must now be forwarded with the application, the fee to be refunded if the Board of Appeal revokes the decision of the Board of Examiners.

A further change was the removal of the annual renewal procedure. Previously, all barbers were required to renew their certificates annually on payment of a fee of $1. Now certificates will remain in effect until suspended or revoked for cause.

Another new provision requires a card of identification to be issued with each certificate, indicating the status of the certificate. On the request of an authorized official the holder of a certificate must produce the certificate or identity card.

Newfoundland Minimum Wage Act

The first minimum wage order issued under the Newfoundland Minimum Wage Act, enacted in 1950, establishes a minimum rate of 50 cents an hour for male workers over 18 years of age. Overtime at the rate of time and one-half the minimum rate, i.e. 75 cents an hour, must be paid for all work done over 10 hours in a week day or for any work done on Sunday. The order is effective from May 1.

The new minimum wage order is applicable to all male employees in the province being paid at an hourly rate except apprentices and persons employed in farming and market gardening.

Ontario Hours of Work and Vacations with Pay Act

The Industry and Labour Board of Ontario has raised the price of a vacation-with-pay stamp book from 25 to 35 cents, by an Order in Council of February 26, gazetted March 14 (O. Reg. 27/53).

Under the Act, employers must purchase vacation-with-pay credit stamps for employees who leave their employment. The employee is entitled to receive vacation-with-pay credit stamps on the basis of two per cent of his total earnings for whatever portion of the working year he has been employed. Employees who voluntarily leave their jobs are not eligible for this holiday pay unless they have worked for the employer for at least three months. An employee engaged in the construction industry is entitled to vacation-with-pay credit irrespective of his employment period.

Ontario Workmen's Compensation Act

Amendments to the General Regulations under the Ontario Workmen's Compensation Act bring four new occupations under the operation of Part I of the Act, that is, the collective liability system, and repeal certain provisions laying down the conditions under which compensation is payable for tuberculosis contracted by employees in hospitals and laboratories. The amendments were approved by O. Reg. 18/53 on February 12 and gazetted February 28.

Hand laundries, previously excluded from the Act, are now included. Power laundries were already under the Act. Other industries added to Schedule 1 of the regulations, which lists the industries in which employers must contribute to the Accident Fund, include the operation of parking-stations or parking-lots, the wrecking of automobiles, and the operation of a building rented wholly or partly for manufacturing.

Certain conditions which previously restricted the right of an employee to receive compensation for tuberculosis have now been removed. Tuberculosis is a compensable industrial disease when con-

tracted by a workman employed in a hospital, sanatorium or sanitarium coming under Part I of the Act or in a laboratory operated by the province. Previously, however, compensation was not payable unless the workman had undergone the examination required for such employees and had been found free of tuberculosis, and unless he filed his claim within three months after leaving the employment. Compensation was not payable if he contracted tuberculosis within three months after his first examination, unless he had been continuously employed in the hospital, sanatorium or laboratory for a three-month period before his examination.

Indian Labour Conference Considers Changes in Industrial Relations Law

At the 1952 session of the Indian Labour Conference, the Minister of Labour of India submitted for its consideration the Government's proposals for changes in industrial relations legislation. The Minister's address at this conference was reported in the Indian *Labour Gazette* for October 1952, and the Bombay *Gazette* for December 1952.

The Indian Labour Conference was formed to advise the Government on labour questions, and all proposed labour legislation is submitted to it. The organization is modelled on the International Labour Organization in that governments, employers and workers are represented, with the number of government representatives equalling the number of non-government members. Of the 11 employers' representatives, eight are named by the Government in agreement with the two main employers' organizations; the remaining three represent other classes of employers. In the same way the Government chooses eight of the workers' representatives in agreement with the two largest workers' organizations, while the other three represent other groups of workers. The government members include representatives of both the central and the state Governments.

In his address at the opening of the 12th annual session of the Conference in October 1952, Shri Giri, the Minister of Labour, strongly urged the abandonment of the system of compulsory arbitration established by the 1947 Industrial Disputes Act and its amendments, and the adoption of a freer system under which management and labour would settle their differences by vigorous collective bargaining and by voluntary conciliation and arbitration. In his view, compulsory arbitration had weakened the trade union movement, since the workers had lost the spirit of self-reliance engendered by healthy collective bargaining and had acquired the habit of litigation. He felt that the system of compulsory arbitration stirred up bad feeling between employers and workers. It also hindered voluntary settlements, since each party to a dispute hesitated to make concessions for fear of prejudicing its case before an arbitrator.

The Minister then placed before the Conference, for its consideration, a possible line of action. He discussed the opinions expressed by state Governments, employers and workers in their replies to a questionnaire circulated by the Government in July 1952. Since the replies to the questionnaire had indicated a general unwillingness to abandon compulsory arbitration altogether, the Minister suggested that it be retained at first in public utility services, which would include power, light, water, sanitation, railways, telegraphs and such other industries as might be considered necessary for maintaining supplies and services essential to the life of the community. In these industries, the state would have the power to refer unsettled disputes for compulsory arbitration and at the same time to prohibit strikes and lockouts. Strikes or lockouts would be permitted only if the appropriate government refused to refer a dispute to arbitration.

In all other industries, compulsory arbitration would be abandoned. Employers and workers would be encouraged to rely on collective bargaining and to resort to conciliation and arbitration by mutual agreement when necessary. While the state would assist in the development of adequate machinery for negotiation, conciliation and arbitration, the parties would be encouraged to devise their own machinery. Strikes and lockouts would be prohibited only during the period of a binding agreement or award.

If the experiment worked in non-public industries, the system could then be extended to public utility services also, Shri Giri stated. If it failed, he would be willing to reverse the steps taken; but he urged all groups in the Conference to give the new experiment a fair trial. He was satisfied that an emergency could be dealt with if it should arise through the granting of special emergency powers by the Legislature. If the Conference wanted to include emergency provisions in the legislation, he might be persuaded to do so, but only a situation causing prolonged and widespread hardship to the community could constitute an emergency necessitating the use of compulsory arbitration and the prohibition of strikes and lockouts.

The Minister indicated that the new legislation to replace the 1947 Industrial Disputes Act would be the basic law applicable to the whole country but that the states would be permitted to enact supplementary legislation provided that it was not inconsistent with the central law. He supported the general consensus that there should be no large-scale extension of the central Government's administrative jurisdiction. He stated that, while the workers' organizations and the majority of state Governments were in favour of a law applicable to all types of employment, the employers' organizations in general would prefer to restrict it to factories, railways, transport services, mines, postal services, telegraphs and telephones, and to have separate legislation for commercial establishments, banks, insurance companies, plantations and agricultural establishments. Shri Giri himself considered that if it were necessary to provide machinery for the settlement of disputes between agricultural workers and their employers a special law would be advisable.

The Minister reported that the large majority of workers' organizations desired the immediate abolition of the Appellate Tribunal, the body established in 1950 to hear appeals from awards of industrial tribunals. He pointed out that the abandonment of compulsory arbitration in most industries would reduce the need for it and urged employers to vote for its abolition so that the new policy could be launched in an atmosphere of mutual goodwill. He recommended also the abolition of standing conciliation boards, commissions of enquiry, and labour courts.

Shri Giri then outlined the new procedure for collective bargaining and the settlement of disputes without compulsory arbitration. The first stage would be direct negotiation between employer and workers. He recommended a system of union recognition providing for two types of certification. A union having as members a fairly large proportion of the workers in an establishment (the required percentage to be suggested by the Conference) would be entitled to certification as bargaining agent with exclusive collective bargaining rights. An agreement concluded between the bargaining agent and the employer would bind all employees in the establishment. If there should be no union with sufficient membership to qualify as bargaining agent, a union with a lower prescribed percentage of employees as members could be certified as a "recognized union". An agreement reached between this type of union and the employer would apply only to its members, unless the non-union employees requested the employer to make it applicable to them also, and non-union employees would be free to negotiate separate agreements with the employer if they wished.

If the parties could not settle their differences through the bargaining process, they could request the services of a conciliation officer. The Minister suggested that in non-public industries the conciliation officer should not intervene unless one of the parties invited him to do so in writing and he were satisfied that the party making the request had endeavoured to bargain in good faith. In public utility services he would be entitled to intervene as under the present system.

The third stage would be that of referring the dispute either to a conciliation board or an arbitration board, each party nominating its own counciliators or arbitrators and the members of the board then selecting an impartial chairman. The members of conciliation and arbitration boards could be chosen from a list compiled annually by the appropriate government. In the case of voluntary arbitration the parties could decide to have one individual act as arbitrator or they could decide to submit the dispute to arbitration by the regular industrial tribunal designated by the appropriate government. Under the system proposed by the Minister, a collective agreement entered into between the parties and every arbitration award would be registered with the conciliation officer and would be binding on the parties for a period of one or two years if no period were specified in the agreement or award.

Other questions on which the Minister sought the advice of the Conference were dismissal of employees, the limits of an employer's right to lay off employees, or

(Continued on page 747)

Monthly Report on Operation of the Unemployment Insurance Act

Statistics* for February, 1953, show benefit payments during month amounted to $18,505,590, compared with $17,502,303, in previous month

During the week February 28-March 6, a total of 249,889 beneficiaries received $4,608,663 as compensation for 1,468,668 days of proven unemployment, in comparison with 231,331 persons who received $4,352,990 as compensation for 1,395,790 days during the week January 31-February 6. In the week February 23-29, 1952, an amount of $3,483,137 was paid to 228,121 beneficiaries as compensation for 1,291,339 days of unemployment.

The average daily rate for the week under review was $3.14, compared with $3.12 last month and $2.70 for the same week in February 1952.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission show that during February 1953, insurance books were issued to 4,471,030 employees who had made contributions to the unemployment insurance fund at one time or another since April 1, 1952.

Employers registered as at February 28 numbered 248,001, an increase of 682 since January 31, 1953.

Supplementary Benefit

During February, 49,631 claimants unable to satisfy the contribution requirements for regular benefit had their claims considered under the supplementary benefit provisions of the Act. An additional 938 renewal supplementary benefit claims were filed. Of the 50,519 adjudications recorded, 35,890 were granted entitlement to benefit, 1,772 had a disqualification period imposed, and 12,857 were disallowed. Supplementary benefit payments amounted to $2,090,530.

Unemployment insurance benefit payments in February amounted to $18,505,590, compared with $17,502,303 in January and $14,162,612 in the same month last year.

Unemployed days for which compensatory payments were made totalled 5,918,651, as against 5,628,881 in the preceding month and 5,266,024 in February 1952.

The monthly report on the operation of the Unemployment Insurance Act, issued by the Dominion Bureau of Statistics, shows that initial and renewal claims for benefit filed in February numbered 171,658, compared with 223,255 a month earlier and 140,386 a year ago.

Claimants on the live unemployment insurance register at the end of February totalled 388,501 (328,314 males and 60,187 females), as against 376,338 (312,756 males and 63,582 females) on January 31 and 350,805 (272,094 males and 78,711 females) on February 29, 1952. Ordinary claimants on February 28 numbered 308,757 (264,964 males and 43,793 females), while of the remaining claimants, 22,011 were short-time, 3,325 temporary lay-off and 54,408 were claiming supplementary benefit.

Adjudications on ihitial and renewal claims totalled 181,580. Of this number, 117,671 were entitled to benefit. Disallowances constituted 49,752 claims, while disqualifications were imposed in 22,328 cases (including 6,399 on revised and 1,772 on supplementary benefit claims). Chief reasons for disqualification were: "not unemployed", 6,731 (the duration of the disqualification period in 4,452 of these cases was six days or less); "voluntarily left employment without just cause", 6,863 cases; "not capable of and not available for work", 2,209 cases.

Claimants receiving first benefit payments during the month totalled 121,507, compared with 163,273 in January and 107,680 in February 1952.

> Comparison of current employment statistics with those for a previous period serves no useful purpose if made on the basis of numbers alone. Consideration must be given to other relevant factors, such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

*See Tables E-1 to E-8 at end of book.

Decisions of the Umpire under the Unemployment Insurance Act

Digests of two selected decisions rendered by the umpire

Decision CU-B 883, December 2, 1952

Held: *That a claimant, who expected to return to work for her former employer and who had been successful in obtaining only six weeks' employment in four months, was rightfully disqualified from the receipt of benefit under Section 40(1)(a) of the Act when she refused to apply for employment at the prevailing rate of pay in the district and of a kind she could have easily performed.*

Material Facts of Case.—The claimant, single, 30 years of age, was employed as an assembler by a manufacturer of automobile parts at a wage of $1.13 an hour from February 12, 1952, to May 7, 1952, when she was laid off because of a shortage of work. On May 8, 1952, she filed a renewal claim for benefit, which was allowed. During the period from July 14, 1952, to August 29, 1952, she again worked for the same manufacturer.

On September 5, 1952, the local office notified her of employment in her home town as a binder with a litho-printing firm at a wage of 72 cents an hour. The hours of work were eight a day and 40 a week (day work). According to the submissions, the prevailing rate of pay in the district for that type of work ranged from 59 to 83 cents an hour. She refused to apply for the employment on the grounds that the wages were too low and that she expected to return to work for her previous employer. The local office commented that the claimant's former employer reported that the probable date of rehiring was very indefinite and that she might not be called back to work before six months' time. The local office further commented that the prospective employer would have given her employment until Christmas and that the job could have developed into a permanent one.

The insurance officer disqualified the claimant from the receipt of benefit for a period of six weeks because she had, without good cause, refused to apply for a situation in suitable employment within the meaning of Section 40(1)(a) of the Act.

The claimant appealed to a court of referees which, after having heard her and her representative, by a majority finding, disallowed the appeal.

The claimant appealed to the Umpire.

Conclusions.—The claimant, who had been successful in obtaining only six weeks' employment with the ..... Products Company since May 7, 1951, was offered, on September 5, 1952, temporary work other than in her usual occupation but of a kind that she could have easily performed. She refused to accept it on the grounds that the rate of pay was too low and that she expected to be recalled to work by her former employer.

With regard to the rate of pay offered, the court of referees found that it was "above the prevailing starting rate" in the district for that kind of work and, on the evidence before me, I have no valid reason to differ from the finding of fact.

As to the claimant's statement that she expected to be recalled to work by her former employer, the local office at the time of the offer inquired from him as to the probable date of her re-employment. His answer was that he had no idea and that it might not be before six months' time. It turned out, however, that she resumed work with him four or five weeks later.

I can understand the claimant's point of view in refusing to accept temporary work at a rate of pay lower than that which she had previously received particularly as she expected to regain the job in which she had established seniority. On the other hand, I cannot lose sight of the fact that unemployment insurance is a measure essentially designed to financially assist the worker who is in the unfortunate position of being unable to find employment and that Section 40(3) of the Act provides as follows:—

> After a lapse of such an interval from the date on which an insured person becomes unemployed as, in the circumstances of the case, is reasonable, employment shall not be deemed to be not suitable by reason only that it is employment of a kind other than employment in the usual occupation of the insured person, if it is employment at a rate of wages not

lower and on conditions not less favourable than those observed by agreement between employees and employers or, failing any such agreement, than those recognized by good employers.

For those reasons, I do not consider that I would be carrying out the intent of the Act if I were to decide that the claimant should have been allowed to continue to receive unemployment insurance benefit when there was work available for her at the prevailing rate of pay in the district and of a kind that she could have easily performed.

The appeal is dismissed.

Decision CU-B 887, December 4, 1952

Held: (1) *That employment in the local textile industry at the prevailing rate of pay was suitable for a young mother who had been unemployed for several months, even though it involved shift work.* (2) *That inasmuch as she was available for work from 7:30 a.m. to 5:00 p.m., which are normal working hours, she had not so restricted her field of employment as to be no longer considered available for work within the meaning of the Unemployment Insurance Act.*

Material Facts of Case.—The claimant, married, 21 years of age, filed an initial application for benefit on January 12, 1952, and stated therein that she had been employed by a manufacturer of power chain saws as a press machine operator at a wage of 75 cents an hour from September 14, 1951, to January 11, 1952, when she was laid off because of a shortage of work.

In April 1952, the insurance officer disqualified her from the receipt of benefit for a period of six weeks under Section 40(1)(a) of the Act because she had refused to apply for a situation in suitable employment, as a power sewing machine operator with a textile company at a wage of 60 cents an hour plus piece work. The reason then given for her refusal was that she had no one to look after her baby in the evenings. The local office reported that she was able to do day work from 7:30 a.m. to 5:00 p.m. but was not free to take shift work.

On August 8, 1952, the local office notified her of permanent employment on a shift basis as a power sewing machine operator with another textile company at a wage of 60 cents an hour. The prevailing rate was reported to be from 50 to 65 cents an hour. She refused to apply for the employment, again stating that she had nobody to mind her baby in the evenings. The local office commented that for several months past there had been no openings for married women desiring day work in factories.

The insurance officer disqualified the claimant from the receipt of benefit for a period of six weeks because she had, without good cause, refused to apply for a situation in suitable employment (Section 40(1)(a) of the Act). He also disqualified her from the receipt of benefit for an indefinite period because she was not available for work (Section 27(1)(b) of the Act).

The claimant appealed to a court of referees which, after having heard her and her representative, by a majority finding, upheld the decisions of the insurance officer.

With the claimant's consent a union representative appealed to the Umpire, contending that the plant to which she was referred for employment on August 8, 1952, was paying much lower than the going wages and that the work, which was on a shift basis, was not suitable for the claimant.

The manager of the local office in a memorandum to the Regional Claims Officer dated October 7, 1952, submitted information which he had obtained regarding rates of pay being paid by a number of employers in the locality.

Conclusions.—It is contended on the claimant's behalf that "shift work with its dislocation of home life, living and meal requirements, etc., should not be within the jurisdiction of an insurance officer to exercise any power of direction or compulsion".

It is not only the right but the duty of the placement officer to direct a claimant to any employment which, under the circumstances, is suitable and this may mean employment involving shift work. Whatever inconvenience it may cause the worker, shift work is a recognized fact in industry.

I readily understand that in the case of the claimant, who is a young married woman with a baby, employment involving night work would considerably disturb her domestic life. On the other hand, one cannot overlook the fact that she had been out of work for several months when she was referred to what was apparently the only employment available. In that lengthy period of time she had been unable to find employment of the kind that she wanted and the local office reported that for several months it had had no openings for married women who desired day work in factories.

Labour Conditions in Federal Government Contracts

Wage Schedules Prepared and Contracts Awarded during March

Works of Construction, Remodelling, Repair or Demolition

During March the Department of Labour prepared 138 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition.

In the same period, a total of 94 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available, on request, to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under this heading provide that:—

(a) the wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and 44 in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and 44 per week;

(d) no employee shall be discriminated against because of his race, national origin, colour or religion, nor because the employee has made a complaint with respect to such discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded under this heading for the month of March are set out below:—

Department	No. of Contracts	Aggregate Amount
Agriculture	2	$ 54,921.49
Defence Construction (1951) Limited: (Building and Maintenance)	1	8,541.60
Defence Production (February report)	151	9,851,019.00
Post Office	9	141,192.61
Public Works	3	16,261.00

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:—

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen, and if there is no current rate then a fair and reasonable rate, but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom then fair and reasonable hours;

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour, showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work. These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is, however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no employee shall be discriminated against because of his race, national origin, colour or religion, nor because the employee has made a complaint with respect to such discrimination.)

Wage Claims Received and Payments Made during March

During March the sum of $606.60 was collected from three employers who had failed to pay the wages required by the labour conditions attached to their contracts. This amount has been, or will be, distributed to the 26 employees concerned.

Contracts Containing Fair Wages Schedules Awarded—March

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week and also empower the Minister of Labour to deal with any question which may arise with regard thereto.)

Department of Agriculture

Bow River Project Alta: W C Wells Construction Co Ltd, construction of canal & road, etc (Distributary R Extension).

Central Mortgage and Housing Corporation

Indian Labour Conference

(Continued from page 740)

to change conditions of employment during conciliation proceedings, the enforcement of collective agreements and arbitration awards, and methods for determining whether a union is entitled to recognition.

At the end of the session, Shri Giri summed up the general trend of discussions. He found that all groups in the Conference were agreed on the basic policy of placing a greater emphasis on collective bargaining and the settlement of disputes through voluntary conciliation and arbitration. However, the majority of the delegates were of the view that it would be too risky for governments to divest themselves of authority to intervene with compulsory arbitration when all other methods of settlement had failed. Shri Giri said that he would carefully consider this view.

Accepting the suggestion that a small committee be set up to agree on the basis of the new legislation, he decided to set up a committee composed of one representative from each of the four central organizations of workers and the three central organizations of employers. Each member could be accompanied by an adviser.

Expressing his satisfaction with the achievements of the Conference, the Minister concluded:—

> The shift of emphasis from compulsory adjudication to collective bargaining is itself a great gain. Collective bargaining must become a habit instead of a necessity, and a habit becomes ingrained only if one has faith in it. The settlement of disputes is a difficult task, but the cultivation of goodwill is an infinitely more difficult one. Compulsory adjudication may attempt the former, but collective bargaining alone can achieve the latter.

Decisions of the Umpire

(Continued on page 743)

It has always been the policy of the adjudicating authorities under the Act to take into consideration, to a reasonable degree, one's domestic circumstances. In this case, however, I do not consider that the intent of the Act and the interests of the mass of workers who contribute to the Unemployment Insurance Fund would be served if I were to decide that the job offered to the claimant was not suitable or that she had just cause for refusing it.

With regard to the low rate of pay, it is quite clear, from the additional information obtained and which is herein before referred to, that it was in accordance with the prevailing rate in the local textile industry for the kind of work which was offered to the claimant.

I must say, however, that I do not agree with the finding of the court that the claimant has so restricted her field of employment that she can no longer be considered as being available for work within the meaning of the Unemployment Insurance Act.

The claimant is apparently available for work from 7:30 a.m. to 5 p.m. which, after all, are normal working hours and I am not convinced that there is no likelihood of day work for her, if not in her usual occupation, in another occupation either in ..... (her home town), which has a population of approximtely 30,000, or in the surrounding district.

For those reasons the court's finding pursuant to Section 40 of the Act is maintained and its finding pursuant to Section 27(1)(b) is reversed.

Pulp and Paper Industry

Plant employees obtained average rise in wage rates of almost 2 per cent in 1952, although wage rates of a large number of workers were unchanged. Decided shift to 40-hour week occurred in some sections

An average rise in wage rates of almost two per cent was obtained by plant employees in the pulp and paper industry in 1952. The wage rates of a large number of workers, however, remained unchanged. There was a decided shift to a 40-hour week in certain sections of the industry. These trends were indicated in the October 1952, survey by the Department of Labour covering 102 pulp and paper mills across Canada.

Wage Changes

In the 12-month period prior to October 1, 1952, plant employees in the pulp and paper industry benefited by gains in wage rates averaging 1·9 per cent. These were substantially lower than in the previous year when an average rise of 20·4 per cent occurred. The index of wage rates for the industry rose from 248·1 to 252·9 on a base of 1939 as 100.

In developing an index of wage rates for the industry as a whole, four sub-industry indexes were used. Three of these cover production workers in the major manufacturing divisions of the industry, pulp, newsprint and paper other than newsprint, and the fourth, maintenance workers in all three divisions. Modest increases in wage rates were evident in pulp, newsprint and maintenance but no change was shown in the index for paper other than newsprint. The indexes of average wage levels for the industry as a whole and the four separate occupational groups are shown below for 1951 and 1952 in terms of 1939 as 100.

	1951 Index	1952 Index	Per Cent Increase
Pulp and Paper.....	248·1	252·9	1·9
Pulp	275·3	283·0	2·8
Newsprint	224·0	224·7	2·0
Paper other than Newsprint	244·0	244·0	0·0
Maintenance	252·7	259·8	2·8

Employees receiving wage increases were widely dispersed geographically and the amounts obtained varied according to both geographic location and manufacturing division.

In Nova Scotia upward wage adjustments of 4 or 5 cents an hour were most common but one mill raised rates by 9 to 19 cents. No major changes in rates of pay occurred in New Brunswick. In Ontario, an agreement between 12 major pulp and newsprint manufacturing firms and nine AFL-TLC unions provided for increases in wage rates of 4 cents an hour effective May 1, 1952, and an additional 4 cents at November 1 (L.G., Oct. 1952, p. 1300), although only the former are reflected in the wage index. While there were no adjustments in wage rates in the important fine paper mills in Quebec and Ontario during the period covered, an agreement was executed September 30 providing for a reduction of working hours from 48 to 44 on January 1, 1953, with maintenance of take-home pay plus a retroactive increase in rates of 3 cents an hour to the date of the agreement (L.G., April, p. 577). A small number of sulphite and newsprint plants in Quebec granted modest increases. In British Columbia, pulp and paper workers received an upward adjustment in hourly rates of 10 cents an hour, effective July 1, 1952.

On a Canada basis, wage changes for the 27 selected occupations used in this analysis and listed in Table 1 varied within very narrow limits. A drop of 1 cent an hour is indicated for beatermen, backtenders and third hands in mills producing paper other than newsprint.[1] For the remaining occupations, average increases ranged from 2 to 6 cents an hour.

[1]Minor fluctuations in rates, such as the 1-cent decrease noted, can quite easily be caused by shifts in the employment distribution of workers among mills and provinces and can also be the result of slight modifications in coverage and reporting methods.

TABLE I.—CANADA AVERAGE HOURLY WAGE RATES FOR SELECTED OCCUPATIONS IN THE PULP AND PAPER INDUSTRY, 1949-52

Occupation	1949	1950	1951	1952
Pulp	$	$	$	$

Pipefitter	1·27	1·36	1·66	1·71

(1) Includes Conveyor Man, Sorter, Loader, Cleaner, Stackerman, etc.

Wage Structure

Average wage rates for these same occupations are given in Table 2 on a regional basis. Newfoundland, important for the manufacture of newsprint, has not been shown separately in order to avoid disclosing confidential information, as employment is largely confined to two firms.

Regional variations in wage rates are not as marked as in most industries, with workers in the Maritime Provinces and Quebec, in the majority of cases, averaging a few cents less than the national figures; those in Ontario and British Columbia, a few cents more. The highest rates for individual occupations were paid in British Columbia.

Of eight occupations selected to represent the pulp manufacturing division of the industry, digester cooks were the highest paid in all provinces and wet machine men the lowest, in all provinces but British Columbia.

Wage rates were also analysed for eight occupations in the manufacture of newsprint. Traditionally, this division of the industry has the highest wage structure, because of the greater responsibility involved in operating and maintaining machines which are of greater speed and width than those used for producing other types of paper. Machine tenders and backtenders, the most skilled occupations shown, received the highest rates of pay in all provinces and beatermen, an unskilled job category, had the lowest.

Of the five occupations selected to represent workers directly engaged in producing other types of paper, machine tenders and backtenders were again the highest paid job categories and finishers the lowest. Regionally, rates were similar in the Maritime Provinces and British Columbia and were somewhat higher in these provinces than in Quebec and Ontario.

Wage rate averages for six maintenance jobs were based on reports from firms in all three divisions of the industry. Electricians, machinists, millwrights and pipefitters received similar rates and these were within a few cents of $1.70 an hour on a national basis. Rates for labourers, which form the base of the wage structure in this industry, averaged $1.27 an hour for Canada as a whole and ranged from $1.13 in Nova Scotia to $1.49 in British Columbia.

Hours of Work

A definite trend to the 40-hour week for pulp and paper workers is indicated by information obtained in the October 1952, survey. At that time more than one-third of the workers were in mills operating on a 40-hour schedule, compared with slightly more than 10 per cent a year previously. The following percentage distribution of plant workers according to length of work week in 1951 and 1952 shows that the major change is a result of reductions from 44 and 42 hours to 40 in some mills. All plants reporting a 40-hour week in 1952 were on a 5-day schedule.

Standard Weekly Hours	Percentage of Non-office Employees 1951	1952
40 and less	10·7	35·2
42	7·4	—
44	12.9	3.4
Over 44 and under 48	.4	—
48	66·7	59·8
Over 48	1·9	1·6
	100·0	100·0

(1) Ranges include rates for the middle 80 per cent of the workers used in the calculation of the averages.
(2) Includes Conveyor Man, Sorter, Loader, Cleaner, Stackerman, etc.
(3) Rates combined for Nova Scotia and New Brunswick in order to avoid disclosing confidential information.

Prices and the Cost of Living*

Consumer Price Index, April 1, 1953

For the fifth month in a row, the Dominion Bureau of Statistics' consumer price index has dropped. Between March 2 and April 1 it declined 0·2 per cent from 114·8 to 114·6, the lowest level since July 1951.

Food prices were lower, clothing costs unchanged and rents higher.

The declines in food prices continued to dominate the total index. A drop of 0·7 per cent in this series, from 111·6 to 110·9, reflected lower quotations for fresh meats, notably beef, veal and lamb, coupled with losses for potatoes and butter. Eggs, coffee, apples and processed pork prices were firmer.

Changes among other groups were small. The index for other commodities and services moved from 115·2 to 115·0, mainly because of the removal of radio licence fees, which overbalanced advances in health care items.

An advance in the household operation index from 116·7 to 116·9 was due to higher electricity rates. An increase in the rent component of the shelter index was reflected in a 0·2-per-cent change to 122·7. Clothing remained unchanged at 109·7.

The index one year earlier (April 1, 1952) was 116·8; group indexes were: food, 117·2; shelter, 119·4; clothing, 112·5; household operation, 116·8; other commodities and services, 116·6.

Cost-of-Living Index, April 1, 1953

The cost-of-living index (1935-39=100) also dropped during March, from 184·2 at March 2 to 183·9 at April 1. At April 1, 1952, it was 188·7.

Group indexes at April 1 (March 2 figures in parentheses) were: food, 223·5 (225·7); rent, 150·9 (150·7); fuel and light, 155·5 (154·4); clothing, 205·5 (205·5); home furnishings and services, 196·8 (196·3); and miscellaneous, 148·7 (147·9).

Group indexes one year ago (April 1, 1952) were: food, 240·2; rent, 146·3; fuel and light, 152·5; clothing, 210·4; home furnishings and services, 200·5; and miscellaneous, 147·9.

City Cost-of-Living Indexes, March 2, 1953

Cost-of-living indexes for seven of the nine regional cities decreased between February 2 and March 2, 1953. Indexes for Saskatoon and Edmonton advanced slightly.

Among food price changes, decreases occurred for most cuts of beef and fresh pork while increases in egg prices were general. Potato prices were lower in all centres except Edmonton. An advance in the price of bread was reported for Saskatoon.

In the clothing and home furnishings and services groups, price changes were scattered, the movement being mainly up.

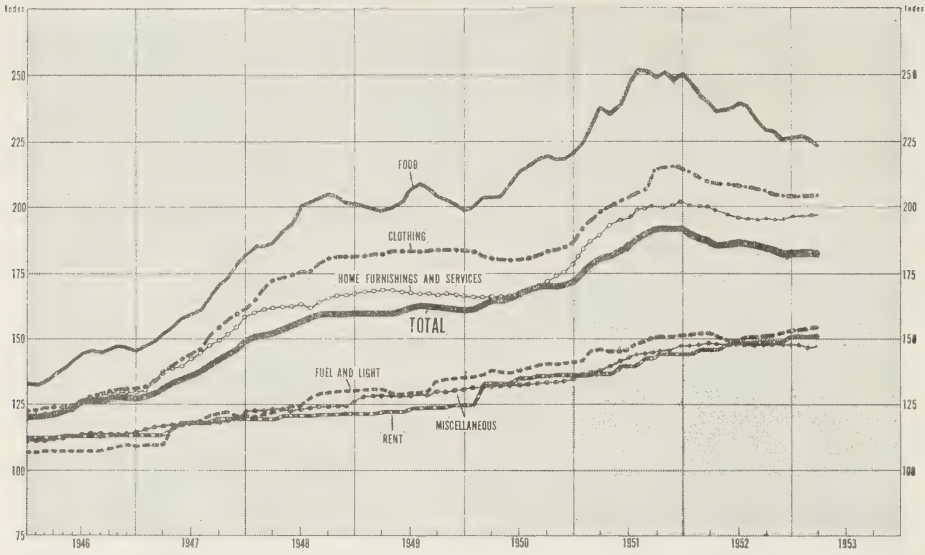
Fuel and light indexes remained unchanged in all cities except Vancouver, where a slight advance in coal prices was reported.

Rent indexes moved up fractionally in five cities and remained unchanged in the other four.

In all cities except Edmonton, where higher fares were reported for local transit, the miscellaneous items series showed a sharp drop, the result of decreases in cigarette prices.

Composite city cost-of-living index point changes between February 2 and March 2 were as follows: St. John's, —1·0 to 101·3 (1949=100); Montreal, —0·7 to 189·8; Winnipeg, —0·6 to 176·6; Saint John, —0·4 to 180·4; Vancouver, —0·4 to 187·1; Halifax, —0·3 to 173·6; Toronto, —0·3 to 181·2; Edmonton, +0·6 to 176·3; and Saskatoon, +0·3 to 182·4.

Wholesale Prices, March 1953



Wholesale prices increased slightly in March. The composite index number advanced from 220·9 to 221·9 between February 14 and March 14, according to the Dominion Bureau of Statistics' monthly report.

The March index this year was down about four per cent from a year earlier.

Five major component groups moved up from February, while one was unchanged and two declined. The index for non-ferrous metals advanced sharply from 168·5 to 174·7, mainly because of firmer prices for copper and its products coupled with lesser advances in lead, silver and tin. A slightly weaker price tone for the Canadian dollar was reflected in a higher quotation for gold. It was also a factor in advancing prices for other exports, notably newsprint.

The wood, wood products and paper index advanced from 289·7 to 290·9, mainly

*See Tables F-1 to F-6 at end of book.

as a result of the newsprint increase as well as changes in white pine, spruce and woodpulp. These outweighed lower quotations for British Columbia fir and cedar.

The vegetable products index rose from 200·9 to 201·5 as firmness for grains, vegetable oils and tea, coffee and cocoa outweighed weakness in potatoes, onions, rubber and livestock feeds.

A gain in fibres, textiles and textile products from 241·1 to 241·6 reflected strength for raw cotton, raw wool and worsted cloth.

An advance in non-metallic minerals was due to increases in brick, imported United States anthracite and sulphur.

In the animal products group, scattered decreases, mainly in livestock except hogs, beef carcass, sausage and butter outweighed advances in fish, hogs, fresh and cured pork and eggs to lower the index from 239·0 to 238·7.

The index for chemicals and allied products declined from 176·7 to 176·5 because of lower quotations for zinc oxide and sodium bichromate, which outweighed advances for certain inorganic chemicals.

Iron and steel products remained unchanged at 221·4.

Canadian farm product prices at terminal markets registered a further decline in March; the composite index receded from 222·6 to 220·8. Lower prices for field products, notably potatoes, were mainly responsible; the index for this series dropped from 182·1 to 177·3. Grains were higher on average. Animal products, on the other hand, increased from 263·1 to 264·3 as a result of increases in eggs, fowl, eastern butterfat and western hogs, which overbalanced lower quotations for other types of livestock and milk sold for cheese manufacture.

Residential building material prices were firmer in March. The composite index advanced from 282·3 to 283·4, recovering most of the drop occurring during the January-February period. Most of the advance was due to higher prices for millwork items coupled with lesser increases for brick and copper wire.

Reversing a three-month downtrend, the United States consumer price index moved up fractionally between mid-February and mid-March. On March 15 the index (1947-1949=100) stood at 113·6, 0·2 per cent higher than a month earlier. The cost-of-living index, on a 1935-39 base, stood at 189·9, 0·3 per cent above the mid-February level.

Strikes and Lockouts

Canada, March, 1953*

Although the time loss from industrial disputes resulting in work stoppages increased slightly during March there was little change from the low figures of the previous two months. Three stoppages caused about 67 per cent of the total idleness. These were: clothing and hosiery factory workers at Montreal, Que.; grain elevator workers at New Westminster and Vancouver, B.C.; and coal miners at New Waterford, N.S.

Wages and related questions were the central issues in 11 of the 21 stoppages in March 1953, causing 48 per cent of the total loss. Of the other disputes, five arose over causes affecting working conditions, four over dismissals or suspensions and one over a union question.

Preliminary figures for March 1953, show 21 strikes and lockouts in existence, involving 5,450 workers, with a time loss of 33,018 man-working days, compared with 19 strikes and lockouts in February 1953, with 3,757 workers involved and a loss of 23,777 days. In March 1952, there were 25 strikes and lockouts, involving 5,186 workers and a loss of 65,272 days.

For the first three months of 1953 preliminary figures show 38 strikes and lockouts, involving 9,108 workers, with a time loss of 87,845 days. In the same period in 1952 there were 41 strikes and lockouts, with 20,645 workers involved and a loss of 184,020 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in March 1953, was 0·04 per cent of the estimated working time; 0·03 per cent in February 1953; 0·08 per cent in March 1952; 0·04 per cent for the first three months of 1953; and 0·07 per cent for the first three months of 1952.

Of the 21 strikes and lockouts in existence in March 1953, two were settled in favour of the workers, one in favour of the employer, four were compromise settlements and seven were indefinite in result, work being resumed pending final settlement. At the end of the month seven stoppages were recorded as unterminated.

(The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes and lockouts of this nature still in progress are: compositors, etc., at Winnipeg, Man., which began on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; and waitresses at Timmins, Ont., on May 23, 1952.)

Great Britain and Other Countries

(The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month. Statistics given in the annual review and in this article are taken, as far as possible, from the government publications of the countries concerned or from the International Labour Office *Year Book of Labour Statistics*.)

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in January 1953, was 136 and four were still in progress from the previous month. In all stoppages of work in progress, 24,100 workers were involved and a time loss of 60,000 working days caused.

Of the 136 disputes leading to stoppages of work which began in January, eight, directly involving 1,700 workers, arose over demands for advances in wages and 50, directly involving 5,900 workers, over other wage questions; six, directly involving 900 workers, over questions as to working hours; 14, directly involving 2,100 workers, over questions respecting the employment of particular classes or persons; and 58, directly involving 3,100 workers, were over other questions respecting working arrangements.

For 1952, preliminary figures show a total of 1,718 work stoppages beginning in the year, 416,000 workers directly and indirectly involved in all stoppages in progress during the year and a time loss of 1,793,000 working days. Comparable figures for 1951 are, 1,719 stoppages, 379,000 workers with a time loss of 1,694,000 days.

United States

Preliminary figures for February 1953, show 350 work stoppages resulting from labour-management disputes beginning in the month in which 120,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 1,000,000 man-days. Corresponding figures for January 1953, are 350 work stoppages involving 200,000 workers and a time loss of 1,250,000 days.

*See Tables G-1 and G-2 at end of book.

TABLE C-4.—HOURS AND EARNINGS IN MANUFACTURING

(Hourly-Rated Wage-Earners) SOURCE: Man-hours and Hourly Earnings, D.B.S.

Tables C-4 to C-6 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage-earners of the co-operative firms.

D—National Employment Service Statistics

Tables D-1 to D-5 are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751: statistical report on employment operations by industry, and UIC 757: inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

Form UIC 751: This form provides a cumulative total for each month of all vacancies notified by employers, applications made by workers, and referrals and placements made by the National Employment Service. Also reported are the number of vacancies unfilled and applications on file at the beginning and end of each reporting period. Because the purpose of these data is to give an indication of the volume of work performed in various local National Employment Service offices, all vacancies and applications are counted, even if the vacancy is not to be filled until some future date (deferred vacancy) or the application is from a person who already has a job and wants to find a more suitable one.

Form UIC 757: This form provides a count of the number of jobs available and applications on file at the end of business on a specified day. Excluded from the data on unfilled vacancies are orders from employers not to be filled until some future date. The data on job applications from workers exclude those people known to be already employed, those known to be registered at more than one local office (the registration is counted by the "home" office), and registrations from workers who will not be available until some specified future date.

From January 24, 1952, to December 24, 1952, inclusive, unemployment insurance claimants on temporary mass lay-offs were not registered for employment and thus were not included in the statistics reported on form UIC 751 and form UIC 757. A temporary mass lay-off was defined as a lay-off either for a determinate or indeterminate period which affected 50 or more workers and where the workers affected, so far as was known, were returning to work with the same employer. Commencing 15 days after the date of such a lay-off, claimants still on the live insurance register were registered for employment on their next visit to the office and henceforth were counted in both statistical reporting forms. This procedure is no longer in effect, as all workers on temporary mass lay-offs now are registered for employment and so counted in the statistical reporting forms. This change in procedure should be kept in mind when comparing the figures on applications for employment during 1952 with data for earlier and subsequent periods.

Persons losing several days' work each week and consequently claiming short-time unemployment insurance benefits are not included in either statistical reporting form unless they specifically ask to be registered for employment.

(1) Preliminary—subject to revision.

(2)—Commencing January 2, 1953, the Standard Industrial Classification Manual of the Dominion Bureau of Statistics replaced the Industrial Classification Manual of the Department of Labour. Since there is a difference in the grouping of the two industry divisions—Transportation, Storage and Communication, and Public Utility Operation, the change in these divisions can only be recorded in the Grand Total.

Current vacancies only. Deferred vacancies are excluded.

* Preliminary figures.

‡ Strikes unterminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, MARCH, 1953 [1]

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars[2]
	Establishments	Workers		
Strikes and Lockouts in Progress Prior to March, 1953				
MINING—				
Copper refiners, Montreal, P.Q.	1	200	3,000	Commenced July 14, 1952; for a union agreement; terminated by March 20; replacement and return of workers; in favour of employer.
Coal miners, loaders New Waterford, N.S.	1	30	30	Commenced February 26; protesting low pressure on conveyor belt followed by suspension of loaders; terminated March 3; reference to umpire; in favour of workers, all reinstated.
MANUFACTURING—				
Textiles, Clothing, etc.—				
Clothing and hosiery factory workers, Montreal, P.Q.	2	290	6,000	Commenced November 25, 1952; for a new agreement providing for increased wages and other changes following reference to arbitration board; unterminated.
Metal Products—				
Jewellery factory workers, Vancouver, B.C.	5	41	900	Commenced December 8, 1952; for implementation of award of conciliation board for increased wages, pay for nine statutory holidays and other changes in new agreement under negotiations; unterminated.
Machinists and moulders, Vancouver, B.C.	1	59	1,000	Commenced February 23; for a new agreement providing for increased wages and payment of one-half premium for medical service plan following reference to conciliation board; terminated March 24; negotiations; compromise.
CONSTRUCTION—				
Buildings and Structures—				
Carpenters, Fort William, Ont.	1	9	100	Commenced December 17, 1952; for a new agreement providing for increased wages retroactive to April 1, 1952; unterminated.
TRANSPORTATION AND PUBLIC UTILITIES—				
Miscellaneous—				
Grain elevator workers, New Westminster and Vancouver, B.C.	5	275	6,000	Commenced February 16; for a new agreement providing for increased wages, premium for dust, job classification and pay for eight statutory holidays instead of six following reference to conciliation board; unterminated.
SERVICE—				
Business and Personal—				
Garage workers, Saint John, N.B.	1	22	500	Commenced February 9; for union recognition and implementation of award of conciliation board providing for increased wages in union agreement; unterminated.
Strikes and Lockouts Commencing During March, 1953				
MINING—				
Coal miners, New Waterford, N.S.	3	2,633	10,000	Commenced March 23; protesting suspension of 13 miners for refusal to transfer from regular working place; terminated March 27; return of workers pending reference to umpire; indefinite.
MANUFACTURING—				
Rubber and Its Products—				
Tire builders, etc., Hamilton, Ont.	1	[3] 350	650	Commenced March 5; protesting piece-work rate on new tire machines; terminated March 6; return of workers pending settlement; indefinite.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, MARCH, 1953 [1]

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars[2]
	Establishments	Workers		
Strikes and Lockouts Commencing During March, 1953—Concluded				
Animal Foods—				
Packinghouse workers, Stratford, Ont.	1	39	740	Commenced March 6; for a union agreement providing for increased wages and reduced hours from 45 to 40 per week with guaranteed 36-hour week following reference to conciliation board; unterminated.
Textiles, Clothing, etc.—				
Textile factory workers, Kitchener, Ont.	1	125	450	Commenced March 16; alleged violation of seniority in lay-off of worker; terminated March 20; return of workers pending negotiations; indefinite.
Metal Products—				
Electrical apparatus factory workers, Guelph, Ont.	1	42	130	Commenced March 13; protesting dismissal of president of union for alleged intimidation; terminated March 18; return of workers pending reference to arbitration; indefinite.
Steel mill workers, Sault Ste. Marie, Ont.	1	[4] 100	600	Commenced March 15; protesting institution of third shift in rail mill; terminated March 20; return of workers pending further negotiations; indefinite.
Aluminum ware factory workers, Wallaceburg, Ont.	1	96	670	Commenced March 23; for a new agreement providing for increased wages, extension of relief period for moulders and hospital and accident insurance plan; unterminated.
Boiler factory workers, Napanee, Ont.	1	45	20	Commenced March 25; for a union agreement providing for increased wages, pay for statutory holidays and seniority following reference to conciliation board; terminated March 25; negotiations; in favour of workers.
CONSTRUCTION—				
Buildings and Structures		[5]		
Building trades workers, Kimberley and Waneta, B.C.	2	1,000	2,100	Commenced March 4; dispute over interpretation of contract clause *re* travel time and fares; terminated March 12; conciliation; compromise.
Building trades workers, Hamilton, Ont.	1	17	17	Commenced March 16; protesting employment of part-time hoisting engineer; terminated March 16; return of workers; indefinite.
Carpenters, Comox, B.C.	1	30	30	Commenced March 20; protesting lay-off of 11 workers because of material shortages and for settlement of other grievances; terminated March 20; negotiations; indefinite.
TRANSPORTATION—				
Other Local and Highway Transport—				
Bus drivers, Timmins, Ont.	1	13	13	Commenced March 5; for increased wages; terminated March 6; negotiations; compromise.
TRADE—				
Dairy workers and route salesmen, Niagara Falls, Ont.	1	34	68	Commenced March 20; for a new agreement providing for increased wages following reference to conciliation board; terminated March 21; negotiations; compromise.

[1] Preliminary data based where possible on reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

[2] In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

[3] 375 indirectly affected; [4] 300 indirectly affected; [5] 190 indirectly affected.

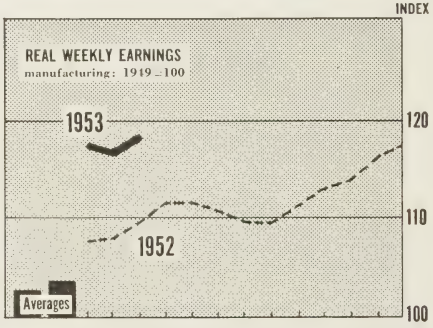
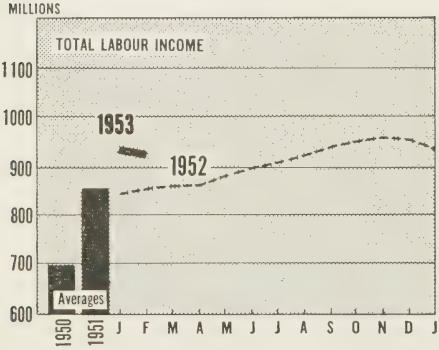
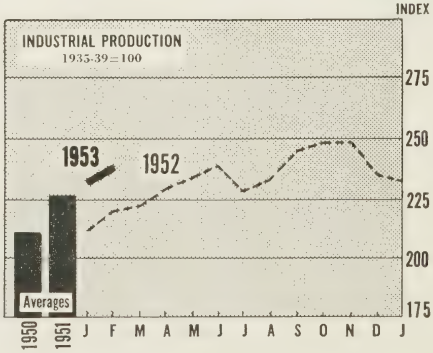
CURRENT LABOUR TRENDS







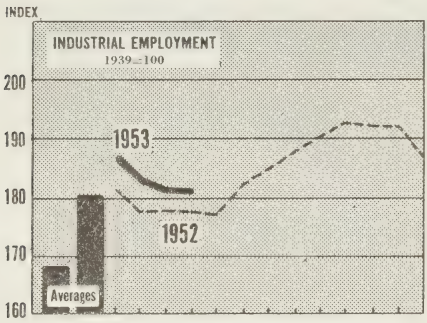
JUNE 15, 1953

CURRENT manpower and labour relations REVIEW

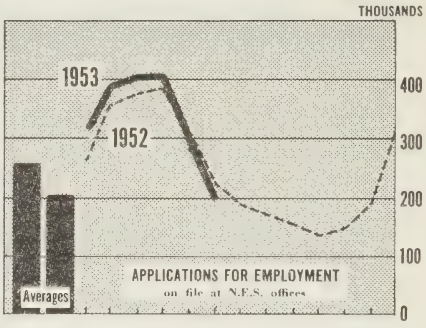
Economics and Research Branch, Canadian Department of Labour

Current Manpower Situation

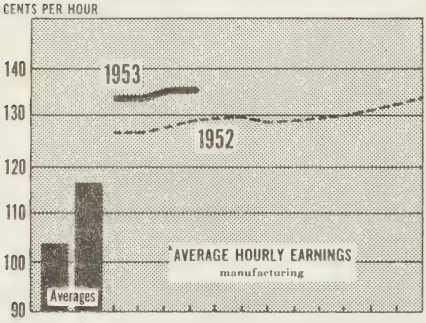
RAPID expansion of agricultural and construction activity in most regions again dominated the Canadian manpower picture during May. Sizeable increases in employment also occurred in other seasonal activities such as fishing and resource exploration, while in most manufacturing industries, employment continued to increase to meet the demands of consumers, defence work and general resource development. Activity in the trade and service industries was likewise expanding as employers hired staff to meet the continuing high levels of retail sales and the opening of the tourist season.



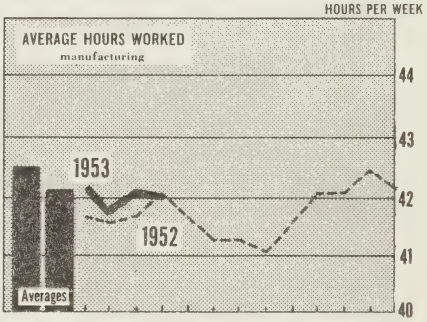
These gains in economic activity are reflected in changes in supply and demand of labour. During the month, a sharp increase occurred in the size of the civilian labour force, accompanied by an increase in full-time employment. As might be expected, labour surpluses rapidly disappeared. By the first of June only about 21 per cent of all paid workers were in areas classified as labour surplus areas, compared with 44 per cent at the beginning of May and 25 per cent in June of last year. The number of areas with either labour shortages or large surpluses was significantly lower than at the same time last year. In most areas, labour demand and supply were in approximate balance.



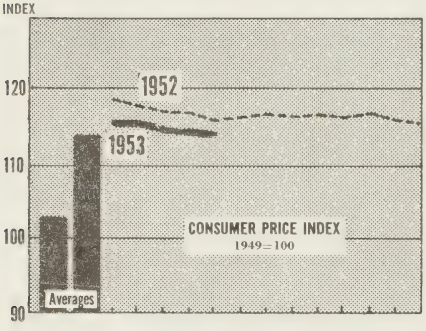
The monthly Labour Force Survey, which provides an over-all picture of current manpower utilization patterns, estimates that for the week ending May 16, 1953, there were 5,321,000 persons in the civilian labour force, an increase of 80,000 from the week ending April 18. Of this total, 4,720,000 were at work for 35 hours or more during the week, an increase of 75,000 from April 18; 388,000 were at work for fewer than 35 hours, an increase of 92,000; 99,000 had jobs but were not at work, a decrease of 46,000; and 114,000 were without jobs and seeking work, a decrease of 51,000.



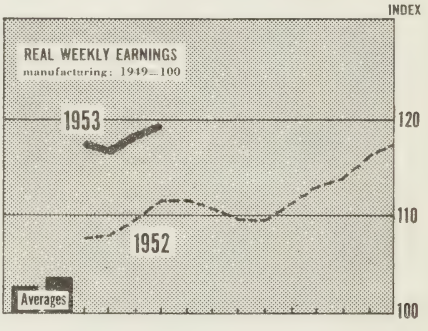
Of the 388,000 working fewer than 35 hours during the week, about 211,000 were reported as usually working part time. Of the remaining 177,000, about 25,000 were employed on a short-time basis, the same number as in the previous month, and about 20,000 were away because of bad weather. The most noticeable changes were in the number on

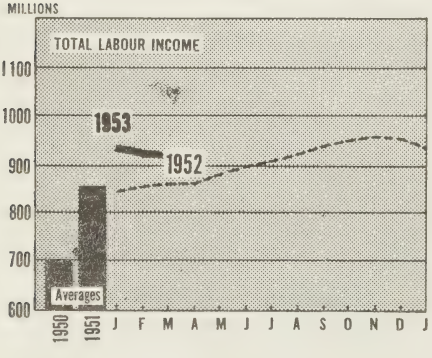


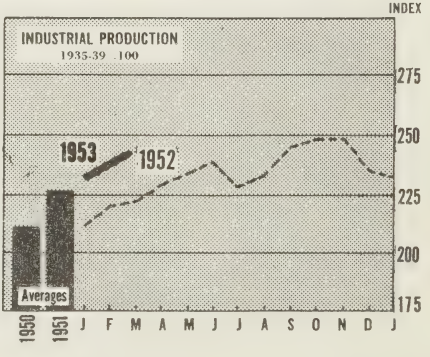
A Monthly *Labour Gazette* Feature



CURRENT LABOUR TRENDS







vacations, which accounted for 24,000 persons, and in the 73,000 included in the miscellaneous category as a result of the observance of Ascension Thursday on May 14.

Of the 99,000 who had jobs but did not work at all during the survey week, illness (54,000) was the most important reason for their absence from work. Another 11,000 persons were laid off for the full week, a decrease of 16,000 from April 18, and 20,000 were away because of vacations.

It was estimated that 114,000 persons were without jobs and seeking work during the survey week. Another 10,000 worked during the survey week but were also actively seeking other work, making a total of 124,000 persons actively seeking work during the week ending May 16, 1953. This is a drop of about 52,000 or 30 per cent from the previous month.

Supplementary information with respect to regional patterns is available from data on registrations for employment collected at local National Employment Service Offices. Between April 16 and May 14, applications on file decreased by 130,000 to a total of 242,003, a drop of about 35 per cent from the previous month.

The largest decline during the month occurred in Quebec, where the decrease of 50,600 was sufficient to bring the total for May 14 (92,118) slightly below last year's level. In the Atlantic region, there was a drop of 21,200 from the previous month, but the latest total (38,409) was still moderately above last year's.

The Ontario region recorded a drop in applications of 25,300 from April 16 to May 14. The total at May 14 (53,297) was about 20,100 below the figure recorded a year earlier. A decline of 20,000 occurred over the month in the Prairie region but the latest total (28,601) was still moderately higher than last year. In the Pacific region, there was a decline of 13,400, bringing the total (29,578) to about the same figure last year.

The durable goods industries continued to set the pace in manufacturing, with significant gains over last year. The transportation equipment industries group increased employment by about 2.5 per cent during March, bringing employment at the April 1 to levels more than 18 per cent higher than at the same time in 1952. Similar gains were apparent in the case of electrical apparatus, where April employment levels were more than 15 per cent higher than last spring.

Expanding construction activity in most regions was stimulating activity in manufacturing. Employment in the non-metallic mineral products industry, for example, was 6 per cent higher at April 1 than a year earlier. In construction itself, 52,626 dwelling units were under construction at April 30, nearly 35 per cent more than last year.

In the trade and service industry, employment at April 1 was nearly 5 per cent higher than in 1952, reflecting much higher (8 per cent) year-to-year levels of retail trade. Employment gains in this sector, while not nearly as large as the much higher percentage gains noted above, are still important in view of the much larger numbers of persons employed in these tertiary industries.

Labour–Management Relations

SIGNIFICANT developments occurred during late May and early June in labour-management negotiations that have been in progress in important parts of Canadian industry over the past few months. Settlements were reached in various parts of the country in construction, shipping, communications and some of the manufacturing industries. Conciliation board reports were published for the coal-mining industry, both in eastern and western Canada.

Negotiations so far this year have been accompanied by strike activity well below the average for the post-war years. For the first five months of 1953, preliminary figures show 69 strikes and lockouts involving 14,600 workers, with a time loss of 153,000 days. In the post-war period, the average number of strikes for the first five months of the year has been 82, the average number of workers involved 34,000, and the average time loss 545,650 days. None of the strikes in 1953 has involved a large number of workers over an extended period of time.

Wage Changes in Selected Collective Agreements*

(Bargained during first five months of 1953)

Amount of Increase per Hour	Number of Agreements	Number of Workers Covered
No change	10	2,900
0–4.9 cents	13	24,600
5–9.9 cents	28	29,400
10–14.9 cents	22	9,000
15–19.9 cents	8	6,300
20–24.9 cents	3	100
25 cents and over	3	1,500
Total	87	74,800

* For purpose of analysis, the Economics and Research Branch maintains a selected sample of 1,000 of the approximately 6,000 agreements in Canada. The above table is based on 87 agreements from this sample, bargained during the first five months of 1953 and forwarded to the Branch.

Wage Changes. Some figures on the trend in wage increases currently being achieved are given in the accompanying table. Based on a sample of agreements signed since January 1, the table shows that about 70 per cent of the workers covered received increases of less than 10 cents an hour. Most of the agreements providing 10 cents or more applied to comparatively small groups of workers, the principal exception being a number of settlements in the railway industry reached early in the year.

More than a quarter of the agreements provide for a reduction in weekly hours of work. Most also provide for various improvements in "fringe" benefits.

Current Negotiations. Collective agreements have now been signed in a number of urban centres for the construction industry. Wage increases so far this year are largely within the range of five to ten cents an hour, although a few exceed ten cents. Among recent settlements, Montreal building trades workers received an arbitration award of five cents an hour with a further five cents next November. Vancouver construction workers settled for a 7-cent increase for journeymen and a 5-cent increase for labourers. At the time of writing, negotiations were still in conciliation at Toronto for all building trades except painters and labourers, who have already

accepted an immediate 5-cent increase, to be followed by a similar increase of five cents on October 1, 1953.

Two conciliation board reports have been made public, dealing with disputes between Nova Scotia and western Canada coal operators and their workers, represented in each case by the United Mine Workers of America. Both reports recommended no wage increases. A majority report affecting about 7,000 coal miners in southern Alberta and British Columbia rejected any wage increase but recommended an increase of five cents to the operators' present contribution to the Miners' Welfare Fund of 15 cents per ton of coal mined, and also other fringe benefits such as free lamps and washing facilities. An agreement was reached following this conciliation report, which, however, was rejected in a vote by the union members. It is reported that the annual vacation clause in the proposed agreement was the main reason for rejection. At present, the workers receive two weeks' annual vacation with full straight-time pay, while the proposed agreement provides two weeks' vacation with pay at the rate of four per cent of annual earnings. Union members in the province of Alberta were to vote shortly in a provincially supervised plebiscite on the acceptance or rejection of the agreement.

The conciliation board dealing with the dispute between District 26 of the United Mine Workers and the Dominion Steel and Coal Corporation in Nova Scotia recommended, in a majority report, that the union waive its demand for wage increases and other benefits for the 10,000 workers it represents and that the company drop its list of counter-demands. In an effort to reduce absenteeism, the board chairman proposed, in a separate statement, the establishment of a bonus plan based on the number of days worked in a year.

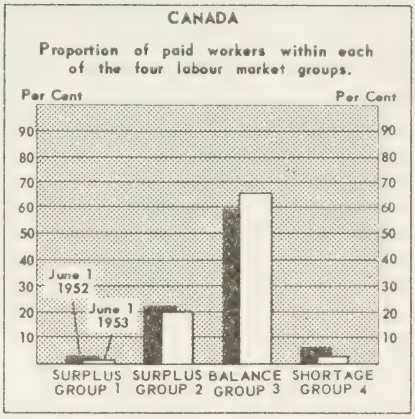
The Bell Telephone Company of Canada recently negotiated contracts with the Canadian Telephone Employees' Association and the Traffic Employees' Association. These agreements, covering 25,000 employees in various centres in Ontario and Quebec, provide for wage increases of from $1.50 to $2.50 a week for skilled workers and from $4.00 to $13.00 a month for office workers.

A threatened strike of approximately 700 British Columbia coastal seamen was averted when their union, the Seafarers' International Union (AFL-TLC), and the operators, Canadian National Railways, Canadian Pacific Railway Company and Union Steamships, Ltd., agreed on the terms of a new contract. At the suggestion of the Federal Department of Labour, negotiations were resumed, resulting in a settlement which includes a $30 monthly increase, as recommended earlier by a conciliation board. The increase was made retroactive to June 1, 1952. Negotiations between the same union and certain shipping companies on the Great Lakes and the East Coast are still in conciliation. In these disputes, the union demands are for a $50-a-month increase.

In northern Ontario and Quebec, negotiations and conciliation board proceedings continued between the United Steelworkers of America (CIO-CCL) and several large gold and base-metal mines.

At Sudbury, Ont., the International Union of Mine, Mill and Smelter Workers (independent) and the International Nickel Company of Canada tentatively agreed to a new contract providing a 5-cent an hour increase, a gain in process allowances for contract miners of from $1.00 to $1.60 a shift, an additional week of holidays after 15 years' service and certain other benefits. The membership voted on these proposals late in May but by mid-June the result of the voting had not yet been announced. Negotiations between the same union and the Consolidated Mining and Smelting Company at Trail and Kimberly, B.C., were still in progress.

In urban transportation, the British Columbia Electric Company and the Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America (AFL-TLC) reached an agreement providing for a 7½-cent hourly wage increase for 3,000 transit workers at Vancouver, New Westminster and Victoria. Arbitration board hearings are in progress in the dispute between the Montreal Transportation Commission and the Canadian Brotherhood of Railway Employees and other Transport Workers (CCL).



A settlement was reported between the Canadian General Electric Company and the United Electrical, Radio and Machine Workers of America (independent) covering 7,000 employees at Toronto and Peterborough. The new one-year contract provides for a wage increase of six cents an hour for men and seven cents for women, both retroactive to April 27. Effective next January, the work week at Peterborough will be reduced from 43 to 40 hours with a 5-per-cent wage increase to maintain take-home pay. Improvements in welfare and pension plans are also reported to be included in the master agreement.

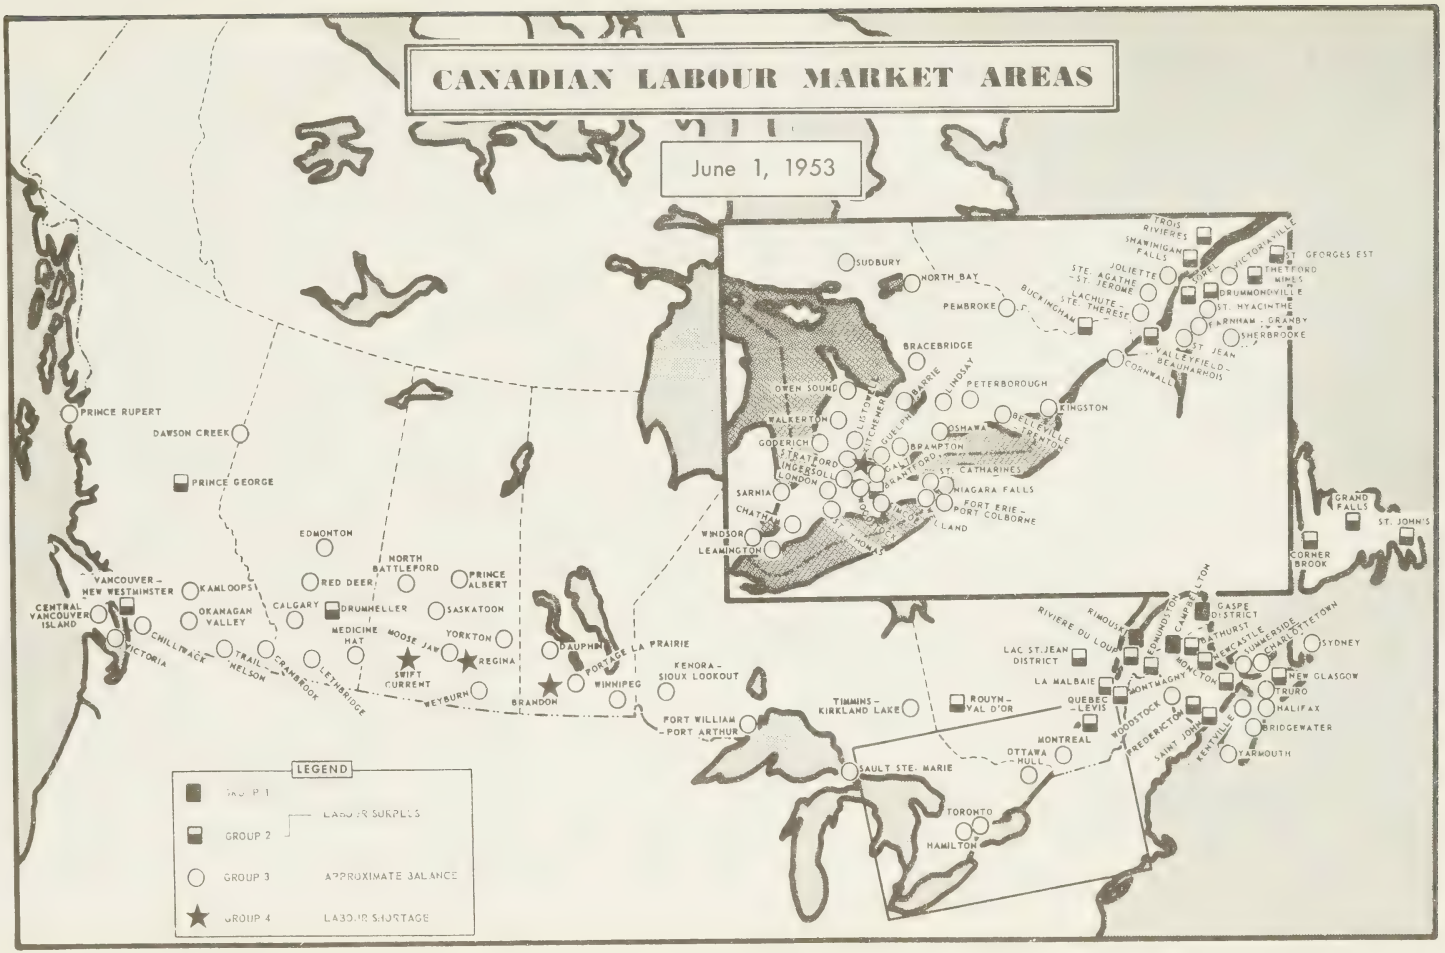
Recent developments in collective bargaining in the automobile industry in the United States were echoed in Canada early in June when the Ford Motor Company of Canada agreed to make certain changes in its contract with the United Automobile Workers (CIO-CCL) although the two-year agreement was not due to expire until February, 1954. (see page 809). The three largest U.S. automobile manufacturers agreed to open their contract to provide increases in wages and in pension benefits. At the Ford Motor Company of Canada, the following changes in the contract, applying to 11,000 workers in the Windsor area, were agreed upon: an across-the-board increase of two cents an hour; incorporation of 11 cents from the 16-cent cost-of-living bonus into wage rates; an increase in the annual improvement factor from three cents to four cents; and extension of hospital and surgical benefits to pensioners.

Two agreements covering groups of 200 or more office workers were signed recently, one at the Montreal Locomotive Works, where the office workers are represented by the United Steelworkers of America (CIO-CCL), and the other at the Cockshutt Plow Company at Brantford, where the workers are represented by the United Automobile Workers (CIO-CCL). At Montreal, an 8.2-per-cent general increase was made in salaries and at Brantford, the amounts ranged upwards from $9.75 a month. Both agreements included improvements in hospitalization or sick-leave plans.

Manpower Situation in Local Areas

AN unusually rapid rate of employment increase during May resulted in the elimination of labour surpluses in more than half the areas that had been in the surplus categories at the beginning of the month. By the first of June the number of Group 1 surplus areas had decreased to 3 from 25 a month earlier; Group 2 surplus areas, from 42 to 28. A corresponding increase took place in the tighter labour supply categories. The number of balanced labour markets rose from 47 to 80 and labour shortage areas increased from one to four.

Examination of the over-all current employment situation reveals a greater degree of balance between the supply and demand for labour than last year. The table below shows, for example, that at the beginning of June there were 12 more areas in the balanced and Group 2 surplus categories combined, than a year earlier. Areas in the shortage and Group 1 surplus categories were correspondingly fewer. Similarly, the proportion of Canadian wage earners in balanced labour markets was 76 per cent at June 1, compared with 69 per cent a year earlier (see bar chart).



Most of the areas whose labour market classification changed during May were in the Quebec and Atlantic regions. Nevertheless, all but four of the 31 surplus areas were in these regions, mainly because the seasonal upturn in employment is generally later there than in the rest of the country. In the Prairie region, on the other hand, the demands of construction and agriculture absorbed practically all available labour and caused distinct shortages in three areas. In Ontario and the Pacific region, labour demand and supply were generally in balance.

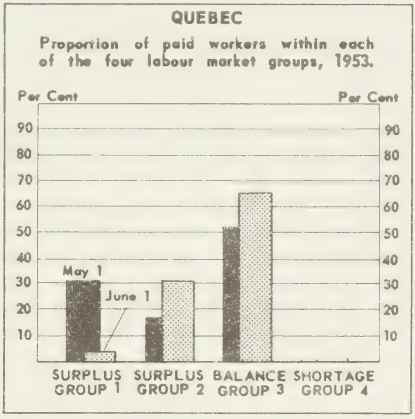
LABOUR SHORTAGE

SEASONAL expansion in construction, sawmilling, agriculture and fishing resulted in a substantial increase in employment in the Atlantic region during May. By the middle of the month, the number of full-time workers had reached 450,000, an increase of 57,000 from the previous month. Part of this increase resulted from seasonal additions to the labour force and part from a reduction in the number of persons previously employed part-time and of those not at work at all but in the labour force.

Although total employment increased seasonally, it still remained below last year's level because of reduced activity this year in the logging, construction and water transportation industries. Construction employment, for example, was 33 per cent lower in New Brunswick and 11 per cent lower in Nova Scotia this year than last. These decreases were partly offset by slightly higher employment levels in wholesale and retail trade and in manufacturing.

The general increase in activity during the month did, however, eliminate labour surpluses in seven of the twenty areas in the region. At the beginning of June, one area was in the Group 1, ten were in the Group 2 and nine in the balanced category, compared with ten, eight and two respectively at the beginning of May.



Metropolitan and Major Industrial Areas. In St. John's, Nfld., employment in construction, sea-fishing, fish-processing, agriculture and shipping increased sufficiently to reduce the labour surplus and move the area from the Group 1 to the Group 2 category. Employment opportunities on local construction sites as well as on those in the interior increased during the month and reduced by two-thirds the number of building tradesmen seeking work. The demand for construction tradesmen this summer, however, is not expected to be sufficient to absorb the available supply because the volume of work in progress this year has been consistently smaller than that of a year ago. Moreover, reductions in the working force at some of the large defence construction sites are foreseen during the next two months.

Employment increased in all of the major industrial areas during May. Heightened activity in fishing, shipping and construction brought the Sydney labour market into balance. The general improvement in employment conditions also brought Corner Brook, Moncton and New Glasgow from the Group 1 to the Group 2 surplus category. Manufacturing employment during the month remained stable in all areas and the shortage of marine electricians, sheet-metal workers, welders and machinists for the Halifax shipyards persisted.

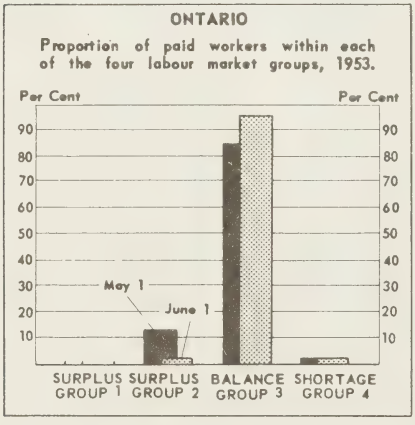
Major Agricultural and Minor Areas. Substantial reductions of surpluses occurred during May as spring farming operations, construction and sawmilling approached peak employment levels. Campbellton was the only area in the Group 1 surplus category. Although local construction activity and the movement of workers to Labrador and industrial centres in Ontario and Quebec partly reduced the excess labour supply in this area, the remaining surplus is expected to continue until production and employment in the lumber industry increases again.

QUEBEC

EMPLOYMENT increased sharply throughout the Quebec region, except in the northern parts, during May. This expansion was mainly seasonal and occurred somewhat earlier than last year because of the more favourable weather conditions this spring.

The principal reason for higher employment levels this year is the size of the construction program. Building in the province as a whole is expected to exceed last year's level but some areas are likely to benefit more than others. Current indications point to a heavy concentration of construction work in Montreal and at two or three large development sites on the north shore of the St. Lawrence. On the other hand, several of the industrial and minor areas anticipate a year-to-year decline in construction.

By the first of June, 14 of the 25 areas in Quebec were in the Group 2 surplus category. Areas in balance, however, increased from two to nine during May and those in the Group 1 surplus category decreased from twelve to two. This last category, as shown in the accompanying bar chart, included only a small proportion of the paid workers of the region.



Metropolitan Areas. Although Montreal continued in the balanced category, labour demand strengthened during May. Residential building was particularly active in the area. Some clothing workers were laid off seasonally during the month and others were put on short-time work but manufacturing employment generally continued at stable levels. Many of the heavier industries still reported shortages of tool and die makers, machinists, radar and other technicians.

A promising year began in Quebec city for the water transportation industry but the building program was still uncertain and many construction workers were without jobs. The manufacturing industries, however, with few exceptions, operated at near-capacity and maintained employment levels substantially higher than those of last year. During May, the area moved from the Group 1 to the Group 2 surplus category.

Major Industrial Areas. The heavy surpluses in Lac St. Jean, Rouyn-Val d'Or, Shawinigan Falls and Trois Rivières were markedly reduced and all four areas were brought into the Group 2 surplus category during May. Valleyfield-Beauharnois remained in the Group 2 category as lay-offs and short time continued in the textile industry and construction work was scarce but the three other major industrial areas in the Eastern Townships (Farnham-Granby, St. Hyacinthe and Sherbrooke) had balanced markets by the first of June.

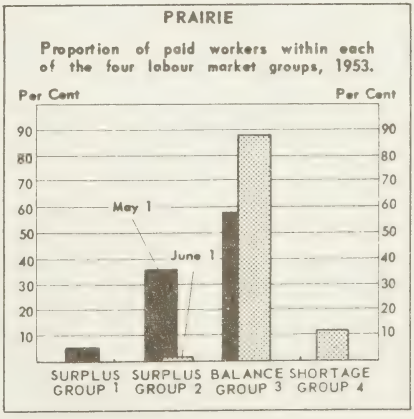
Major Agricultural and Minor Areas. Reduction of labour surpluses occurred in almost all the major agricultural and minor areas during the month. By June 1, only Gaspé and Rimouski remained in the Group 1 surplus category. Five areas were in approximate balance and eight were in the Group 2 surplus category. Because of the low price of cod, fishing may not be as active this season as in other years but hydro-electric construction and mining development is expected to be extensive. Several lay-offs occurred in defence industries in Sorel and construction work was slow to expand. The area fell into the Group 2 category and was one of the few in the province to show a heavier labour surplus than last year.

ONTARIO

SEASONAL employment expansion in Ontario accelerated during May as warm weather permitted the beginning of outdoor activities in some of the northern parts of the province. During the four-week period ending May 16, full-time workers in the region increased by 30,000 to a total of 1,718,000. This increase was accompanied by seasonal additions to the labour force and by a reduction in labour surpluses.

Seasonal industries such as agriculture, construction, railway maintenance, food processing and summer-resort operation, the re-opening of sawmills and the beginning of summer logging operations were chiefly responsible for increasing employment in the region. In addition, manufacturing employment was about eight per cent higher than last year and the number of housing starts during the first four months of this year was about 60 per cent greater than in 1952. Nevertheless, the only labour shortages reported to date were for farm help and for engineers, draughtsmen and certain other professional workers. The arrival of more than 10,000 immigrant workers during the first four months of the year helped to relieve the shortages in some of these occupations. Some farm workers will be brought to Ontario from the Maritime Provinces to help with the hay harvest in June but demand was expected to exceed supply throughout the summer.

The general increase in activity in the region brought nine additional labour markets into balance during May. By the beginning of June, 37 of the 39 areas had approximately balanced labour markets, compared with 36 a year earlier. However, fewer workers were available this year than last. Although there is little unfilled demand, most areas were at the lower extreme of the balance range and virtually all suitable workers were employed. As shown in the bar chart, 96 per cent of all wage earners were in areas with approximately balanced labour markets, compared with 84 per cent at the beginning of May.



Metropolitan Areas. The labour supply tightened somewhat in Toronto and Hamilton during May and the early part of June, as seasonal industries expanded and industrial lay-offs in Hamilton were reduced. In Ottawa, the demand for professional and construction workers, sales personnel and machine-shop workers continued to increase. Labour was scarce in all categories but the slow start of farming and construction work across the river left some available labour in Hull. Although engineers were still in short supply in all three metropolitan areas and the general shortage of farm hands throughout Ontario was reflected in their employment situation, the labour markets of these areas continued to be in approximate balance.

Major Industrial Areas. The labour supply was becoming tighter in all the major industrial areas of Ontario; Cornwall, Peterborough, Sudbury and Timmins-Kirkland Lake moved from surplus into balance during May. A shortage of qualified miners and skilled sawmill workers developed in Sudbury and Timmins-Kirkland Lake. Labour demand continued to exceed supply in Kitchener, the shortages being mainly of clerical workers, sales clerks, bricklayers, crane and shovelmen, construction labourers, automobile mechanics and female domestic workers. Brantford was the only area in Ontario with a labour surplus and that was being rapidly reduced by the transfer of workers to some of the surrounding areas where demand was strong.

Major Agricultural and Minor Areas. Surpluses were rapidly reduced in the major agricultural and minor areas and all 21 were in approximate balance.

PRAIRIE

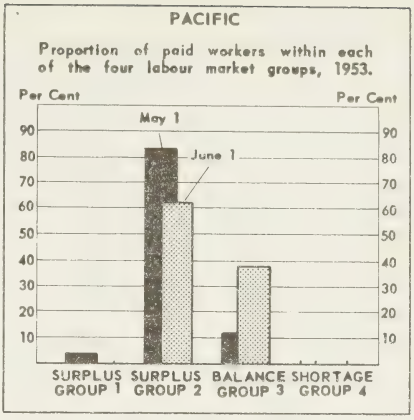
EMPLOYMENT continued to increase in the Prairie region as farm labour requirements reached a spring peak. By the middle of May, 873,000 persons in the region were working full-time, an increase of 28,000 from the previous month. Reduction of labour surpluses and of the number of part-time workers accounted for about half of this increase; the remainder represents seasonal additions to the labour force.

Frequent and heavy rainfall during the last half of the month delayed and, in some cases, pre-

vented crop seeding through large sections of Manitoba and southern Saskatchewan and Alberta. Consequently, although agricultural labour demand increased sharply, shortages in May were not as widespread as had been expected earlier. Most of the existing labour shortages in the three provinces can be attributed to agricultural demand and a construction program of boom proportions. As in other regions, the emphasis this year has swung to house building. Units under construction in the Prairies at the end of April were more than a third greater than at the same time last year, while the number of units started since the beginning of 1953 was 61 per cent greater. Wet weather delayed construction programs in many areas, which may intensify labour requirements later in the season. Most of the increase in total construction was in Alberta, where it helped to reduce labour surpluses in coal-mining areas.

By the beginning of June, labour surpluses had disappeared in all but one area, while shortages had developed in three agricultural areas. At the same time last year, nine areas had shortages, largely because of the labour required for the concurrent harvesting and seeding operations. Seventeen areas were in balance, compared with 14 in the previous month and 12 last year.

Metropolitan and Major Industrial Areas. Calgary, Edmonton and Winnipeg experienced sharp employment increases in construction and allied industries, retail trade, and meat-packing. In Calgary, the anticipated manpower requirements for construction were greater than the current supply. The influx of workers from other areas was fairly heavy, but scarcity of accommodation created increasing difficulties. Much the same situation prevailed in Edmonton, except that the number of incoming workers appeared to be somewhat greater in relation to the rise in demand.



A notable development during the month was the elimination of the substantial labour surplus in Fort William-Port Arthur. Rehiring of bush workers for the river drive, together with increasing construction activity, reduced the job applications listed with the National Employment Service from 5,200 to 2,100. Further increases in demand were expected to cause shortages of a number of construction skills.

Major Agricultural and Minor Areas. Labour supply in almost all areas declined rapidly during the month, notable shortages developing in Brandon, Regina and Swift Current. In these areas there was heavy unsatisfied demand for farm hands, carpenters and unskilled construction labourers, auto mechanics, clerical workers, waitresses and domestic service workers. The only area remaining in the moderate surplus category was Drumheller, in which a considerable number of miners were still without jobs.

PACIFIC

MAY was featured by rapid seasonal employment increases in all parts of the Pacific region. By mid-May the number of full-time workers had reached 387,000, an increase of 14,000 from the previous month. This increase, which is the largest since the beginning of the year, was accompanied by substantial declines in short-time work and unemployment. The current employment level, however, is not quite as high as a year ago.

Some of the major industries of the province continued to operate at lower levels than last year. This was particularly true of logging, in which production was reduced by a decline in overseas export demand for lumber; of fishing and fish canning, which still suffered from the effects of the labour-management disputes this spring; and of base metal mining, which was adjusting to the lower prices of lead and zinc.

Losses in these industries were largely offset by the heavy demands of construction, which, by the beginning of April, showed a twelve-month employment increase of 3,000, or 14 per cent. Recent awarding of several large contracts, together with the projects already in progress, caused rapid employment expansion and shortages developed of various types of skilled labour, particularly welders for pipeline and refinery construction. The greatest demand continued to come from the Kitimat–Kemano project, which includes the construction of a townsite, smelter, powerline, powerhouse, tunnel and reservoir. The number of workers engaged on these various items increased from a winter low of about 2,500 to within a few hundred of the expected summer peak of 9,000.

The general upswing in activity during May absorbed labour surpluses in all but two areas in the region. By June 1, there were seven fewer areas with a labour surplus than at May 1, and one fewer than at June 1, 1952. However, since one of the two remaining surplus areas was heavily-populated Vancouver–New Westminster, the surplus category included more than three-fifths of all wage earners (see bar chart).

Metropolitan and Major Industrial Areas. Greater employment opportunities within Vancouver–New Westminster and the re-opening of logging and construction camps in the interior steadily reduced the labour surplus but did not quite bring the area into balance. Demand for carpenters and machine shop workers was particularly strong but the supply was still large enough to satisfy all but a few out-of-town requests. The outlook for the fishing industry remained uncertain owing to disagreement between companies and the fishermen's union on the price of salmon. Negotiation on this matter was still in progress at the month-end.

Labour supply and demand in Victoria remained in balance during May. Small lay-offs at the naval dockyard, shipyards and logging concerns were offset by increased construction and tourist activity.

Minor Areas experienced the greatest relative employment gains during the month. Seasonal increases in the demand for construction, logging and farm labour eliminated surpluses in all areas but Prince George, which was recovering from the spring closure of logging roads. The recent strengthening of base metal prices created a greater degree of optimism in the mining industry. Further lay-offs amounting to 150 workers, however, occurred in the Cranbrook area during the month.

Current Labour Statistics

(Latest available statistics as of June 10, 1953)

Principal Items	Date	Amount	Percentage Change From	
			Previous Month	Previous Year
Manpower				
Total civilian labour force (a)	May 16	5,321,000	+ 1.5	–

Manufacturing	March	265.3	+ 2.9	+11.4
Durables	March	334.3	+ 2.3	+15.8
Non-Durables	March	221.1	+ 3.4	+ 7.4

(a) Estimated by DBS on basis of sample labour force survey. Only those who did not do any work in the survey week are here classified as persons without jobs. Labour force estimates are based on a sample survey of 30,000 households chosen by area sampling methods in more than 100 different areas in Canada. They are subject to sampling error. In general the smaller the estimate, the larger the relative sampling error. The estimates, however, do show the numbers in the various labour force categories with sufficient accuracy for practical purposes.

(b) Total applications on file at NES offices exclude registrations from persons known to have a job while applying for another one. Means are also taken to exclude, as far as possible, persons who have secured work on their own since registration. Nevertheless, the figures inevitably include a number of persons who have found employment or who have left the labour force by the time the count is made. On the other hand, not all the persons who are looking for work register at employment offices.

(c) These percentages compare the cumulative total to date from first of current year with total for same period previous year.

Notes of Current Interest

Ford, GM Accept Revision Of UAW's 5-Year Pacts

Both General Motors Corporation and the Ford Motor Company have agreed to changes in their five-year escalator contracts with the United Automobile Workers of America (CIO), even though these contracts have still two years to run.

The changes provide pay rises and other benefits for about 350,000 workers at General Motors and some 135,000 workers at Ford.

Both companies have agreed to incorporate into the base pay 19 cents of the 24 cents per hour cost-of-living allowance accumulated since 1950.

In addition, General Motors has agreed to (1) an increase in the annual improvement or productivity factor from four to five cents per hour, effective June 1; (2) a wage increase of ten cents per hour for some 40,000 skilled tradesmen, also effective June 1; and (3) a formula for relating the escalator clause in the contract to the new consumer price index developed by the Bureau of Labor Statistics. The old index, representing a somewhat narrower sampling of consumer purchases, is being abandoned by the Bureau.

At a joint union-management press conference in Chicago recently, Walter P. Reuther, President of the UAW and of the CIO, said other automobile manufacturers will be asked to meet the new wage standard.

Several Solutions in U.S. To Escalator Problem

Several solutions have been reached in the United States to the problem of converting escalator agreements to the new consumer price index published by the Bureau of Labor Statistics.

One solution arrived at is complete elimination of the escalator clause with incorporation of all accumulated cost-of-living bonuses into base wage rates.

Another solution is retention of the old base and continuation of the escalator into a new agreement. Under this plan, the old BLS index will continue to be used until it is dropped at the end of June this year. At that time, BLS tables will be employed to convert to the new index without incorporating bonuses already received into base rates.

A third solution is the complete conversion of the escalator clause to the new index with incorporation of part of the accumulated cost-of-living bonus into base rates, leaving the remainder subject to reduction if the index drops.

Higher Pension Granted In Ford-UAW Contract

Members of the United Automobile Workers of America (CIO) employed by the Ford Motor Company will now receive maximum pensions of $137.50, including social security. The pensions were formerly $125 per month.

The pension increase, affecting the company's 135,000 production workers, is one of the adjustments made last month in the five-year contract signed by the company and the union in 1950.

Chrysler Also Agrees To New UAW Contract

Three days after General Motors and the Ford Motor Company had agreed to changes in their five-year contracts with the United Automobile Workers (see above), Chrysler Corporation on May 27 granted the same wage improvements to its 114,000 hourly-rated employees.

In addition to the increases in wage and the revision of the escalator formula to fit the new consumer price index, the Chrysler agreement calls for maximum pensions of $137.50 per month, including social security benefits. This brings it in line with pension improvements granted first by the Ford Motor Company and a few days later by General Motors. The Chrysler pensions were formerly $130 per month.

The Nash-Kelvinator Corporation also agreed to contract changes for its workers, granting everything in the way of wages that the UAW had won from General Motors, Ford and Chrysler.

The International Harvester Company, however, did not agree to interim contract changes. As a result, its 75,000 employees suffered a 2-cents per hour wage reduction June 1 in accordance with the escalator clauses in agreements between the company and several AFL, CIO and independent unions.

UAW Chiefs Urge Firms To "Level Off" Production

The presidents of Locals 195 and 200, United Automobile Workers of America (CIO-CCL), have urged the major auto manufacturers in Canada to level off production in order to prevent unemployment later this year.

In a joint statement, Presidents Earl Watson of Local 195 and Charles McDonald of Local 200 declared that at the current rate of production, all three major auto producers will have reached the saturation point in production by September, causing lay-offs until 1954 models are ready to roll.

Responsibility for whatever unemployment is created, they said, must be assumed by the companies.

"There is no reason to believe 30 per cent more cars will be sold this year than last year, yet present production indicates just about 30 per cent more production this year over sales last year," they said.

The statement of the Canadian union leaders followed a similar one made earlier by Walter P. Reuther, President of the UAW and of the CIO. Mr. Reuther warned that firms in the United States would produce 60 per cent of their annual quota during the first six months of the year. He termed this practice "anti-social, economically unsound and morally wrong".

In a reply to Mr. Reuther, Harlow H. Curtice, President of General Motors Corporation, said he did not share the union President's "lack of confidence in the economic future of our country," adding that "I am quite optimistic as I look ahead".

The General Motors President said that recently he had been "reinforced in my conviction that we can look forward to good business throughout the year 1953".

New Arts, Craft School Is Quebec's 40th

A three-quarter million dollar arts and craft school, with facilities for nearly 500 day and night students, was officially opened at St. Johns, Que., on April 26 by Premier Maurice Duplessis.

The school was built through the co-operation of the municipal, provincial and federal Governments, under the Vocational Schools Assistance Agreement. The provincial Government contributed $715,655 and the federal Government $129,700 towards the cost.

Quebec now has 40 arts and craft schools in operation, the Minister stated.

Home Building Up Sharply In 1st Quarter This Year

Home building in Canada increased during the first quarter of 1953, with both starts and completions of new dwelling units up sharply over last year in each of the three months.

According to the latest Dominion Bureau of Statistics report, 11,930 new units were started in the quarter, an increase of 4,662 or 64 per cent over the 7,268 starts made in the first three months of 1952, while the number of units completed climbed by 5,326 or 41 per cent to 18,392 from 13,066.

At the end of March there were 49,232 units under construction, 32 per cent more than the 37,259 under construction on the same date last year.

Following substantial gains in January and February, March starts rose by 2,013 or 57 per cent to 5,568 from 3,555 a year earlier, while completions were up by 2,523 or 70 per cent to 6,130 from 3,607.

The average time under construction of units completed in March was down to 7·1 months from 8·4 months a year earlier, continuing the decline of the two preceding months.

U.S. Housing on Increase

A total of 110,000 new permanent non-farm dwelling units was started during April, an increase of 13 per cent above the March figure and about four per cent above that of April a year ago, according to preliminary estimates of the U.S. Labor Department's Bureau of Labor Statistics. Housing starts in March numbered 97,000 units.

For the first four months of 1953, housing starts totalled 356,100, compared with 352,700 last year and 412,300 in the peak year 1950.

More Houses in U.K., Too

Permanent houses completed in Great Britain during February totalled 20,118, compared with 16,163 for the same month of 1952, according to a national housing summary published recently.

In the first two months of 1953, a total of 40,702 permanent houses was completed, compared with 31,855 in the same period last year.

At the end of February, 1,593,708 permanent dwellings had been completed under Britain's post-war housing program, of which 1,296,973 were new permanent houses and flats.

Yearly Health Bill of $82 Paid by Average Family

Family units in Canada paid out a total of $373,800,000 for health services during the 12-month period from autumn, 1950, to autumn, 1951, or an average of $82.10 per unit, according to recently-published details of a national sickness survey. The term "family unit" covers both families of husband and wife with or without children and single persons outside these families.

The survey, jointly planned and conducted by the federal and all ten provincial health departments and the Dominion Bureau of Statistics, is the first nation-wide study of illness in the general population of Canada.

Prepayment plans for medical and hospital care accounted for $88,400,000 or 23·7 per cent of the total spent. Direct payments for doctors' services, for eye and dental services, for hospital and nursing services accounted for an estimated $203,200,000. Expenditures on drugs and appliances came to $75,300,000, of which $73,000,000 was for medicines.

Hospital care, both direct and through payment plans, amounted to $90,000,000 or 24 per cent of the total. The amount expended similarily for physicians' services came to $99,500,000 or 26·7 per cent, eye services and glasses aggregated $14,100,000 or 3·8 per cent and dental services amounted to $32,900,000 or 8·8 per cent. Of the $73,000,000 spent for medicine, $46,100,000 was for prescribed medicine and $26,900,000 for medicine not prescribed.

Of the $82.10 spent by each family unit, $19.50 went in prepaid medical plans; $44.60 for direct payments for services; $16.50 for drugs and appliances; and $1.50 for other services, goods and medical care.

Family units with five-to-six persons spent the most on health services at $114.70. Next was the three-to-four size at $110.40, followed by the family of seven or more at $104.80.

Of a total of 4,555,000 family units in Canada, only 621,000 had no expenditures for health. Of the total, only 2,641,000 subscribed to prepaid medical plans, the survey showed.

Pensions in 1952-53 Cost Federal Govt. $19 Million

The federal Government's share in old age assistance payments for needy persons between the ages of 65 and 69 totalled $19,128,837 in the fiscal year which ended March 31, Hon. Paul Martin, Minister of National Health and Welfare, has announced.

The federal and provincial Governments share the cost of old age assistance on a 50-50 basis up to a maximum of $40 per month, except in Newfoundland where the maximum monthly payment is $30.

Federal contributions by provinces in the past fiscal year were: British Columbia $1,701,854; Alberta $967,948; Saskatchewan $997,396; Manitoba $1,036,021; Ontario $4,586,572; Quebec $6,927,593; New Brunswick $1,113,921; Nova Scotia $893,059; Prince Edward Island $66,313; Newfoundland $833,898; Northwest Territories $4,257.

At the end of March, 87,675 persons were receiving assistance distributed among the provinces as follows: British Columbia 7,685; Alberta 4,688; Saskatchewan 4,206; Manitoba 4,400; Ontario 20,401; Quebec 30,490; New Brunswick 5,371; Nova Scotia 4,789; Prince Edward Island 551; Newfoundland 5,037; Northwest Territories 57.

Winnipeg Building Trades Sign Master Agreement

A blanket collective agreement covering 11 local unions was signed recently between the Winnipeg Building Trades Council and the Winnipeg Builders' Exchange.

The first contract of its kind in the construction industry in Canada, the agreement provides a ten-cent hourly wage increase for all members. It is designed to stabilize the industry and to prevent lock-outs or strikes in any of the trades involved.

Under the agreement, effective for one year from May 1, 1953, no individual union can strike without going through a procedure laid down by all 11 unions. Machinery is set up in the contract to arbitrate any dispute which may arise within the industry. The agreement protects all parties in respect to agreements now held by both employers and employees.

In announcing the agreement, R. G. Anderson, President of the Winnipeg Building Trades Council, said it "will no doubt serve as a pattern for the construction industry throughout Canada and will contribute very significantly to the stability of the industry".

In addition to the wage increase, the contract calls for a uniform basis for all trades with respect to transportation, travelling time and board and room. A security clause has been included whereby all mechanics and labourers hired by members of the Builders' Exchange will become members of their respective unions 30 days from the date of beginning work.

Women's Bureau Planned, Gregg's Estimates Show

Included in the departmental estimates presented by the Hon. Milton F. Gregg, Minister of Labour, and passed at the last session of Parliament, was an item to provide for the establishment of a women's bureau within the Department of Labour.

Speaking on the vote in the House, the Minister said that among its functions will be the study of problems peculiar to women workers and the development of facilities to make available the results of these studies. It will also review continually what is being done in this field by governmental and other agencies.

Women's organizations, said Mr. Gregg, have for some time been urging upon the Government the need for such study and information.

"Industry Being Forced To Hire Older Women"

Shortage of trained young women workers is slowly forcing industry to change its attitude towards the hiring of the older worker, it was agreed by women personnel experts attending the sixth annual Personnel Appraisal Institute at McGill University last month.

The theory that a woman upon reaching the age of 40 automatically becomes a burden to an employer is outdated and will have to be discarded, they said.

Because of the shortage of younger women, companies that have been reluctant to hire a woman over 40 are gradually realizing the merits of the older experienced worker. "They have more ambition," said one speaker, "because they know they are going to stay with the company until pension time. If she is over 40 and gets married, there is little possibility of her raising a family and chances are she'll stay with the company for years."

U.S. Has Shortage of Young Women Workers

While there is no over-all shortage of women workers, there is a sizeable number of occupations, traditionally filled by women, where shortages do exist, the U.S. Department of Labor has announced.

These are largely in occupations that require training of several years and where, in many cases, the economic rewards are relatively less than for jobs where little training is required.

The Department of Labor states that there are important reasons for the present shortage of young women workers. "These reasons," says the Department, "must be known and understood if the nation is to solve the problems resulting from the effect that there are not enough young women in teaching, nursing and other occupations essential to community and national welfare."

For nearly all of the occupations which report shortages and for all jobs for women in the Armed Forces, the call is almost entirely for young women between the ages of 18 and 34 and with little family responsibility.

Working Woman in N.Y. Needs $2,442 Annual Wage

A working woman living with her family in New York state in September 1952, needed $2,442 a year, or nearly $47 each week, to support herself adequately, meet income tax payments, and save for emergencies and old age.

The New York State Department of Labor, in its survey of living costs in eight cities in the United States, revealed that of this total, $1,745 was needed to cover the cost of goods and services and $697 for income taxes, insurance and savings.

Author of Wagner Act Dies in 76th Year

Robert F. Wagner, author of the Wagner Labor Relations Act, died in New York City, May 4, at the age of 75 years.

Born in Germany, Mr. Wagner emigrated to the United States as a boy. He entered politics in 1905 as a member of the New York State Assembly. He was a United States Senator (Democrat) from 1927 until his retirement in 1949.

While in the Senate, Mr. Wagner introduced and successfully promoted such New Deal measures as the National Recovery Administration, the Public Works Administration, the Works Progress Administration and the Federal Emergency Relief Administration. He also sponsored the Railway Pension Act of 1934 and the Social Security Act of 1935.

The Wagner Act, passed in 1935, made collective bargaining by employee agents legal, compelled employers to negotiate with their employees as a body and provided for supervision of bargaining elections. It was superseded in 1947 by the present Taft-Hartley Act.

Ontario CCL Holds Fair Employment Practices Conference

Eamon Park
United Steelworkers of America

Mrs. Irene Elliott
University of Western Ontario

H. S. Johnstone
Federal Department of Labour

Just two weeks after the new Fair Employment Practices Act was passed in the House of Commons (see page 832), the Ontario Federation of Labour (CCL) held its second fair employment practices conference at Brantford, May 23-24. More than 100 delegates attended.

In the opening address of the conference, C. H. Millard, National Director, United Steelworkers of America, called for a stepped-up program of education for better understanding among Canadians of different backgrounds.

H. S. Johnstone, head of the Fair Wages Section, Department of Labour, outlined the new Act and explained the labour conditions attached to government contracts and the non-discrimination policy of the National Employment Service. Mrs. Irene Elliott of the University of Western Ontario explained the operation of the Ontario Fair Employment Practices Act, in force since 1951.

Anti-Discrimination Bill Introduced in U.S. Senate

A bill to make all racial and religious discrimination by employers and unions an unfair labour practice was presented recently to the United States Congress by Senator Irving M. Ives of New York. The bill would also give the National Labour Relations Board authority to determine whether discrimination had been practised in any particular case.

Senator Ives introduced the bill as a proposed amendment to the Taft-Hartley Act, but said it should not be considered a substitute for a full fair employment practices law which he has sponsored.

Paid Vacations Virtually Standard in U.S. Industry

Paid vacations are virtually standard in industry, a recent survey of fringe benefit plans in the United States has found.

The Bureau of Labor Statistics, in a study of wages in manufacturing and non-manufacturing firms employing more than 10,000,000 workers in 40 major labour market areas in the country, also found that paid holidays are provided for a large majority of these employees and that pension and insurance coverage, while not so extensive, is on the increase. The study showed that of all fringe benefits, paid sick leave is the most limited.

Minimum Wage Raised In Saskatchewan

Eight Saskatchewan cities and nine towns have a new, increased minimum wage of $26 for a 44-hour work week since June 1. Provincial Labour Minister C. C. Williams announced the increase last month.

The new wage law affects the cities of Regina, Moose Jaw, North Battleford, Prince Albert, Saskatoon, Swift Current, Weyburn and Yorkton and the nine larger towns of Canora, Estevan, Humboldt, Kamsack, Lloydminster, Melfort, Melville, Nipawin and Shaunavon. The former minimum wage for these places was $24 per week.

Towns of more than 300 population, which formerly had a minimum wage of $21.50, now have a new minimum wage rate of $24.50.

The 44-hour week, with the 8-hour day, will be enforced in the eight cities and nine towns. All other points in the province retain the 48-hour week.

First Long-Term Pact In B.C. Logging Signed

The first long-term wage contract in the history of the British Columbia logging and lumber industry was signed recently between the International Woodworkers of America (CIO-CCL) and Western Plywoods (Cariboo) Ltd. at Quesnel.

Covering about 250 workers, the 3½-year agreement establishes the 40-hour week with a basic hourly wage of $1.35 plus four wage increases totalling 13½ cents.

Based on the average rise in national productivity, the increases will be distributed as follows: three cents on signing, three cents more in 1954, 3½ cents in 1955 and four cents in 1956.

In addition, the contract provides for compulsory check-off of union dues from all employees, maintenance of membership union security, three paid statutory holidays and negotiations for two more paid holidays in 1954 and 1955.

René Rocque Retires As CCCL Organizer

René Rocque, who was sentenced to six months' imprisonment as a result of his participation in the asbestos workers' strike at Thetford and Asbestos in 1949, has tendered his resignation as CCCL organizer and assistant director of the organization service.

In his letter of resignation to the General Secretary of the CCCL, Mr. Rocque stated:—

"I shall always have at heart the promotion of the working classes and of the cause of trade-unionism. I am perfectly well aware, however, that I no longer have the indispensable minimum of physical strength and energy needed to serve the cause as it should be served. The six months I spent in prison have got the better of my nervous system, and it seems to me that I shall never really get over it.

"My reflexes are slower, my health is affected, and I feel that I can no longer serve the workers as I ought."

The CCCL's official statement announcing Mr. Rocque's decision expressed regret for "the departure of a fellow-worker and comrade who has done so much for the cause of the Catholic syndicates".

The statement added:—

"Mr. Rocque's resignation clearly indicates just how hard and how difficult is the work of a permanent union official in a society which accepts with a bad grace the necessary rôle of professional organization, and, in particular, of trade-unionism."

Mr. Rocque had been a CCCL organizer since March 1946, and assistant director of the organization service for five years. He was in prison from January to July 1951.

ILGWU Sets Sights on 30-Hour Work Week

At its 28th triennial convention in Chicago last month, the International Ladies' Garment Workers' Union (AFL) called for the expulsion of criminal elements from the ranks of organized labour and heard of plans for a 30-hour work week.

The union's President, David Dubinsky, said in an opening address to the 1,000 delegates that the union is now conducting a campaign to extend the 35-hour week to all its members and that it hopes soon to reduce the work week to 30 hours.

The ILGWU President told the delegates that they should seek immediate pay increases in new contracts and should not sign contracts that fail to provide a basic 35-hour week.

In his speech, Mr. Dubinsky demanded that the AFL and the CIO withdraw charters from unions that provide a respectable front for underworld characters.

He said the AFL ought to adopt constitutional provisions broad enough to prohibit convicted criminals from holding office in any affiliated union.

"Charters are issued by our great labour federations, the AFL and the CIO, to build unions, to serve workers and to strengthen the general labour movement," he said. "But no charter gives anyone the right to betray the workers and to destroy the good name of labour."

A report submitted to the convention by the general executive board of the ILGWU showed that 52 per cent of the union's 430,830 members now have a 35-hour week, 18 per cent have a 37½-hour week and 30 per cent have a 40-hour week.

Three-quarters of the workers on the 35-hour schedule are employed in New York City and the surrounding district. The heaviest concentration of 40-hour contracts is in the New England states, where 45,529 workers put in 40 hours. A similar work schedule prevails in most Southern, Midwestern and Canadian clothing centres, the the report showed.

The executive board also submitted for approval a formula under which union members could work in any part of the country without forfeiting their protection under employer-financed pension plans.

The formula seeks to establish reciprocal financing agreements for all clothing industry centres, with retirement costs to be prorated on the basis of the actual time worked by union members in each area.

Right to Strike Must Be Preserved—Finkelman

Compulsory arbitration of industrial disputes is not the answer to the problem of creating industrial peace, said Prof. J. Finkelman, Vice-Chairman of the Ontario Labour Relations Board, in a recent address to the Chamber of Commerce in London, Ont.

Prof. Finkelman said extensive adoption of compulsory arbitration in other countries has led eventually to wage fixing and later to Government control of profit margins.

Conceding that lack of compulsory arbitration where negotiations break down leads to strikes, the labour board official said that in a system of free enterprise, the right to strike and the right by employers to lockout employees must be preserved equally with the right to do business.

"It may be that at times these rights will be abused, that unwise courses will be followed, that action will be taken against the best interests of the community, that hardship may be caused to greater or lesser segments of society.

"But the fact remains that the alternatives, at this stage of the game, appear to be too drastic to be acceptable," he said.

Immigration Decreases 46 Per Cent in Quarter

Immigration to Canada during the first three months of this year was 46 per cent lower than for the same period of 1952, according to figures published by the Department of Citizenship and Immigration.

The total for the first quarter of 1953 was 22,937, compared with 42,743 for January, February and March of 1952.

Immigrants from the British Isles numbered 6,367 compared with 8,890 in the first quarter of 1952, a decrease of 28 per cent. Those from North European countries totalled 8,457 (of which almost half came from Germany), compared with 14,675 during the first three months of last year, a drop of 42 per cent. Other countries, mostly South and East European and Asian, supplied 5,970 immigrants in the first quarter of this year compared with 17,573 for the same period of 1952, a decrease of 67 per cent.

The only increase occurred in the number of immigrants from the United States, rising 40 per cent from 1,605 in 1952 to 2,243 this year.

Canadians who returned from the United States during the three months ending March 31 this year numbered 1,004, compared with 795 for the same period last year.

CIO Approves Merger Of White-Collar Unions

The Congress of Industrial Organizations has approved a proposed merger of the Retail, Wholesale and Department Store Union (CIO) and the unaffiliated Distributive, Processing and Office Workers of America, it was announced recently.

The proposal to merge will be discussed at the conventions of the two unions in October. Upon approval, a charter will be issued by the CIO creating a new organization of some 130,000 members.

The Distributive, Processing and Office Workers union was formed from unions that were expelled from the CIO in 1948 for refusing to sign non-communist affidavits (L.G., May, p. 663). Officials of the CIO are now satisfied that the organization has purged itself of communism.

CMA Warns Industry To Train Personnel Now

Members of the Canadian Manufacturers' Association have been warned by the Executive Council to act now if an adequate supply of skilled personnel is to be assured.

Careful consideration, said the CMA Executive Council, should be given to the institution of plans for the training of apprentices and first-line supervisors, and for the development of executive personnel.

Firm Opens School for "Trade Improvement"

In order that their employees may keep abreast with the rapid developments and new techniques constantly taking place in the aircraft industry, Northwest Industries, Ltd., at Edmonton, have launched a specialized training program. Training is given at a newly-organized "Trade Improvement Centre".

The scheme is the result of collaboration between the federal and provincial governments and the company under the federal-provincial Canadian Vocational Training agreement. Equipment was supplied by both the Canadian Vocational Training Branch of the provincial Department of Education and the company.

The training syllabus was devised jointly by the company and CVT to fit the company's particular needs.

Bricklayers' Apprentices To Demonstrate at CNE

Bricklayers' apprentices will have an opportunity to demonstrate their skill at this year's Canadian National Exhibition, Toronto, in a competition being arranged by officers of the Bricklayers, Masons and Plasterers' International Union of America (AFL-TLC).

The object of the competition is to give the public an idea of the time, effort and skill needed by the apprentice to complete the four years' training required to become a craftsman in the trade.

Wants Teachers to Work Every 5th Year in Plants

Vocational school teachers should spend one year in every five as workers in industry, V. G. Smith, professor of electrical engineering at the University of Toronto, said in a recent address before the Ontario Industrial Education Council.

Education authorities, Prof. Smith suggested, should institute a system whereby technical instructors could take an industrial job one year in every five, to enable them to keep abreast with industrial development.

"Industry," he said, "should be ready to provide positions where these teachers can observe methods and keep up with current techniques."

Another Change is Made On Quebec Labour Board

Another change has taken place in the Quebec Labour Relations Commission with the appointment of Jean-Marie Bériault, Montreal lawyer, to replace Paul Vallée, QC, as secretary-general and legal adviser of the Commission.

Mr. Bériault is the third person to hold this position in the past four months. On December 15, Gérard Vaillancourt replaced Paul E. Bernier (L.G., March, p. 372); Mr. Vallée later succeeded Mr. Vaillancourt.

Premier Duplessis has also announced the appointment for another two-year period of Chief Judge Roland Paquette of Montreal's Municipal Court as president and third member of the arbitration board to deal in matters in dispute between the municipal council and the civic employees.

U.K. Promoting Study of Human Side of Industry

Two committees set up recently in Great Britain to study human problems in industry will be concerned mainly with promoting research by existing bodies. They are the committees of the Department of Scientific and Industrial Research and the Medical Research Council.

During 1952 the two departments made a detailed survey of the work being done in the field by other agencies and laboratories. The two committees will assist such studies, finance work on suitable subjects at present untouched, and promote application of the results of the work to improve production in industry.

The first committee will be concerned with the human factors in industrial efficiency, such as fitting the job to the man, selection and training, and job assessment. The second will deal with human relations in industry—joint consultation, formal and informal groupings in the workshop, and attitudes to work.

U.S. Unions Report 17 Million Members

Membership of United States labor unions is estimated at 16,500,000 to 17,000,000* in a new directory of labour unions published last month by the U.S. Department of Labor. Nearly 800,000 of the membership is in Canada.

Of the 215 unions listed, 109 are affiliated with the American Federation of Labour, 33 with the Congress of Industrial Organizations and 73 with neither.

Three unions reported memberships of a million or more: the United Automobile Workers (CIO), 1,184,507; the United Steelworkers (CIO), 1,100,000; and the Teamsters (AFL), 1,000,000.

Unions estimated that close to three million women were members.

Demand Increases for Older Workers in U.S.

Employment demand in the United States for older workers is higher than it was a year ago, according to the Northwestern National Life Insurance Company.

Of the 125 public and private employment agencies surveyed by the company, 113 reported that the demand at present for men 45 to 55 years of age is from fair to good; 92 agencies reported the same for women in this age range.

The great majority of agencies finds that difficulties in placing those more than 55 years of age increase sharply, except for well-trained and skilled workers. In general, small business concerns, usually having pension programs that do not call for low hiring-age limitations, offer the best placement opportunities for workers 55 years and over.

Because the favourable labour market for older workers results in part at least from the present shortage of younger applicants, it cannot be regarded as permanent, the study concludes.

Japanese Bill Would Curb Electrical, Coal Strikes

The Japanese Government has drafted a proposed labour law which would give it wide powers to prevent a repetition of last year's coal and electricity strikes, according to a report in the New York *Journal of Commerce*.

The law would prevent workers in the electrical industry from taking any action directly hindering normal supply of power. It would prohibit employees in the coal industry from taking action , obstructing safety maintenance work or causing damage to mines.

Extracts from Hansard of Interest to Labour

Co-operative Credit Associations

April 17

Hon. Douglas Abbott (Minister of Finance) moved the second reading of Bill No. 338, respecting co-operative credit associations.

He said: Mr. Speaker, this Act provides for the establishment of co-operative credit associations operating in more than one province under the supervision of the superintendent of insurance. Before any such national association may operate it will have to come to Parliament for incorporation by a special act.

This legislation is introduced at this time because a group of provincial central co-operative societies has announced its intention to apply to Parliament to be incorporated as a national co-operative association. It is the Government's view that if Parliament is to approve such legislation it is desirable that there be available suitable safeguards.

The main object of a national association will be the receiving of deposits from its members and the loaning of money to its members and making other approved investments. This is the fundamental function of provincial co-operative credit associations. Hon. members will realize that at certain times there will be surplus cash on deposit with a member operating in one part of the country while there may be a demand for loans in another part of the country. However, with the establishment of a co-operative credit association, it will be possible to loan surplus funds to members requiring cash for loans on a national basis thereby overcoming the present provincial limitation.

The members of an association will be co-operative credit societies incorporated by special act or declared by Parliament to be eligible to become members of an association, not more than ten co-operative

*Union membership in Canada at January 1 this year had reached 1,219,714 (L.G., May, p. 646).

corporations (not being co-operative credit societies) and not more than fifteen natural persons.

It is provided that before an association commences accepting deposits and making loans it must obtain a certificate from the treasury board. This certificate will be granted only after the association has satisfied the board that it has complied with the provisions of the Act.

The lending and investment powers of an association are subject to adequate safeguards in order to prevent its assets from being too heavily concentrated in one particular form and to preserve liquidity. For example, an association may not make any loan or investment if its cash on hand and on deposit with the chartered banks is less than five per cent of its own deposit liabilities.

There is provision for the appointment of auditors in a manner similar to that in the Bank Act. In addition there is a requirement for submitting annual reports to the Government. The superintendent of insurance, who now has supervision over certain insurance, trust and loan companies, will have supervision over an association, and penalties are provided for violations of the provisions of this Act.

I believe that hon. members are fully aware of the necessity of this legislation. The growth of co-operative credit societies in Canada in recent years has been widespread. As the operations of these organizations will undoubtedly include operations which are clearly of a banking nature, it is desirable that if these associations are going to operate on a national basis they should be under federal legislation as are the chartered banks.

I propose that when this bill receives second reading it be referred to the banking and commerce committee. At that time the superintendent of insurance and the officers of my department will be available to explain its provisions and discuss them with members of the committee....

As the House will appreciate, this bill is a purely enabling measure. It permits the incorporation of a national credit association by special act, and outlines the powers of such an association. It provides for inspection and supervision by the superintendent of insurance. I agree with what has been said about the splendid work which is being done by these credit unions, and I think it is now desirable that there should be federal legislation to authorize the incorporation, organization and supervision . . . of these financial institutions....

Motion agreed to, bill read the second time and referred to the standing committee on banking and commerce.

April 27

Bill reported, read the third time and passed.

National Housing Act Amendment

April 21

Hon. Robert H. Winters (Minister of Resources and Development) moved that the House go into committee to consider the following resolution:

That it is expedient to introduce a measure to amend the National Housing Act, 1944, to increase the appropriation provided by Section 7 for loans under part I from $300,000,000 to $500,000,000, and the appropriation provided by Section 13 for loans under part II from $150,000,000 to $250,000,000, also with respect to grants in aid of slum clearance and to certain other matters deemed necessary for the proper administration of the Act.

Motion agreed to and the House went into committee, Mr. Beaudoin in the chair.

Mr. Winters: Mr. Chairman, the resolution before the House seeks authority for the Government to introduce certain amendments to the National Housing Act. I will at this stage confine my remarks to the subject matter of the resolution.

When the present National Housing Act was passed in 1944, $100 million was authorized for home ownership loans under part I and to take care of possible losses under the previous housing acts of 1935 and 1938. In 1949 this amount was increased to $300 million. It is now proposed further to increase this appropriation by $200 million, making a total cumulative statutory vote of $500 million for home ownership loans under part I of the Act.

For rental housing under part II of the Act the original appropriation was $50 million. This was increased to $150 million in 1945. It is now proposed to increase this appropriation by $100 million to $250 million, making a total cumulative statutory vote of $250 million for rental housing loans under part II of the Act.

Since 1945 over $1 billion of loans have been approved under the National Housing Act for residential construction in Canada. Of this amount the share of the federal Government, including loans made by Central Mortgage and Housing Corporation on direct account, is $379 million.

The reason for asking for increased appropriations at this time is that, of the $300 million appropriated for part I loans,

$285 million has been committed, including the amount held to the credit of lending institutions under the pool guarantee arrangement. As hon. members know, when a loan is made jointly with a lending institution under the Act a certain amount is credited by Central Mortgage and Housing Corporation to an account held by the Corporation in the name of that lending company. This account is for the purpose of making provision for losses that the company may in the future sustain in respect of its share of joint loans. Commitments for rental housing loans under part II, including that credited to the pool guarantee account, approximate $126 million. The balances remaining would not be sufficient to carry the operations of the Act through the year 1953.

During the last session the standing committee on banking and commerce examined the annual report of Central Mortgage and Housing Corporation which administers the National Housing Act. That committee, after its deliberations, recommended that the slum clearance provisions of the National Housing Act be amended. It is now proposed to broaden Section 12—the slum clearance section—to provide that the slum area when cleared may be developed under Section 35 of the Act as a federal-provincial housing project. Under the present legislation the area may be developed by a limited-dividend company, as provided by Section 9 of the Act, or a life insurance company operating under Section 11 of the Act. The amendment will further provide for the development of a housing project on an alternative area to be provided by the municipality. This alternative area may be developed by a limited-dividend company, a life company or as a federal-provincial project. There is a condition imposed in the proposed amendment, to the effect that the cleared area must be used for a municipal, provincial or federal public purpose. In other words, the provision relating to the use of an alternative area will apply only if the slum area is designated on the master plan of the municipality for public use. The committee recommended also that the cleared area might be used for commercial or other purposes. It is considered that if land is to be acquired and cleared for commercial or industrial uses the responsibility for its acquisition and clearance should rest with the commercial or industrial interests concerned, and authority to make the cleared land thus available is not being sought in the proposed amendments.

Other amendments contained in the proposed legislation are of a procedural or technical nature....

Resolution reported, read the second time and concurred in.

Mr. Winters thereupon moved for leave to introduce Bill No. 339, to amend the National Housing Act, 1944.

Motion agreed to and bill read the first time.

April 28

Hon. Robert H. Winters (Minister of Resources and Development) moved the second reading of Bill No. 339, to amend the National Housing Act, 1944.

He said: ...Before dealing with the amendments proposed for the National Housing Act I would like to make some remarks of a general nature.

During 1952 the number of housing starts increased steadily. For the year as a whole starts numbered about 84,000, excluding conversions, an increase of 21 per cent over the 68,600 of 1951. There were 93,000 houses started in 1950. In the last quarter of 1952 starts were taking place at a rate higher than the previous record rate of 1950.

Completions on the other hand declined in 1952 to 74,000 units, as compared with 81,000 in 1951. This decline reflects the much smaller carry-over into 1952 of dwellings under construction than there were at the beginning of 1951. The carry-over has been restored, as a result of the increase in housing starts in 1952, and we entered the year 1953 with 56,000 dwellings under construction. There is already therefore, an auspicious prospect for completions in 1953. This high rate of building has continued this year. During the first quarter of 1953, dwellings started in centres of 5,000 population and over numbered 10,500. This represents an increase of 69 per cent over the same period in 1951, and as a matter of fact it has been the best first quarter on record from the point of view of the number of dwellings started in Canada.

The large number of houses that were brought under construction in the later part of 1952 may be attributed to a number of favourable factors on both the demand side and the supply side of the market. For one thing the demand for new houses was supported by a continued high level of net family formation. Not only was there a good increase in the number of families in 1952, but the families had more money with which to buy houses. Fortunately, our lending insti-

tutions showed an increased interest during 1952 in mortgage loans for new residential construction in general and for National Housing Act loans in particular.

Institutional loans for new residential construction were approved for 46,000 units in 1952, an increase of 19 per cent over 1951. Joint loans under the National Housing Act were approved for 27,488 dwellings in 1952, or 39 per cent more than in 1951. Had it not been for this increased flow of mortgage money, the rise in demand deriving from family formation and higher real incomes could not have been effective to the same extent. Brisk demand in 1952 was accompanied by favourable supply conditions. Except for cement in certain localities and some minor steel items, construction materials were readily available where and when needed. Even in regard to cement and steel, the situation improved towards the end of the year. We reaped the benefits of ample material supplies, not only in terms of a steady flow of production at the site, but also in terms of cost stability. During the course of 1952 the price of building materials for a house was about the same as in 1951. Neither was there any marked shortage of labour in 1952 for the residential work in hand despite an increase in other types of construction. However, wages in the construction field increased during the year by about 9 per cent.

Combined material cost and wage rates in construction were about 3 per cent higher in 1952 than in 1951; the prices of new houses increased even less. This is the smallest rise in construction costs that has occurred from one year to the next since the war. So much for the calendar year just passed. What of the cumulative program over the past seven years, from the beginning of 1946 to December 31, 1952? In this period starts in Canada, excluding conversions of existing buildings, totalled 570,000.

I would now like to summarize the accomplishments of the federal Government in the field of housing during this period and the extent to which the support and stimulus provided by the National Housing Act has resulted in such a large volume of new housing. During this period 141,294 dwelling units have received financial assistance under the joint loan terms of the National Housing Act. Another 30,000 units were built on direct government account. This included 28,000 units in the veterans' rental housing program and another 1,760 units under the public housing Section 35 of the National Housing Act. In addition the rental insurance plan has accounted for about 18,000 units.

Central Mortgage and Housing Corporation, from funds voted by Parliament, has built about 12,000 permanent married quarters for the armed services. In addition, a modest number of units have been built for other government departments, including the Department of Defence Production. Housing assistance has also been provided by the federal Government under the Veterans Land Act, the Canadian Farm Loan Act and the Farm Improvement Loans Guarantee Act. All these activities, of which hon. members will note that joint loans compose much the largest element, have had the net effect that about two of every five permanent post-war houses in Canada have received stimulus or assistance of one kind or another from the federal Government. In making this tally I have not taken into account the 11,000 temporary units made available under the emergency shelter regulations.

I would point out that apart from the direct construction to which I have referred this housing has been produced by supplementing the efforts of those agencies whose ordinary business it is to deal directly in new housing. We have supported the builders with guarantees, we have supported the lending institutions by joint participation in National Housing Act loans; during the immediate post-war years we ensured that materials flowed into the residential field. Generally, the policy was then, as it is now, for the federal Government to give secondary help and assistance rather than to assume a primary rôle.

I would like to discuss for a few moments some of the provisions of the Act and to lay emphasis upon those few sections which supplement the basic policy of the Government to utilize to the utmost existing private mortgage outlets and other private agencies directly connected with the construction of houses.

It will be recalled that apart from the provision for direct government loans to limited dividend companies, the National Housing Act, passed in 1944, relied upon the initiative of private enterprise and old established institutions to use their facilities to provide new housing.

In June 1947, Section 31A was introduced. The difficulty had arisen that the lending institutions were unable or unwilling to make loans in outlying areas. The new section authorized Central Mortgage to make loans on the same terms to the borrowers as joint loans where such loans are not being made by lending institutions.

Since the introduction of Section 31A its application has in practice been widened to cover three other types of housing. First, rental insurance projects for which private institutional mortgage loans are not available may qualify for direct corporation loans. Second, the 90 per cent loans available in respect of houses for defence workers are made on direct corporation account under this section. And third, since last July loans placed by lending institutions, acting as agents of the Corporation, may be made on direct corporation account in centres of from about 5,000 to 50,000 population. Some of these centres were being deprived of mortgage money and the agency arrangement was conceived to prevent the withdrawal of National Housing Act benefits therefrom.

Under Section 31A of the Act net loans have been approved to the end of 1952 in respect of 16,290 dwellings. Of these, 13,030 were under the rental insurance plan, 1,848 were in areas outside the operations of lending institutions, 1,974 were in connection with 90 per cent loans for defence workers' housing, and 96 were under agency agreements.

Another change in the National Housing Act took place in June of 1948 with the introduction of the rental insurance plan. This was devised to establish incentives to promote the construction of more rental housing by builders. Under the plan the Corporation is authorized to make certain guarantees in regard to new rental housing projects, in return for an agreed premium. To builders of approved projects the Corporation guarantees a minimum gross annual rental. The amount of guaranteed rental itself is calculated as enough to pay all operating and financial costs and provide to the owner of the project a return of 2 per cent on his equity. As a condition of this guarantee the rental units come under a rental ceiling set by the Corporation for a period of three years. By the end of 1952 the number of rental dwellings for which this type of guarantee has been approved was over 18,000.

During the post-war years the only important new supply of low rental housing was provided by the veterans' rental program. This had been achieved by arrangements, with the approval of provincial governments, between the federal Government and the municipalities whereby a portion of the land and services was provided by the municipality and the construction was carried out by the federal Government. By the middle of 1949 this program had come to a conclusion and at that time, by amendment to the National Housing Act, Parliament authorized the Government to enter the field of public housing through the medium of Section 35. It was felt that a more permanent arrangement for providing housing, and particularly rental housing, was required for those whose needs could not be met by existing facilities of the National Housing Act. It was also considered that some positive action should be taken to assist in the solution of one of the most pressing problems which had already beset the production of housing—that is, the lack of serviced land. Not only was Section 35 designated to deal with these two problems, but it also fitted into our federal structure of government by leaving initiative with the provincial governments so that arrangements with municipalities could take place through them.

Most provincial governments have responded by enacting legislation which enables them to work with the federal Government in partnership, the general basis being that the federal Government provides 75 per cent and the provincial governments 25 per cent of the funds required for work undertaken through Section 35. The provincial governments are, of course, free to share their part of the costs with municipalities in whatever proportion they may see fit.

In the application of Section 35 to low rental housing we have now established some basic principles of administration. The ownership of such low rental projects is vested in the federal-provincial partnership and a local housing authority is set up to manage the property.

It is the firm policy of the federal Government that federal subsidies provided under Section 35 of the Act shall be made available only to families which need such assistance in housing. We believe that it is improper for the taxpayers as a whole to subsidize families who can afford to pay economic rentals or their equivalent in the home ownership field. In this respect our policy is similar to that of the United States.

In addition to the subsidized low rental projects, we have undertaken rental projects which do not involve any subsidy but produce a rent revenue sufficient to recover full costs of amortization, management and local taxes. The tenants eligible for this housing must have incomes not less than four and not more than six times the rent.

The land assembly operations under Section 35 are quite distinct from those which involve the construction and owner-

ship of rental projects, though they are based on the same ratio of federal-provincial financing and the same sharing of profits or losses. Here the financial resources of the federal Government are available to assist municipalities in the preparing of land for residential use. We have so far undertaken with the provinces to acquire 24 tracts of land ranging in size from 10 acres to 500 acres which will yield 11,900 serviced house lots.

Mr. Speaker, I have reviewed some of the actions taken under the National Housing Act in order to give some background for the amendments now being proposed. It will be clear to hon. members that the rôle of the federal Government in this field is a complex one. The Government must deal on the one hand as a mortgage banker in full co-operation with the financial institutions who have their own proper purposes. On the other hand we must deal in a co-operative spirit with provincial governments who have jurisdiction in the field of housing and who have widely differing traditions and attitudes in the matter of housing. And finally, the construction that results from our efforts is placed in the local community and must complement the present array of buildings there. Now it is a feature of the National Housing Act as originally introduced and frequently improved by Parliament that it enables the lending of support by the federal Government on behalf of the citizens of Canada to meet a wide variety of needs. I venture to say that in no federal state outside Canada is there found a more comprehensive, flexible and versatile instrument to help the people meet their need for shelter than has been passed by Parliament.

I opened my remarks today with some observations on the housing program of 1952. The rising levels of starts and strong demand in 1953 will, I am sure, prove a source of gratification to all of us. But we are still faced with difficulties.

Most important among these I consider the shortage of serviced land. The post-war rate of housing starts has far exceeded the rate of lot development and the growth of municipal services, such as sewer, water, road and school facilities. Therefore the amount of available serviced land has rapidly diminished. In some centres substantial programs of new residential development must wait on the provision of additional serviced land, and in others a similar situation is approaching. An increasing proportion of current house building requires the development of new land.

This problem has two important aspects, that of the municipality, and that of the house buyer. The problem of the municipality is more immediate. For the municipality, residential land developments means the extension of pavements and existing utilities and commonly involves the provision of new schools. In some cases further land development may require enlarged central pumping plants and the like. In any case, such land development means heavy municipal expenditures. These expenditures must be financed by municipal borrowings. Because of unwillingness or inability to borrow, the municipalities do not always respond as soon as the need for additional serviced land arises. The financing problems are of particular severity in metropolitan environs where the growth associated with a great city is apt to be thrust upon a junior municipality which is predominantly residential, and which lacks those commercial and industrial assessments that bulk so large in the ordinary municipal tax base. It is this non-residential property that has traditionally given some relief to the home owner in paying for expensive urban services.

The development of serviced land under Section 35 is providing financial relief to municipalities only in respect to the installation of facilities within the project. The municipality must still meet the costs of school construction, trunk main extensions and the expansion of central municipality plant.

As that problem is solved and serviced land is made ready in greater quantities, it may be necessary to stimulate a corresponding increase in the flow of mortgage money. The introduction of the agency arrangement in 1952, by which the Corporation extended the direct loan facilities of Section 31A to cities of from 5,000 to 50,000 population, is already a step in that direction.

Life and fire insurance companies, trust and loan companies and fraternal societies are the main source of private mortgage money for new houses in Canada. These institutions have played a most important rôle in financing house construction. Their participation in the mortgage lending field increased from 1951 to 1952. Commitments in the whole mortgage field in 1951 amounted to $434 million and in 1952 to $497 million, an increase of 15 per cent. The increase of commitment in the residential field is even greater. I mention these figures because I would like to consider them in relation to the whole investment operation carried out by these companies. The level of net mortgage

investment by these companies in 1952 absorbed about half of their total increase in assets during the year. Their mortgage holdings at the end of the year represented something more than one-quarter of their total assets. Present levels of institutional mortgage investment indicate that lending institutions are not just to maintain but to increase the relative importance of their mortgage portfolios.

Now to deal more directly with the terms of the bill before the House: The first amendment vests in approved lending institutions the power to act in an agency capacity on behalf of Central Mortgage and Housing Corporation. This is accomplished by adding paragraph (c) to subsection (1) of Section 3 of the present statute. That section provides that notwithstanding limitations that may be contained in other legislation, an approved lending institution shall have power to make loans in accord with and in the proportions mentioned in the National Housing Act. In this connection hon. members will recall that the Insurance Act normally limits mortgage lending by insurance companies to 60 per cent of the lending value whereas under the National Housing Act this is increased to 80 per cent by government participation. The section in addition authorizes lending companies to purchase mortgages from Central Mortgage. No change is made in these particulars. The new clause authorizes the agency provisions. It is being included by way of abundant caution. We felt that the present legislation is adequate but while lending institutions believe that they have the power to act as the agent of the Corporation, they indicated that they would feel more secure if there was an expressed empowering provision in the National Housing Act.

As hon. members are aware, under Section 31A of the National Housing Act the Corporation makes loans on its own account on terms similar to joint loans in communities of about 5,000 and less. Lending institutions have been servicing the larger centres of population. Last year, however, when mortgage money did not appear to be available to give full coverage of all areas in Canada, the Corporation was authorized by the Government to make an arrangement with lending institutions by which they could make loans in areas up to 50,000, with the funds being provided by Central Mortgage. Under the arrangement the companies administer the loans for the first two years, during which time they have an option under which they can purchase a three-quarters interest in the loan, thus reconstituting it as a joint loan. At the present time five companies have signed the agency agreement, and up to the end of the year 96 loans had been approved.

Another provision in the bill empowers the Corporation on its own account to make supplementary loans for borrowers' charges. Under the statute, where there is a joint loan in existence the company and the Corporation together may make a supplementary loan to a borrower for the purpose of protecting the mortgage security. It would be helpful if the Corporation had the same power in respect of direct corporation loans to meet emergency cases that might arise. As an example, there might be a failure of a central heating plant in a large housing development financed by the Corporation after a period of years and the owners might not be in a position to finance the installation of a new plant. This would mean that the project would not be rentable. In order to put the project in a position to operate, the Corporation could finance by way of supplementary loan the cost of such installation. While we do not look forward to cases of this kind arising, it is considered that the Corporation should have such authority.

Parliament is being asked to amend the section in the National Housing Act that established the integrated housing plan. As hon. members know, under these provisions in the Act the Corporation is authorized to enter into contracts with builders to encourage the construction of houses for sale to veterans. The existing legislation provides that such contracts shall require the builder to finance the construction of the houses under the provisions of the National Housing Act and to offer the houses so built for sale at a price not exceeding the price fixed in the contract with Central Mortgage. The section further provides that the Corporation shall agree to purchase from the builder any house that he is unable to sell on the market. It is now proposed that in return for the Corporation's undertaking to repurchase a house, the builder should pay a premium at a rate to be established by the Governor in Council. It is proposed further to amend the integrated housing section by enlarging the class of persons to whom houses can be offered in the first instance by builders to include defence workers as well as veterans.

The arrangement is that for a certain period after the completion of the house the builder cannot consider any applications other than those of veterans and defence workers. After the expiration of this specified period the house may be

offered on the market at or below the fixed price. If he is unable to sell it within a certain period the builder may then require the Corporation to take the house off his hands.

Then, too, there are revisions of the sections which provide for the cumulative statutory votes. For home ownership loans and losses under the previous housing acts and the existing Act an increase is sought from $300 million to $500 million, while the cumulative total requested for rental housing loans is $250 million, instead of the present $150 million.

The rent control period for rental insurance projects in the present legislation is being dealt with. The amount of rent that may be charged by a borrower in respect of each unit of a project financed under the rental insurance plan is limited by an agreement between the Corporation and the borrower.

Under the present legislation the period of control, which is three years, runs from the date of completion of the entire project. The provision has worked a hardship in the case of very large projects in which the completion dates for the various units may extend over a period of years. The new legislation would permit the rent control period to be on a unit basis. Administratively, it will be dealt with by groups of units.

The bill contains a revision of the rehousing sometimes referred to as slum clearance, provisions of the National Housing Act. Section 12 of the Act provides for federal grants to a municipality to assist in clearing, replanning, rehabilitating and modernizing slum areas or blighted or substandard areas.

As it presently reads, Section 12 authorizes the Minister, with the approval of the Governor in Council, to make a grant to a municipality to assist it to acquire and clear a slum area. It is a condition of the grant under the present legislation that the area which is acquired and cleared be sold to a limited-dividend housing company for the construction of a housing project under Section 9 of the Act, or to a life insurance company for the construction of a housing project under Section 11. As hon. members know, Section 9 provides for loans for low rent housing, and Section 11 authorizes lending companies to proceed with the construction and operation of low and moderate rental housing.

At present the amount of the grant must not exceed one-half the difference between the cost of the acquisition and clearance of the land the price at which it is sold to a limited-dividend company or a life insurance company. The remainder of the excess costs must be borne by the municipality or by the province and the municipality jointly. The proposed amendment provides that in addition to the possible sale of the land to a limited-dividend company or a life insurance company it may also be sold to a province and Central Mortgage and Housing Corporation jointly for a housing development under Section 35 of the National Housing Act. This is in accordance with the recommendation of the standing committee on banking and commerce after it completed its study of the annual report of Central Mortgage and Housing Corporation last year. The basis of sharing the costs of acquisition and clearance will remain unchanged. The cost of the future development under Section 35 will be borne 25 per cent by the province and 75 per cent by the federal Government. The present legislation requires that the cleared area be redeveloped for housing purposes. The proposed amendments will permit the cleared area to be used either for housing purposes or for a municipal, provincial or federal public purpose, provided that the municipality makes available for a housing development an alternative area of a size sufficient to house at least the same number of persons as were living in the cleared area. The provision relating to the use of an alternative area will apply only where the slum area to be cleared is designated on the municipal plan for use ultimately for public purposes.

In conclusion, Mr. Speaker, I would like to explain that part II of the bill comprising Sections 8 to 15 constitutes a rewrite of Sections 1 to 7....

Mr. Donald M. Fleming (Eglinton): Mr. Speaker, it is evident, both from the terms of Bill 339, and from the interesting statement just made to the House by the Minister, that we are dealing with a bill of limited objectives and limited extent. Indeed, contrary to the expectations of some hon. members, the bill does not seem to go much beyond the terms of the resolution debated in the House on April 21.

Sir, I am sure there will be no question as to the desire of the House to give full support to the bill, limited as its objectives may be. Indeed, it may be said that at no time has Parliament hesitated, when called upon to enact housing legislation in any form which would be of assistance in meeting this great and still pressing problem.

Similarly, when questions have arisen—and I refer to the entire post-war period—as to making greater sums of money

available from the consolidated revenue fund for the assistance of housing, and to implement sound schemes, there has never been any hesitation on the part of Parliament to provide what was required. Therefore it may be assumed that while the bill may not go as far in its objectives as some may have hoped, nevertheless to the extent that it does attempt to improve our housing legislation it will, I am sure, have the support of hon. members.

The Minister said less than I had hoped he would say concerning the need for housing in Canada....

Mr. J. W. Noseworthy (York South): My criticism of the bill before us, Mr. Speaker, is that, as a bit of patchwork of tinkering with the National Housing Act, it has some merit. But it does not touch the root of our housing problem. When speaking during the resolution stage of this matter on April 24, I pointed out that, although the Government has been negotiating with the finance companies and the real estate companies ever since the war, it has not yet evolved a housing policy that has met the situation.

The facts, as I pointed out, are that the backlog of housing that existed at the end of the war still exists and has increased....

Mr. E. G. Hansell (Macleod): ...I think all hon. members will agree that what is needed is some action which will enable those of low income to purchase their own homes. That can be done only by offering them low initial payments, in the first instance. I am not opposed to the procedure of borrowing on homes. As I have said before, most people would not own their own homes if they had not had the opportunity of borrowing money in the first instance. However, there are vast numbers of young married people who are now starting out in life—and perhaps some older people too—who are in the lower income brackets, who are paying rent, sometimes high rent which takes up a great proportion of their income. These are people in the lower income brackets who could not possibly begin to build houses because they have not sufficient money to make the initial payments....

Mr. George H. Hees (Broadview): ...I should like to deal with the question of the interest rate and the amortization period. On National Housing Act loans it is necessary to pay 5¼ per cent interest, and to pay the loan off over a 20-year period. This requirement makes it extremely difficult indeed for a person earning a modest income to carry the charges on a new house. I should like once again to cite what has been done to meet this situation in the United States. There, loans are made at rates as low as 4 per cent, and the amortization extends over a period as long as 30 years. This provision has made it possible for people earning a modest income to carry the charges on a new house....

Mr. John Hunter (Parkdale): ...Let us try to get down to the facts of this situation. I was interested in some of the suggestions offered by the hon. member for York South (Mr. Noseworthy). He suggested there should be direct loans by Central Mortgage and Housing Corporation at 2 per cent. That is very thought-provoking and most attractive. I think most of us would like to be living in houses where the mortgage was only 2 per cent. The great bulk of the mortgage money in this country is let out by the lending institutions, by the insurance companies, the loan companies and so on.

In the case of the insurance companies, that is the money of the policyholders, and in the case of the loan companies, it is the money of the shareholders. The insurance company is holding that money in trust for its policyholders and it is their duty as trustees to invest it properly. Is it their duty to let out that money at 2 per cent when they can get 5 or 6 per cent? Obviously it is not.

If direct loans are made by the Government at 2 per cent there will be absolutely no participation by the lending institutions. It would be against their duties as trustees to lend money at that rate of interest. That means that the Government will have to provide the money. As the last speaker said, let it be an investment of government funds. What a delightful phrase, government funds. You would think that that was some mysterious money that did not come from anywhere and did not hurt anybody. We will just lend these government funds, we will just lend unlimited money for housing at 2 per cent. At the rate at which money is being loaned for housing at the present time, and with the interest which you would get with money available at 2 per cent, it would mean roughly $1,000 million a year. It would certainly be well over $700 million or $800 million. That could be raised only by taxation of the Canadian people because these mysterious government funds are nothing but the money of the people.

They are advocating that this Government tax the people of this country approximately an extra $1,000 million a year....

The hon. member for Broadview said some interesting things and on the whole he deals with them sensibly. He referred to the lack of serviced land. We all know that that is true. It is a difficult problem and it always will be with the type of municipal set-up we have in this country. Possibly it would be a difficult problem with any other type of municipal government. We all know that taxation on housing simply does not produce enough revenue to pay for schooling and other services. Most municipalities which have any type of planning board want about 35 per cent of their assessments in the form of industrial assessments. Until they get that 35 per cent they are not going to approve a plan for serviced land for housing. Not only that, it takes a large builder to service land today. The municipality is not interested in servicing land itself and putting out debentures, as used to be done. When a builder comes to them with a plan for a hundred acres, or whatever it is, they say they will approve it if he will put in the roads, guarantee the school debentures, put in the storm sewers, the water mains, the gutters and so on. All these items of service drive up the cost of the houses because they all cost money....

Another suggestion was that the down payment should be much less, possibly no more than 10 per cent. But does that solve the problem? With a down payment of 10 per cent you immediately require a loan of $9,000 instead of $8,000, and that increases the monthly amortization payments. Under the regulations of Central Mortgage and Housing Corporation the monthly payment, including interest, principal and taxes, should not be more than 23 per cent of the person's salary. You would be surprised at how many peope would be brought outside that provision of 23 per cent if an extra $1,000 were added to their loans. Most purchasers of these low-cost $10,000 homes are buying them within a very few dollars of the 23 per cent provision. As soon as you add another $1,000 to the loan you defeat your purpose—you would then have houses but you would have no purchasers.

The hon. member, along with others, suggests that the interest rate is too high and the amortization period too short. As I have said already, if we are going to get the lending institutions to put their money into the mortgage field the mortgage interest rate must be at a level which will attract them away from other investments....

Mr. J. G. Diefenbaker (Lake Centre): ...Certainly no one wants the Government embarking on an expenditure orgy such as was contemplated in such horrendous terms by the hon. member for Parkdale (Mr. Hunter); but on the other hand the Government, having embarked on a policy of endeavouring to provide housing accommodation for so large a portion of the population as is possible, should endeavour to remove those anomalies which exist in the law or the regulations and which in any way tend to reduce that maximum production of building units which is the avowed purpose of the legislation....

Mr. David A. Croll (Spadina): ...The Minister told us today that the most pressing problem in the production of housing was the need for serviced land. I think it is the conclusion of hon. members, from what has already been said that the most pressing problem is the shortage of mortgage money. The Minister indicated that life and fire insurance, trust and loan companies were the main sources of private mortgage money. He told us today that their mortgage holdings represent a quarter of their total assets. I have no doubt his figures are correct; but it is not enough.

Mr. Fortin, secretary-treasurer of the Dominion Mortgage and Investment Association said, in respose to a request for mortgage money, "But there is not enough money to go around". He said that some projects must be postponed, and that house-building mortgages must take their share of the postponement. His words appear in the *Globe and Mail* of March 25, 1953.

Last year Mr. Mansur, giving evidence before the standing committee on banking and commerce, said that 10,000 additional starts would have been made if mortgage money had been available in 1952. This means that we lost the use of some 10,000 houses during 1952 because we did not have enough mortgage money. That is a very serious matter.

Since 1947, under Section 31A of the National Housing Act, there is authority to the Corporation to make loans on its own account when joint loans are not available from lending institutions. To meet the shortage of mortgage money, direct loans have been made available in municipalities under 5,000. In August of 1952 that was extended to communities under 50,000, such as Oshawa, Barrie, Brampton, Orillia and similar municipalities. Then today the Minister said in his statement:—

> The introduction of the agency arrangement in 1952 by which the corporation extended the direct loan facilities of Section 31A to cities of from 5,000 to 50,000 population is already a step in that direction.

Up to the present time 96 loans have been made under that section of the Act. The Minister knows how disappointing that is, in my view; because we are not coming to grips with the problem. I think that in the main the Minister and the Government are doing an excellent job on housing; but a new problem has arisen, and we are not facing up to it. Financing today, above all things, is limiting our ability to build houses. There just is not enough money now available to build homes. Therefore credit-worthy Canadians cannot obtain the money which ought to be available to them.

I recall very well when the occasion arose in the house to increase interest rates. It was then said—I do not suggest it was said by the Minister but certainly it was said outside the House—that if we wanted to make it attractive to the mortgage companies we had to increase the interest rates. Well, we did that; and almost immediately more money came on the scene. Now we find we are getting another squeeze. I am suggesting to the House that this is another attempt being made to increase interest rates once again.

If there is no inclination on the part of the Government to expand the loan program, surely there is an opportunity to increase the joint loan. At the present time we are participants to the extent of 25 per cent. We could participate to the extent of 50 per cent, which would make 25 per cent more money available to the public generally by way of conventional or direct loans from the mortgage companies. This would help the mortgage companies to provide available funds in order to provide more housing.

I think it would do more than that. What I am saying to the House is that if we participated to the extent of 50 per cent instead of 25 per cent it would also decrease the fear of the lending institutions against a lower down payment, or a longer amortization period. Consequently it would make it easier for people in Canada who need houses to obtain them.

If more mortagage money was available at the present time it would have an effect upon construction costs. If builders were able to plan so that they could use mass-production methods and undertake large-scale building projects, they could bring down the cost of housing. But they are unable to do that at the present time, because they cannot obtain forward commitments for mortgages.

I am considerably disappointed to find that it is necessary for us to beg money from lending institutions, on their terms; still it is not available to a great many Canadians who do not want it for speculation purposes, but merely to build homes. In the House of Commons we talk about encouraging people to live in their own homes. That is the way it should be. But on the other hand we are not doing too much to make that possible. I think the time has come when a credit-worthy Canadian ought to be able to obtain whatever funds he requires to build a home for himself and his family. If mortgage and lending institutions in this country are not prepared to make the funds available, then it is the duty of the Government to make them available. I am not talking about 1 per cent money; I am not talking about 2 per cent money. If it costs the Government 3 per cent then we will charge 3 per cent, and one-quarter per cent to cover the overhead. I am not asking for a subsidy from the Government or from anyone else. All I suggest is that there is a real and vital problem which concerns all of us, and which is not receiving the attention it deserves....

Immigration

April 23

Hon. W. E. Harris (Minister of Citizenship and Immigration): ...And now, Mr. Chairman, I would like to take just a very brief look at the future. The Government is fully aware that Canada needs more people, that we cannot fulfil our destiny and develop our resources with a population of only a little more than fourteen and a half million. The Government is fully aware that natural increase will not alone provide the population we must have. The Government is aware also of the fact that the difficult times we had in the 1930's had an effect on the natural increase and the number of Canadians reaching working age is lower than normal at the present time. Accordingly the Government will continue its program of immigration to stimulate Canadian growth and Canadian development.

To give effect to this, we are now selecting immigrants on a very wide basis. First priority, of course, is being given in all countries to the movement of close relatives of people already established in Canada. I believe hon. members will agree with this. However, the close relatives are only a percentage of those we are selecting now. For instance, in all countries where we have immigration offices, outside of

Asia, we are selecting, in addition to the close relatives, anyone who meets our qualifications and for whom there are opportunities in Canada. There is one exception to the above; that is in the Netherlands, with which country we have an agreement for the selection of immigrants. In those countries where we have no immigration offices we are able to deal only with cases of close relatives and cases of exceptional merit.

The approach will continue to be a realistic one, with the development of our economy the guiding factor. We shall anticipate future developments as closely as we can and gear our immigration program to them, realizing as we do that the next few years will present greater opportunities for the growth of the Canadian nation than ever before, and that under these circumstances there is an obligation on the Government to seize the opportunity and make the maximum use of it, not only in the intersts of our people but in the interests of peace.

Canada has much to contribute to the peace of the world; and that contribution will be the greater as we grow in numbers, not only by natural increase but by the addition to our population of others who will acquire Canadian ways and add something to our national life, and who are quite prepared to play their part in building and defending their country of the future.

Mr. Gillis (Cape Breton South): ...This is a subject about which I do not think we have had sufficient discussion. In my opinion the whole future of Canada depends to a great extent upon what our immigration policy may be, and how well we plan it. In my view immigration cannot be discussed intelligently unless other related factors are considered. Immigration, employment and housing are in my opinion interrelated; and a considerable amount of study and planning must take place if our immigration policy is to be realistic and successful.

The Canadian Congress of Labour and the Trades and Labour Congress made representations to the Government within the last few months. They had a section in their brief dealing with this particular matter. They are not opposed to immigration, but they believe in planning it and considering all the factors related to it.

One of the fields that must be carefully surveyed by the Department of Citizenship and Immigration and the Department of Labour is the field of employment. Mr. Mosher, President of the CCL, speaking only last week in Saint John, New Brunswick, suggested that unemployment could be looked for from some of the signs they are seeing today, such as a growing resistance of employers to increased wages, the general unrest that is beginning to creep in which indicates a levelling off, and so on. With the curtailment of defence spending in the foreseeable future, pockets of unemployment might develop across the country. These are all things which the Department of Immigration should check closely with the Department of Labour.

I know that if you go across the country from the Maritimes to British Columbia you will find that in large industrial centres like Montreal, Toronto, Windsor and Vancouver there is growing uneasiness on the part of the industrial worker because of the influx of people from other parts of the world into those particular centres. I think that adds up to a lack of planning. If you have a recession in those areas you will have a bad unemployment problem. I think the whole matter of immigration should be predicated on developing the country, not just bringing them in and laying them down in the centres where there is employment. If we are going to develop Canada it must be opened up. You cannot continue to concentrate in the centres as we are doing at the present time....

What the Government professes to do is bring in only the kind of labour we are short of, when we are short and where we are short. But that is not always as easy as it looks. The National Employment Service may report a shortage of such and such a kind of labour today and may even predict that the shortage is likely to last for some time. But by the time the immigrants have been found, selected and shipped in, the shortage may have vanished or may even have turned into a surplus. Sometimes at the right time shipping is short, and at the wrong time it is long. To cap it all, immigration really comes under two government departments —that is what I was pointing out a few minutes ago—Labour and Citizenship and Immigration; and to the extent that there is consultation, co-operation and understanding between the two Departments with respect to employment, number of immigrants, class of immigrants and where they should be placed, to the extent that these two departments are working together and co-operating, then to that extent will the Government's policy be in line with what the requirements of the country are and in the right spots.

Has post-war immigration caused unemployment? From 1946 to 1951 inclusive we brought in about 625,000 immigrants. Total emigration in the same years was about 207,000. That many left the country. But many of these people entering the country do not come into the labour force at all. Total adult immigrants, less married women, numbered about 331,000, and total adult emigrants, less married women, about 112,000. Therefore net immigration into the labour forces in the whole six years was only about 219,000, and many of these people do not come into the labour market.

In the five years from 1946 to 1950 about 46 per cent of the male immigrants were classified as agricultural or trading. Most of these were probably farmers or small merchants. In 1951, the peak year for post-war immigration, net adult immigrants, less married women, came to about 85,700, and about 28 per cent of the immigrant workers were farming class, trading or professional. In the first six months of 1952 almost 31 per cent were so classified. As our total civilian labour force now runs to about 5,200,000, and our total of wage and salary earners plus unemployed to about 3,900,000, it is evident that immigrant workers form only a very small proportion of the labour supply.

This of course does not dispose of the question. If the cup is already full, a few drops will make it overflow. But until last fall, when unemployment started rising markedly over the year before, there was seldom any suggestion that immigration was responsible for unemployment. In Ontario, which got about half the immigrants for the years 1946 to 1950, unemployment was usually low enough that nobody bothered. Quebec had much heavier unemployment, but got only about 17 per cent of the immigrants. The Atlantic provinces, which had the heaviest unemployment of all, got only 5 per cent of the immigrants. In the fall of 1951 unemployment in Ontario, though still probably much lighter in proportion to total number of workers than in any other region, began to show spectacular increases over the year before. By April 1952, it was running close to double. In Quebec the increases were less spectacular and came later, but they started from a much higher level. Both provinces also showed big increases in a short time.

All you can deal with are the 1951 and 1952 figures because the figures are not available up to date. I think the figures that I am using show pretty well the trend in employment, and I think they dispose of the arguments that immigration from 1946 to 1951 was responsible for great unemployment. It certainly was not. The figures do not show that, although there is a marked trend in the road to unemployment at the present time.

In the nine months from October 1951 to June 1952 the number of immigrants to Ontario was more than 50 per cent higher than in 1950-1951. Immigration to Quebec more than doubled. Immigration to British Columbia rose nearly 80 per cent. At the beginning of July 1952, unemployment was higher than in July 1951 in every single region, almost 58 per cent higher in Quebec, almost 43 per cent in British Columbia, almost 38 per cent in Ontario, 21 per cent in the Atlantic region and 15 per cent on the prairies. It does not follow that this was the result of immigration. Only a detailed study of where the immigrants went and into what industries and what job would tell us that.

But it certainly looks on the face of it as if the last quarter of 1951 and the first half of 1952 would have been a good time to ease up on immigration. Instead, the Government seems to have done just the opposite. The Government might reply that unemployment will soon give way to shortages and then we will need the extra workers in a hurry. But even the *Financial Post* of July 5 said there would probably be more unemployment next winter than in the winter before. It had this to say:—

> Demand is not nearly as buoyant as had been expected ... It seems evident now that the defence program is getting to the point of levelling off, so far as labour demand is concerned. There may be an increasing demand for skilled workers but the overall picture will remain about the same.

Yet in the first six months of 1952 immigration of unskilled and semi-skilled workers was about 35 per cent higher than in the first six months of the year before, a slightly higher percentage increase than for skilled workers. This needs explaining, to say the least. In a discussion last evening on the matter of education I pointed out that you can go to the employment offices across the country and find large queues of unskilled workers, and at the same time the bulletin boards in the employment offices will show that there is quite a demand for skilled workers, mechanics, toolmakers and so forth. We have not been placing enough emphasis on the matter of vocational training in this country, and we have been importing unskilled labour when there is an oversupply in the country at the present time.

The immigration figures for skilled and unskilled workers that I have just quoted

show very clearly that we are aggravating a situation that is already bad. Our selection of immigrants should be along the lines of the requirements of the country, but in the last year we have imported unskilled labour when we should have been bringing in skilled people to fill vacancies that already exist at the employment offices. We have been carrying on practically no vocational training in the country to train our own people who are in the queues of the unemployed at the present time.

That is why I said it was so important that the Department of Labour and the Department of Citizenship and Immigration should work closely together. I know that the Department of Labour has the information and the trained personnel who can put their fingers on any given situation across the country in the field of employment, with respect to where immigration is needed, what kind of immigrants, etc. I know the Minister of Citizenship and Immigration understands this just as well as I do, but he is a busy man with a big department to handle. He is pestered a lot by Members of Parliament and others, and it does no harm to check his memory on these things....

April 24

Mr. E. D. Fulton (Kamloops) ...Last night the Minister made a general statement on immigration... The Minister in introducing the second part of his remarks said at page 4328 of *Hansard:*—

> And now, Mr. Chairman, I would like to take just a very brief look at the future.

We hoped that we would get a very definite and positive statement of Government policy, but I feel that most of us who hoped that will be disappointed in that the Minister's statement, while a statement of broad general principles; was not what we had hoped to have in the way of a statement of policy. There is in it no indication of specific objectives or of specific limits of the broad general principles which are going to be applied by the Government in giving effect to those principles. In view of the importance of the subject I do think that we are entitled to know just what the concrete, positive program of the Government is with respect to immigration into Canada in the next few years. To what countries are we to look for the major sources of inflow of population? What limits of numbers or what objectives with respect to total immigration has the Government in mind or what is it seeking to achieve in bringing people into Canada?

We are still left with the question, quite unanswered, of exactly what that means in terms of numbers of people coming into Canada, and arrangements for their reception, their employment and their housing —all matters which, as the Member for Cape Breton South has pointed out, go hand in hand with immigration policy. We are left without any information on those specific subjects and I must say, Mr. Chairman, that although the Minister refers to a program of immigration to stimulate Canadian growth and development, and says that such is the Government's policy, my impression is rather to the contrary. My impression is that the Government is certainly not doing very much to stimulate immigration in the sense that it will contribute to the growth of Canada, but rather the Government is following an extremely cautious policy. I have the feeling, anyway, that there is some slight pressure on the brake pedal, and that rather than stimulating the growth and development of Canada we are hardly keeping pace—if we are in fact keeping pace it is only just keeping pace—with the demand which, as the Minister said, the nature and future of Canada makes for an increase in population. In particular, we are hardly keeping pace with the demand for farm workers. I think anyone coming from an agricultural constituency will agree that there is a considerable shortage of farm workers, and that the Government's immigration policy does not seem to be in tune with the necessities in that regard....

Unemployment Insurance

May 4

Hon. Milton F. Gregg (Minister of Labour) moved that the House go into committee to consider the following resolution:—

> That it is expedient to introduce a measure to amend The Unemployment Insurance Act, 1940, to provide for the payment of unemployment insurance benefit to insured persons who, while otherwise unemployed and entitled to benefit, become incapacitated for work by reason of illness or injury.

Motion agreed to and the House went into committee, Mr. Beaudoin in the chair.

Mr. Gregg: The effect of the bill to be founded on this resolution will be that a person who is in receipt of unemployment insurance benefit will continue to receive such benefit, notwithstanding the fact that he may be incapable of or unavailable for employment by reason of illness, injury or quarantine.

The law as it now stands requires the Unemployment Insurance Commission to deny benefit to a claimant in respect of any day on which he is incapable of or unavailable for work. These are normal conditions for the orthodox type of unemployment insurance, and they were essential during the early development of the Canadian scheme. We now seek to modify those conditions.

Experience has shown that considerable hardship resulted from the application of the conditions to which I have referred, in that benefits were denied unemployed persons simply because they fell ill or were injured. I think that we can all agree that a person who is unemployed, and drawing benefits, needs these benefits when he is sick just as much as and more than when he is well. The desire to do something about it has been in our minds for quite a while, and the delay in putting such a plan into effect has been caused by long and intensive study to see how jurisdictional and administrative difficulties might be overcome. In fact, Mr. Chairman, the extension of this study is the only reason I am so late in the session in introducing this legislation. I believe that most of these difficulties have now been solved in so far as they are related to the step now proposed.

I feel that I should point out to hon. members that this proposal does not extend to the insured worker who becomes unemployed because of sickness or accident. However, benefit can be paid to such a worker after he has recovered from the illness, if no suitable work is then available for him.

There will be no change in the rate of benefit nor in the method by which the duration of benefit is established. I am unable to give a precise estimate of the added cost to the fund. It is not felt that the plan will add materially to the number of insured persons filing claims for benefit. It will of course increase the number of days for which benefits are paid. It is felt that the proposal can be taken care of, for the present at any rate, without asking for additional contributions to the unemployment insurance fund. I do not believe that the additional cost of administration will be great.

It is realized that the proposed amendment does not go as far as has been suggested by the labour congresses, by some members of this chamber and by others. However, the plan will give the Commission some very useful experience in this further extension of unemployment insurance benefits.

The proposed amendment has been considered by the Unemployment Insurance Advisory Committee and that committee has been pleased to report favourably thereon.

I recommend the resolution to the committee.

Resolution reported, read the second time and concurred in.

Mr. Gregg thereupon moved for leave to introduce Bill No. 366, to amend the Unemployment Insurance Act, 1940.

Motion agreed to and bill read the first time.

May 6

Hon. Milton F. Gregg (Minister of Labour) moved the second reading of Bill No. 366, to amend the Unemployment Insurance Act, 1940.

Motion agreed to, bill read the second time and the House went into committee thereon, Mr. Beaudoin in the chair.

On Section 1—*Illness during benefit period.*

Mr. Gregg: Mr. Chairman, I propose to make only a very brief statement. ...It has to do with the availability of suitable work for an unemployed worker when he becomes sick. On that point I shall make a brief and carefully prepared statement. As is evident, the amendment has to do with Section 27 of the Act. That section contains three basic conditions precedent to the payment of benefit. These three conditions must be met for every day the benefit is paid. They are, of course: (a) that a person must be unemployed; (b) that he must be capable of and available for work; and (c) unable to obtain suitable employment.

The first of these, as I have indicated, is that the claimant must be unemployed, and the second and third are as I have stated them. The amendment modifies the second condition and allows the payment of benefits while he is incapacitated by reason of illness, injury or quarantine. The two other conditions, namely, that he must be unemployed and unable to obtain suitable employment, remain exactly as they were. The claimant must still prove that he is unemployed and he must still prove that he is unable to obtain suitable employment. When a job is offered to a claimant he will not be disqualified if he proves that he is genuinely ill. But if he fails to prove that he is ill, he will then be disqualified under the normal procedure of the Act.

I am sure that the work test that was and is still in the Act will be used by the Commission in a judicious manner in order

to prevent any abuses of the fund. Generally I am quite confident that the insured population will not abuse their rights under the amendment to the Act. On the other hand, the Commission will apply the extensions fairly and generally and in a humane manner but will stand ready to use its powers to prevent any unwarranted claims on the fund....

Mrs. Fairclough: I take it from what the Minister has said that a beneficiary who is ill must prove his illness in some manner or that he cannot make his regular report because of illness. That means practically that he must have a doctor's certificate to that effect.

Mr. Gregg: May I interrupt? What I said was that when a job is offered to a claimant who is ill he will not be disqualified if he proves that he is genuinely ill.

Mrs. Fairclough: That is a different point entirely. It is not necessary for him to prove that he really is ill. In other words, he still collects the benefits on his word that he is ill provided no employment is available. But when employment becomes available it is necessary for him to prove that he is genuinely ill. That really adds considerably to the scope of this amendment because it means that if work becomes available and he is genuinely ill he continues to collect those benefits for the period of time for which he is entitled to benefits.

Mr. Gregg: That is correct.

Mrs. Fairclough: In that case I would think that the amendment has gone far beyond the scope of what appeared on the surface when it was first brought down. I think it is a good step in the right direction.

Mr. Knowles: What machinery is provided to enable a person, who continues to be eligible to draw benefits, being able to actually collect those benefits? At the moment an unemployed person who qualifies for benefits collects those benefits by reporting each week. What will be the machinery for collection in the case of a worker who has qualified, starts to draw benefits, and then because of illness is not able to report? Can someone else report for him? Can it be done by mail? What is the plan?

Mr. Gregg: It is not with any intent of avoiding answering the question, but I hesitate since that is one of the things the Commission is working out. I would not want to tie their hands or embarrass them by giving a spot answer. All I can say is that the best and quickest possible method will be worked out and put into effect as soon as possible.

Section agreed to.

Section 2 agreed to.

On Section 3—*Illness during benefit period.*

Section agreed to.

Section 4 agreed to.

Bill reported.

Mr. Gregg moved the third reading of the bill.

Mr. Knowles: By leave.

Motion agreed to and bill read the third time and passed.

Fair Employment Practices Act

May 4

Hon. Milton F. Gregg (Minister of Labour) moved that the House go into committee to consider Bill No. 100 to prevent discrimination in regard to employment and membership in trade unions by reason of race, national origin, colour or religion.

Motion agreed to and the House went into committee, Mr. Beaudoin in the chair.

The Chairman: May I point out that this bill has been considered by the standing committee on industrial relations and reported to this House with amendments to Section 2, Section 4 and Section 6 and a Section 13 added.

On Section 1—*Short title.*

Mrs. Fairclough: Mr. Chairman, I think the amendments which the Minister will move in due time and which were suggested by the committee have substantially improved the bill. I must say that I am in complete accord with every one of them, and I think the committee as a whole was in accord with the recommendations which were finally forwarded....

There is only one other comment I would like to make, and it is that I still regret that provision was not made in this bill for an educational program. I think the whole matter of education should go hand in hand with the administration of this bill. I know you cannot promote such a program unless provision is made to pay the cost of it. The very fact that no provision is made for an appropriation for this work would indicate that there is no intention to proceed with it. I do not mean to say that there is no intention to proceed with the administration of this Act, because I understand that plans are already under way to take care of it within the existing structure of the department. I feel that the officers of the department are fairly well loaded down with work, and that at best it could not receive the attention which is due to such an important piece of legislation. As I said on a previous occasion, I see no

provision in the bill for the educational program which I am certain is necessary if this legislation is to attain its full scope.

Mr. Gregg: Ever since this matter was under consideration, without mentioning the *verboten* word "education" in this House, I have always considered that Section 10 on page 5 of the bill takes care of the situation. It reads as follows:—

The Minister where he deems it expedient may undertake or cause to be undertaken such inquiries and other measures as appear advisable to him to promote the purposes of the Act.

Provided, as the hon. member has said, the cost of such measures are covered in the estimates, I have taken that as authority to carry out the kind of thing she has in mind.

Section agreed to.

Sections 2 to 12 inclusive agreed to.

On Section 13—

Mr. Knowles: Mr. Chairman, Clause 13 was one of two clauses which some of us did not think exactly necessary but certainly we have no objection to it. I believe it provides that the Act shall come into force on the 1st day of July 1953. We are glad to give the department that much time to get ready to put the Act into operation and we think that it is a matter of sufficient significance to call attention to the fact that this important piece of legislation will come into effect on Canada's birthday, July 1.

Section agreed to.

Bill reported, read the third time and passed.

Voluntary Revocable Check-off

May 5

Mr. A. F. Macdonald (Edmonton East): Mr. Speaker, I beg to move, seconded by the hon. member for Spadina (Mr. Croll):

That the second report of the standing committee on industrial relations presented on Tuesday, April 28, be now concurred in.

Mr. Stanley Knowles (Winnipeg North Centre): Mr. Speaker, before this motion for concurrence in the second report of the standing committee on industrial relations is carried, I should like to say just a few words. As hon. members are no doubt aware, the second report of this committee was tabled on Tuesday, April 28, and indicated that the committee had endorsed the principle of Bill No. 2 and recommended that the principle of the said bill, together with the submissions included in the printed evidence, be studied by the Government in connection with its review and proposed revision of the provisions of the Industrial Relations and Disputes Investigation Act.

No doubt hon. members are aware that Bill No. 2 is my bill which called for writing the check-off of trade union dues into the federal labour code. I certainly would not take the time of the House now to go into this matter at any length as it has been debated frequently in the House. Some of us would have liked to have seen progress made in the form of a legislative enactment at this session, but we are at least glad that this much progress has been made. After my bill having been defeated on several occasions, its principle has now been endorsed by the committee, and the motion now before us proposes that the House likewise endorse it and recommend to the Government that the matter be studied.

I think attention should be drawn to the fact that the request for a study of this matter includes more than just what was in the bill. It asks the Government also to study even more advanced ways of providing union security as suggested in some of the submissions included in the evidence that has been laid on the table of the House by the industrial relations committee.

As I say, some of us had hoped that we might get further than this at this session, but at least we are making progress. I trust that the study that will be made of this measure on the recommendation of the committee will result in some form of the check-off being written into the federal labour code at the earliest possible date.

Old Age and Blind Pensions

May 11

Mr. Stanley Knowles (Winnipeg North Centre): ...we appear to be coming to the end of this Parliament, we appear to be approaching a general election, without anything having been done by the Government that is now in power with respect to the amount that is paid to our old age or blind pensioners.

This 21st Parliament of Canada has to its credit that it took a very important step when it removed the means test from the old age pension for those aged 70 years and over and made certain other changes, such as starting a pension at age 65, but the amount of $40 has not been changed since just before the election of 1949. In that period of four years the cost of living for our old age and blind pensioners has gone up tremendously. Likewise, in that period of time Canada's productive capacity has soared to a startling degree. Yet no steps have been taken to pass on to our

old age pensioners, or to the blind, their share of that increased wealth of this country.

My case is simple and it can be put very briefly. I feel that steps should be taken to increase the amounts of the old age assistance pension, the old age security pension and the blind persons' allowances to a figure of not less than $60 a month. I suggest that figure because of what I referred to a moment ago, namely the tremendous increase in Canada's productive capacity since 1949. I take that year because that is the year in which the $40 a month figure was set. In 1949 our gross national product was of the order of $16 billion. For this year the Minister of Finance (Mr. Abbott) says that it will be of the order of $24 billion. In other words, in that period of four years we have experienced and achieved a 50 per cent increase in our gross national product, in the capacity of the Canadian people to produce real wealth.

I suggest it is only fair that we pass on that same proportion to our old age and blind pensioners by increasing their pensions by at least 50 per cent. I know there are hon. members in the House who will say immediately—they are probably saying it in their own minds—that while they agree with me in spirit that our old age and blind pensioners deserve this increase, they are asking themselves the question: Can we afford it? What will it cost?

To increase these pensions by the amount I have suggested would cost of the order of $200 million. I arrive at that figure by computing the total amount that the Dominion and the provinces are now paying to our elder citizens and to the blind, and I find it is something less than $400 million. To increase these pensions by 50 per cent would therefore involve an increased payment out of the wealth of this country of about $200 million.

May I point out that in this very year the Minister of Finance indicates that we shall increase our gross national product by five times that amount, namely, by $1,000 million. May I point out also that since 1949, when the figure of $40 a month was set, we have increased our national production by $8,000 million. I suggest that to propose that we use $200 million out of that $8,000 million for this purpose is asking for little indeed....

Mr. Howard C. Green (Vancouver-Quadra): ...I believe that a message should go forward from this Parliament to the new Parliament of Canada indicating that we believe this whole question should be thoroughly reviewed by that new Parliament. Such action cannot be taken this Monday morning or this week. The question would have to be carefully investigated, probably by a committee such as that which some years ago dealt with the old age security problem and the problem of our blinded Canadians.

I am convinced that these problems are of sufficient importance to warrant such a careful investigation by the new Parliament....

Mr. J. H. Ferguson (Simcoe North): ...The Government should let the country know that they have the problem on their minds constantly. I am willing to go so far as to say that I do believe that the Minister of National Health and Welfare (Mr. Martin) does have this problem constantly on his mind. He must know, as we all know, that the present old age security rate is not adequate considering present-day costs of living. I am sure that this matter will have the consideration of the new Parliament, that it will not be dilly-dallied with, and that some figure will be arrived at in keeping with the necessities of today's cost of living. I believe that the new Parliament will not waste any time and will immediately enter into discussion of this particular subject....

Mr. H. O. White (Middlesex East): ... some time prior to the election of 1949 I suggested to the House that not only old age pensions but other pensions should be hooked to the cost of living index. Whatever government was in power would not have to consider this recurring problem if that were done. As the cost of living went up or went down pensions would be adjusted accordingly....

Hon. Paul Martin (Minister of National Health and Welfare): ...As the hon. member for Winnipeg North Centre has stated, this proposal would impose another burden of some $200 million on the people of Canada. I should observe at this time that since last Friday when my estimates were under discussion we have had proposals from the other side that would impose obligations on the people of this country by an additional amount of $1 billion. That has been just since last Friday—and those proposals come from a quarter that complains about the tax level which this Government has imposed on the Canadian people.

I remember well the words of the hon. member for Vancouver East (Mr. MacInnis) when he pointed out a few years ago that the only source from which social

benefits could be provided was the hard work of the masses of the people of Canada....

What does this proposal before us suggest? It suggests that we should give consideration to increasing the payments made to old age pensioners and blind pensioners under the Old Age Assistance Act, the Old Age Security Act and the Blind Persons Act—listen to this—to an amount commensurate with today's cost of living. There is no responsible social worker in Canada who would agree with that proposition. To make social security benefits dependent upon some particular contingency that would provide for a sliding scale of benefits would be a most unfortunate proposal. Supposing the national product of Canada went down to $5 billion, the result would be if we were to apply logic to the proposal, that the old age pensioners would receive benefits less than they are now receiving. For that reason, as the Minister responsible for this measure, I cannot undertake to give consideration to that particular proposal. I do not think it would be in the interests of the blind pensioners or the old age pensioners. I can say, as the Minister in Britain said, that I certainly will give consideration, as I always do, to old age pensioners and to blind pensioners.....

We are now committed, and I think rightly so, to a system of contributory payments, in part, towards our old age security fund; ...within two years this Government, through this Parliament and the parliamentary committee, brought in an old age security system based on the contributory principle, that can stand comparison with any, in fact, it is more generous than the old age security system of any other country in the world.

This Parliament, and this Government, was paying old age pensions along with the provinces to about 300,000 people two years ago. What are the facts now? The facts are that, as a result of the old age security legislation recently introduced to provide pensions without a means test, not 300,000 people but 686,127 people of 70 years and over are receiving pensions at the monthly cost of about $27 million, representing a total federal expenditure of $334,916,000 a year. A year and a half ago we were paying old age pensions, on federal account, of some $100 million. The federal Government, without any assistance whatever now from the provinces, together with the contributions made by old age security pensioners themselves, is now paying three and one-half times what we paid formerly to our aged citizens.

The hon. member speaks as though there was callousness on our part towards these people. He forgot to point out also that 87,000 people are now receiving old age assistance at a monthly cost of over $1·6 million, or a total annual cost of $22 million, out of the national exchequer, apart altogether from the provincial contributions. He also forgot to point out the improvement in the allowance for the blind, and the increases over the years. In fact, there are over 6,000 blind persons now receiving, as a result of the Old Age Security Act, that assistance free of the means test. The hon. member failed to mention that, since this legislation was introduced, we have relieved the provinces of an $18 million obligation to the old age pensioners. The provinces have saved $18 million a year as a result of the assumption by the federal Government of responsibility for those 70 and over. As a result of that saving two provinces, Alberta and British Columbia, are providing supplementary payments to their old age pensioners. As a result of that saving two provinces, Ontario and Alberta, are providing disability pensions....

My final word is this. These matters are always being studied....

Department of Labour Estimates

May 14

Hon. Milton F. Gregg (Minister of Labour): ...The estimates are divided into two main categories: (a) votes required for activities under the jurisdiction of the Department of Labour proper; and (b) votes required for operations under the Unemployment Insurance Act. I shall take the Department of Labour first....

It will be noted that for 1953-54 I am asking for $665,297 less than was asked for in 1952-53. There is no substantial change in staff strength of the department. The estimates also include a new vote, No. 188, to provide for a women's bureau, and a substantial increase in vote No. 196 to implement a program for the rehabilitation of the disabled. I shall give more information on both of those later.

Another increase, it may be noted, is under vote 186, for the organization and use of agricultural manpower, but this is not a true increase, as an offsetting decrease is taken under vote 199 of the Unemployment Insurance Commission. I shall go into this more fully later.

I want to go back to the women's bureau. The women's organizations, speaking for large numbers of women, have been urging upon the Government for some time that there are special problems facing

women workers which should be given special attention. They say that adequate information is not always available in Canada pertaining to women workers, and that there is a need for more study and analysis of the basic facts about the employment of women and the opportunities for their employment. Also there appears to be need for intimate study of the particular problems of women in special situations, such as those who are both workers and homemakers or older women who might become self-supporting. It is believed that some women in employment are handicapped by some common prejudices of employers which are not founded on fact, and women think it is the responsibility of the Department of Labour to study the problems peculiar to women workers and establish facilities for making the results of such studies available to women's groups.

We therefore propose to establish a senior position in the Department to be filled by a competent woman whose duty it will be to keep in close touch with national organizations concerned with the problems of employed women, and to develop a women's bureau within the Department. Amongst the bureau's functions will be a continuing review of what is being done by governmental and other agencies in this field, and the establishment of means for making the information available. In doing this we are recognizing that the problems raised by women's groups deserve attention. At the same time we must take care to avoid any duplication of present services. I am confident that the new women's bureau will play a very valuable part in the improvement of the status of women in Canada's great production program.

I call your attention to item 196. I am going to take time to deal with that one at some length. The need for a properly co-ordinated plan to rehabilitate Canada's disabled civilians has become increasingly evident. Because of this, a national conference was called by this Government in 1951. The meeting of over 300 delegates, with every province officially represented, was sponsored by the Departments of National Health and Welfare, Veterans Affairs and Labour. Acting upon its recommendations a National Advisory Committee on Rehabilitation was set up. This committee, composed of official representatives of each province, the federal departments I have named, the medical profession, employers, labour and voluntary welfare agencies and universities, first met in February 1952. Since then it has met on two occasions.

In November of last year the executive of the Committee outlined to the Government the broad principles which they considered should be followed in a rehabilitation program. In keeping with the recommendations thus made to us, that is not only to this Department but to my colleague the Minister of National Health and Welfare, we hope to reach agreement with each of the provinces very soon regarding the steps to be taken. In the meantime, in Mr. Ian Campbell we have found a national co-ordinator with long practical experience in the rehabilitation field with the Workmen's Compensation Board of Ontario, proved good administrative ability and the possession of the qualifications necessary to organize and direct the newly formed Civilian Rehabilitation Branch. Since his appointment in June 1952, he has visited every province and has done something toward encouraging existing provincial, voluntary and civic efforts.

Under the provisions of the Vocational Training Co-ordination Act, through the special placement facilities of the Unemployment Insurance Commission services essential to rehabilitation can be, and are being, expanded. It is proposed that the present assistance now being given to the provinces under the Vocational Training Co-ordination Act be extended to include a new training schedule for the disabled....

Now, on the matter of decreases, the largest amount is under vocational training. This is not an indication that the Government is any less interested in this important program. We are more interested in it than ever before, because Canada's need for skilled workers is greater than ever before. The decrease in the vote is due to projects of a capital nature having been completed. These completed projects account for the full amount of the reduction. The Government is still assisting the provinces in providing youth training, apprenticeship training, which has gone forward with new vigour this last year, foremanship and supervisory training, and other classes which will assist in bringing skilled trades into our labour markets. It is also proposed to continue the payment of annual grants to relieve the provinces of a portion of the operational expenses of vocational schools.

The other comparatively large decrease is under vote 195, the movement of workers from outside Canada to work on farms and in other essential industry in Canada. We are asking for $110,000 less

for 1953-54 than was voted in 1952-53. This is possible because of smaller group movements and easier shipping conditions which will enable movements to be controlled to meet seasonal demands and thus avoid off-season maintenance costs.

I come now to labour-management relations, vote 182. There is practically no change in this vote, which is for the conciliation service. I wanted to mention one or two points with regard to it, because perhaps it is the most important single division of our work. Fifty-four cases were dealt with by conciliation officers under the Industrial Relations and Disputes Investigation Act during the fiscal year 1952-53. Of these 54 cases, settlements were secured in 30 cases by the conciliation officers' co-operation. Out of a total of 37 disputes dealt with by the conciliation boards, 23 settlements had been secured by March 31. Of the remainder, eight disputes were still in the hands of the boards at that date, and in four other cases board reports had been received and were under consideration. Apart from the cases in process as mentioned, in only two cases dealt with were settlements not achieved during the fiscal year, and in only one of these cases did strike action occur. This, of course, was the dispute that ended recently in British Columbia.

Now we come to the Unemployment Insurance Commission. Administration costs show an increase of $504,523. This is made up of increases in salaries, higher rents, increased stationery, supplies and equipment, and for alterations, maintenance and repairs of buildings housing commission offices.

The item for the transfer of labour to and from places where employment is available shows a decrease of $125,000 from the previous year. This is due to a readjustment whereby the Department of Labour made provision for the interprovincial transfer of workers under dominion-provincial farm labour agreements heretofore provided by the Unemployment Insurance Commission. Through the readjustment of these services under one appropriation, a saving of $60,000 has been effected.

In considering administration costs of the unemployment insurance program, it is essential to remember that these cover both insurance and placement activities. There has been a tendency sometimes to consider the amount that is paid out in cash benefits and take certain percentages of that amount for administration costs and say that is a very high percentage of administration cost; and so it would be if those administration costs were to cover only the paying out, bookkeeping, accounting and processing of the insurance itself. But that administration cost also covers the entire cost of the placement service in the national employment offices in over 200 centres across Canada.

The Commission operates a free—that is, free to the applicant—employment service available to all employers and workers whether engaged in insurable employment or not. That is an important fact to remember.

At the end of the fiscal year the regular staff of the commission numbered 6,917 as compared with 6,885 at the close of last year, 1951-52. The number of casual employees was 1,115 as against 1,140 on March 31, 1952. There are now in operation more than 200 local offices located across Canada from Newfoundland to the Pacific. They are administered by the Commission from Ottawa through five regional offices.

During the calendar year 1952 the number of vacancies filled—that is, job vacancies—was 969,916 as compared with 918,238 in the previous calendar year.

On the insurance side, the latest available figures show a balance in the employment fund, as at February 28, of $858,159,269. The total amount paid out in benefits since the inception of the plan, up to February 28 last, is $545,142,962. It will be quite obvious that the distribution of this appreciable sum has not only proved to be of great assistance to the direct beneficiaries, but has helped to maintain economic stability in our country.

Since contributions began in the summer of 1941, the sum of $1,070,082,806 has been paid into the fund by employers and employees. The Government's contribution has totalled $215,852,552. The sum of $117,223,515 has been added to the fund as the result of interest on investments and profit on sale of securities. The fund itself is invested in federal government bonds, or bonds guaranteed by the Government.

Mr. Chairman, in presenting my estimates for 1953-54 I should like to pay tribute to the loyal and devoted work of the staffs of both the Department and the Commission. More and more has it become necessary for these two government agencies, while maintainng their own identities, to co-ordinate many of their activities. This has been carried forward. I can assure the committee that every effort will continue to be made by both to improve their services to the people of Canada.

Standard Work Week in Canadian Manufacturing Industries, 1952

Plant Employees

Proportion of workers on 40-hour week increased to 40 per cent from 36 per cent between October, 1951, and October, 1952. Proportion of workers on 5-day week increased from 70 to 75 per cent in the year

The most significant change in standard weekly hours in manufacturing in October 1952, as compared with a year previously, was the higher proportion of plant workers on a 40-hour week. This was found in the annual survey conducted by the Economics and Research Branch, Department of Labour.

About 40 per cent of the workers were on a standard week of 40 hours as of last October, the proportion having increased from 36 per cent in 1951. A similar change took place in the proportion of workers on a 5-day week (75 per cent as compared with 70 per cent in 1951). Although a very considerable number of those workers who are on a 5-day week work more than 40 hours, it is apparent that the 40-hour 5-day week is becoming an increasingly popular work schedule.

A continuation of the trend in manufacturing in 1952 toward the 40-hour week, and in particular the 40-hour 5-day week, is borne out by figures in the accompanying tables. A comparison of the percentage distributions in the table which follows indicates the substantial changes that have occurred in the last five years. In 1947, the major concentration (30 per cent) was in the 48-hour group, whereas fewer than 20 per cent were on the 40-hour week. By 1952, only 13 per cent were in plants on a 48-hour week but 40 per cent were in those operating on a schedule of 40 hours or less.

Standard Weekly Hours	Percentage of Workers 1947	1951	1952
40 and under	18·9	35·8	40·5
Over 40, under 44	2·4	13·4	13·7
44	14·4	11·5	9·8
45	19·2	16·7	15·6
Over 45, under 48	4·7	2·3	2·3
48	30·3	14·4	12·6
Over 48	10·1	5·9	5·5

This article is based on returns from almost 6,700 establishments employing well over 800,000 plant workers. Information was compiled for 167,000 office employees as reported by about 5,500 units, most of which were made up of the office staffs of the above-mentioned industrial establishments. The survey was designed to ascertain the "standard" work week, defined on the survey forms as "the number of hours per week after which your employees would be considered as working overtime". Employers were instructed to disregard short time or regularly scheduled overtime in reporting on the standard week. In cases where work schedules varied by department within an establishment, the number of hours worked by the majority of the employees was requested.

Standard Hours by Industry

Manufacturing is divided in this analysis into 17 groups in accordance with the Standard Industrial Classification; among these groups the extent of the 40-hour week ranged from 16 per cent of the total plant employees in the leather products group to 81 per cent in the manufacture of petroleum and coal products (Table 3). In 13 of the 15 remaining groups, the percentage was 30 per cent or higher.

The percentage of workers on a 5-day week in the various industries ranged from 46 in the paper products industry* to 99 per cent in the manufacture of electrical apparatus and supplies. However, in all but 4 of the 17 groups, the proportion was greater than 75 per cent. The fact that these proportions are almost invariably higher than those for the 40-hour week indicates a considerable incidence of 5-day schedules of lengths other than 40 hours; the most common of these are 45, 44 and

*A considerable number of paper mills have gone on the 5-day week since the date of the survey.

TABLE 1.—STANDARD WEEKLY HOURS: CANADA TOTALS

Manufacturing Industries of Canada, October 1952

Standard Weekly Hours	Establishments		Employees	
	Number	Per Cent	Number	Per Cent
Under 40	73	1·1	5,456	·7
40	2,078	31·1	321,536	39·8
Over 40 and Under 42	39	·6	4,582	·6

Over 48	750	11·2	44,661	5·5
Total	6,689	100·0	808,516	100·0
On a 5-day Week	4,124	61·7	610,497	75·5

42½ hours. The average standard week of plant employees in each of the groups is shown below, arranged in order of length of schedule.

The figures in the left-hand column show the average of the standard weekly hours reported by the establishments in each industry. In the average figures, of course, the influence of an establishment with a large number of employees is greater than that of a small establishment. In the column at the right (modal group), the figures represent the work week reported by the largest group of establishments, regardless of size. In the case of industries where the average is not substantially different from the modal group, a certain degree of uniformity would appear to exist among large and small plants. In cases where the figures differ, a greater dispersion in the length of the work week is implied.* For example, in the transportation equipment group the average standard week is 43·1 hours, while the modal group, based on the classes used in the stub of Table 3, is "over 48". The influence of the 40-hour week in the large automobile manufacturing plants is seen in the average. However, the modal group reflects the influence of a large number of smaller establishments such as automotive repair shops and garages.

*For a study of the work week by size of establishment see L.G., Jan., p. 40.

Industrial Group	Work Week	
	Average (Weighted by employees covered)	Modal Group (Frequency by establishment)
Non-ferrous Metal Products	39·9	40

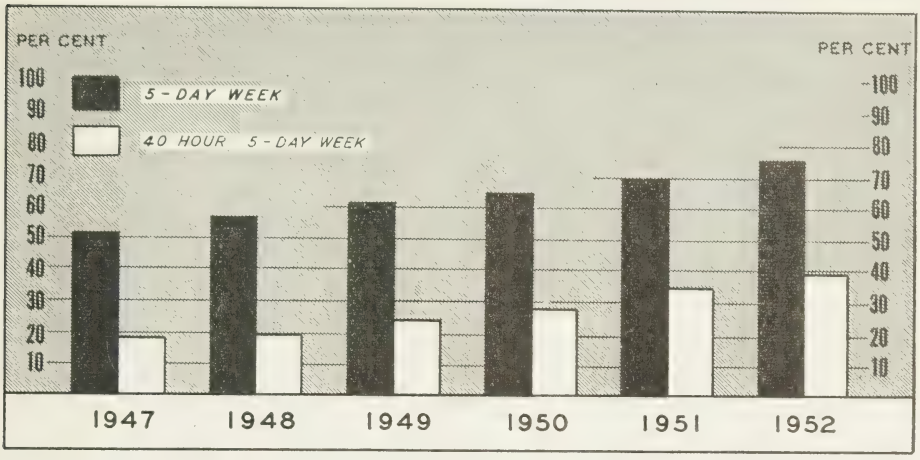
Standard Hours by Province

In all ten provinces, the proportion of workers on a 5-day week was greater in 1952 than in 1951; all but New Brunswick and Nova Scotia had a higher proportion on a 40-hour week; and in seven provinces the average standard work week was shorter.



The standard work week was shortest in British Columbia, where the average stood unchanged at 41·5 hours since the 1951 survey. This province also had the highest proportion of employees on a 40-hour week, although Ontario led in the 5-day week proportion with 86 per cent of its manufacturing plant employees in plants operating on this basis. The average work week is shown by province in the table below, arranged according to length of schedule:—

	Average Standard Work Week
British Columbia	41·5
Ontario	42·5
Manitoba	42·7
Saskatchewan	42·9
Alberta	43·0
Nova Scotia	44·1
Quebec	44·9
Prince Edward Island	46·0
Newfoundland	47·1
New Brunswick	47·4

Standard Work Week by City

Details of the standard work week for plant employees in 29 Canadian cities in October 1952, is shown in Table 4; establishments covered in these centres account for about two-thirds of the total number and an almost equal proportion of the plant workers. In 14 of the centres shown, the proportion of workers on a 40-hour week or less was equal to or in excess of the national average (40·5 per cent); these proportions ranged from less than one per cent in Trois Rivières to almost 90 per cent

PLANT EMPLOYEES IN MANUFACTURING ON A 5-DAY WEEK AND ON A 40-HOUR 5-DAY WEEK

in Vancouver. In 16 cases, the proportion on the 5-day week was higher than the all-Canada figure of 75·5 per cent, and in all but five centres, the proportion on the 5-day week was over 50 per cent of the total employees covered. The average work week in five major cities representing a cross section of the country follows:—

City	Average Standard Work Week
Halifax	44·2
Montreal	43·7
Toronto	41·9
Winnipeg	42·7
Vancouver	40·3

Office Employees

Trend towards 5-day week fairly substantial. Percentage of workers on 5-day week increased during year from 76 per cent to 82 per cent. Pattern of standard weekly hours not much different from year earlier

Office workers in general continue to work shorter hours than plant employees but the pattern of standard weekly hours for office employees in October 1952, was not markedly different from 1951. There was, however, a fairly substantial trend towards the 5-day week. The percentage of office employees on a 5-day week in 1952 was 82, as compared with 76 per cent in 1951.

As of October 1952, fewer than 10 per cent of the 167,000 clerical employees covered in the survey of manufacturing industries were on schedules of more than 40 hours per week (Table 5). This is a smaller proportion than in 1951. There was a slight decline in the relative proportion of office employees working 37½ hours or less.

A distribution of office employees by standard working schedule for 1949, 1951 and 1952 follows:—

Standard Weekly Hours	Percentage of Workers 1949	1951	1952
Under 37½	16·8	20·9	18·8
37½	29·0	28·5	27·8
Over 37½, under 40	17·0	17·3	20·8
40	19·1	20·5	22·7
Over 40	18·1	12·8	9·9

Standard Hours by Province

In all provinces the extent of the 5-day week for office employees was greater than in 1951. In Prince Edward Island, about a quarter of the 176 office employees reported in manufacturing were on a 5-day week compared with fewer than three per

cent a year earlier. In British Columbia, the proportion was about 79 per cent, compared with just over 50 per cent in 1951. In the table below, the average standard hours for office employees in manufacturing are shown for each of the provinces, in order of average standard week.

	Average Standard Work Week
Quebec	38·4
Ontario	38·4
Nova Scotia	38·9
British Columbia	39·2
Newfoundland	39·6
Manitoba	39·7
Saskatchewan	40·4
Alberta	40·7
Prince Edward Island	41·8
New Brunswick	42·5

Standard Work Week by City

About three-quarters of the office employees in manufacturing establishments making returns to the 1952 survey were in the 29 cities for which data are shown in Table 7. In 13 of the centres, one-half the employees were in plants working a schedule of 37½ hours or less per week; only in Sudbury, Oshawa and Edmonton was the proportion less than 10 per cent. The proportion of employees on a 5-day week ranged from six per cent of the total in Halifax to 98 per cent in Brantford; in 15 centres the percentage of employees on a 5-day week was equal to or greater than that for Canada as a whole; it was less than 40 per cent in only three cases.

Salaries of Office Workers in Manufacturing Industries, 1952

Office workers in manufacturing received average salary increase of five per cent in 12-month period prior to October, 1952, less than previous year's 13 per cent and plant workers' 6·5 per cent raises

Office workers in manufacturing received average increases in salaries of five per cent in the 12-month period prior to October 1952. This gain was less than in the previous year, when salaries rose by 13 per cent. It was also slightly less than the 6·5 per cent increase in wage rates accorded to plant employees in the manufacturing industries during this same 1951-52 period.

These figures are based on information furnished the Economics and Research Branch, Department of Labour, by 5,500 establishments employing more than 167,000 office workers. The eight male and 15 female clerical occupations selected for this analysis cover 58,000 workers, of whom two-thirds are female. The job categories are important in terms of numbers of

employees and prevalence throughout various sections of the manufacturing industries.

Table 1 indicates that the level of salaries rose in each occupational class selected, although there were wide variations in the percentage changes. The salaries for four occupational classes rose by more than 12 per cent, whereas those for eight jobs increased by less than four per cent. The average increase for male workers was approximately the same as for women workers in percentage terms.

Among the male office workers covered in the survey, salary levels on a national basis were highest for senior office clerks and bookkeepers, who earned more than $60 a week on the average. Junior clerks at the other extreme earned just over $40. Of the female occupations analysed, only secretaries received more than $50. Junior clerks averaged $32.30 a week.

Table 2 gives a comparative study of weekly salaries for office employees in five major Canadian cities: Halifax, Montreal, Toronto, Winnipeg and Vancouver. Information from about 2,800 manufacturing establishments employing almost 79,000 office workers was used in developing the figures.

From the table it can be seen that there are variations in the average salaries of similar occupations among the five cities as well as among the salaries for different occupations within each city. However, this variation does not obscure a fairly uniform pattern of relative salary rankings for the occupations. For instance, in most cities senior office clerks, bookkeepers and cost clerks, in that order, were the highest paid male office employees and secretaries, senior office clerks and bookkeepers, the highest paid female occupations.

It is evident that the general level of office salaries was substantially higher in Montreal, Toronto and Vancouver than in either Winnipeg or Halifax. This applies to both male and female workers.

McGill University's 5th Annual Industrial Relations Conference

Subjects covered by five speakers were: measurement of productivity; the labour movement's objectives; effects of technological change on human relations in industry; relationships between collective bargaining, full employment and inflation; a theory of industrial relations

The fifth annual industrial relations conference convened by McGill University's Industrial Relations Centre was served a varied fare by the five speakers on the program. Subjects covered were: the measurement of productivity, the objectives and ideas of the labour movement, the effects of technological change on human relations in industry, the relationships of wages to inflation and of collective bargaining to inflation, and a theory of industrial relations.

Guest speakers at the conference, the central theme of which was "Industrial Relations in a Dynamic Economy," were a federal government economist, an international union's education director and two United States university professors. The Director of McGill University's Industrial Relations Centre, Prof. H. D. Woods, delivered the banquet address.

The most revealing and thought-provoking presentation during the conference was the reading of excerpts from an interview with a worker on a moving assembly line, a striking description of a man's reactions to the pressure of the machine in mass production industry.

More than 100 representatives of management, labour, universities and governments attended the two-day conference, April 22 and 23.

The guest speakers were: Dr. George V. Haythorne, Director, Economics and Research Branch, Department of Labour; Brendan Sexton, Director of Education, United Automobile Workers (CIO); Prof. Robert H. Guest of Yale University's Institute of Human Relations; and Dr. Albert Rees of the Industrial Relations Centre, University of Chicago.

Productivity Analysis

Two problems of productivity analysis —how to increase and how to measure productivity—were discussed by Dr. George V. Haythorne, Director of the Economics and Research Branch, Department of Labour, whose address opened the conference. In his talk he presented, "as a check-list of concrete steps that might be considered in productivity analysis," excerpts from the report of the International Labour Office Productivity Committee (L.G., Jan., p. 50).

Turning first to the problem of measurement of productivity, Dr. Haythorne gave this definition of productivity: the ratio of output or product, expressed in physical terms, to the input of the various factors of production, also expressed in physical terms. In practice, he explained, it is usually necessary to use only one input factor; but when this is done, he warned, it is important to keep in mind that all input factors have an influence on output and hence it is not correct to ascribe to the one input factor being used the major responsibility for changes in the resulting productivity estimates.

In some cases, he added, the use of labour as the input factor will prove to be a better indicator of over-all productivity than in others. He cited as an example the textile industry, where labour is a proportionately large input factor compared to the chemicals industry.

Dr. Haythorne also warned against the use, in constructing productivity indexes, of statistical data gathered for some other purpose. He suggested that, when it is difficult to measure output in physical units, value data be used, providing the necessary allowance for price changes is made.

Stating that the calculation of productivity indexes for the economy as a whole raises difficult measurement problems, particularly on the output side, he explained that the approach usually taken is to divide the current dollar value data from the national accounts by the appropriate prices indexes.

Calculation of productivity indexes is only half the task, Dr. Haythorne continued. The statistics will be of limited value only, he said. "They may even

prove harmful unless it is explained why the variations in the indexes occur and the changing pattern of relationships between various input factors is disclosed and evaluated."

Announcing that the federal Government's interdepartmental committee on productivity had spent considerable time on steps that are important as a background for subsequent statistical or analytical work, he declared that it would now be possible for individual firms and industries to undertake some useful work on productivity measurement. The Department of Labour will be glad to assist management and labour groups in such analysis, he said, pointing out, however, that "the main initiative and responsibility for developing measures of productivity change, especially at the plant and industry levels, must rest with industry".

Also resting with industry, Dr. Haythorne said, are the initiative and responsibility for the practical steps required to increase productivity. He then reported some of the findings of the ILO Productivity Committee.

The ILO committee, he told the conference, placed much emphasis on the development of good labour-management relations. "Success in obtaining the co-operation of workers in measures to raise productivity," he quoted from the committee's report, "is itself a test of the quality of management but depends also upon trade-union leadership."

He explained how the ILO committee suggested, as means of improving productivity, simplification, standardization and specialization; clear definitions of lines of authority and responsibility; the development of lines of communication between different departments; adequate training of foreman and supervisors, not only in technical and administrative duties but also in the principles of human relations; special training plans in plants where measures to raise productivity are in the process of application; payment-by-results schemes, provided safeguards are introduced to ensure full consideration of workers' interests; carefully-planned layout to ensure a proper sequence of operations; mechanization of handling equipment; the development of well-planned maintenance schedules; and joint consultation.

Enlarging on the importance of joint consultation, Dr. Haythorne said: "There are many advantages that accrue from the active participation of employees or their representatives in discussions of (productivity) matters. Not only do they help to bring about improved attitudes and morale but they encourage a self-imposed discipline that is usually much more effective than that imposed from without."

The labour-management production committees sponsored by the Department of Labour were cited by Dr. Haythorne as a valuable means of bringing about a better understanding of and a more active interest in the steps needed to increase productivity.

On the question of how the benefits accruing from increased productivity should be shared, he reported, the committee agreed that:—

> In order to ensure that higher productivity does in fact lead to higher standards of living, it is of the utmost importance (a) that the benefits of higher productivity should be equitably distributed among capital, labour and consumers; and (b) that the demand for goods and services should be maintained at a sufficiently high level and that adequate measures should be taken to prevent higher productivity from leading to unemployment. In countries where employment opportunities are limited by scarcity of capital, special attention needs to be devoted to the problem of ensuring an adequate rate of capital formation.
>
> These are matters both of social justice and of economic necessity; failure to distribute widely the benefits of higher productivity and to maintain demand and employment would mean that the conditions for continuing increases in productivity would not exist.

The committee rejected, he said, the proposal that there should be a specific formula for tying wage increases to changes in productivity. Benefits accruing from improved productivity should be the subject of collective bargaining, the committee agreed, without having a fixed formula laid down. Unions should not assume, the committee reasoned, that all benefits from increased productivity should go to labour. If some of the gains of increased productivity were realized through reduced prices, the committee argued, workers as well as consumers generally would gain.

Dr. Haythorne's address was followed, as were those of the other speakers, by a discussion period, during which those attending asked questions to be answered by the speaker or by others at the conference.

When asked why he did not accept "output per man-hour" as a definition of productivity, Dr. Haythorne replied that "output per man-hour" is an alternative definition. "It is a productivity index," he said. "The thing to be avoided is a labour productivity index, because it gives the impression that labour is the only factor of productivity."

A management representative complained that unions were misleading the public by using productivity ratios based on man-hour input to justify wage demands based on increasing productivity. Dr. Haythorne advised management to make clear the limitations of the use of labour input as a component of the productivity ratio. Dr. Rees, another conference speaker, added that "in collective bargaining the concept of the whole economy should be used, as this includes increases of productivity due to capital growth, labour efficiency and technological improvement".

Another question was: "Is it a good plan to share the benefits of increased productivity through higher wages rather than through lower prices, which help those on fixed incomes?" The questioner pointed out that increased wages help first the organized groups, then, if there is anything left, the unorganized groups. Dr. Haythorne felt it would be better to achieve a happy medium. "I feel it is not good for the economy as a whole," he said, "that the benefits of increased productivity should go to one or the other."

To this statement, Prof. Woods added: "You can't expect a common wage to apply to all industry, to the wage leaders as well as the marginal or sub-marginal industries. What do you do with low-productivity industries? If there is no possibility of increasing productivity, the industry should be allowed to die. If there is a possibility, management and union should work together to make sure that the increase takes place."

Objectives and Ideas of the Labour Movement

Brendan Sexton, Director of Education, United Automobile Workers (CIO), the first union official ever to address a McGill industrial relations conference, spoke on "Developing Objectives and Ideas of the Labour Movement".

His union's most important present objective, he told the conference, is "to bring about a greater degree of stability of employment through the negotiation of guaranteed annual wage plans". It will fight for the guaranteed annual wage in the hope of "stabilizing" purchasing power, he said.

Mr. Sexton began by saying that the aims and objectives of the trade union movement are set out and can be read "in the union contracts that have been negotiated with employers and in the resolutions adopted at conventions and in the addresses of the leadership of the trade union movement".

Different kinds of unions from time to time have substantially different ideas, he pointed out, explaining that craft unions are less concerned with the problem of human relations in industry and with problems of seniority than large industrial unions of necessity are. The workers in industrial unions, he said, are removed from their employers by "layer upon layer of bureaucratic structure" and by thousands of miles.

"The programs of the industrial unions are more general, more political and probably more radical," he said, summing up the differences in the programs of the industrial and craft unions.

The objectives of the trade union movement will change, even from day to day and certainly from year to year, depending upon changes in the political climate and in accordance with changes in the health of the economy, he said. Specifically the trade union movement seeks, he added, quoting Sam Gompers' reply to a Congressional query, "more, more and always more".

"The goals of the trade union movement necessarily must be continually to seek a larger share in the national wealth of the nation in which it operates and a larger measure of control over the conditions under which the workers it represents operate," Mr. Sexton declared.

He then emphasized that unions do not exist for the purpose of promoting greater productivity or even greater production. Managements who have not accustomed themselves to this idea must inevitably do so, he warned.

"It may be," he continued, "that a labour union, in the course of pursuing other goals, will take part in a program which may lead to increasing productivity or production; but this is not a function of, nor the purpose of, the trade union movement. The trade union movement exists for the purpose of defending and extending the rights of the people who belong to that movement and who pay dues to support the movement." When the trade union movement ceases to promote the best interests of its members, he added, the trade union movement will probably cease to exist.

Mr. Sexton presented statistics on retirements under UAW-negotiated pension plans in support of his statement that unions press continually for improvements in the standards under which their members are employed.

In this connection he mentioned that his union is seeking to have included in pension agreements an escalator clause to

protect retired workers against increases in the cost of living and to "allow them to continue to share in the increasing productivity of the nation". He also reported that the UAW was seeking to have eliminated from its agreements the automatic retirement age.

"I think there is an increasing awareness in our society," he said, "that it is arbitrary and unwise, if not unjust, to establish in collective bargaining agreements automatic age limits at which people must retire, since we learn increasingly that many people at age 67 are as productive as other people are at age 55 and some people are as productive at age 77 as other people are at 67."

Speaking of his union's desire for a guaranteed annual wage, Mr. Sexton said that both Canada and the United States seem likely to be faced within a very short time with the problem of maintaining employment in the face of diminishing expenditures for armaments; and, because our productive power will in 20 years be double our current power to produce, with the problem of increasing our ability to consume as rapidly.

"If substantial cuts in expenditures for armaments are made, consumer income, it seems to us," he stated, "necessarily will have to increase very rapidly if economic decline and perhaps even economic collapse is to be averted." There is now no pent-up demand to be satisfied as there was at the end of the Second World War, he pointed out.

Mr. Sexton likened the demand for a guaranteed annual wage to the earlier union demand for call-in pay. "Management told us," he recalled, "that it was impossible to plan their production so that they would not have to have workers on the job every day unless they were going to use them. We found, however, that when we did negotiate these agreements and we put the burden on management for planning, these clauses fell into disuse almost as quickly as they were negotiated." He believed that, if the burden for planning production over a year's period were placed on management, then management "would begin to find some way to stabilize employment".

A guaranteed annual wage on a wide-enough scale may prevent an economic downturn and, if it fails to do that, would prevent an economic recession from becoming a disastrous depression, he believed.

"As production of goods is cut back because surpluses have piled up," he explained, "the guaranteed annual wage should provide the buying power to remove these surpluses from the market so that production may be speedily resumed."

To conclude, Mr. Sexton told the conference that "the union movement will seize upon almost any opportunity that is presented to promote the economic well-being of its membership, since it believes that in doing so it promotes not only the well-being of its own membership but also of the total community".

Some of the questions addressed to Mr. Sexton after he had spoken, together with his answers, were:—

Q. Why is the UAW opposed to arbitration of the speed-up?

A. We may submit a particular case to arbitration when we feel that the difference between labour and management is not so great that an adverse decision would be harmful. We do not wish to arbitrate a question that may affect the workers' health and safety.

Q. What would you substitute for calendar age in retirement?

A. Physical examination of some kind, plus work records.

Q. The guaranteed annual wage may result in the condition that management will exercise such caution that unemployment will be centred in the group that has not been fortunate to have become union members.

A. I think that to some extent there is that danger. At times a union may seem to negotiate agreements that seem to have an adverse effect on some segments of the population.

Q. What are your views on price decreases as an alternative to wage increases?

A. Naturally, if prices decrease, there will be less pressure on unions to demand wage increases.

Q. What do you think would happen if, as it did last year, the rate of increase in wages continues to exceed that of productivity?

A. I don't envisage that that situation would continue to exist in our society. Employers have the power to resist and certainly will resist, because a continuation of the situation you mention would eat into profits; and no management will bargain themselves out of business. Although it may happen from time to time that wage increases exceed productivity increases, I don't envisage it as a continuing condition.

Q. Justify labour's demands for a share of the benefits of increased productivity resulting from technological improvements.

A. We believe union wage demands have resulted in technological improvements. Therefore you cannot say that management has introduced technological improvements; the society has created them. Technological improvements have come from society; labour, as a segment of that society, should share in the benefits.

Technology and Human Relations

"We are constantly perfecting our engineering skills and our human relations skills but the curious fact is that we have somehow failed to recognize the interdependence of the two fields," said Prof. Robert H. Guest of the Yale University Institute of Human Relations, whose address bore the title "Technology and Human Relations".

"We must know what is happening to machines before we can interpret what is happening to man," he said, pointing out that what the engineer does to change the machine environment is as "crucially" important to human relations as the non-technical action of the administrator, the foreman, the personnel manager or the shop steward.

In developing his theme, Prof. Guest discussed first the effects of a specific technological environment on workers, then technological change. He devoted the first part of his address to a discussion of the effects of highly repetitive and routine tasks on men on an essembly line.

After defining the general characteristics of the mass production method and the "job cycle" on an assembly line, during which each worker must perform a prescribed number of operations within a set time limit and, on moving conveyors, within a given distance, he quoted from an interview with an assembly line worker (see box, p. 854). The worker, a welder in an automobile plant who at the time of the interview was earning close to $70 weekly, expressed satisfaction with his pay, the working conditions, his job security and the hospitalization and disability benefits but dissatisfaction with his job.

"For this man," said Prof. Guest, "the engineers had, in applying the principles of mass production in their extremes, factored out virtually everything that might be of real personal value to the individual." He pointed out that the job was highly repetitive, that there was little or no need for skill, that the tools and work procedure were all set up for him (and when techniques changed, the engineer, not the worker, controlled the change), that he worked on a fraction of the product and never obtained a sense of the whole, and that the attention required was too much to allow him to daydream or talk with others but not enough to absorb him in his work.

Prof. Guest pointed out that the technical set-up of the assembly line also determined the character of social relationships in the plant. "Men on the line," he said, "work as an aggregate of individuals with each man performing his operation more or less independently of others. The lack of an intimate group awareness appears to reinforce the same sense of anonymity fostered by the conveyor-paced, repetitive character of the job itself."

Commenting on the worker's meagre hope for promotion, Prof. Guest said the industrial engineer, in the best interest of efficiency, had simplified the tasks so that differences in skills from one job to the next were all but eliminated and it was difficult for the average worker to move vertically through a series of distinct steps in promotion. "Over the years, the union itself, through collective bargaining, has encouraged the trend towards uniform wage standards," he added.

An examination of the work careers of more than 200 workers revealed only a few who had experienced any substantial change in job classification in a period of 12 to 15 years, he continued. All of the workers had improved their over-all economic status but, individually, few experienced much change in their relative job status. The net effect of this, the professor pointed out, was the further "de-personalization" of the job. The worker was just a "cog in the wheel".

Despite the profits made by companies adopting mass production methods and the good wages earned by the workers, there are economic costs to the industry, Prof. Guest said, in addition to the social costs to the men involved. High absenteeism and turnover rates add to replacement and training costs. Quality performance is low because of the inherent lack of interest in the jobs and labour-management relations remain in a state of constant tension; this, too, is costly, he stated.

He was not advocating the scrapping of mass production methods, he emphasized, but he urged industry and labour to take steps to bring about a better adjustment of man to machines. He suggested:—

1. A certain amount of flexibility in the way in which work is set up and performed.

2. A system of job rotation determined by the work group with the co-operation of line supervision.

"My job is to weld the cowl to the metal underbody. I take a jig off the bench, put it in place and weld the parts together. The jig is all made up and the welds are made in set places along the metal. Exactly twenty-five spots. The line runs according to schedule. Takes me one minute and fifty-two seconds for each job. I walk along the line as it moves. Then I snap the jig off, walk back down the line, throw it on the bench, grab another just in time to start on the next car. The cars differ, but it's practically the same thing. Finish one —then have another one staring me in the face.

"I don't like to work on the line— no man likes to work on a moving line. You can't beat the machine. Sure, maybe I can keep it up for an hour, but it's rugged doing it eight hours a day, every day in the week all year long.

"During each day I get a chance for a breather ten minutes in the morning, then half hour for lunch, then a few minutes in the afternoon. When I'm working there is not much chance to get a breather. Sometimes the line breaks down. When it does we all yell 'whoopee!' As long as the line keeps moving I've got to keep up with it. On a few jobs I know, some fellows can work like hell up the line, then coast. Most jobs you can't do that. If I get ahead maybe ten seconds, the next model has more welds to it, so it takes ten seconds extra. You hardly break even. You're always behind. When you get too far behind you get in a hole—that's what we call it. All hell breaks loose. I get in the next guy's way. The foreman gets sore and they have to rush in a relief man to bail you out.

"I like a job where you feel you're accomplishing something and doing it right. When everything's laid out for you and the parts are all alike, there's not much you feel you accomplish. The big thing is that steady push of the conveyor—a gigantic machine which I can't control.

"You know, it's hard to feel that you are doing a good quality job. There is that constant push at high speed. You may improve after you've done a thing over and over again, but you never reach a point where you can stand back and say, 'boy, I done that one good. That's one car that got built right'. If I could do my best I'd get some satisfaction out of working, but I can't do as good work as I know I can do.

"My job is all engineered out. The jigs and fixtures are all designed and set out according to specifications. There are a lot of little things you could tell them, but they never ask you. You go by the bible. They have a suggestion system, but the fellows don't use it because they're scared that a new way to do it may do one of your buddies out of a job.

"My chances for promotion aren't so hot. You see, almost everybody makes the same rate. The jobs have been made so simple that there is not much room to move up from one skill to another. In other places where the jobs aren't broken down this way the average fellow has something to look forward to. He can go from one step to another right up the ladder. Here it's possible to make foreman; but none of the guys on the line think there's much chance to go higher than that....

"We had a walk-out last year. They called it an unauthorized strike. Somebody got bounced because he wouldn't keep his job on the line. The union lost the case because it should have gone through the grievance procedure. The company was dead right to insist that the union file a grievance. But it was one of those things it's hard to explain. When word got around that the guy was bounced, we all sort of looked at each other, dropped our tools and walked. Somehow that guy was every one of us. The tension on the line had been building up for a long time. We had to blow our top—so we did. We were wrong. The union knew it and so did the company. We stayed out a few hours and back we came. We all felt better, like we got something off our chests.

"Some of these strikes you read about may be over wages; or they may just be unions trying to play politics. But I sometimes think that the thing that will drive a man to lose all that pay is deeper than wages. Maybe other guys feel like we did the day we walked out."

—Excerpts from an interview with an automobile worker by Prof. Robert H. Guest, Yale University, quoted at McGill University's fifth annual industrial relations conference.

3. Job enlargement, a method in which a single worker performs a number of different operations over a longer time cycle.

4. Improved selection and placement methods.

5. Better training facilities so that workers can in time become qualified to fill openings in the craft and clerical positions.

Prof. Guest then turned to the problem of technological change and its influence on men at work.

"We live in a period which accepts and welcomes change," he said. Although since the beginning of the '40s the displacement of workers has been kept at a minimum because the expanding market has been able to absorb the products of both the older and newer industries, he continued, yet thousands of men and women, and many small businesses and communities, are today suffering from change. He described conditions in a town in which the major industry was shut down when a new process for making the plant's product was developed and the new facilities located elsewhere.

The challenge today, the speaker declared, is to recognize that government, management and labour unions must take advantage of the present period of prosperity to study the social costs accompanying industrial change. Area seniority plans covering whole communities were cited as an example of what is being done to help cushion the impact of technological change, especially that type of change involving the closing down of a single unit in a large corporation. The normal seniority structure of collective agreements hinders mobility, Prof. Guest pointed out.

He then issued a call for joint planning when technological changes are proposed. "Those concerned with the human relations repercussions of the change—the line supervisors, the personnel people and the representatives of the workers—must be allowed to have a voice in a proposed change as soon as, if not before, the plans reach the drafting board," he declared. "Much can be accomplished through the collective bargaining process to adjust to change. The more enlightened unions and managements are coming to realize that mutual understanding is absolutely essential."

Some steps being taken to minimize some of the immediate social costs of technological change were listed by Prof. Guest. These were:—

1. Holding off the hiring of new workers until those displaced by a technological change have been absorbed elsewhere in the organization.

2. Establishing adequate separation pay where displacement cannot be avoided.

3. Guaranteeing average previous earnings during the period of transition.

4. Maintaining "out-of-line" differentials for workers whose job classifications are lowered as a result of the change.

5. Establishing new incentive rates which will allow for earnings equivalent to or better than former rates.

6. Developing systems to allow workers to share in the over-all benefits of increased productivity brought about by technological improvements.

In addition to these steps, Prof. Guest then emphasized, there is a deeper need for understanding between those concerned with people and those concerned with machines and methods.

"Human relation is not something apart from technological environment," he concluded. "There is something basically wrong in the practice of designing and building machines, setting up methods and standards, then manning the shop with people and leaving it up to line management, the personnel manager and the union to straighten out the human relations problems which inevitably develop. Clearly called for is joint planning in advance by all parties at interest.

"It may even be found that the engineer and methods expert can modify the design of operations in line with sound human relations principles without violating sound engineering principles."

Asked during the discussion period following his address whether much has been done to give workers a sense of importance, Prof. Guest replied: "Not very much; not enough."

When asked if there were not some persons who adjust to repetitious jobs, he stated that some do but that the majority do not. He then went on to say that psychologists had found the persons who do readily adjust to repetitious jobs possess certain personality characteristics, namely, low intelligence, low education, a lack of drive for advancement, a belief that the pay is the important thing and a failure to identify themselves with the company.

"This," said Prof. Guest, "raises the question: why not set up tests to pick out persons with those characteristics? Instead," he declared, "we should change the environment."

Prof. Guest was asked whether governments should subsidize industries made obsolete by technological progress, e.g., the Nova Scotia coal mines. He replied: "Yes, until long-range planning can be completed."

Collective Bargaining and Inflation

"On the whole, collective bargaining has probably not raised wages above the levels they would have reached in its absence," Dr. Albert Rees of the Industrial Relations Centre, University of Chicago, told the closing session of the conference. Market forces are the primary cause of rising wages during an inflationary period, he contended.

Dr. Rees, who spoke on "Collective Bargaining, Full Employment and Inflation," also expressed the belief that a more modest full-employment goal will help to preserve free labour markets and free collective bargaining without inflation. "An over-ambitious full-employment policy will eventually produce wage controls or other types of government interference with the collective bargaining process," he warned.

Cautioning the gathering that his knowledge of the wage-price spiral was limited to the United States, he declared that evidence, rather than supporting the view that collective bargaining has caused the wage increases of the last 12 years, offers some support to the view that collective bargaining has held wages down.

To introduce his address, Dr. Rees announced he would discuss several questions: What has been the rôle of wage changes in the inflationary process? Are they a cause of inflation or merely a reflection of changes elsewhere in the economy? What is the relation between wage changes and full employment?

He rejected as a crude concept the interpretation of the wage-price spiral which sees the spiral starting with a wage increase, which raises production costs, then product prices, and allows wage earners to bid up the prices of products not affected by the cost increases, so that workers demand still higher money wages and the spiral continues indefinitely. Putting the wage increase first is viewing the spiral as it seems to the employer, he said. To the employee it is seen as a price-wage spiral.

He rejected that interpretation, he explained, because it says nothing about money. "Unless the quantity of money increases or existing money circulates more rapidly," he said, "a higher level of wages will produce unemployment rather than inflation. Unemployment will act as a check to further demands for wage increases."

Citing wage increases obtained by collective bargaining in the United States steel industry from 1945 to July 1952, Dr. Rees pointed out that they seem to be "the results of conscious decisions, not of impersonal economic forces—the starting point rather than the end of a chain of economic events". The slow upward creeping of wages in unorganized sectors of the economy is unnoticed, he declared.

To explain his statement that collective bargaining has held wages down, Dr. Rees said that collective bargaining turns wage movements into a series of steps and pointed out that, in periods of rapid inflation, "the stabilizing effect of the width of the step—in time—may outweigh the upward pressure represented by the height of the rise". Also, he said, the downward wage inflexibility of collective bargaining encourages some degree of upward inflexibility.

"Collective bargaining makes it more difficult for employers to reduce wages when demand slackens," he pointed out. "It therefore tends to prevent them from making 'temporary' increases in wages and prices during periods of high demand, for fear that the temporary price increases will really be temporary whereas the supposedly temporary wage increase will in fact be permanent."

To support his contention that collective bargaining has probably not raised wages above the levels they would have reached in its absence, he cited the labour shortages in the United States steel industry in 1946 and 1947 and compared wage movements between highly-unionized industries and those with little or no unionization. The shortages, he said, indicate that, in the absence of unions, employers would have set wages at least as high as the negotiated rate to attract labour. The comparison of average hourly earnings in unionized and non-unionized industries shows the movements of earnings in the two groups to be similar, with the advantage, if any, lying with the non-unionized group. Similar results are obtained from a comparison of average annual earnings.

Dr. Rees warned, however, that two reservations had to be kept in mind when making such comparisons. First, he explained, they apply only to the effects of unions on money earnings during a period of inflation. "It is highly probable," he pointed out, "that unions increase the

money earnings of their members relative to others during periods of deflation and some unions may do so during periods of stable prices." He added that unions, during all periods, afford their members many non-economic benefits not enjoyed by many non-unionized workers.

Second, he stated, the absolute level of earnings in unionized industries was higher than that of non-unionized industries in the base year, so that equal percentage increases will generally represent larger absolute increases for the unionized industries.

"The real cause of inflation," Dr. Rees declared, "is the abdication by the monetary authorities of their responsibility for maintaining stable monetary conditions. I know of no evidence," he added, "that unions in the United States have influenced monetary policy by political means since 1939."

One way unions could create political conditions in which the monetary authorities would not be free to pursue an anti-inflationary policy, he pointed out, is by succeeding in committing a national government to a policy of maintaining full employment at any cost.

"Under such a policy," he explained, "wage increases would force the government to increase the money supply enough to finance a higher level of wages and prices. If the government did not do this, the wage increase would result in unemployment."

In Dr. Rees' opinion, whether or not full employment will produce inflation depends on the definition of full employment. The most widely accepted definition, he said, is Sir William Beveridge's: "having always more vacant jobs than unemployed men." Such a definition is "inherently inflationary," Dr. Rees declared.

He then quoted a definition of full employment, given by Swedish economist Prof. Bertil Ohlin, that "implies a non-inflationary monetary and fiscal policy". Prof. Ohlin defined full employment as the highest level of employment compatible with stable prices. This definition, Dr. Rees stated, "would permit a rise in wages roughly equal to the long-run rise in productivity".

Under a Beveridge-type full employment, he said, the amount of unemployment that should be permitted in the United States ranges from an estimated two to four per cent of the labour force. Is it desirable to change this full-employment goal by one or two per cent of the labour force to permit a successful anti-inflationary policy, he then asked.

"An over-ambitious full-employment policy will eventually produce wage controls or other types of government interference with the collective bargaining process," he said. "Such interference is rightly distasteful to unions and management alike. With a somewhat more modest full-employment goal, we can preserve free labour markets and free collective bargaining without inflation."

In the discussion period following his address, Dr. Rees said that if a government says to labour and management, "You have to stop inflation," labour and management should answer: "We are not responsible; we don't have that influence. You have the influence with tax policy, monetary policy, etc."

A Theory of Industrial Relations

Prof. H. D. Woods, Director of McGill University's Industrial Relations Centre, convener of the conference, was the speaker at the conference dinner. He titled his address "Men and Industry", announced he was setting forth a theory of industrial relations but stated he would be satisfied if he succeeded in "asking the right questions and posing the real problems".

One of the problems he felt had arisen out of the conflict of power groups engaged in industrial relations was that the concentration of management and unions on the power issue "has absorbed their energies and diverted them from fuller consideration of the problem of men at work.

"In a sense," he said, "the worker may be the forgotten man in the resolution of union and management conflict."

Prof. Woods began by stating that the actions of the three groups actively engaged in industrial relations problems—managements, unions, and governments and other third parties—are related to policy. Every management, he said, has its personnel and industrial relations policy, which is, to a degree, consciously worked out. The union movement is constantly shaping and reshaping policy. The modern state, because of the economic and social repercussions of industrialism, has been forced into the field and has fashioned public policy as reflected in social and labour legislation and administrative machinery.

A prerequisite policy, he continued, is understanding, which should not be based on error. Yet labour and management may be working from conflicting assumptions and policies are formulated as a result of compromise.

Conscious policy is now concentrated, Prof. Woods said, in power agencies such as corporations, unions and governments, and we have abandoned the idea of a self-regulating economy for one based on compromise between and among large power agglomerations.

"The power conflict is a fact and collective bargaining is the means of resolving it," he declared. And, he warned, the destiny of a free society depends upon the resolution of this power relationship.

Prof. Woods then turned to the worker in industry.

> The worker in industry functions more or less in a specialized job of a specialized department of a specialized industry, which in turn is part of an interdependent economy. As employee, he is subject to the authority of management and his perspective tends to be limited to the experience of his own job. He may have little knowledge of or interest in the whole operation. He is subject to the prosperity of the firm and is insecure in his employment. In the circumstances, management decision and management action related to the solutions of business problems effect him vitally. . . . Management, the state, and unions become the agencies through which the workers' problems are worked out. Yet all three suffer from lack of knowledge of the needs and aspirations of employees.

The depersonalization trend, derived from the nature of industry itself, is supported by management policies developed in recent decades, he continued. "Impersonality is the essence of modern management and union practice," he said, pointing out that standardized selection, employment, training and promotion policies, among others, reflect the separate or joint influence of management and the union.

By "impersonality" he did not mean that no one pays any attention to the worker, he emphasized. But all those in industry who concern themselves with individuals think of them in the context of their formal relations with others: everyone is classified.

Prof. Woods then listed a number of major problems "important not only for unions and management but also for men at work and for the public at large":—

> 1. In an enterprise economy which retains free political and social institutions, the final responsibility for decision-making in business rests with management. The growth of corporations and the enlargement of the business unit greatly enhanced the power of management. The growth of unions and the developing state function in economic and social affairs has reversed the trend towards power of management. The question of the ability of management to function and discharge its responsibilities is important, not only for management but also for unions and the public.
>
> 2. The growth of union collective power in answer to the collective power of the corporation and to the growing problems of industrial and other wage workers has been attended by a weakening of the relationship between union officers and rank and file members. In the process union objectives tend to become redefined and oriented towards associational aims at the expense of the individual aspirations of worker members. The price of union power may be the decline of member influence.
>
> 3. The collective relationship between union and management has strengthened the trend towards large-scale group action and the reduction of market influences.
>
> 4. Concentration of management and unions on the power issue has absorbed their energies and diverted them from fuller consideration of the problem of men at work. Some attention to human relations is given by industry, little by unions, and none at all by both together.

Summing up, Prof. Woods appealed to business leaders, union officers and government officials to give serious attention to human relations in industry.

"In a sense, the worker may be the forgotten man in the resolution of union and management conflict," he said. "It seems to me that both management and union officials need constantly to be considering the implications of collectively-determined personnel administration from the point of view of the 'customer', the worker himself, not in terms of what they believe his interest is or ought to be but in terms of the worker's definition."

He concluded by warning that industrial conflict poses a threat to the preservation of free institutions. Decisions by power groups must produce "socially desirable" results, he said.

"The guarantee of the retention of freedom surely rests on the success that is achieved in developing a climate favourable for objective study of the social and human problems of administration in business and industry," Prof. Woods said. "The task of preserving free institutions will continue to place a heavy burden of responsibility on the two most powerful elements in society, business and unions, particularly because of the inevitable impact of their mutual relations.

"It is about time that they began to define problem areas of common cencern and approach them together."

Laval University's 8th Annual Industrial Relations Convention

Human relations in industry at the plant level is the central theme on which seven speakers base addresses during the two-day conference

Since human problems in industry are felt primarily at the plant level, the studies at the 8th annual convention* on industrial relations at Laval University, held at Quebec on April 20 and 21, were limited to that sphere.

During the two-day session, more than 500 delegates—heads of concerns, industrial relations directors, labour leaders, officers of employers' organizations, personnel directors, legal and moral advisers, labour officials, industrial engineers, social workers and professors—attended seven lectures, each followed by a free exchange of opinions, analysing methods for adapting the workers to the continual changes brought about by the constant development of production techniques.

Introduction of the Theme

Gérard Tremblay, Quebec's Deputy Minister of Labour and Director of Laval's Department of Industrial Relations, who was chairman for the convention, briefly outlined the theme in his opening address. Mr. Tremblay reminded his listeners that, although the machine is valuable, the one who assembles and operates it is more valuable still.

"Human capital," he said, "to use an expression which is hateful because of its unpleasant materialistic associations, must be protected."

"We are living in a world in which the techniques of production are constantly changing, in which production itself is developing new fields of activity opened up by scientific research. How can the workers be adapted to these continual changes? Companies are mechanizing their working methods, introducing new machines, establishing mass production and production on the assembly line or conveyor belt. How will the worker react to work which loses its personal value when it becomes repetitive and parcelled out? The worker, who is a human being, must understand these changes and the need for them if he is not to deteriorate into a robot."

Mgr. Alphonse Marie Parent, PA, Vice-Rector of Laval University, also spoke at the opening session, welcoming the delegates and giving the key-note for the discussions.

"As essential conditions for social peace," he said, "the supremacy of man over matter requires, on the one hand, the adaptation of the work to the worker: duration, rhythm, methods, hygiene, apprenticeship, professional environment; and, on the other hand, an organization of the work based on an effectively protective status of the right of association, both for employers and for workers, which, in the ordinary course of events, directs employers' and workers' associations towards the coming of a social order based on justice and charity."

Social Structure of the Concern

The social structure is a small world in which, by reason of the division of labour, jobs are necessarily diversified and fall into a hierarchical pattern. How can the individuals, in this hive which is the factory, be integrated in such a way that all may feel useful, even when carrying out the most humble tasks, that all may be as one in accomplishing the work of production?

The first speaker, Emile Gosselin, Secretary of Laval's Department of Industrial Relations examined the social structure of the concern.

"The concern," he said, "in addition to producing goods and services, must assume the eminent social rôle of providing for the members of its staff a framework in which all will be able to develop their personal abilities, a circle to which all will be proud to belong; in short, a society in which they will be able to satisfy their most legitimate ambitions."

*Themes of the seven previous conventions were: industrial relations in Quebec (1946); collective agreements and union security (1947); forms of labour-management co-operation (1948); technique of labour relations (1949); wage structure (1950); security in the worker's family (1951); and wages and prices (1952). The 1950, 1951 and 1952 conventions were reported in the LABOUR GAZETTE (June 1950, p. 817; June 1951, p. 794; and June 1952, p. 723).

Mr. Gosselin divided the real social structure of the concern into two structures of relationships: a formal social structure and an actual social structure. These two structures of relationships make up the real social structure of the concern, influencing and completing one another.

Three factors, according to the speaker, affect most social relations in the concern: members of the staff do not all enjoy the same authority; they do not all carry out the same duties; and, while at work, they have to communicate among themselves through official channels.

Mr. Gosselin then dealt with the social effects and consequences of these factors. The formal organization will contribute towards the creation of a social scale in the concern; it will be the cause of filtering and slowness in communications; it will give rise to the spontaneous organization of social relations by facilitating the formation of groups with common interests.

"The members of a sector," the speaker explained, "will have a feeling of solidarity with one another; they will adopt common attitudes and will unite in defence of the activities of the group itself when they feel threatened by outside forces." This solidarity would explain in part the friction which develops in a concern. It should therefore be taken into account where production is concerned.

Pointing out that the individual wants to give more than an economic sense to his relations in the concern, the speaker added that the individual looks to the group for what his official relations in the plant cannot give him.

"If the concern is to be integrated on the level of economic and human requirements," Mr. Gosselin concluded, "it would perhaps be beneficial to make use of the group technique to increase production and at the same time to improve the spirit of co-operation among the participants."

Authority in the Concern

The employer must administer his plant. This responsibility brings him into contact with his supervisors and workers. Under what conditions and, especially, in what atmosphere should he exercise his authority in order to obtain, from the human and even from the technical point of view, the most effective results?

"Considered within the framework of the community at large," said Roger Chartier, in charge of industrial relations education at Laval University's Extension Course Centre, "every company contributes to the satisfaction of the needs of a nation, to the maintenance of a standard of living and to the progress of a civilization."

The speaker stressed the fact that relations between the members and the agents of concerns, especially between those who contribute their labour and those who contribute capital, give rise to combinations of rights and reciprocal duties which affect the management and the administration of the concern, the ownership of the product and the distribution of profits.

The source of authority, according to Mr. Chartier, is God; its foundation is the common good. There is no authority which does not come from God. The end of man is the common good; in order to subsist and to attain his end, man has a fundamental need of society and of his fellow-men. This society, grouping such diverse activities, cannot be maintained without authority.

After reviewing the qualities of leadership, the speaker reminded his listeners that the great art of the leader or the head of a business lies in the effective delegation of part of his powers of decision to all levels of the hierarchy.

Mr. Chartier closed with an analysis of the conflicts of authority in a unionized company.

"Trade-unionism," he said, "has brought about an expansion of labour demands, and collective agreements have given rise to a new problem, the problem of the prerogatives of employers. The workers will not agree to imposing any limits on collective bargaining, because, for them, there is no question of principle involved, and because they consider that agreement on all points should henceforth be reached 'together'. They want to identify themselves as closely as possible with the concern and play a more and more important part, in accordance with changing conditions, in its life and progress. The employers' attitude, either of shock or of acceptance, creates or solves the problem of authority in the concern."

The Union and the Company

The union has every right to establish itself in the concern. By reason of its influence on the workers and on the operations of the company, it becomes a factor in production. What are its social responsibilities towards the concern? What are its responsibilities towards its members, towards the employer and towards society?

Marc Lapointe, Montreal barrister and Master of Industrial and Labour Law, analysed the growth of trade-unionism,

stating that it is not a passing accident in the history of the world. Following after the era of individualism, it appears to be the fruit of a reaction tending towards community life.

"Trade-unionism is a necessity today," he said, "because it fulfils a function in the social structure which we have wanted to create ourselves, and it cannot disappear until the need for it disappears, that is until the social structure has taken another step along the path of its destiny."

Mr. Lapointe pointed out that trade-unionism is a social as well as a legal institution, recognized by our laws and accepted in our social structure. "Only understanding, acceptance and sincere co-operation will enable trade-unionism to meet its obligations and to be something other than an instrument for struggle and attack and for making demands."

"The first rôle of trade-unionism," the speaker explained, "was to humanize production. Then the union applied itself to the delicate field of remuneration, and this often forced the employer to defend his methods of production, to discuss them with the union and sometimes to accept some very practical suggestions. Thus the union has been a stimulus to the employer's inventive genius. In return the union becomes an educational factor, thereby helping to increase the output in production. Trade-unionism has also done a great deal to straighten out and level off abusive competition and to make industry healthier by doing away with dishonest competition based on inferior working conditions. The trade-union movement is also a movement of harmony and stability within the concern, for it has rapidly developed a system for channelling complaints, a safety valve which works just as well to the advantage of the employer as to that of the workers. The employer is relieved of a host of grievances which the responsible union sifts out, and this is a more pleasant way for the worker than if the employer himself had to intervene."

Personnel Management and its Responsibilities

Both large and medium-sized concerns are overwhelmed with personnel problems. T. P. Dalton, Personnel Manager of the Shawinigan Water and Power Company at Montreal, analysed the duties and responsibilities of personnel managers.

"The prime responsibility of a personnel department," he said, "is to co-ordinate the directives and the activities which relations with the employees entail."

When it decides to set up a personnel department, according to Mr. Dalton, a company must have in view the development of good labour-management relations. "It would be unfortunate," he said, "for such a service to be set up for the sole purpose of creating a negative and defensive attitude towards the union."

He stressed the need for personnel managers to possess the unlimited confidence and support of top management.

In the field of responsibilities, Mr. Dalton specified that the personnel manager should assume absolute responsibility for conducting the negotiations with the help and advice of a number of those who are in charge of production, carefully chosen from among the senior officials of the company. "He must never enter into negotiations with the union," he said, "unless he has obtained a definite mandate considered by his committee as being satisfactory, fair and reasonable.

"Grievances which reach the final stage," he added, "should be submitted to the personnel manager, who will refer the case to the head of the concern. The personnel manager will thus be able to study the case objectively, and his recommendations will save the company from embarrassing situations and needless arbitration procedures."

Rationalization of Labour and the Human Element

The intensive production of modern industry has been made possible by the division of labour and by mechanization. But the industrial genius which is responsible for the rationalization of labour co-ordinates not only energy and machines but also the men who operate and tend these machines.

How, through the rationalization of labour, can social justice be made to prevail while economic progress is realized? This was the subject of a talk by Camille Barbeau, industrial organization expert from St. Lambert.

Pointing out that the heads of commercial and industrial concerns, geared to our economic system, are obliged to rationalize, Mr. Barbeau drew attention to the following problems:—

In plants where new ideas are always having to be applied, the complete co-operation of all members of the concern, without exception, must be assured.

Scientific organization will be a complete failure in a concern if there has been no improvement in working conditions.

The workers should be given reasonable tasks.

If a greater effort is required, adequate compensation must be paid.

Methods used must be simple and of such a nature that they can be understood by all.

All parts of a concern must, of necessity, be rationalized.

Mr. Barbeau added that rationalization has given man a choice place in industry; the worker has become an expert who must have recourse more and more often to all his resources.

In closing, he expressed the hope that this movement towards the pursuit of greater and greater efficiency might lead to the abolition of all hard labour.

Physiological Aspect of Labour

Next to accidents, the worker's greatest enemy is fatigue. How can fatigue be kept within reasonable limits? Above all, how can it be prevented and its normal or abnormal causes reduced? With these questions Dr. Bertrand Bellemare, MPH, special adviser to the Quebec Department of Labour and the Workmen's Compensation Commission, tackled the problem of the physiology of labour in the industrial sphere and among the workers.

"If," he said, "with the considerable industrial expansion now going on, and if, in the present era of mechanization, we completely forget the most essential human factor, which is health, man will finally bring about his own destruction instead of improving himself while improving the machine."

Pointing out that machines used to be designed without any consideration for the human being, the speaker stated that the physiology of labour requires that the machine first be well adapted to the man and he will then adapt himself to the machine.

Dr. Bellemare also stressed the fact that work must be carried on in a healthy atmosphere; he reminded his listeners that the worker, who is the pillar of industry, must be in good health if he is not to impair the activity of industry.

After analysing some of the causes and effects of industrial fatigue, as well as certain remedies for it, the speaker stated that work must be regulated by a fair and healthy adaptation of the machine to the man and the man to the machine, by the elimination of all harmful substances from the vicinity, by the correction of differences in temperature and humidity, by an appropriate choice of colour, the elimination of noise, selection of the employees, and sanitary facilities.

Dr. Bellemare stated in closing that a healthy physiology and a healthy scientific organization of labour must go hand in hand with the extensive economic developments now in prospect.

Adaptation of the Worker in the Concern

It is up to management, and to an enlightened personnel management, to direct the transition in a human way, reducing the necessary shocks to a minimum, said Louis Philippe Brizard, Director of the Department of Industrial Relations at the University of Montreal, describing a method of adaptation to be recommended to the supervisory staff: group discussion—that is, complete participation by those to be affected by a change in a collective and systematic discussion under the direction of the supervisory officer.

This form of industrial democracy, according to the speaker, satisfies the psychological and social aspirations of the worker. However, he mentioned certain limits to this group discussion procedure: the need for a good psychological training of intermediate management; the need to educate the workers, and the practical difficulties involved in bringing together the workers affected by the changes.

Mr. Brizard concluded his brief outline with an explanation of the rôle of the personnel department and the advantages of union co-operation in the putting into effect of this adaptation technique of collective discussion.

Human Relations in Industry

In a remarkable synthesis of the human problems which arise during the development of a company, presented at the closing banquet, Rev. Father Noël Mailloux, OP, Director of the Human Relations Research Centre at the University of Montreal, emphasized the importance of studying the conditions which will make it possible to introduce, in a world of human efforts, mutual confidence based on sincerity, justice and charity.

"In order to achieve this purpose," he said, "we must group together all persons of good will in order to ensure closer and more effective co-operation in the carrying out of that task which consists of making labour a work of human improvement."

Father Mailloux, who is also Director of the Institute of Psychology of the University of Montreal, pointed out that it is not fair to give us over to that type of determinism which has led us to the gates of the abyss and to the most disastrous of wars.

He specified that we are faced with a fundamental problem of human relations, no longer of the individual towards another individual or group only, but of a community facing another community. It should be realized that we are social beings and that every one of our reactions may have a considerable effect on the persons living around us, he said.

"Man must therefore work in order to bring more happiness to society. And he will do so only in so far as he has a clear and objective conception of human and supernatural values."

The speaker was introduced by Rev. Father Gérard Dion, Assistant Director of the Department of Industrial Relations at Laval. The banquet was presided over by Gérard Tremblay, Deputy Minister of Labour for Quebec and Director of the Department of Industrial Relations at Laval.

Father Mailloux devoted the greater part of his talk to a history of the development of human relations in industry.

Work, he pointed out, is a personal matter, a condition of life. Man seeks, as it were, to make it the signature of his existence. Thus, instead of considering labour solely as a cause in production, we have come to recognize a real personal and human value in it.

In closing, Father Mailloux stated that work done solely for personal ends very often interferes with the operation of the concern. Labour must be a life, a work of love, a giving of oneself. Only then does it become fully effective, with regard to man and with regard to the community.

Fatal Industrial Accidents, 1952

Industrial fatalities in Canada during calendar year 1952* totalled 1,428, an increase of 13 over 1951 figure. Fatal and non-fatal accidents reported by Workmen's Compensation Boards also more numerous

During the calendar year 1952, industrial fatalities in Canada totalled 1,428, an increase of 13 over the 1951 figure of 1,415. Included in the final figure for 1951 are 12 deaths not previously reported. Accidents, both fatal and non-fatal, reported by the Workmen's Compensation Boards increased from 447,011 in 1951 to 477,885 in 1952.

The accidents recorded are those which involved persons gainfully employed and which occurred during the course of, or arose out of, their employment. Also included are deaths from industrial diseases as reported by the provincial Workmen's Compensation Boards. Reviews of industrial fatalities appear quarterly in the Labour Gazette.

During the year, there were 19 industrial accidents that caused the death of three or more persons in each case. On January 10, three loggers were drowned near Thurlow Island, B.C., when the boat in which they were transporting supplies back to camp overturned and sank. In the worst mining disaster since 1941, 19 coal miners lost their lives in a gas explosion on January 14 in a mine at Stellarton, N.S. A head-on collision between two freight trains at Abenakis, Que., cost the lives of two engineers, a fireman and brakeman. On January 30, three railway employees were killed in a collision of two freight trains at Argosy, N.B. The engine of one train ploughed into the caboose of the other, which had stopped to take on water.

Three men working on a construction project at Froomfield, Ont., were burned to death January 31, when a small heating unit used to prevent fresh mortar from freezing tipped over and sent flames roar-

Annual statistics on industrial fatalities are compiled from reports received from the various provincial Workmen's Compensation Boards, the Board of Transport Commissioners and certain other official sources. Press reports are used to supplement these data but accidents reported in the press are included only after careful inquiry to avoid duplication. For those industries not covered by workmen's compensation legislation, newspaper reports are the Department's only source of information. It is possible, therefore, that coverage in such industries as agriculture, fishing and trapping and certain of the service groups is not as complete as in those industries covered by workmen's compensation legislation. Similarly, a small number of traffic accidents, which are in fact industrial accidents, may be omitted from the Department's records because of a lack of information in press reports.

*See Tables H-1 to H-5 at end of book.

ing up the partially completed tower in which they were working. On February 5, at Carman, Man., three steel workers were killed when trapped in a falling radio tower. The men had ascended the tower to repair damage done when an airplane struck the tower the previous day. Four employees of a construction firm were burned to death at Seven Islands, Que., on March 29, when the bunkhouse in which they were staying, caught fire. The accident occurred when one of the men tried to start a stove with gasoline.

On April 8, three sawmill workers were drowned in the Saskatchewan River near Nipawin, Sask., while attempting to save equipment when the mill in which they were working was flooded. At Lions Bay, B.C., a contractor, mechanic and a machinery salesman lost their lives on May 17, when the aircraft in which they were returning from a construction project crashed into the bay. Three employees of an air transport company were killed at Cartwright Harbour, Labrador, on May 18, when their aircraft crashed while attempting to land. On May 31, at Kirkland Lake, Ont., three miners died as a result of rockbursts in the mine in which they were working.

On July 3, a fishing vessel, the *Daisy B,* disappeared off the coast of British Columbia with seven men aboard. At Glace Bay, N.S., seven miners were killed in an underground explosion July 9. Seven employees of the Manitoba Government lost their lives in a plane crash at Berens River, Man., on July 21. A railway accident at Seven Islands, Que., on September 12 resulted in the deaths of two construction workers and two employees of a mining company. The four men were in a railway caboose which was struck by a flat car which had been rammed by a runaway diesel locomotive. On September 15, three tobacco workers were killed when the car in which they were travelling was in collision with a truck near Langton, Ont. At the time of the accident, the three men were being driven back to the farm where they were regularly employed, after spending the day working at a neighbouring farm. On September 25, at Port Arthur, Ont., four men lost their lives as a result of a dust explosion at the grain elevator where they were working.

A head-on collision between two trains at Ragged Rapids, Ont., on December 23, resulted in the deaths of five of the trains' crews. Seven seamen aboard the tug *Petrel* were drowned on December 27, when the tugboat disappeared in the Gulf of Georgia.

Fatalities by Causes.—Table H-2 contains information on industrial fatalities classified by main classes of industries with a complete breakdown of the new cause classification adopted January 1, 1952. An analysis of the causes of the 1,428 fatalities which occurred during the year shows that 391 were the result of being "struck by tools, machinery, moving vehicles and other objects". Within this group, the largest number of deaths was caused by falling trees and limbs (70), by objects falling or flying in mines and quarries (46), and by automobiles and trucks (42). Accidents which involved "collisions, derailments, wrecks, etc.", were responsible for 338 of the total deaths during the period. These included 142 fatalities involving automobiles and trucks, 64 involving watercraft and 43 that were the result of railway accidents. In the classification "falls and slips" 262 fatalities were reported. Of these, 238 were caused by falls to different levels.

Fatalities by Provinces.—The largest number of industrial fatalities recorded in any province in 1952 was 481 in Ontario, a decrease of two from the preceding year. Of these, 103 occurred in manufacturing, 81 in the construction industry and 80 in transportation. In Quebec, 332 fatalities were recorded, including 71 in transportation, 67 in construction and 59 in the manufacturing industries. British Columbia followed with 270 during the year. Accidents in the logging industry were responsible for 75 of these fatalities. (*See* Table H-3).

Fatalities by Industries.—Table H-4 provides an analysis of fatalities by industries and months. The number of fatalities in each industry is expressed as a percentage of the grand total. The latest available figures of persons employed in the various industries are also given; these, although not in any case for the year under review, are included to provide an approximate indication of the relative frequency of accidents from industry to industry.

The highest percentage of the 1,428 fatalities in 1952 was in transportation, with 17·5 per cent as compared with 17·2 per cent in the previous year. Fatalities in the construction industry accounted for 17·2 per cent, an increase of two per cent over 1951.

The percentage in manufacturing showed a slight decrease, being 16·2 per cent compared with 16·4 per cent in the preceding year. In mining, the percentage increased from 13·5 per cent in 1951 to 14·6 per cent in 1952.

3rd Meeting of Apprenticeship Training Advisory Committee

Standard definitions of occupations and analyses of trades were main topics discussed. Recommendations made concerning publicity, upper age limits in and educational requirements for apprenticeship plans

Standard definitions of occupations and analyses of trades were the main topics discussed at the third meeting of the Apprenticeship Training Advisory Committee in Ottawa, April 20 and 21. Recommendations were made concerning publicity, upper age limits in apprenticeship plans and educational requirements of apprentices.

The two-day meeting was attended by representatives of labour, industry and provincial governments. Percy Bengough, President of the Trades and Labour Congress of Canada, presided until the second day, when he was succeeded in the chair by L. J. Sparrow of the Canadian General Electric Company.

The members of the Committee were welcomed by A. H. Brown, Deputy Minister of Labour, who said apprenticeship was a most urgent problem at the present time in view of Canada's expanding economy and the preparedness program during the cold war.

Hon. Milton F. Gregg, Minister of Labour, addressed the meeting and said the importance of having key people to take part in Canada's industrial expansion cannot be over-emphasized.

"The supply of skilled workers depends in large measure on the attitudes and co-operative efforts of employers and organized labour, which in turn are directly affected by your deliberations and recommendations," he told the members of the Committee.

Definitions and Classification of Trades

In his report to the Committee, A. W. Crawford, Director of Training in the federal Department of Labour, commented on the difficulty of developing occupational titles of designated trades which would be acceptable in all parts of Canada. The present work on trade analyses, he said, would be helpful in developing standard definitions at a later time.

Several methods of classification were in use, said Mr. Crawford. These included: the general nature of the work performed; the place the work is performed; the degree of skill and training required; and the nature of the skills required.

Members of the Committee were agreed that the degree and nature of the skills should be the main factors in defining trades. It was felt that standard apprenticeship schemes should provide training in the "hard core" of skills required. Apprentices, it was felt, could then proceed to specialize in any of the different branches of the trade.

A motion was passed urging that the work of trade analyses be continued and that the matter of standard definitions be left until after the completion of each analysis.

Trade Analyses

C. R. Ford, recently appointed Assistant Director of Training, reported that in co-operation with the Economics and Research Branch of the federal Department of Labour, all material for analysis of the carpentry trade had been gathered and a start made on material for the machinist trade.

The Director of the Economics and Research Branch, G. V. Haythorne, said the analyses are being prepared in consultation with employers, skilled tradesmen and teachers. These analyses will be sent to provincial vocational training directors for perusal and then presented in final form.

An analysis of the machinist trade, prepared by the Ontario Industrial Educational Council, was described by Mr. Sparrow. The plan, designed for small plants with few employees, provides for in-plant instruction and is an attempt to arrive at uniformity of training and classification.

Publicity

Methods of publicizing the need for in-plant training and group apprenticeship programs were discussed. It was felt that publicity by the federal Government should be integrated with that of the provincial governments through radio programs, films, articles in trade publications and displays

at fairs and exhibitions. Several members were of the opinion that publicity could be achieved most effectively through national employer and union organizations.

The Committee was agreed that publicity should be directed to local areas, should inform parents and teachers of the advantages of apprenticeship for children, and should encourage apprenticeship programs involving several plants.

Industry representatives pointed out that there is a shortage of apprentices in manufacturing. They indicated that more employers are becoming aware of the shortage and that this awareness could be followed up by publicity in the form of visits by experienced field men promoting in-plant training schemes.

The Committee adopted a resolution calling the attention of the federal and provincial governments to the importance of immediate and continued programs under which a greatly increased proportion of employers will be associated in group apprenticeship schemes. Such programs, said the resolution, should point out the availability of federal financial participation in this matter, both as to field staff and publicity campaigns.

Drop-outs in Apprenticeship

Mr. Crawford estimated that, according to information received from the provinces, 30 per cent of all apprentices enrolled in designated trades have their contracts cancelled for various reasons. The reasons given, in order of incidence, are: lack of interest; enlistment in the armed forces; and lack of fitness for the trade.

Suggested remedies for this situation, said Mr. Crawford, included development of sympathetic informed attitudes towards apprenticeship on the part of employers, unions, teachers, parents and youths; better selection methods through pre-employment classes to determine fitness; fair standard entrance qualifications including abolition of upper age limits and adjustments in apprenticeship periods; greater time credits for school training; enactment of Tradesmen's Qualification Acts; and higher wages for apprentices.

Suggestions for retaining apprentices included closer supervision on the job and in classes; follow-up of those who quit or leave the province; a system of transfers for better instruction and during slack periods; frequent increases in pay rates with bonuses for outstanding ability; full-time classes to replace part-time and evening classes; periodic consultations with employers, parents and apprentices; co-operation with the armed forces with respect to credits; and more rigid enforcement of law and regulations.

The Committee recommended that these suggestions be passed on to provincial apprenticeship boards and directors of apprenticeship for their consideration and for the consideration, study and information of all advisory committees.

Education

In his report, Mr. Crawford emphasized the need for close co-operation between vocational schools and industry. The Committee agreed that educational measures should be co-ordinated at all levels, from manual training classes through pre-employment classes to the trade training itself.

The Committee recommended that the Training Branch of the federal Department of Labour make a survey of the educational requirements for apprentices demanded by trade unions, companies and provincial apprenticeship boards.

Other Matters

J. H. Ross, head of a special committee on equipment and teaching aids for automotive classes, reported on conferences held with auto manufacturers. Both manufacturers and dealers, he said, felt the need for more mechanics of better quality and welcomed government interest in this field.

Mr. Ross reported that equipment in most trade schools was fair to good and that it was being supplied by manufacturers either at reduced prices or on loan.

T. A. Fishbourne of the Unemployment Insurance Commission reported that there had been some difficulty at national employment offices in identifying and classifying *bona fide* apprentices. Under a newly-adopted system, however, classification will be uniform for all provinces in Canada. At the same time, unemployed apprentices registered with the unemployment insurance commission will also be registered with local apprenticeship directors.

The members of the Committee were shown a film, *Building for Tomorrow*, dealing with apprenticeship in the construction trades. The film was produced by the National Film Board and presented by the Information Branch of the Department of Labour.

Representatives of the Economics and Research Branch reported that the Labour Department's bulletin *Apprenticeship in Canada* is being revised and brought up to date. When completed, the 75-page

booklet will contain a short history of apprenticeship, a survey of government apprenticeship programs, acts and assistance, a description of private industrial apprenticeship plans and plans in the armed forces. An appendix will contain apprenticeship programs of foreign countries, typical apprenticeship forms and a table of designated trades.

Members of the Committee stated their governments and organizations would find considerable use for the booklet.

Members of the Committee

Members present at the meeting were: W. E. Wilson, Deputy Minister of Labour, Winnipeg; J. H. Ross, Supervisor of Trade Training, Department of Labour, Ottawa; J. B. Metzler, Deputy Minister of Labour, Toronto; G. Rousseau, Technical Advisor, Apprenticeship Services, Department of Labour, Montreal; R. E. Anderson, Chief Administrative Officer, Department of Labour, Halifax; J. C. Campbell, Canadian Acme Screw and Gear, Ltd., Toronto; L. S. Sparrow, Supervisor of Apprentices, Canadian General Electric Co., Peterborough, Ont.; A. E. Hemming, Trades and Labour Congress of Canada, Ottawa; and H. Conquergood, Director of Education and Welfare, Canadian Congress of Labour, Toronto.

Others present were: N. D. Cochrane, Deputy Minister of Labour, Fredericton; K. A. Pugh, Chairman, Alberta Apprenticeship Board, Edmonton; D. C. Hicks, Inspector, Apprenticeship Branch, Ontario Department of Labour, Ottawa; J. A. McLaughlin, Assistant Commissioner of penitentiaries, Ottawa; R. E. Nuth and S. D. C. Chutter, Canadian Construction Association, Ottawa; G. V. Haythorne, W. Dymond, P. Cohen and W. W. McCutcheon, Economics and Research Branch, Department of Labour, Ottawa; G. G. Blackburn and H. L. Douce, Information Branch, Department of Labour, Ottawa; and T. A. Fishbourne, H. C. Hudson, J. McGregor and D. W. McDuffee of the Unemployment Insurance Commission, Ottawa.

Recent Speeches by Minister of Labour

Hon. Milton F. Gregg discusses rehabilitation of the disabled, post-war trends in industrial relations, supply of professional workers

In three recent speeches, Hon. Milton F. Gregg, federal Minister of Labour, spoke on rehabilitation of disabled persons, post-war trends in labour-management relations and Canada's resources in professional workers.

At a meeting of the Forest City Kiwanis Club in London, Ont., Mr. Gregg called upon Canadians, and particularly service clubs, to help with the work of rehabilitating disabled men and women.

"If Canada is going to play its part in the maintenance of world peace, it must become and remain strong through defence preparation, in other words, it must make full use of its manpower resources. This presupposes effective use of all who are or should be in the labour force, and that includes the disabled," he said.

"This is important, because as a result of the low birth rate in the '30s, the number of fit young Canadians becoming available to enter upon productive work each year is not sufficient to maintain our present rate of production. And the statisticians say that this situation will not right itself until 1966."

Mr. Gregg said that during the 14 months of its existence, the National Advisory Committee on the Rehabilitation of Disabled Persons had found that through the co-operation of government agencies, the medical profession, educationalists, vocational experts and placement services, a system can be developed that will channel the disabled from a life of dependence to a place where they can taste of the joy of personal achievement and can make their maximum contribution to the wealth of the nation.

The National Committee, said Mr. Gregg, had shown first that money is not *spent* on rehabilitation, but *invested,* and second, that while we tend to stress those who can become wholly or partly productive in the economy of the nation, the eventual objective is to restore *all* the disabled to the highest place in a community that they are capable of assuming.

Mr. Gregg said the federal Department of Labour is broadening the scope of vocational training for disabled persons and suggested that sheltered workshops, established by service clubs, voluntary agencies

and groups of employers, are necessary in a fully rounded out rehabilitation plan. These workshops, he said, could employ those who cannot compete on the open labour market in such work as packaging small products.

In an address to the Hamilton branch of the Canadian Chamber of Commerce, Mr. Gregg said that with more than one in three paid workers from all industry under agreements, Canada's economy is heavily influenced by decisions made in collective bargaining.

In the post-war years, said the Minister, labour and management "are showing an increasing awareness that, since they have to live together, ways and means can be found to make life tolerable for both.

"An observer of the contemporary labour relations scene cannot help but be struck by two healthy developments. First, the advances in working conditions represent continuing results of joint decisions by management and labour. No dictatorial decision has shaped the trends but they have grown out of the meeting of the different points of view that are brought to bear on mutual problems.

"The second encouraging result to be seen in the trend of settlements is the breadth of social consciousness reflected in them. Problems such as those of standards of living, leisure time, old age and the workers' security on the job are all reflected in the bargaining of the past decade."

By and large, said Mr. Gregg, labour and management are using collective bargaining to solve problems in which the public interest is concerned and to settle their disputes without interrrupting production.

"Approximately 7,000 collective agreements are now in effect in various sections of Canadian industry. Most of these are negotiated annually without reference to government conciliation machinery, either federal or provincial.

"In the year 1952, only about 2,100 cases of negotiations went to conciliation. Of this number, almost 1,400 cases were settled with the help of conciliation officers and, of the 718 remaining cases, only 69 eventually ended in a strike."

Mr. Gregg said the two main functions of the federal Department of Labour were to provide conciliation services and to supply information on labour questions. He said the department considers that its duty is to assist labour and management "to work together in such a manner that industry will function to the greatest advantage of all the people of Canada".

At the annual meeting in Ottawa of the Professional Institute of the Public Service, Mr. Gregg revealed that Canada today has 377,000 professional workers. Enrolment in universities this year, he said, totals some 53,000 undergraduates, compared with the record high of 80,000 in 1947-48.

"This year," said the Minister, "it is estimated 10,000 new graduates will be seeking employment. By the middle of March our departmental returns indicated that there were 16,000 openings for them and for summer students, not including the requirements of the Civil Service Commission and the armed services."

Mr. Gregg said the Government is the largest employer of professional men and women, with approximately 32,000 in the Civil Service.

"Canada's rapidly developing economy, the growing complexity of all levels of government, and defence preparedness have all added to the demand for professional workers.

"Today the complexity of warfare means that defence preparedness calls for the services of people with professional training in many different fields. Large numbers of scientists, engineers and other highly trained personnel are required. These developments mean that Canada faces heavy pressure on the limited supply of professional persons."

Mr. Gregg expressed the hope that "a fair quota of our young graduates will be self-employed . . . dangerous-living, rugged individualists, who will gaily hang out their own shingles as consultants, counsellors and advisors."

Average hourly and weekly earnings of hourly-rated wage-earners in Canadian manufacturing industries reached new all-time high levels at the beginning of March, according to the Dominion Bureau of Statistics.

Hourly earnings in manufacturing averaged 134·7 cents compared with 127·8 a year earlier, weekly wages $56.71 compared with $53.29, and average hours 42·1 compared with 41·7.

International Labour Organization

36th ILO Conference Begins

Director-General in annual report urges widespread acceptance of the need for higher productivity. Hon. Milton F. Gregg attends sessions

A widespread comprehension and acceptance of the need for higher productivity was urged by David A. Morse, Director-General of the International Labour Organization, in his report to the 36th general conference of the ILO, which opened June 4 in Geneva. It will end June 27.

"We must narrow the gap of production," said Mr. Morse. "This must be done if we are to lay a secure basis for peace, if freedom and liberty are to prevail, and if we are to win our long battle for the dignity of the individual and of labour."

Some 66 member countries have sent tripartite delegations to the three-week conference, where about 650 worker, employer and government delegates and advisers are discussing holidays with pay, protection of the health of workers in places of employment, the minimum age of admission to work underground in coal mines, and the organization and working of national labour departments. The delegates were given information and reports on the application of conventions and recommendations of previous conferences.

The Hon. Milton F. Gregg, federal Minister of Labour, is attending the conference. Other members of the delegation from Canada are:—

Government delegates: Paul Goulet, Assistant to the Deputy Minister of Labour and Director of the ILO Branch (head of the delegation) and G. V. Haythorne, Assistant to the Deputy Minister and Director, Economics and Research Branch. Government advisers are: H. R. Pettigrove, Industrial Relations Officer, Federal Department of Labour, Fredericton, N.B.; Ernest Watkinson, Chief of the Occupational Health Division, Department of National Health and Welfare, Ottawa; and Bruce Williams, Deputy Delegate, Canadian Permanent Delegation to the United Nations, Geneva.

Employer delegate: Clyde E. Shumaker, Director of Personnel, Goodyear Tire and Rubber Company of Canada, member of the Industrial Relations Committee, Canadian Manufacturers' Association, Toronto. Advisers to the employer delegate are: J. A. Brass, General Secretary, Railway Association of Canada, Montreal; R. V. Robinson, Assistant Manager, British Columbia Division, Canadian Manufacturers' Association, Vancouver; Allan Ross, Ross-Meagher Limited, representing the Canadian Construction Association, Ottawa; and H. McD. Sparks, Manager, Industrial Relations Division, Northern Electric Company, representing the Canadian Chamber of Commerce, Montreal.

Worker Delegate: Claude Jodoin, Vice-President, Trades and Labour Congress of Canada, Montreal. Deputy worker delegate is James Morrison, Research Director, District 26, United Mine Workers of America (CCL), Cape Breton. Advisers to the worker delegate are: A. H. Balch, member of the Dominion Joint Legislative Committee, Railway Transportation Brotherhoods, Ottawa; Carl E. Berg, Vice-President, Trades and Labour Congress of Canada, Edmonton; and Lucien Dorion, Vice-President, Canadian and Catholic Confederation of Labour, Quebec.

Secretary to the Canadian delegation is H. T. Pammett, Executive Assistant, ILO Branch, Department of Labour, Ottawa.

Other Canadians attending the conference are: Hon. Antonio Barrette, Minister of Labour, Province of Quebec; Hon. Charles Daley, Minister of Labour, Province of Ontario; and Louis Fine, Chief Conciliation Officer, Department of Labour, Toronto.

At the opening session, Senator Irving McNeil Ives of the United States was elected conference president. Vice-presidents elected were Ibrahim Alami of Iran for the government group, Charles Kuntschen of Switzerland for the employers' group and Albert Roberts of the United Kingdom for the workers' group.

The report of the meeting of experts on productivity in manufacturing industries, held in Geneva last December (L.G., Jan., p. 50), was submitted to the conference. This report recommended that arrangements be made for ILO officials to visit plants of outstanding efficiency in various countries in order to obtain first-hand information on productivity methods and results, and that the ILO serve as an international clearing house of information

as well as continue its technical assistance on productivity in the less developed countries.

In his report to the conference, Mr. Morse remarked that during the past year there had been no extension of war, inflation had largely given way to stability and unemployment had not grown as appeared possible at one time.

"Contrary to what had been feared," he stated, "real wages and employment, the most important indicators of wage-earners' welfare, have not suffered the reduction that it was, at one time, feared would result from rearmament.

"The overwhelming need is for peace," said the Director-General. "Second only to that, and indeed an essential part of it, is the problem of economic and social justice.

"What is wanted now is more output in order to confirm the check to inflation, to maintain the growth of employment, to make a positive contribution to the battle against poverty in the great bulk of the world, and above all to tip the balance in favour of peace."

Emphasizing that there is still ample room for further increases in productivity, Mr. Morse said no one particular improvement in methods is likely to have a dramatic impact on living standards. It is, he said, a matter of an enormous number of small independent improvements in many small sections of all economies, all adding up to a gradual but perceptible increase of productivity.

"Increasing productivity is not primarily a matter of making workers work harder. It is a matter of using more effectively the efforts that workers are already making," he said.

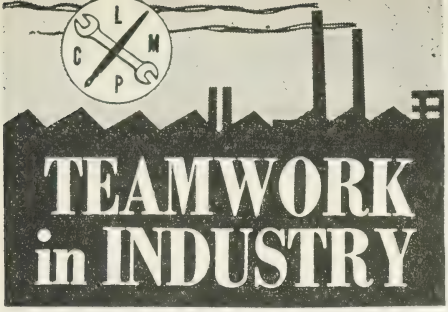
"It is for us to ensure that we shall enjoy the great advantages of substantial and continuing increases in productivity, and that they shall be accompanied by fair shares for all, by an over-all level of employment that rises steadily with the number of those seeking work, by more interesting and satisfying work, and by an increasing degree of co-operation between governments, employers and workers in facing their common problems."

Four essential conditions under which higher productivity will yield an increase in welfare were listed by Mr. Morse as: (1) there should be the fullest possible consultation and co-operation between employers and workers; (2) the benefits of higher productivity should be fairly distributed; (3) effective action should be taken to ensure that higher productivity does not lead to unemployment, and (4) higher productivity should be sought by means which require of workers only a speed and intensity of work which they can maintain without increasing fatigue, strain or risk to health or safety.

"Everybody agrees that workers as a whole should share in the benefits resulting from higher productivity," he said, "and it is evident that, at least in the more highly developed countries, they have in fact done so."

Fair wages are not the only consideration in deciding what form this share should take, he declared. There is also the matter of the prices at which goods are sold and of the proportion of the increase in wealth yielded by higher productivity which should take the form of social services, better working conditions and workers' housing. A reduction in normal hours of work in appropriate cases may also be a part of the gain from higher productivity, he said.

In addition to the debate on Mr. Morse's report, other items on the conference agenda include "The Organization and Working of National Labour Departments," "The Protection of the Health of Workers in their Places of Employment," and "Minimum Age for Admission to Work Underground in Coal Mines."



The discussion on national labour departments is scheduled as a means of exchanging information and experience between countries in which labour departments are at different stages of development. No general consideration of the problems of organization and working of labour departments has previously been undertaken by an ILO conference.

The question of regulations to protect the health of workers at the workplace was considered by last year's conference. The ILO secretariat was instructed to prepare a report after consulting with governments. This year's conference will decide whether the proposed regulations should take the form of one or more Conventions or a Recommendation, or both.

Adoption of a Recommendation that proposes that the minimum age of employment underground in coal mines be fixed at 16 years will be considered by the conference. It was drafted on the basis of a resolution adopted at the 1952 sessions.

Other items on the agenda include: preliminary discussion of principles governing holidays with pay; a proposed constitutional amendment to increase membership of the Governing Body from 32 to 40; and the ILO's 1954 budget.

Fernando Garcia Oldini, Chilean Minister to Switzerland, who is Chairman of the ILO Governing Body, officially opened the conference.

The sixth in a series of research studies on labour-management production committees, *Joint Consultation in The E. B. Eddy Company,* is now available for distribution by the Labour-Management Co-operation Service.

The study has been prepared by the Department of Labour in co-operation with the management, committee members, and officials of the three international unions who are bargaining agents for The Eddy Company Employees. These unions are: Local 34 of the International Brotherhood of Paper Makers (AFL-TLC); Local 50 of the International Brotherhood of Pulp, Sulphite and Paper Mill Workers (AFL-TLC); and Local 412 of the International Association of Machinists (AFL-TLC).

The booklet describes in detail the organization, conduct of meetings and publicity arrangements for the committees; their accomplishments and their relationship to the personnel department. After experiencing some difficulty in the early years after their founding in 1942, the committees have gradually evolved to the stage where they are recognized by both unions and management as a vital instrument in their industrial relations.

Speaking as a representative of management, A. Welch, Vice-President and General Manager, says: "The work of the Employee-Management Committees (LMPCs) within The E. B. Eddy Company has resulted in many tangible and intangible benefits for both management and employees. There is no doubt that the system has served as a vital link between the supervisory staff and the employees in general, a link which we consider to be of the utmost importance in promoting the spirit of co-operation and friendliness so essential to the effective operation of our mills."

Typical of the attitude of the representatives of organized labour is that of G. Courval, President of Local 34 of the International Brotherhood of Paper Makers, who says: "I have become a firm supporter of our Employee-Management Committees. At first I had some doubts about them and thought they might tend to weaken our union; but they have demonstrated their value time and time again and the union itself is stronger than ever. I am convinced of management's interest in the committees and they, and we, have every reason to be satisfied with our accomplishments."

The study points out that the LMPC at The E. B. Eddy Company has succeeded in bridging the gap which had frequently separated labour and management. Through the committees, labour and management have been able to co-operate to their mutual advantage without infringing on the rights of either.

Copies of this research study may be obtained by writing to the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour, Ottawa.

* * *

Although it has been in operation for less than one year, the LMPC at the Lachine Canal operation of the Canadian Department of Transport in Montreal has a fine record of accomplishments.

The purpose of the LMPC is to provide for and facilitate co-operation, mutual understanding and confidence between officers and employees, and to establish a two-way communication channel between Labour and Management for the exchange of ideas and information on canal operation and maintenance problems. It is also empowered to discuss problems affecting the canal administrative offices.

Among the matters which the LMPC discusses are improvements in operation and maintenance efficiency, elimination of waste in labour and materials, safety, education, welfare and recreation, and the reduction of absenteeism.

The canal management is highly pleased with the excellent co-operation it has received from the men and officials of Local 3104, United Steel Workers of America (CIO-CCL), which speaks for the employees. The LMPC has increased understanding and co-operation between labour and management, and canal operation and maintenance has improved as a result.

Establishment of Labour-Management Production Committees (LMPCs) is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions set up LMPCs, the Service provides publicity aids in the form of booklets, films and posters.

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during April. The Board issued two certificates designating bargaining agents, ordered one representation vote, and rejected two applications for certification. During the month the Board received seven applications for certification.

Applications for Certification Granted

1. International Association of Machinists, applicant, on behalf of a unit of clerical employees of Colonial Airlines, Inc., employed at Montreal Airport (Dorval), Montreal City Ticket Office, Ottawa Airport (Uplands), and Ottawa City Ticket Office (L.G., May, p. 697).

2. Saskatchewan Wheat Pool Employees' Association, on behalf of monthly salaried staff, office, and clerical staff of Saskatchewan Co-operative Producers Limited, Flour Mill Division, employed at the flour mill with elevator located at Saskatoon, Sask. (L.G., May, p. 697).

Representation Vote Ordered

Association of Radio and Television Employees of Canada, applicant, and Canadian Broadcasting Corporation, respondent (program and administrative personnel) (L.G., Feb., p. 239).

Applications for Certification Rejected

1. International Association of Machinists, applicant, and Trans-Canada Air Lines, respondent (ramp controllers) (L.G., March, p. 418). The application was rejected for the reason that ten months of the term of the current collective agreement had not expired.

2. Local No. 4, Marine Department, Canadian Communications Association, ACA, applicant, and Canadian National Steamship Company Limited, Vancouver, respondent (wireless operators) (L.G., March, p. 418). The application was rejected for the reason that the proposed bargaining unit was not appropriate for collective bargaining, as for all practical purposes it did not comprise a group of employees.

Applications for Certification Received

1. National Association of Broadcast Engineers and Technicians on behalf of a unit of employees of Radio Station CKOY, Ottawa (Investigating Officer: B. H. Hardie).

2. International Chemical Workers' Union, on behalf of a unit of employees of Polymer Corporation Limited, Sarnia, Ont. (Investigating Officer: R. L. O'Neill).

3. United Mine Workers of America, District 50, Region 75, Local 13618, on behalf of a unit of unlicensed personnel employed on vessels operated by Hall Corporation of Canada, Montreal (Investigating Officer: R. Trépanier).

4. Malt and Grain Process Workers, Local 105, International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America, on behalf of a unit of employees of Purity Flour Mills Limited employed in the company's plant at St. Boniface, Man. (Investigating Officer: J. S. Gunn). (The application was withdrawn later in the month.)

5. United Packinghouse Workers of America on behalf of a unit of employees of Purity Flour Mills Limited employed in the company's plant at St. Boniface, Man. (Investigating Officer: J. S. Gunn).

6. Brotherhood of Railroad Trainmen on behalf of a unit of conductors and assistant conductors employed by the Canadian National Railways on its Atlantic and Central Regions, except the Newfoundland Division (Investigating Officer: J. L. MacDougall).

7. Brotherhood of Railroad Trainmen on behalf of a unit of conductors employed by the Canadian National Railways on its Western Region (Investigating Officer: J. L. MacDougall).

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board and the Industrial Relations Branch of the Department.

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During April the Minister appointed conciliation officers to deal with the following disputes:—

(1) Canadian Pacific Air Lines Limited, Vancouver, and Canadian Air Line Flight Attendants' Association (Conciliation Officer: G. R. Currie).

(2) Robin Hood Flour Mills Limited, Calgary, and United Packinghouse Workers of America, Local 326 (Conciliation Officer: D. S. Tysoe).

(3) Polymer Corporation Limited, Sarnia, and United Gas, Coke and Chemical Workers of America, Local 14 (Conciliation Officer: F. J. Ainsborough).

(4) Newfoundland Employers' Association Limited, St. John's, and Longshoremen's Protective Union (Conciliation Officer: W. L. Taylor).

Settlements Reported by Conciliation Officers

(1) Canadian Pacific Air Lines Limited (Accounting Department), Vancouver, and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (Conciliation Officer: G. R. Currie) (L.G., April, p. 575).

(2) Robin Hood Flour Mills Limited, Calgary, and United Packinghouse Workers of America, Local 326 (Conciliation Officer: D. S. Tysoe) (*See* above).

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The branch also acts as the administrative arm of the Canada Labour Relations Board in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certifications given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of two officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario; three officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

74562—6

(3) Polymer Corporation Limited, Sarnia, and United Gas, Coke and Chemical Workers of America, Local 14 (Conciliation Officer: F. J. Ainsborough) (*See* above).

(4) Westward Shipping Limited, Vancouver, and Seafarers' International Union of North America, Canadian District (Conciliation Officer: D. S. Tysoe) (L.G., April, p. 574).

Conciliation Boards Appointed

(1) Canadian National Newfoundland Steamship Service, Canadian National Railway Company, and Canadian Merchant Service Guild, Inc. (L.G., May, p. 698). (The Board had not been fully constituted at the end of the month.)

(2) Canadian Steamship Lines Limited, Montreal, and Seafarers' International Union of North America, Canadian District (L.G., May, p. 698). (The Board had not been fully constituted at the end of the month.)

(3) Colonial Steamships, Limited; N. M. Paterson & Sons, Limited; Upper Lakes & St. Lawrence Transportation Company Limited, and Seafarers' International Union of North America, Canadian District (L.G., May, p. 698). (The Board had not been fully constituted at the end of the month.)

(4) National Harbours Board, Montreal, and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (L.G., May, p. 698). (The Board had not been fully constituted at the end of the month).

(5) National Harbours Board, Quebec, and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (L.G., May, p. 698). (The Board had not been fully constituted at the end of the month.)

Conciliation Boards Fully Constituted

(1) The Board of Conciliation and Investigation established to deal with matters in dispute between J. C. A. Turcotte; Wolfe Stevedores Limited; Empire Stevedoring Co., Ltd.; North American Elevators Ltd.; Sorel Dock and Stevedoring Co. Ltd.; Brown & Ryan Limited and Eastern Canada Stevedoring Co. Ltd., and National Catholic Syndicate of Longshoremen of Sorel, Inc. (L.G., May, p. 699) was fully constituted in April with the appointment of Mr. Justice André Montpetit, Montreal, as Chairman. Mr. Justice Montpetit was appointed by the Minister in the absence of a joint recommendation from the other two members, Léonce Plante, QC, and Marc Lapointe, MCL, both of Montreal, who were previously appointed on the nominations of the companies and the union respectively.

(2) The Board of Conciliation and Investigation established in March to deal with matters in dispute between Red River Grain Company Limited, St. Boniface, Man., and Malt & Grain Process Workers, Local 105, International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America (L.G., May, p. 699), was fully constituted in April with the appointment of John B. Rollit, Winnipeg, as Chairman. Mr. Rollit was appointed by the Minister on the joint recommendation of the other two members, Ivan J. R. Deacon and Harvey Barber, both of Winnipeg, who were previously appointed on the nominations of the company and union respectively.

Conciliation Board Report Received

During April the Minister received the report of the Board of Conciliation and Investigation established in February to deal with matters in dispute between British Columbia Coast Steamship Service of the Canadian Pacific Railway Company; Canadian National Steamships; and Union Steamships Limited, Vancouver, and Seafarers' International Union of North America, Canadian District (L.G., May, p. 699). The text of the Board's report is reproduced below.

Settlement Following Board Procedure

Keystone Transports Limited and Canadian Merchant Service Guild, Inc. (L.G., Jan., pp. 54 and 90).

Strike Following Board Procedure

Gatineau Bus Company Limited, Hull, Que., and Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division 591 (L.G., May, p. 699). The strike was settled on April 20 with the assistance of Raoul Trépanier, Industrial Relations Officer of the Department.

Britain's 704 trade unions have a total membership of 9,480,000, the highest on record, government statisticians have announced. Women members number approximately 1,775,000. (For Canadian union membership, see LABOUR GAZETTE, May, p. 646; for U.S. membership, p. 815).

Report of Board in Dispute between

British Columbia Coast Steamship Service, Canadian Pacific Railway Company; Canadian National Steamships; Union Steamships Limited

and

Seafarers' International Union of North America, Canadian District

The Hon. MILTON F. GREGG, VC,
Minister of Labour,
Ottawa 4, Ontario.

In the matter of the Industrial Relations & Disputes Investigation Act and a dispute affecting: "Seafarers' International Union of North America, Canadian District, the Applicant

and

British Columbia Coast Steamship Service (Canadian Pacific Railway), Canadian National Steamships, Union Steamships Limited."

Dear Mr. MINISTER:

On the 19th day of March 1953 you were pleased to appoint a Conciliation Board to investigate the above dispute. The Board was constituted as follows:—

Philip Fleming, Esq., Victoria, B.C., Chairman.
Jack Price, Esq., Vancouver, B.C., Union Nominee Member.
R. Mahoney, Esq., Vancouver, B.C., Company Nominee Member.

Hearings were held in Vancouver on March 30 and 31, April 1, April 2, April 9 and April 10, 1953. The Easter holidays intervening.

The Steamship Companies were represented by:—

T. Gossage, Canadian Pacific Railway.
P. Ayrhart, Canadian National Railway.
G. A. MacMillan, Canadian National Steamships.
H. Tyson, Canadian Pacific Railway.
Capt. O. J. Williams, Canadian Pacific Railway.
E. E. Stewart, Canadian Pacific Railway.
L. O. Dwyer, Canadian Pacific Railway.
R. C. McLean, Union Steamships.
Capt. W. Suffield, Union Steamships.
J. Muirhead, Union Steamships.

On April 15, 1953, the Minister of Labour received the report of the Board of Conciliation and Investigation appointed to deal with matters in dispute between Seafarers' International Union of North America, Canadian District, and (1) British Columbia Coast Steamship Service, Canadian Pacific Railway Company; (2) Canadian National Steamships and (3) Union Steamships Limited, Vancouver.

The Board was under the Chairmanship of Philip Fleming, Victoria, B.C., who was appointed by the Minister in the absence of a joint recommendation of the other two members. The nominee of the companies was Richard A. Mahoney, Vancouver; the union nominee, Jack Price, Vancouver.

The text of the Board's report is reproduced herewith.

The Employees were represented by the following Union members:—

N. Cunningham.
D. Joyce.
B. Perkins.
S. Scharp.
D. W. O'Reiley.

The hearings were protracted and delayed, there being three companies to consider and Easter intervened.

Extensive briefs were presented.

WAGES: A two-year agreement was signed by the three companies on March 1, 1951, which contained the privilege of re-opening the wage clause on March 1, 1952.

This was not done.

A majority of the Board, Mr. J. Price and the Chairman, recommend a wage increase of Thirty Dollars ($30.00) per month across-the-board, except for stewards on Union Steamships who are to receive the wage increase of seven per cent (7%) and seven cents (7¢) recently negotiated

74562—6½

for the stewards on Canadian National Railways and Canadian Pacific Railway boats.

The Employers' nominee, Mr. R. A. Mahoney, recommends a wage increase for all personnel of seven per cent (7%) and seven cents (7¢), across-the-board.

The Board unanimously recommends the following:—

Retroactivity: The wage increase to be retroactive to September 1, 1952.

Union Security: Any unlicensed personnel as provided for in this agreement shall be required to, as a condition of employment, either to join the Union and to continue as a member thereof during their employment, or in the alternative to tender the Union one month's dues, and to pay subsequent monthly dues, as required of Union members, and failure to pay such monthly dues shall be a bar to further employment with these companies until such arrears are paid. The above regulation shall be complied with within thirty (30) days of employment by the employees of the said companies.

Vacations: It is recommended that the companies concerned shall grant one week holiday with pay after twelve (12) months service and two weeks holiday with pay after twenty-four (24) months service.

As there are three companies concerned it is recommended that no company shall lessen the present benefits.

Statutory Holidays: Unanimously recommended that there shall be seven (7).

Penalty Rate: For cleaning double bottom water tanks, boilers, working inside smoke stacks, working in bilges below bottom deck plate a bonus of seventy-five cents (75¢) per hour is recommended.

Oilers and Firemen: It is recommended that each company specify the duties of Oilers and Firemen on sea watches on each ship.

Cargo—Petty Officers: It is recommended that Union Steamships include daymen in the category of Petty Officers in the Deck Department who receive overtime penalty pay, when called upon to work cargo.

Payment for Cargo Handling: In the light of evidence submitted this Board recommends that the basis of pay for handling cargo remain as in the present agreement.

Hours of Work: Recommended that the hours of work remain as at present—namely eight hours within a spread of sixteen hours for all unlicensed deck and engine room ratings—other than watchkeepers.

Calculation of Overtime: Recommended that overtime be calculated as in the present contract in increments of fifteen (15) minutes.

Standby Time for Union Steamships: Recommended regularly monthly wage rate be paid for standby time for Union Steamships—this not to include subsistence pay.

Hours of Work for Routine Operation Duties: Recommended that there be no change in the present hours of work during which routine operations are performed.

We further recommend that the companies concerned make an effort to have the work performed in daylight hours where possible.

Summer Bonus for Cooks & Stewards, Union Steamships: Recommended that the summer overtime bonus for cooks and stewards employed by Union Steamships be increased from Twenty-Five Dollars ($25.00) per month to Thirty Dollars ($30.00) per month.

Overtime Pay: Recommended that the overtime rate of $1 per hour be increased by the same percentage amount as the recommended wage increase.

Contract: Recommended the provisions of the contract other than wage rates be effective as of March 1, 1953.

In the light of a very considerable amount of time and effort spent by all members of this Conciliation Board, it is expected that within the framework of the award a satisfactory settlement will be arrived at forthwith without further bargaining.

Respectfully submitted.

(Sgd.) Philip Fleming
Chairman

(Sgd.) Jack Price
Member

(Sgd.) R. A. Mahoney
Member

World's Longest Strike Has Ended

The death of an Irish tavern keeper has ended a strike which lasted 14 years. The strike began when the publican, James Downey, fired a bartender. The Irish National Union of Vintners, Grocers and Allied Trade Assistants began to picket his tavern at Dun Laoghaire and continued, day after day, year after year, for 14 years until the proprietor's death May 30.

Report of Arbitrator in Dispute between

Canadian National Railways and the Canadian Pacific Railway Company

and

Brotherhood of Railroad Trainmen

In the matter of disputes between the Canadian Pacific Railway Company, Canadian National Railways, and the Brotherhood of Railroad Trainmen relating to requests for increased rates of pay, an escalator clause, rules changes, and a five-day week in yard service.

By appointment of the Hon. the Minister of Labour, dated the 17th of April, 1953, reciting that, "whereas differences of opinion have arisen between the parties as to the proper interpretation and application of the provisions of Clause One of the said Memorandum of Understanding reading: 'Increase of 12 per cent in wages effective February 1, 1953'," I have been appointed to arbitrate the said issue and thereafter to report my award forthwith to the parties.

On the 7th of February 1952, notices were served by the Brotherhood upon both the Canadian National and Canadian Pacific Railways, each of which contained the following request or demand:—

> that all wage rates however established, applicable to miles, overtime, arbitraries and special allowances, be increased by thirty-five per cent (35%), effective April 1, 1952.

Ultimately, two Boards of Conciliation were appointed under a common chairman, and the majority reports, which were accepted by the railways but rejected by the Brotherhood, contained the following paragraph:—

> This Board, after hearing all the representations and bearing all these factors in mind, are prepared now to find that there should be a wage increase across-the-board at this time of 12 per cent.

It may be observed that in the case of the Board which dealt with the dispute to which the Canadian National Railways were a party, the railways' rebuttal statement contained the following paragraph:—

> The above differentials and allowances have been in effect for a great number of years. Although arbitrary, they have become traditional, as have those contained in other Running Trades wage agreements. Settlements with Engineers and Conductors this year maintained the differentials and allowances in cents. Similarly, in this case, no wage adjustment should disturb existing differentials measured in cents.

No reference is, however, made to this matter in the report of the Board which dealt with this dispute and the effective portion of their report is as above set out.

Following the reports of the Conciliation Boards, negotiations took place between the Brotherhood and the railways which ultimately resulted in a meeting of January 29, 1953, between the parties at which agreement was reached and a memorandum thereof drafted by one of the railway officers engaged in the negotiations. The relevant portion of this memorandum reads as follows: "12 per cent effective Feb. 1".

This was followed on the 4th of February by the signed memorandum of that date. This also was drafted by the railways. Paragraph 1 of this document is already reproduced above.

Following the receipt of the reports of Conciliation Boards in disputes between the Brotherhood of Railroad Trainmen and Canadian National Railways (L.G., Feb., pages 248-259) and the Canadian Pacific Railway Company (L.G., Feb., pages 260-274), further negotiations between the parties resulted in the signing by the railways and the union of a "Memorandum of Understanding" at Montreal on February 24, 1953. This Memorandum in turn became the subject of a dispute concerning the proper interpretation and application of its provision relating to a wage increase of 12 per cent. In consequence of a proposal made to the parties by the Minister of Labour, it was agreed that the differences between them on this matter should be referred to arbitration. On April 17, 1953, the Minister of Labour appointed the Hon. Mr. Justice R. L. Kellock to arbitrate the issue. The text of the arbitrator's award, submitted to the parties on April 24, is reproduced herewith.

The facts above recited are common ground between the parties, as is also the fact that apart from the reference to the question of "differentials" in the rebuttal statement of the Canadian National Railways, to which I have referred, no reference was made to this subject by any of the parties prior to the dispute going to conciliation or during any of the negotiations subsequent to the reports of the Conciliation Boards. It was only subsequent to February 4, 1953, when the new rates became the subject of discussion between the Canadian National Railways and its employees, and, in the case of the Canadian Pacific Railways, when the new rates were put into effect on the first payday subsequent to February 4, that the difference between the parties emerged.

The railways took the view of the settlement that the "differentials" between employees engaged in way freight service and through freight service, as well as certain other differentials between other classes of employees, were to be preserved, while the Brotherhood has maintained the contrary view.

It seems plain that before the final document of February 4, 1953, was actually signed, those in charge of the preparation of the new schedule of rates on behalf of the Canadian National Railways were of the opinion that these differentials were to be maintained as a schedule of the new rates was prepared as early as February 2, in accordance with the railway view. This, however, did not come to the attention of any of the representatives of the Brotherhood until after the final memorandum of settlement had been signed. The representatives of the Brotherhood say that at no time when presenting their demands or subsequently, did they have in mind that these differentials would be preserved. The question for decision in such circumstances is, therefore, as to what is the reasonable meaning of the language which the parties have employed in the memorandum of settlement, and whether, if such language is ambiguous, any light is thrown on its interpretation by relevant surrounding circumstances.

It is "wages" which under the document of February 4, 1953, are to be increased by 12 per cent, and there is no limitation or qualification. In my opinion, this language is clear and does not provide any basis for the limitation contended for by the railways.

If the language employed could be said to have any ambiguity, it would seem to me that such ambiguity would be entirely removed by a number of considerations. In the first place, the request or demand of the Brotherhood, as already pointed out, was for an increase in "all" wage rates however established. In the second place, the Canadian National Railways at least, advanced before that Conciliation Board the contention that any wage adjustments should not disturb "existing differentials measured in cents", but, on the language employed by the Board in its report, that contention was not given effect.

There is the further consideration that both memoranda of settlement were drawn by the railways themselves and if the increase was to be applied only to "basic" rates or to all wage rates "subject to existing differentials being preserved", some such language would seem to have been called for.

I think, therefore, that I cannot give effect to the contention of the railways and that in applying the increase of 12 per cent under the agreement of February 4, 1953, regard may not be had to the preservation of any pre-existing differentials.

Dated at Ottawa this 24th day of April, 1953.

(*Sgd.*) R. L. Kellock.

Rail Union "Will Not Condone" Slowdowns

A declaration that it "will not condone" slowdowns was made recently by the Brotherhood of Railroad Trainmen when its members ended a five-day strike on the Union Railroad in Pittsburgh, Pa.

The Brotherhood agreed that "the carrier is entitled to, and the employees are under obligation to perform, a fair and reasonable day's work of eight hours."

The strike of 1,500 men was called when two members of the union were given 10-day suspensions for conducting slowdowns on the job. In the settlement with the carrier, however, the union agreed that the two employees had been at fault in the slowdown and that the management of the railroad had been justified in suspending them.

Collective Agreements and Wage Schedules

Recent Collective Agreements

Pay for statutory holidays in the construction industry is provided in the agreement covering inside wiremen between certain electrical contractors in the province of British Columbia and the International Brotherhood of Electrical Workers, summarized below. In addition to their regular wage rates employees receive 3·2 per cent of their total earnings as pay for statutory holidays.

A file of collective agreements is maintained in the Economics and Research Branch of the Department of Labour. These are obtained directly from the parties involved and through the Industrial Relations Branch of the Department. A number of those recently received are summarized here. Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Fishing

Whaling—*West Coast—British Columbia Packers Limited and United Fishermen and Allied Workers' Union.*

Agreement to be in effect from April 1, 1953, to March 31, 1954, and thereafter from year to year, subject to 2 months' notice.

Preference of employment: the company agrees to recommend to its skippers that preference of employment be given each year to crew members who were engaged the previous year in the whaling operation and who rendered satisfactory service throughout the whole season. A memorandum of understanding providing for such arrangement may be signed by the skipper and the union.

Check-off: voluntary.

Vacation pay: the minimum vacation pay for crew members shall be 2 per cent of their total regular wages.

Minimum monthly wage rates for crew members employed on whale catchers: captain $325, chief engineer $310; mate, second engineer, cook $250; deckhands, fireman $237. In addition to the above wage rates crew members will be paid a whale bonus on the following basis: all whales caught by the boats engaged in the operation shall be pooled. The company will pay into the pool the following amounts for all legal size whales caught and processed during the 1953 season: blue whales $150 per whale; sperm, humpback, finback and bottlenose $80 per whale; sei whales $35 per whale; gray whales (if bonus permitted by the government) $80 per whale. The bonus each member of the crew shall receive will be based on the number and kind of whales which were delivered to the plant during the period that he was sharing in the pool (from the time his vessel left the Coal Harbour Plant for the whaling grounds to the time of termination of employment). The pool money will be divided in the following proportion: each mate will be entitled to 20 shares, each first engineer to 11, each second engineer to 9, and each cook, deckhand or fireman to 6 shares.

Each employee who stays the full season will be paid a seasonal bonus of $150. Any man fired for just cause after 3 months' employment will be entitled to three-fifths of his seasonal bonus. Men injured or falling sick or given permission for absence during the season, and men engaged as replacements after a boat has commenced operation who stay until the end of the season will be entitled to a proportionate part of the seasonal bonus.

A "Special Supplement to the 1953 Whaling Agreement" provided for a special bonus in addition to the above wages and bonuses: if the whaling fleet delivers 500 to 549 legal size whales during the season each crew member will receive a flat bonus of $150; if 550 or more whales are delivered the bonus will be increased to $200. To be eligible for the full special bonus a crew member must have been employed from June 1, 1953, until the completion of the whaling season. Crew members hired after June 1, 1953, who remain until the completion of the season will receive a bonus on a *pro rata* basis.

Transportation: the company shall be responsible for transportation from and to the port of hiring, provided the employee stays the full period for which he was engaged or is fired; if he quits of his own accord, he shall be responsible for his transportation costs.

Bedding: the company will supply blankets, sheets, pillow slips and pillows to each crew member. Clean sheets and pillow slips shall be supplied weekly, subject to return of the vessel to the station. A laundry and service charge of $3 per month is payable by each crew member.

Provision is made for *grievance procedure.*

Manufacturing

Whale Processing—*Coal Harbour, B.C.—British Columbia Packers Limited (Coal Harbour Whaling Station) and the United Fishermen and Allied Workers' Union.*

Agreement to be in effect from April 1, 1953, to March 31, 1954, and thereafter from year to year, subject to 2 months' notice.

Union security: preferential hiring of union members.

Check-off: voluntary and revocable.

Hours: 8 per day Monday through Friday, 4 on Saturday. *Overtime:* time and one-half for work in excess of above hours, for all work after 5 p.m. Mondays through Fridays

or 12 noon on Saturdays and for all work on Sundays, on 5 specified holidays and on any other days proclaimed British Columbia statutory holidays within the meaning of the "Factories Act"; double time for work on 4 other specified *paid holidays*.

Rest periods: employees will be granted two 10-minute rest periods per day.

Vacation pay: an employee working less than 1,152 hours (including overtime) in a calendar year will receive vacation pay equal to 2 per cent of his straight time and overtime earnings, while an employee working 1,152 hours or more will receive 4 per cent of his earnings up to a maximum of 2 weeks' pay.

Minimum hourly wage rates: plant—shift boss $1.59; pressman, digestor man and/or oilman, dryer fireman $1.43; meal man $1.34, head evaporator operator $1.54; evaporator operator $1.44, apprentice $1.32; deck—flenser $1.63; saw man, hook tender, rib cutter $1.39, deck crew $1.32; engineers—$1.27 to $1.63; sundry—port engineer and/or machinist $1.63, assistant $1.50; harpoonsmith $1.63, helper $1.34; maintenance man $1.51; bullcook $230 per month (no control of hours), watchman $230 per month. Charge hands will receive 7 cents per hour extra. For "dirty" jobs employees will be paid up to 25 cents per hour extra while on such jobs. Each man shall receive a bonus of 16·7 cents for each whale processed at the plant during the period the employee is engaged at the plant. (The above wage rates and bonus are the same as in the previous agreement.)

Transportation: the company shall be responsible for one-way transportation if the employee works at the plant 2½ months or longer, and for two-way transportation if he stays for 6 months or longer, completes the season, or completes the work for which he was engaged.

Medical Services Association: "it is agreed that conditions covering MSA shall continue as at present and any changes incorporated in other shore workers' agreements shall apply to employees employed at the Coal Harbour Whaling Station."

Provision is made for *seniority rights, grievance procedure* and for *sanitary living accommodation.*

Canned Fruits and Vegetables—*Vancouver, B.C.—Bestovall Canning Company Limited and The United Packinghouse Workers of America, Local 350.*

Agreement entered into July 24, 1952, to continue in effect until October 31, 1954, and thereafter, unless terminated or amended at that date on 60 days' notice.

Union security: maintenance of membership; however, an employee may withdraw from the union during the period from October 16 to October 31 in any year.

Check-off: compulsory for all employees. New employees will not be subjected to the compulsory check-off until they have completed 60 days service, unless they become members of the union.

Hours: from November 1 to June 30—8 per day 5 days a week, a 40-hour week; from July 1 to October 31—9 per day 6 days a week, a 54-hour week. *Overtime:* time and one-half for the first 2 hours of work in excess of the above hours; double time thereafter and for work on 6 specified *paid holidays;* for work on Sundays and on holidays, other than paid holidays, employees will be paid time and one-half.

Rest periods: all employees will be granted a 10-minute rest period during each work period of 4 or more hours.

Vacations with pay will be granted in accordance with the Holidays Act of British Columbia; after 5 years' continuous service (1,125 days) employees will be granted 2 weeks and after 15 years' service (3,375 days) 3 weeks.

Hourly wage rates (retroactive to April 1, 1952, for employees on the payroll July 24, 1952): Females—general grade 2 (graders, peelers, corers), first 2 weeks 74 cents, thereafter 84 cents; special grade 1 (weighers, syrupers, machine operators, can catchers), first 3 weeks 84 cents, thereafter 91 cents; supervisors 94 cents; Males—boys up to and including 18 years 82 cents; casual workers $1 to $1.06; general grade 2 (general cannery workers with no job classification and swampers) $1.12; special grade 1 (machine operators, supervisors, line-men, cookers, maintenance men and truck drivers) $1.24. Any female worker placed on any job or classification formerly occupied by a male worker must receive the rate for the male classification provided she is capable of doing the work without further assistance.

Escalator clause: the above wage rates will be adjusted upwards or downwards, each six months, on the basis of one cent per hour for each full 1·3 points change in the Dominion Bureau of Statistics' cost-of-living index from the index figure published for the month of July 1952, up to a limit of 5 cents per hour. If this formula for the calculation of the cost-of-living bonus should, in any 6-month period, call for an increase or a decrease of more than 5 cents per hour above or below the present basic wage rates, either party shall have the right to re-open the above wage provisions on April 1, 1953, November 1, 1953, and April 1, 1954.

Provision is made for *grievance procedure, seniority rights* and the *safety and health* of employees.

Bakery Products—*Winnipeg, Man.—Christie Brown and Company Limited and the Retail Wholesale and Department Store Union, Local 650 (Retail, Wholesale Bakery and Confectionery Workers).*

Agreement to be in effect from October 27, 1952, to October 16, 1953, and thereafter from year to year, subject to 30 days' notice.

Check-off: all new employees after 30 days of employment and all employees presently members of the union shall be required, as a condition of employment, to remain on the dues check-off for the duration of the agreement.

Hours: for production workers 8½ (previously 9) per day Monday through Thursday, 8 on Friday, a 42-hour (previously a 44-hour) week; for the shipping floor staff 8 per day, 5 days a week a 40-hour week; for engineers 44 (previously 48) hours per week as per posted working schedule. *Overtime:* time and one-half for work in excess of the above daily or weekly hours and for work on Sundays (except in the case of preparatory workers, engineers and watchmen), double time and one-half for work on 8 specified *paid holidays* and time and one-half on any other unpaid holiday.

Relief periods: all employees will be allowed two 15-minute relief periods, one in the forenoon and one in the afternoon.

Vacations with pay: one week after one year's continuous service, provided the employee has not been away from work more than 5 weeks in the previous 12-months period, 2 weeks after 3, and 3 weeks after 20 years of continuous service.

Hourly wage rates: females—general 95½ cents, machine operator $1.08; males—general $1.19½; machine captain, ovenman $1.31½; assemblyman $1.27½, receiver $1.30½, assistant mixers $1.24 and $1.31½, mechanics $1.35 to $1.52½, day engineer $1.40½, engineer watchman $1.28, senior cone machine operator $1.25½; shipper $54.74 (per week), assistant $48.24 (per week); deliveryman $50.93 and $53.62 (per week). (The above rates are in most cases from 5 to 11½ cents per hour higher than the previous rates.) Starting and step-up rates: for females and males under 18 years 73 cents, increased to 75 cents after one month, to 77½ cents after 2 months, to 82 cents after 4 months and to 88 cents after 8 months; for males and employees of the agency and shipping branch 92 cents, increased to 95 cents after one month, to 98½ cents after 2 months, to $1.03 after 4 months and to $1.10 after 8 months; additional raises based on merit. At the end of 12 months actually worked time, the employee shall reach the maximum of his classification.

Night shift differential: a premium of 5 cents per hour will be paid to any employee starting work between 4 p.m. and 6 a.m.

Seniority will be the determining factor in lay-offs, re-hirings and promotions provided that, in the opinion of the company, there is equality of skill, competence and efficiency.

Provision is made for *grievance procedure* and a *Safety Committee.*

Handbags—*Toronto, Ont.—Certain Handbag Manufacturers, Members of the Handbag Manufacturers' Guild, and the International Handbag, Luggage, Belt and Novelty Workers' Union, Local 8.*

Agreement to be in effect from June 1, 1952, until June 1, 1954, and for an additional year, subject to 60 days' notice.

Union security: closed shop.

Check-off: compulsory for all employees.

Hours: 8 per day Monday through Friday, a 40-hour week. *Overtime:* time and one-half for work in excess of above daily hours. Employees losing time of their own volition shall have to work out this time during the same week before they are entitled to overtime pay. Overtime work shall not be permitted until all help in the trade is employed, except in case of emergency.

Statutory holidays: employees who have worked in the industry at least 6 months will be allowed 5 *paid holidays* if they have been with the same employer for at least 2 weeks prior to the holiday. For work on 3 other specified holidays employees will be paid time and one-half.

Vacations with pay will be granted to employees with more than one but less than 3 years of work in the industry in accordance with government regulations. Employees who have worked for one firm 3 or more but less than 5 years shall be entitled to an additional half week, while those who have worked for one firm 5 or more years will be entitled to 2 weeks vacations with pay.

Wages: effective August 15, 1952, all union members who were on the payroll of the employer on August 5, 1952, were to receive a general wage increase of 5 per cent. Effective January 1, 1953, employees were to be granted an additional increase of $1 per week.

Health and Sick Benefit Fund: the employers will pay into the fund a levy of one per cent of the total monthly payroll for all eligible employees. The fund is administered by a joint committee on which the manufacturers and the employees are represented by an equal number of representatives.

Provision is made for *grievance procedure.*

Explosives and Fertilizers—*McMasterville, P.Q.—Canadian Industries Limited, Beloeil Explosive Works, Beloeil Agricultural Chemicals Works and Beloeil Central Research Laboratory, and Le Syndicat des Travailleurs des Produits Chimiques de McMasterville (Chemical Products Workers Syndicate of McMasterville).*

Agreement to be in effect from October 27, 1952, to October 26, 1954. Either party may, on 10 days' notice, require the other party to enter into negotiations for the renewal of the agreement within 2 months of the expiry date and both parties shall thereupon enter into such negotiations in good faith and make every reasonable effort to secure such renewal. This agreement is similar to the one previously in effect (L.G., May 1951, p. 688) with the following changes and addition:—

Hours of work are reduced from 44 to 42 per week; they are now—for single and certain multiple shift operations 8½ per day on 4 days and 8 hours on one day each week, and for continuous and certain multiple shift operations 8 hours per day for 5 days during 3 weeks and for 6 days during the fourth week.

Hourly wage rates are increased in most cases by from 21 to 23 cents per hour and now range from $1.21 to $1.60 per hour.

Escalator clause: an escalator clause has been added to the agreement. It provides for a cost-of-living bonus of one cent per hour for each 1·1 points rise in the Dominion Bureau of Statistics' cost-of-living index above 187·6 (index figure for August 1952). The bonus is to be adjusted quarterly, upwards and downwards, but in no event shall a decline in the index below 187·6 points provide a basis for a reduction in the wage rates. If the index is discontinued or its method of calculation changed the two parties will meet with a view to negotiating an equivalent basis of calculating the cost-of-living bonus.

Construction

Plumbers—*Fredericton, N.B.—The Fredericton Branch of the Master Plumbers and Heating Contractors and the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada, Local 772.*

Agreement to be in effect from January 1, 1953, to December 31, 1953, and thereafter from year to year, subject to 60 days' notice.

Union security: preferential hiring of union members or of men willing and eligible to join the union within 30 days.

No workman shall be employed to do any work in Fredericton in connection with sanitation or the city water supply system who is not in possession of a provincial plumber's licence; apprentices will be allowed to work on this type of work. Members of the union likewise agree to work only for recognized shops and to give preference to shops which are parties to the agreement.

Hours: 8 per day Monday through Friday, 4 on Saturday, a 44-hour week. Members on sheet metal work in the shops will be allowed to work after the ordinary hours of labour for the regular rate of pay. *Overtime:* time and one-half for overtime until midnight, double time thereafter and for work on Sunday and on 9 specified holidays. If to finish a repair job on a regular working day will not take more than one hour, it will be done at the regular rate of wages.

Vacation pay shall be at the rate of 2 per cent of wages.

Minimum rate of wages shall be $1.45 per hour.

Out-of-town jobs: employees on out-of-town work will have their board and fare paid by the employer.

Apprentices will be employed in accordance with the provisions of the New Brunswick Apprenticeship Act.

Provision is made for the *settling of grievances.*

Bricklayers—*Edmonton, Alta.—The General Contractors' Section of the Edmonton Builders' Exchange and the Bricklayers, Masons and Plasterers' International Union of America, Local 1.*

Agreement to be in effect from April 9, 1953, to March 31, 1954.

Hours: 8 per day between 8 a.m. and 5 p.m. Monday through Friday, a 40-hour week. To work more than one shift, permission of the union must be obtained; such shift work shall be paid at the rate of 8 hours' pay for 7½ hours' work. Outside the city limits 9 hours a day may be worked as well as Saturdays; however, the ninth hour must be paid for at time and one-half and Saturdays at double time. *Overtime:* time and one-half for the first 2 (previously 4) hours after the regular shift and double time thereafter until 8 a.m. and for work on Sundays and on 8 specified holidays; however, overtime and work on Sundays and on holidays may be performed only in cases of emergency.

Minimum hourly wage rates: journeymen $2.22 (previously $2.17); for approved oven or boiler firebrick work 10 cents per hour extra; foremen 25 cents per hour additional to the journeyman's rate.

A full time forman shall be employed on each job requiring 3 journeymen and apprentices. The foreman must be a member of the union.

Apprentices: the employing of apprentices shall be governed by regulations of the Alberta Apprenticeship Board.

Shelter: suitable clean shelter from storms and a suitable lockfast place for tools and clothes must be provided for the men.

Out-of-town jobs: men hired in the City of Edmonton and sent to out-of-town jobs will receive suitable transportation and board and room; they will be paid for travelling time, up to 8 hours in 24.

Provision is made for the *settling of disputes.*

Electricians (Inside Wiremen)—*Vancouver, B.C.—Certain Electrical Contractors and the International Brotherhood of Electrical Workers, Local 213.*

Agreement to be in effect from September 1, 1952, to March 31, 1954, and thereafter, subject to 60 days' notice.

Union security: closed shop. Union members shall not contract for electrical work in the Province of British Columbia. No contractor shall perform work on any electrical installation within the scope of the agreement. The union will permit its members to work only for contractors who have signed this agreement, except in the case of government or utility work.

Hours: 8 per day Monday through Friday, between 8 a.m. and 12 noon and 1 p.m. and 5 p.m. (or 12.30 p.m. and 4.30 p.m.), a 40-hour week. *Overtime:* double time for all work outside above hours. *Shift work* will not be permitted except in cases of necessity. Employees on shift or night work will receive double time for the first 3 nights; thereafter they will be paid at the rate of 8 hours' pay for each 7½-hour shift on ordinary working days.

Statutory holidays: work on 9 specified holidays will be paid for at double time. Commencing November 1, 1952, all employees will receive, in addition to their regular wage rates, 3·2 per cent of their total earnings, which will be recognized as pay for statutory holidays.

Vacations with pay will be granted on the basis of 2 per cent of the annual earnings; vacations must be taken in the year in which they accrue.

Hourly wage rates: journeymen wiremen for period November 1, 1952, to March 31, 1953, $2.20 (an increase of 10 cents per hour over previous rate); thereafter $2.30; apprentices 40 per cent of journeyman's rate during first 6 months, 50 per cent during second 6 months and so on to 85 per cent during eighth 6 months; helper 75 per cent of journeyman's rate; foreman with 4 or less journeymen 15 cents, with more than four 30 cents per hour extra; general foreman 60 cents per hour extra. Members 60 years of age or over will be employed on work which suits their physical ability and which is acceptable to them.

There shall be no restriction on the use of labour saving machinery or equipment on the job. However, any such machinery or equipment shall be operated by members of the union.

Out-of-town jobs: on jobs outside the corporate limits of the City of Vancouver, but within the area of Greater Vancouver, workmen will be paid 8⅓ hours' pay for 8 hours' work. All cost of transportation in excess of ordinary city carfare will be paid by the employer. On jobs outside the boundaries of Greater Vancouver employees will receive actual travelling expenses to and from the job, travelling time (8 hours in 24) and reasonable living expenses for the full 7-day week.

Welfare fund: commencing November 1, 1952, the contractors will pay an additional 3 cents per hour into the Electrical Workers Welfare Trust Fund, bringing the total payment to 8 cents per hour.

Apprentices: the ratio of apprentices to journeymen shall not exceed one apprentice or one helper to 2 journeymen, except where

only one journeyman is required on a job, when the employer can work one apprentice or one helper with one journeyman.

Provision is made for *grievance procedure.*

Transportation, Storage, Communication

Truck Transportation—*Vancouver and New Westminster, B.C.—Certain Companies and the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, Local 31 (General Truck Drivers and Helpers' Union).*

Agreement to be in effect from September 16, 1952, to March 31, 1954, and thereafter from year to year, subject to 2 months' notice.

Union security: preferential hiring of union members combined with union shop. The employer shall have free choice of unemployed union members for employment. The union will co-operate as far as possible in maintaining a list of unemployed union members.

Check-off: compulsory for all union members.

Hours: 8½ per day, 47 per week. *Overtime:* time and one-half for the first 2½ hours of work in excess of 8½ hours per day, double time thereafter. For work on 7 specified *paid holidays* employees will be paid time and one-half for the first 8½ hours, double time and one-quarter for the next 2½ hours and triple time thereafter. For work on Sundays and on any holidays so designated by either the Provincial or the Dominion Government, employees will be paid time and one-half. (Previous agreement provided for 3 paid holidays.)

Vacations with pay: one week after one year's service, 2 weeks after 5 years' service. A year's service shall be 1,500 hours of work in a calendar year.

Hourly wage rates: tow motor operators $1.43, truck drivers $1.38 and $1.43; female truck drivers $1.23; furniture operators and packers, trailer, semi-trailer and low bed machinery operators $1.48; swampers and helpers, warehousemen and checkers $1.38; furniture swampers, furniture packers' helpers $1.40½; motorcycle operators $1.23. (The above rates are 8 cents per hour higher than the previous rates.) Effective April 1, 1953, the above wage rates were to be increased by 7 cents per hour. For the first 6 months inexperienced employees will be paid not more than 10 cents per hour less than experienced employees.

Provision is made for *seniority rights* and the *adjustment of disputes.*

Public Utility Operation

Electric Light and Power—*Charlottetown, P.E.I.—Maritime Electric Company Limited and the International Brotherhood of Electrical Workers, Local 1432.*

Agreement to be in effect from February 11, 1953, to February 10, 1954, and thereafter from year to year, subject to 2 months' notice.

Hours: 8 per day 5½ days per week (excluding Sunday), a 44-hour week, except that employees in power plants, whose regular duties, because of variations necessitated by rotation of shifts, require them to work on Sundays and statutory holidays, shall work an average of 8 hours per day and of 48 hours per week. Rural service men shall work such hours as the service requires but in general not more than 44 hours per week. *Overtime:* time and one-half will be paid after the regular working day and for work on 9 specified *paid holidays.*

Vacations with pay: after one year's continuous service permanent employees will be granted 2 weeks.

Sick pay: in the case of permanent employees absent through sickness or occupational accidents, the payment of wages, wholly or in part, will be a matter to rest solely in the company's discretion.

Hourly wage rates: power plant operator $1.23 to $1.34, assistant $1.11 to $1.23; boiler operator $1.11 to $1.23, power plant helper 97 cents, power plant maintenance men 97 cents to $1.23, line crew foreman $1.34, lineman $1.11 and $1.23, digger operator 95 cents, groundman and labourer 90 cents, line storekeeper $235 per month, rural service men $190 to $217 per month; learners and apprentices—minimum starting rate $75 per month with review every 3 months. (The above rates are approximately 5 per cent higher than the previous rates.)

Seniority: in the case of promotion, demotion, laying-off or discharge of employees, seniority shall be one of the factors the company shall take into consideration.

Provision is made for a *Labour-Management Committee*, the *settling of differences* and the *safety* of employees.

Service

Hotel—*Toronto, Ont.—The Sheraton Limited (Toronto Division, King Edward Hotel) and Hotel and Restaurant Employees' and Bartenders' International Union, Local 299.*

Agreement to be in effect from January 13, 1953, to May 1, 1954, and thereafter from year to year, subject to notice.

Check-off: voluntary and irrevocable (may be revoked only within the last 30 days prior to the termination date of the agreement).

Hours: in laundry department and for painters, seamstresses, carpenters, upholsterers, electrical maintenance, plasterers, locksmiths and their helpers and labourers in the maintenance department 44 per week; telephone operators not more than 45 per week within a period of 48 hours of containment; in all other departments 48 hours per week. *Overtime:* time and one-half after 9 hours of daily work and for work in excess of the regular assigned weekly hours; double time for work on 5 (previously 4) specified *paid holidays.* However, in lieu of a paid holiday the company may grant an employee a substitute day off with pay within a period of 30 days prior to or subsequent to the holiday concerned.

Vacations with pay: after one year's service one week, after 3 years' continuous service 2 weeks.

Paid sick leave: full time regular employees on completion of one year's continuous service will be entitled to a maximum of 6 days' non-cumulative sick leave allowance. Such allowance shall only commence after the third day of illness; it will not be granted in case of illness or accidents which are compensable under the provincial laws.

In case of death in the immediate family full time regular employees after one year's continuous service will be entitled to 3 days leave of absence with pay. However, the total death leave allowance in any one year shall not exceed 6 days.

Daily (8-hour day) wage rates for certain classifications, retroactive to January 1, 1953 (job rates after 48 days): housekeeping department—housemen, lobby porter $7.12; chambermaid, scrub maid $6.02; service department—elevator operator $7.12; bell captains $6.17, assistants $3.92; doorman $5.67; bellmen, page boy $3.47; baggage porter $5.22; food preparation department—pastry chef $11.76; night chef, banquet chef, fry cook, sauce cook $10.66; broiler cook, assistant pastry chef, night baker $9.56; staff cook, short order cook, baker (day) $8.46; assistant fry cook, oysterman, assistant baker $7.91; assistant staff cook, assistant banquet chef $7.36; soup man $6.81; helpers and apprentices $6.02; pastry porters, pot washers $5.52; pantry girls $4.72; food, beverage and entertainment department—head waiters $8.87, waiters $5.87 and $6.17, head bus boy $6.02, bus boys $5.52; repairs and maintenance department—electrical maintenance, plasterer $10.11; spray painter, locksmith $9.56; painter, upholsterer, carpenter $9.01; helpers $7.12 and $7.91, seamstress $6.52; laundry department $5.52 to $7.36; telephone department $6.52. (The above rates are 32 cents per day higher than the previous rates.) Effective May 2, 1953, the wage rates will be increased by 8 cents per day. All employees in the food preparation and the food, beverage and entertainment departments will be charged with two (head waiters with 3) meals per day, such amounts to be deducted from the rates shown above.

Provision is made for *grievance procedure* and *seniority rights.*

Collective Agreement Act, Quebec

Recent proceedings under the Collective Agreement Act, Quebec,* include the extension of three new agreements, the amendment of ten and the correction of five others. In addition to those summarized below, they include: the extension of new agreements for barbers and hairdressers at Magog and at Sherbrooke; the amendment of the agreement for the ladies' handbag industry in the province; and the correction of the agreements for barbers and hairdressers at Trois Rivières, for the building and for the printing trades at Montreal and for the building trades at Sorel and at St. Hyacinthe, published in the *Quebec Official Gazette,* March 28. An amendment to the agreement for trade and office employees at Jonquière was published April 18.

A request for a new agreement for the sash and door industry (woodworkers) and requests for the amendment of the agreements for longshoremen (ocean), for checkers (ocean) and for hospitals, etc., at Quebec were gazetted April 4. Requests for new agreements for the building trades at Quebec and at Rimouski, and requests for the amendment of the agreements for the uncorrugated paper box industry and the glass processing industry at Quebec and for the ladies' handbag industry in the province were gazetted April 11. A request for a new agreement for the retail fur industry at Montreal and requests for the amendment of the agreements for barbers and hairdressers at St. Hyacinthe, for the uncorrugated paper box industry and for garages and service stations at Quebec, for longshoremen (inland and coastal) at Montreal and for the dress manufacturing industry in the province were published April 18.

Orders in Council were also published approving the constitution and by-laws of certain joint committees and others approving the levy of assessment on the parties to certain agreements.

*In Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. References to the summary of this Act and to amendments to it are given in the LABOUR GAZETTE, January, 1949, page 65. Proceedings under this Act and earlier legislation have been noted in the LABOUR GAZETTE monthly since June, 1934.

Mining

Building Materials Industry, Province of Quebec

See below under "Manufacturing".

Manufacturing

Tannery Employees, Province of Quebec

An Order in Council dated March 19 and gazetted March 28, makes binding the terms of a new agreement between certain employers in the leather tanning and currying, etc. industry and Le Syndicat Catholique des employés de tanneries de Québec inc.; Le Syndicat Catholique des travailleurs du cuir et de la chaussure inc., of Plessisville; Le Syndicat national des tanneurs et corroyeurs inc., of St. Hyacinthe. Agreement to be in effect from March 28, 1953, to March 27, 1954, and thereafter from year to year, subject to notice.

Territorial jurisdiction comprises the entire province divided into 3 Zones as follows: Zone I—the Island of Montreal and the city of Quebec and municipalities totally within a radius of 10 miles from the Island of Montreal and the city of Quebec. Zone II—any other city of a population of 10,000 or more; Zone III—the rest of the province. However, those establishments of Zone III employing a minimum of 26 workers will be considered as belonging to Zone II.

Hours: 60 per week for stationary enginemen and maintenance men (millwrights), 72 per week for watchmen, 53 hours for all other employees. (Weekly hours are unchanged.)

Overtime: time and one-half for work in excess of weekly hours or in excess of 12 hours per day, and for work on Sundays or any of 9 specified holidays. Overtime for stationary enginemen and watchmen is limited to work in excess of weekly hours and the provision governing specified holidays does not apply to these categories. For workers being paid higher than the minimum rates set for class A, overtime will be paid at the hourly rate actually being paid, increased by half the rate of class A.

Minimum hourly wage rates for employees paid on an hourly basis or on a piece-work basis are increased by 7 cents per hour for all classes in the 3 Zones. New minimum rates are now as follows (piece-work rates in parentheses): at least 60 per cent of male employees, including all stationary enginemen and maintenance men (millwrights), and at least 60 per cent of female employees 95 cents ($1.03) in Zone I, 91 (98·6) cents in Zone II, 85 (92) cents in Zone III; not more than 25 per cent of male employees, including watchmen, and not more than 25 per cent of female employees 80 (86½) cents in Zone I, 77 (83·2) cents in Zone II, 71 (76·6) cents in Zone III; not more than 15 per cent of male, or of female employees 65 (70) cents in Zones I and II, 60 (64½) cents in Zone III. Piece-work rates in effect on February 10, 1953, are increased by 7 per cent. During the first year of operation new firms in Zone III will benefit by a reduction of 20 per cent on the minimum rates shown, during the first 6 months; this percentage is reduced to 10 per cent during the second 6 months.

Vacation with pay provisions are unchanged as follows: employees with 2 months or more of service in the preceding calendar year are entitled to 7 days of vacation with pay calculated at 2 per cent of earnings in the preceding calendar year. After 3 years' service an additional 7 days with pay calculated on the same basis. At the employer's option this second week may be withheld but vacation pay granted.

Fashion Accessories Industry, Montreal

An Order in Council dated March 19 and gazetted March 28, amends the previous Orders in Council for this industry (L.G., April 1948, p. 332; Jan. 1950, p. 77; July, p. 1051).

Territorial jurisdiction now comprises the Island of Montreal and the area within a radius of 15 (previously 10) miles from its limits.

Specified paid holidays are increased from 2 to 3 by the addition of St. Jean Baptiste Day.

Minimum hourly wage rates are increased as follows: stamper, special machine operator from 47 to 55 cents per hour; crochet beader from 44 to 50 cents; hand embroidery worker, floor help, covered button and buckle maker from 39 to 45 cents; bonnaz operator from $1.07 to $1.20; pleater and pattern maker from 63 to 90 cents; pleater's assistant from 39 to 55 cents. New scales of minimum rates for apprentices, as well as revised periods of apprenticeship are provided for in this amendment. (Weekly hours are unchanged at 40 per week.)

Vacation with pay: two weeks' with pay equal to 4 per cent of earnings during period of employment in each year; maximum not to exceed 2 weeks of regular pay. The 4 per cent will also be payable on termination of employment. (Previously 7 days of continuous vacation with pay after one year of service.)

Printing Trades, Quebec District

An Order in Council dated March 26 and gazetted April 4, amends the previous Orders in Council for this industry (L.G., April 1951, p. 544; April 1952, p. 451; March 1953, p. 432). Agreement to be in effect until December 31, 1953, inclusive.

Specified paid holidays are increased from 8 to 9 by the addition of Confederation Day.

Minimum wage rates: day shift—typographer, keyboard caster operator, electrotyper $1.57½ per hour for class "A", $1.52½ for class "B", $1.47½ for class "C" (electrotypers not included in classes "B" or "C"); bookbinding finish-gilder $1.57½ for class "A", $1.52½ for class "B", $1.47½ for class "C", $1.43½ for class "E"; stereotyper $1.56 for class "A", $1.52 for class "B", $1.47 for class "C"; pressman $1.55 for class "A", $1.51 for class "B", $1.46 for class "C"; photo-engraver and camera operator $1.51 for class "A"; bookbinder $1.51 for class "A", $1.48 for class "B", $1.44 for class "C", $1.42 for class "E", analine press (paper bags) $1.53 for class "B"; typographer and pressman on platen press $1.27 for class "D". (The above rates are from 7½ to 10 cents per hour higher than those previously in effect.) Minimum weekly wage rates for bookbinding female employees are from $1 to $3 per week higher as follows: from $17 per week during first 6 months of first year to $30 per week during the second 6 months of fourth year. Apprentices' minimum rates are from $1 to $3.50 per week higher. Helpers' rates are unchanged at 60 cents per hour in first year, 64 cents in second year.

In Lévis and Lotbinière counties the wage scale may be reduced by 3 (previously 5) per cent. In judicial districts other than that of Quebec the wage scale may be reduced by 10 (previously 12½ per cent).

Other provisions include apprenticeship regulations.

Ornamental Iron and Bronze Workers, Montreal, Trois Rivières and Sherbrooke Districts

An Order in Council dated March 26 and gazetted April 4, amends the previous Orders in Council for this industry (L.G., Feb. 1951, p. 233, June, p. 827, Aug., p. 1107, Oct., p. 1377; Jan. 1952, p. 55; May 1953, p. 728).

Minimum hourly wage rates in Zone II are from 8 to 10 cents per hour higher than those previously in effect and are now as follows: mechanic $1.10; fitter, blacksmith 99 cents, helper 88 cents per hour. Effective May 1, 1953, minimum rates for mechanics will be increased from $1.10 to $1.20, for fitters and blacksmiths from 99 cents to $1.10 and for helpers from 88 cents to 97 cents per hour.

Building Materials Industry, Province of Quebec

An Order in Council dated April 2 and gazetted April 11, amends the previous Orders in Council for this industry (L.G., June 1950, p. 872, Aug., p. 1185, Dec., p. 2067; Nov. 1951, p. 1539; Feb. 1953, p. 283, April, p. 582, May, p. 728). "The United Mineworkers of America" and "The United Cement, Lime and Gypsum Workers International Union" are added to the list of contracting parties.

Part II—Stone Industry

New working conditions replace those which previously governed this section of the present agreement as follows:—

Natural Stone

This part of the stone industry applies to any finishing operations on limestone, sand stone and any other natural stone with the exception of granite and marble.

Territorial jurisdiction comprises the entire province of Quebec.

Hours are unchanged at 8 per day, 4 on Saturdays, a 44-hour week for stone cutters, apprentice cutters; other classifications mentioned in the wage scale, 10 per day, 5 on Saturdays, a 55-hour week. No daily or weekly limitation for watchmen.

Overtime: as previously in effect all overtime is paid for at time and one-half; double time for work on Sunday.

Minimum hourly wage rates are from 10 to 25 cents per hour higher than those previously in effect and are now as follows: stonecutter $1.30; planerman and stone turner 95 cents in first year, $1.10 after one year; carborundum machine operator $1.10; sawyerman (all kinds) 95 cents in first 12 months, thereafter $1.05; craneman 95 cents in first 12 months, thereafter $1.10; helper and labourer 95 cents; blacksmith 85 cents in first year, 95 cents in second year, thereafter $1.25. New minimum rates for apprentice stonecutters now range from 70 cents in first year to $1 in third year. (Previously apprentice stonecutters received 60 cents in first 6 months, 70 cents in second 6 months, 80 cents in second year and 90 cents in third year.) Watchmen's rates are unchanged at $30 per week.

Vacation: one week with pay equal to 2 per cent of annual earnings after one year of continuous service with the same employer; 2 per cent of earnings for those employees with less than one year's service. (Vacation provisions are unchanged.)

Artificial Stone

The provisions of this part of the stone industry section of the present agreement for the building materials industry which apply to all operations in the artificial stone industry are the same as those shown above for the natural stone industry with the following exceptions:—

Hours: 10 per day, 5 on Saturday, 55 per week. (Previously artificial stone dressers worked a maximum of 44 per week.)

Minimum hourly wage rates are from 5 to 20 cents per hour higher as follows: artificial stone dresser $1.25; machine operator $1.10; machinist and maintenance man $1.40; rammer and moulder $1.05; helper and labourer 95 cents; modeller $1.55. Minimum rates for artificial stone dressers' apprentices range from 70 cents per hour in first 4 months to $1 in third 4 months.

Concrete Blocks

The terms governing this part of the stone industry section of the present agreement which apply to all operations in the fabrication of concrete and cement blocks are similar to those shown above for the natural and artificial stone industries with the following exceptions:—

Territorial jurisdiction comprises the entire province divided into 2 Zones—Zone I, the Island of Montreal and the cities of Quebec, Trois Rivières and Cap-de-la Madeleine; Zone II, the remainder of the province.

Hours: 10 per day, 5 on Saturday.

Minimum hourly wage rates: all trades and all categories—95 cents per hour in Zone I; 85 cents in Zone II.

Cement Pipes

The terms of this part of the stone industry section of the present agreement which governs all operations in the manufacture of cement pipes are similar, in all respects to those governing the fabrication of concrete blocks, shown above.

Other Cement Products

This part of the stone industry section of the present agreement applies to the manufacturing of precast cement wall and roofing slabs, joyce, panels, etc.

Territorial jurisdiction: entire province of Quebec.

Hours: 10 per day, 5 on Saturday, 55 per week.

Overtime: time and one-half for all overtime; double time on Sunday.

Minimum hourly wage rates: labourer and helper $1.15; lift truck operator, mixer operator and all other categories $1.25. Night shift premium 5 cents per hour.

Vacation provisions are the same as those shown above for the natural stone industry.

Construction

Structural Iron Industry, Province of Quebec

An Order in Council dated March 19 and gazetted March 28, extends the previous Order in Council for this industry (L.G., Nov. 1952, p. 1481) to July 1, 1953.

Building Trades, Montreal

An Order in Council dated March 26 and gazetted April 4, extends the previous Orders in Council for this industry (L.G., June 1952, p. 781, March 1953, p. 432, April, p. 582, May, p. 728) to July 1, 1953.

(Continued on page 911)

Labour Legislation, 1951 and 1952, in Northwest and Yukon Territories

Workmen's compensation benefits in Yukon and Northwest Territories have been made the same as Alberta's. Mining and steam boiler ordinances revised. Yukon ordinance effects general regulation of hours

In the Northwest and Yukon Territories, ordinances of interest to employers and employees were enacted in the past two years.

In 1952 new Workmen's Compensation Ordinances fixed for both Territories the scale of compensation benefits payable under the Alberta Workmen's Compensation Act. As before, an employer is liable for the payment of compensation and medical aid for an accident which occurs in the course of employment and must carry sufficient accident insurance to cover his liability. The Alberta Workmen's Compensation Board, acting as Referee under both Ordinances, will determine all claims for permanent disability.

New steam boiler ordinances were passed in both Territories, adopting the new CSA boiler regulations and laying down higher standards of inspection and certification of engineers and firemen.

In the Northwest Territories, the Mining Safety Ordinance and the rules made under it were revised to include new safety requirements.

In the Yukon Territory, the Hours of Labour Ordinance enacted in 1951 limits working hours to eight per day and 48 per week unless time and one-half is paid. The Ordinance applies to all workers in the Territory except those engaged in mining operations and in shops, hotels and restaurants, whose hours are regulated by two special ordinances.

The school-leaving age in the Northwest Territories was raised from 12 to 16 years.

Both Territories enacted enabling ordinances to provide for the payment of assistance to old age and blind pensioners.

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

NORTHWEST TERRITORIES

Workmen's Compensation

A completely revised Workmen's Compensation Ordinance in the Northwest Territories provides for the payment of similar benefits in the Territories as are payable under the Alberta Act. The Ordinance continues to make an employer individually liable for the payment of compensation and to require him to carry insurance to cover his liability. In this respect it differs from the Workmen's Compensation Acts of all ten provinces. The provincial Acts provide for the collective liability system under which employers are required to contribute to an Accident Fund from which compensation and medical aid are paid to workers who suffer injury in the course of their employment. The new Ordinance, assented to on July 10 and amended December 11, 1952, went into effect on January 1, 1953.

Arrangements were made whereby the Workmen's Compensation Board of Alberta will act as "Referee" under the Ordinance to determine disputed claims. All claims for permanent disability will be referred by the Commissioner to the Referee for determination. Claims for temporary disability will be settled by the insurer. If the employee is dissatisfied with the disposition of his claim, however, he may apply to the Commissioner to have his claim reviewed by the Referee. Formerly, all matters of compensation were determined by the employer and employee, or, if agreement could not be reached, by the courts.

The Ordinance provides for an assessment not exceeding one-half of one per cent of the employer's estimated payroll, to be paid at the time the employer pays his insurance premium. The purpose of the assessment is to pay the expenses of an office at Edmonton, through which claims will be referred to the Alberta Board.

The provisions of the Ordinance with respect to coverage, scale of benefits, industrial diseases for which compensation is payable, etc., are substantially the same as those of the Alberta Act (L.G., 1948, p. 999; 1952, p. 1085).

Contract of Insurance

As before, the employer is required to carry accident insurance for his workmen with an approved company unless he has made other arrangements satisfactory to the Commissioner. The insurance must provide for the payment of compensation to a workman or his dependants for accidents arising out of and in the course of employment covered by the Act and for certain industrial diseases set out in the schedule.

Application

The industries set out in Schedule I are the same as those for which compensation is payable under the Alberta Act. All enumerated employments are covered regardless of the number of workmen. As in Alberta and four other provinces, "learners" are covered, i.e., persons not under contract of service who are required by the employer to undergo training or perform probationary work before entering regular employment.

Industrial Diseases

Compensation is payable for the following industrial diseases: anthrax; glanders; poisoning by lead, mercury, phosphorus and arsenic; infection or inflammation of the skin due to oils, cutting compounds or lubricants, dust, liquids, fumes, gases or vapours; pneumoconiosis; poisoning by benzol or by nitro and amido derivatives of benzol, anilin and others; and subcutaneous cellulitis of the hand (beat hand).

Compensation may also be paid for silicosis but only if, in the opinion of the Referee, the workman has been exposed to silica dust in his employment in the Territories for at least three years preceding his disablement.

Under the previous Ordinance, the diseases, with some exceptions, were similar to those compensable under the British Columbia Act.

Notice of Accidents

In every case of injury by accident in an industry within the scope of the Ordinance, the workman, or his dependants in case of death, must notify the employer as soon as practicable. Failure to give notice within 12 months from the date of injury or death, unless excused by the Commissioner, is a bar to compensation. Upon being informed of an accident, the employer is required to notify the Commissioner.

Waiting Period

Under the Ordinance a waiting period of three days and a qualifying period of six days are provided for. A worker whose disability lasts six days or less cannot recover compensation for the first three days of his disability. Only if a disability lasts longer than six days is compensation payable from the day of the accident. In this respect the Ordinance is unlike the Alberta Act, which provides for a waiting period of one day.

Scale of Compensation

The principal benefits fixed by the Ordinance for death cases are as follows: (a) not more than $200 for burial expenses and, in addition, if the Referee deems it advisable, a further allowance, not exceeding $100, towards the cost of transporting the workman's body from the place of death to any place within the Territories; (b) a lump sum of $100 and $50 a month to the widow and, where there are children, an additional $25 a month to each child up to 16 years of age or, in the case of a dependent invalid child, for as long as the Referee believes that the workman would have contributed to the child's support; (c) an additional payment not exceeding $10 a month, in the discretion of the Referee, to orphans under 16 years or to children whose surviving parent is confined to a prison or institution. Payments to dependent children may be continued to the age of 18 if the Referee considers it desirable to continue their education.

A dependent widow who re-marries receives a lump sum of $600 and provision is made for resuming monthly payments of not more than $50 after the lapse of one year if she is subsequently in need by reason of the death of her husband, his imprisonment or his confinement to an institution. This provision for resuming the compensation payments of a widow in needy circumstances after her re-marriage is contained only in the Alberta Act. No other provincial Workmen's Compensation Act has a like provision.

A workman who is permanently and totally disabled is entitled to receive for life a weekly payment equal to 75 per cent of his average weekly earnings during the previous 12 months. In any case, he is not to receive less than $25 a week or the full amount of his earnings if they are less than $25. Where the workman suffers a permanent partial disability, compensation is to be awarded according to impairment of earning capacity estimated from

the nature and degree of the disability, and, as in total disability, is based on 75 per cent of average weekly earnings.

Temporary total or temporary partial disability is compensated at the same rate as permanent total and permanent partial disability, but in such case compensation is payable only so long as the disability lasts.

In computing average earnings, $3,000 a year is the maximum amount taken into account.

The former Ordinance did not fix the amounts payable for compensation. It provided that, if the compensation paid under the contract of insurance was, in the Commissioner's opinion, less than the amount which would be payable for a similar disability under the British Columbia Act, he might pay the difference out of Territorial funds, provided that application was made by the employee or his dependants within a year after payment.

Medical Aid

In addition to compensation payments, the injured workman is entitled to "medical aid" provided by the employer, which includes medical and other services, nursing, hospitalization, drugs, dressings, X-ray treatment, special treatment, transportation and other matters as the Referee may authorize.

Mines

Greater provision for the safety of workmen in mines, quarries, smelters, mills and metallurgical works was made in the Mining Safety Ordinance and the rules under it, which were revised, effective from August 1, 1952. The arrangement of the sections was improved and an effort was made to bring the Ordinance more into line with similar legislation in other parts of Canada, particularly with the Mining Act of Ontario.

New or more detailed sections were added to the Ordinance governing employment, medical certificates, mine rescue apparatus, and inspection. Three sections governing the powers and duties of inspectors, the erection of party walls for adjoining mines, and notices required when installing new equipment or when opening or closing a mine, which were formerly contained in the rules, are now included in the Ordinance itself. Many new provisions were also added to the mine safety rules, which now comprise 418 sections. In particular, changes were made with respect to sanitation, fire protection, hoisting equipment and electricity.

The former Mining Safety Ordinance made in 1943 was repealed.

Employment

It is now provided that the minimum age of 18 for employment underground is also to apply at the working face of any open cut workings, pit or quarry. Above ground, no person under 16 years may be employed. The provision prohibiting female employment in connection with a mine except in work of a technical, clerical or domestic capacity was amended to add to the exception the words "or such other capacity as requires the exercise of normal feminine skill or dexterity but does not involve strenuous physical effort". The minimum age for a person operating any hoisting engine at a mine is now 21 years. Formerly, the operator of a hoist in which persons were carried was required to be 21 years old but for other types of hoists the minimum was 18 years.

The new Ordinance retains the limit of eight hours in any consecutive 24 during which a workman may remain underground or be permitted to operate a hoisting engine.

Medical Certificate

A hoistman who operates a hoist which carries persons is required to hold a medical certificate. Certificates are valid for one year. The Ordinance now requires a record of the medical certificates of all hoistmen in a hoistroom to be kept posted showing the names of the hoistmen and the date of the last certificate issued to each.

As before, no person is allowed to work in a dust exposure occupation unless he holds a medical certificate. "Dust exposure occupation" is defined to include not only employment underground, or at the surface in ore or rock-crushing operations, but also any occupation at the surface designated by the Chief Inspector. There must now be attached to the medical certificate a photograph of the holder with the number of the certificate endorsed on it. Medical certificates are good for one year. Application for an examination and renewal of the certificate must be made within 30 days prior to the expiry date.

Mine Rescue Stations

The Commissioner may direct that mine rescue stations be established and operated in a mine in which a shaft has been sunk to a depth of 100 feet and stoping operations have started or in any other mine in which the Chief Inspector considers that they are necessary. The rescue station must be in the charge of a mine rescue superintendent appointed by the Commissioner. An inspector is to assess each mine

with the cost of maintaining mine rescue stations, including the salary of the mine rescue superintendent. The assessments are to be made after the end of each quarter on the basis of the total number of men shifts working underground and in the mine's mill.

The manager is responsible for the training of mine rescue officers and rescue crews and he, or a rescue officer designated by him, under the general supervision of the mine rescue superintendent, must direct all rescue work and recovery operations. The owner or manager is required to submit to an inspector returns or other information respecting safety work or mine rescue training as the Commissioner may prescribe.

Inspection

Inspectors are required to submit inspection reports to the Chief Inspector immediately on the completion of an inspection and to make monthly reports as the Chief Inspector may require. Formerly, the inspectors were required to make an annual report to the Commissioner.

Reporting of Accidents

The Commissioner, as before, may direct an inspector to make a special report on an accident causing death or injury and, in addition, may now require a special report on the condition of a mine.

When any person suffers injury which, in the opinion of the attending medical officer, may result in incapacity for work for seven days or more (formerly three days or more) the owner or manager must, within three days, notify the inspector.

An outbreak of fire which endangers safety and which requires the services of the mine rescue station must be reported immediately to the mine rescue superintendent and to an inspector.

Mine Safety Rules

The principal changes in the mine safety rules are indicated below.

With regard to sanitation, the rules require one sanitary convenience for every 25 men or fewer on any shift of workers underground. Similar requirements are laid down for the provision of conveniences where men are employed on the surface. Where women are employed, one toilet for every 15 must be provided.

In any case where men are employed underground or in hot or dusty surface occupations, accommodation for drying and changing clothes and supplies of warm or cold water must be provided above ground near the principal mine entrance. Previously, this was required only if six or more persons were ordinarily employed below ground each day.

Where persons are employed underground, there must be a system of checking in and out those underground.

As regards fire protection, the general procedure to be followed both on the surface and underground must be drawn up for use in case of fire. All persons concerned must be kept informed of their duties and copies of the rules or suitable extracts must be kept posted.

No person may build a fire underground unless authorized by the manager and only after the necessary fire-fighting equipment has been provided. The amount of volatile inflammable liquid kept underground must not exceed the requirements for the current day's work.

Where dangerous concentrations of inflammable gas have been found to exist in any mine workings, the area must immediately be considered as a fire hazard area and every precaution taken to prevent the gas from igniting. No person may smoke, use open-flame lamps, matches, etc., in a fire hazard area, except with the Chief Inspector's written permission. The owner or manager must maintain suitable warning signs in such an area.

As before, fire-fighting equipment as deemed necessary by the inspector must be provided in every head-frame, shafthouse, portal-house and every other plant building and at every shaft and winze station underground. It must now be inspected once a month by a person appointed by the manager and a report made in writing to the manager.

New sections were added to the rules governing the care and use of explosives. Explosives must be stored on the surface in special buildings, such as magazines, thaw houses, detonator or blasting cap storage buildings or cap and fuse houses, which are under the direction of the manager or a person appointed by him. Where possible, the building must be located in accordance with the British Table of Distances in respect of distance from the mine, other buildings or any public highway or railway. The ground surrounding the building must be cleared of timber or other combustible material for at least 50 feet.

As previously, with the written permission of the Chief Inspector, underground explosive magazines may be established. The maximum amount of explosives which may be stored in such a magazine was increased from 2,500 to 5,000 pounds.

A number of changes were made with respect to hoisting machinery and equipment. As regards inspection, the owner or manager of a mine where a hoist is in use must appoint a competent person to inspect the shaft at least once a week, and at least once a month to examine thoroughly the guides, timber, walls and hoisting compartments generally. A shaft inspection book must be kept for each shaft and a record of every examination entered by the person making the examination. Entries must be read and signed each week by the person in charge of the maintenance of the shaft who must also note in the book any dangerous condition reported and the action taken regarding it.

The maximum load of both men and materials which may be carried in any shaft conveyance must be determined by the inspector before the mine owner or manager may permit men to be carried. The inspector, before issuing a certificate to this effect, must be satisfied that the hoisting installation and signalling equipment comply with the rules.

The safety appliances on a cage or skip must be examined once a day, and at least once in every three months the safety catches of the cages must be tested. If they are found unsatisfactory, the cage or other shaft conveyance must not be used until the catches have been repaired and proved to act satisfactorily. If the inspector deems it necessary, he may order specific tests to be made. The Chief Inspector may give permission in writing for hoisting men without safety catches if he is satisfied that the equipment and conditions are such that a maximum of safety is provided.

Hoisting ropes are subject to stricter requirements. No hoisting hope may be used which has not been tested and approved. At least a daily examination of the rope is required, and once a month that part of the rope which is not on the hoist drum when the conveyance is at its lowest stopping point must be examined. A higher factor of safety is now required for ropes on new hoists or on existing hoists modified to increase the hoisting capacity.

Special rules are now set out for the safe operation of electric hoists and cover such matters as automatic brakes, overwind and underwind devices, circuit breaker, and warning signals. An electrical hoisting equipment record book must be kept at a mine where an electric hoist is in use and a weekly examination of the hoist motor and control apparatus, electric safety devices and hoisting signal equipment must be recorded as well as notation made of any failure of or accident to such equipment and the action taken regarding it.

Stricter regulation of clay, sand and gravel pits and quarries is provided for. The new provisions require open cut operations more than 65 feet deep to be worked in benches unless the written permission of the Chief Inspector has been obtained. Another new provision requires men working on the pit wall to wear a life-line securely snubbed above the working place and under the supervision of a snubtender or held taut by one of more fellow-workmen. Specifications are now set out for travelways, stairways and ladders.

Two new sections of the rules set out safety precautions to be observed at metallurgical works and at blast furnaces and roasters. Breathing and portable resuscitating apparatus approved by the inspector must be maintained at blast furnaces and other metallurgical works where the atmosphere may contain dangerous concentrations of poisonous gases. In addition, a person trained in the use of the apparatus must be on duty in each working shift.

Extensive changes were made in the rules covering the use of electricity in mines. Many of the new provisions incorporate sections of Part V of the CSA Electrical Code covering the use of electricity in coal mines and in metalliferous and industrial mineral mines and quarries. It is now stipulated that, in the absence of any specific rules on a particular point, the adherence to electrical codes recognized by the Commissioner will be recognized as good practice.

An inspector is now authorized to suspend or vary any mine safety rule made under the Ordinance if the owner or manager applies to him in writing giving reasons for requesting that the rule should not apply. The suspension or variation is effective for two months unless it is cancelled sooner or confirmed by the Commissioner.

Boilers and Pressure Vessels

The new Steam Boilers Ordinance, 1951, which replaces the Ordinance of 1941, adopts the Canadian Regulations for the Construction and Inspection of Boilers and Pressure Vessels (CSA B51-1951) as regulations under the Ordinance and contains other new provisions designed to bring the Ordinance into line with present-day standards.

The Ordinance covers the inspection, certification and operation of boilers and

pressure vessels and the certification of four classes of engineers and of welders.

The Ordinance applies to boilers and pressure vessels used for power, heating and refrigeration except for boilers of less than 3 h.p. or those used for heating private residences that house fewer than three families, those subject to inspection under the Canada Shipping Act, boilers and pressure vessels which are part of the equipment of railways under the federal Railway Act, pressure vessels of less than $1\frac{1}{2}$ cubic feet volume or operating at less than 50 pounds pressure p.s.i., those subject to inspection under the federal Explosives Act and diesel engines. The latter exclusion is new.

All uninsured boilers and pressure vessels are required to be inspected and certificated annually and are subject to additional inspections if they are reported to the Commissioner to be in an unsafe condition. The new Ordinance also authorizes inspectors to examine boilers or pressure vessels in the course of construction or undergoing repair. The inspector may refuse to grant a certificate of inspection if a boiler or pressure vessel is found to be improperly constructed or repaired or where permission to make the inspection has been refused.

Boilers and pressure vessels covered by the Ordinance must, as previously, be operated by a person over 21 years of age who holds a certificate of qualification. Four classes of certificates are provided for, graded according to the rating of the boiler or pressure vessel. A first class engineer, as before, may take charge of any boiler or pressure vessel. The rating of boilers and pressure vessels which a second or third class engineer may take charge of was considerably increased. A second class engineer is now qualified to take charge of a boiler or pressure vessel not exceeding 750 h.p. instead of 100 h.p.; a third class engineer may be in charge of one of not more than 500 h.p. rather than 50 h.p.; a fourth class engineer (fireman) may take charge of one of not more than 200 h.p. if he is under the general supervision of an engineer with a higher certificate. Formerly, a fireman could take charge of any boiler or pressure vessel if he was supervised by a properly qualified engineer.

As previously, where the owner of a boiler or pressure vessel is unable to secure the services of a qualified engineer, the inspector may grant a permit to operate the boiler or pressure vessel for six months to any person who satisfies him as to his good conduct, sobriety and experience.

The Ordinance prohibits welding on boilers or pressure vessels except by a person holding a welder's certificate or one who is considered by the Commissioner to be otherwise qualified.

Licensing of Trades and Businesses

Amendments, assented to December 11, 1952, were made to the Business Licence Ordinance which forbids a person to carry on any of the occupations listed in the schedule without first obtaining a licence and paying the required fee.

The Ordinance requires an applicant for a licence who is an employer of labour to state in his written application the arrangements he has made for the protection of his workmen in case of accident in accordance with the provisions of the Workmen's Compensation Ordinance or his reasons for not making such arrangements.

The amendment authorizes the Commissioner to refuse to register or issue a licence to a person who is required to insure his employees under the Workmen's Compensation Ordinance and who fails to do so.

School Attendance

A new School Ordinance, assented to July 10, 1952, raises the school-leaving age from 12 to 16 years. Previously, a child between 7 and 12 years was required to attend school for at least 16 weeks in each year, eight weeks of which were consecutive.

Under the new Ordinance, a parent or guardian of a child between 7 and 16 years is required to send him to school, or see that he is educated otherwise, and for failure to do so may be liable to a fine not exceeding $5 for each day during which the violation continues.

A parent or guardian is not liable to penalty for failure to send the child to school for any of the following reasons: (a) if the child is being educated in some other satisfactory manner; (b) if he is unable to attend by reason of sickness or other unavoidable cause; (c) if there is no school open which the child can attend within five miles from his residence; (d) if the child has reached a standard of education equal to or higher than that to be attained in such school; (e) if the child's physical or mental condition is such as to prevent his attendance at school or his application to study; (f) if there is insufficient accommodation in the school which the child has the right to attend; (g) if the child has completed Grade VIII

or its equivalent; or (h) if he is absent from school on a holy day recognized by the church to which he belongs.

Old Age and Blind Assistance

The Old Age Assistance and Blind Persons Allowance Ordinance, assented to on December 13, 1951, is similar to the Acts passed in all provinces during 1951 and 1952. It provides for the administration of the old age and blind persons' assistance program in the Territories. The Commissioner is authorized to appoint a Director to be responsible for receiving applications and determining eligibility for both types of assistance. The Ordinance went into effect January 1, 1952.

YUKON

Hours of Work

By the enactment of the Hours of Labour Ordinance, 1951, working hours must be confined to eight in a day and 48 in a week unless time and one-half is paid for all time worked after these limits. The Ordinance is, in general, similar to the hours of work legislation in effect in five provinces and in its provision requiring time and one-half to be paid if work continues beyond fixed limits is like the Acts of Manitoba and Saskatchewan.

This is the first general statutory regulation of hours of work in the Yukon Territory. The Fair Wages Ordinance, 1946, limits the hours of employees in shops, hotels, restaurants, etc., to eight and 44 unless time and one-half is paid and the Ordinance to Regulate the Hours of Labour and the Minimum Wage to be Paid in Mining Operations, 1937, limits to eight and 48 the working hours of employees in mining. Employees covered by these two Ordinances are excluded from the new Hours of Labour Ordinance. Also excluded from the Ordinance are persons employed in a supervisory, managerial or confidential capacity.

Employers are required to keep records showing the hours worked by all their employees. Records must be produced for inspection when required by the Commissioner or a person authorized by him.

For failure to comply with any provision of the Ordinance the penalty is a fine ranging from $25 to $100 for each employee affected by the violation or, in default of payment, imprisonment for a term of not more than three months.

Workmen's Compensation

A Workmen's Compensation Ordinance practically identical to the one enacted in the Northwest Territories, described above, was assented to in the Yukon Territory on October 23, 1952, and became effective on January 1, 1953. As in the Northwest Territories, disputed claims in the Yukon will be dealt with by the Alberta Workmen's Compensation Board, which has agreed to act as Referee.

The only difference of note between the two Ordinances has to do with payments to a dependent widow on her re-marriage. As in the Northwest Territories, the Yukon Ordinance provides that when a dependent widow re-marries her monthly payments cease and she receives a lump sum of $600 within one month of her re-marriage. No provision is made in the Yukon Territory for the resumption of a widow's monthly pension if she later finds herself in need.

While the new Ordinance provides for the same general system of individual liability as before, under which an employer is liable for the payment of compensation and must insure his risk in a private insurance company, it makes substantial changes by adopting the scale of benefits and other provisions of the Alberta Act.

Previously, fixed lump sums were payable in death claims and for permanent total disability, e.g., compensation in case of death was $5,000 to a widow, with $750 for each child under 16, the total not to exceed $8,600. The sum of $6,000 was payable for permanent total disability and fixed sums for specific injuries. For temporary total disability a workman received a weekly payment of 66⅔ per cent of his average daily wages for the duration of his disability, up to a maximum period of 12 months.

Under the new Ordinance a widow receives a lump sum of $100 and a monthly pension of $50 until her death or re-marriage, together with $25 a month for each of her children under the age of 16 years. For permanent total disability compensation is a weekly payment during the lifetime of the workman equal to 75 per cent of his average weekly earnings. For permanent partial disability compensation is a proportion of 75 per cent of average weekly earnings, depending on the degree of loss of function resulting from the injury.

Another change from the previous Ordinance is in application. All industries set out in the schedule are covered whereas under the former Ordinance industries with fewer than five workmen were exempted. The number of industrial diseases was increased from five to eleven. Formerly, compensation was payable only for silicosis, lead, arsenic and mercury poisoning, and infected blisters.

The new Ordinance provides for a three-day waiting period and a six-day qualifying period. The six-day qualifying period is new. Previously, a workman was not granted compensation for any disability that lasted less than three days. Henceforth, when disability is of more than six days' duration, compensation is payable from the day of the accident.

Boilers and Pressure Vessels

The Steam Boilers Ordinance was replaced by a new Ordinance enacted May 8, 1952, and amended October 23 of the same year. The provisions are similar to those of the new Ordinance in the Northwest Territories (see above).

The coverage is the same as in the Northwest Territories except that the Ordinance does not apply to boilers and pressure vessels of less than 15 h.p., instead of those of less than 3 h.p. as is the case in the Northwest Territories.

In the Northwest Territories, and previously in the Yukon, all boilers and pressure vessels were required to be inspected annually. Now the compulsory annual inspection applies to all boilers, pressure vessels of over 20 cubic foot capacity, and hot water boilers which have over 150 square feet of heating surface or any used for heating a school, hospital, church, theatre, hall, auditorium or other building where the public assembles. On completing the inspection, the inspector must issue to the owner an inspection certificate. The new Ordinance provides that, if circumstances warrant, the Commissioner may issue a certificate to an owner of a new boiler or pressure vessel pending the next regular inspection.

In addition to the four regular classes of engineers' certificates provided for, the Commissioner is authorized to issue a provisional certificate on payment of a fee of $10, valid for not more than one year, to a person who has been employed as a fireman on a high pressure boiler for at least one year.

A new section provides that, where a boiler is delivered to a purchaser within the Territory, an affidavit of the foreman under whose supervision the boiler was built must be forwarded to the Commissioner. Unless this section is complied with, the inspector will not be required to pass the new boiler.

As in the Northwest Territories, the Yukon Ordinance adopts the 1951 Regulations for the Construction and Inspection of Boilers and Pressure Vessels of the Canadian Standards Association. In addition, the Yukon Ordinance provides that the Interprovincial Boiler Code is to govern the design, construction and inspection of boilers and pressure vessels in all circumstances not covered by the regulations.

A schedule of fees for inspecting boilers and pressure vessels is appended to the Ordinance.

Licensing of Trades and Businesses

The Business Licence Ordinance, 1952, requires all persons engaged in any of the occupations listed in the schedule to obtain a licence, for which they must pay a fee ranging from $10 to $100. A licence is valid for one year, expiring on March 31. The Ordinance does not apply to portions of the Territory situated within the boundaries of a municipality.

Guides

New provisions with respect to the licensing of guides are contained in the Game Ordinance which went into effect January 1, 1952, replacing an Ordinance of 1947.

As before, every person acting as a guide is required to be licensed by the Commissioner or his agent. Three types of licences are provided for, Grades A, B and C. These must be renewed annually.

To obtain a Grade A licence, a person must have acted as a guide for three years and have suitable equipment for outfitting any person desiring to hunt game. A Grade B licence may be issued to a person acting as assistant to a Grade A guide or to one whose activities as a guide are confined to areas where there is no need of extensive equipment to ensure the safe handling and conducting of the hunting party. A Grade C licence will entitle the holder to operate only under the immediate supervision of the holder of a Grade A or B licence; the holder must not hold hunting territory in his own right.

An applicant for a licence must produce evidence of qualifications, ability, character, age, residence, equipment, and the districts in which he has hunted.

Old Age and Blind Assistance

The Old Age Assistance and Blind Persons Allowance Ordinance was passed in 1952 to provide for the administration in the Yukon Territory of pensions to needy persons between 65 and 70 and needy blind persons over 21 years.

In addition to the maximum pension of $40 a month payable to these two classes of persons, the Ordinance also provides for a supplementary allowance of up to $10 a month. The Ordinance went into effect April 1, 1952.

Legal Decisions Affecting Labour

Quebec paper mill loses appeal against Superior Court decision refusing to stay the proceedings of arbitration board. Manitoba spray painter claiming entitlement to week's dismissal notice loses case

In a case which arose out of difficulties encountered by Price Brothers and the pulp and paper syndicates representing their employees in negotiating an agreement in March 1951, the appeal court in Quebec has ruled that a dispute over the unions' request for a voluntary revocable check-off was a proper subject for reference to a board of arbitration.* In Manitoba, the Court of Appeal dismissed a workman's claim that he was entitled to a week's notice on termination of employment both at common law and by the terms of the Manitoba Hours and Conditions of Work Act.

Quebec Court of Queen's Bench, Appeal Side...

...finds check-off a "condition of employment" coming within jurisdiction of arbitration board

The Quebec Court of Queen's Bench, Appeal Side, at Quebec on March 11, 1953, dismissed an employer's appeal from the ruling of the Superior Court that the voluntary revocable check-off of union dues was a condition of employment coming within the jurisdiction of a council of arbitration and that no writ of prohibition could be issued against a council of arbitration to prevent it from making a recommendation on this question.

Mr. Justice Hyde, Mr. Justice Marchand, Mr. Justice Gagné and Mr. Justice Bertrand gave separate reasons for the Court's decision and Mr. Justice Barclay gave a dissenting opinion.

The facts of the case were related by Mr. Justice Hyde. Price Brothers and Company Limited had signed collective agreements with the unions which were the bargaining agents for employees in the company's paper mills at Riverbend and Jonquières. On March 27, 1951, the unions gave notice that they wished to negotiate amendments to the agreements before they were renewed. In the discussions that followed, agreement was reached on all points except the unions' request for a voluntary check-off of union dues from the wages of the employees, which the company refused. According to the provisions of the Labour Relations Act for the solution of differences in the negotiation of collective agreements, the Minister of Labour first appointed a conciliator; then, when he was unable to effect an agreement, a council of arbitration.

A representative of the company appeared before the council of arbitration and contested its jurisdiction on the ground that the check-off clause over which the parties disagreed was not a "condition of employment" which a council of arbitration was authorized by statute to consider. On November 15, 1951, the members of the council of arbitration reported unanimously to the Minister that they were unable to render a decision on the matter submitted to them, since the question of their jurisdiction was one to be determined by the courts.

On December 10, 1951, the Department of Labour advised the company that the Minister had decided to appoint a second council of arbitration to consider the issue of the check-off and requested it to nominate a member. The employer informed the Minister of his view that a council of arbitration had no jurisdiction to consider the matter and that the Quebec Labour Relations Act did not empower the Minister to appoint a second council. He stated that if the unions persisted in proceeding with the matter he would contest the jurisdiction of the council of arbitration in court. When the Minister proceeded to appoint a second council, the employer applied to the Superior Court for a writ of prohibition against the new council of arbitration.

Mr. Justice Hyde reviewed the arguments given by the employer and the unions in the Superior Court. Counsel for the company claimed first that the Minister had no power to appoint a second council of arbitration and secondly that an employer could not be required under either the Labour Relations Act or the Quebec Trade Disputes Act to accept a check-off provision. The unions' counsel maintained that a writ of prohibition could

*Last month the Supreme Court of Canada declined to hear the company's appeal from this decision.

not be issued against a council of arbitration, that the Minister had the right to appoint a second council because the refusal of the first group to consider the matter submitted to it was equivalent to resignation, and that the proposed check-off clause did constitute a condition of employment within the meaning of the Labour Relations Act. The Superior Court dismissed the application for a writ of prohibition for various reasons, including the ones urged by the unions' counsel.

In the Court of Queen's Bench the case was narrowed down to two questions. Was the voluntary revocable check-off a "condition of employment" coming within the jurisdiction of a council of arbitration? If a council of arbitration exceeded its jurisdiction, could a writ of prohibition be issued against it?

Mr. Justice Hyde proceeded to exmine the company's contention that a check-off clause cannot be enforced upon an employer and consequently is a matter outside the jurisdiction of a council of arbitration. He noted first that the unions' request was for a voluntary revocable check-off clause, under which the employer would be obliged, upon the written request of an employee covered by the agreement, to withhold periodically from his pay the amount of his union dues and to remit the money to the union. The employee would have the right to revoke such instructions at any time and so would be left with complete freedom of action. He drew a distinction between this type of check-off provision and a compulsory check-off with or without the closed shop or other form of union security provision.

His Lordship then referred to Section 2(e) of the Labour Relations Act which defines a collective agreement in these terms:—

> "Collective agreement" or "agreement" means any arrangement respecting conditions of employment entered into between persons acting for one or more associations of employees, and an employer or several employers or persons acting for one or more associations of employers.

Counsel for the employer emphasized the more limited meaning of the phrase "conditions de travail" in the French version of this section. He agreed that any clause not contrary to public order or good morals might be included in a labour contract or a collective agreement freely negotiated but maintained that the Act only required the employer to negotiate terms concerning "conditions de travail", that is, the work which employees are required to do and the relations between the employer and his employees. He contended that a check-off provision was not a condition of employment since it dealt only with the relations between the union and the employer.

Mr. Justice Hyde did not support this view. He pointed out that there was no attempt in the statute to limit the meaning of "conditions of employment". He also cited the rule given by Maxwell's *Interpretation of Statutes* that the chief object in construing the meaning of statutes is to determine the legislative intent, and that words should be given their full meaning, or the more extensive of two meanings, if this will best carry out the legislative intention. A narrow interpretation of "conditions de travail" might mean only the actual physical conditions under which the work was performed while "conditions of employment" might be restricted to rates of pay and hours of work. It was obviously not the intention of the Legislature to restrict the terms of collective agreements in this way.

His Lordship considered that the check-off was a question of the manner of payment of wages and was therefore a "condition of employment". While it was true that the union would benefit from the automatic collection of dues, the check-off was not solely in the interests of the union but would also assist the individual employee. It would save him the trouble of making the regular payments to which he was pledged and would assure him of remaining in good standing.

Section 14 of the Labour Relations Act provides for the submission of a dispute over the negotiation of a collective agreement to a council of arbitration. Since he considered the check-off a condition of employment properly the subject of a collective agreement under the Act, His Lordship held that the matter did come within the jurisdiction of a council of arbitration. For this reason he did not find it necessary to consider whether a writ of prohibition could be issued against a council of arbitration.

The employer also contended that the matter in dispute was beyond the jurisdiction of a council of arbitration appointed under the Trade Disputes Act because it was not mentioned in Section 4 of that Act which lists matters which may constitute a dispute. Mr. Justice Hyde held that a reference of a dispute arising in the negotiation of a collective agreement to a council of arbitration was not concerned with the jurisdiction prescribed by the Trade Disputes Act but solely with that given by the Labour Relations Act. Since this question was one properly dealt with

in a collective agreement there was no question of the jurisdiction of a council of arbitration to consider and report upon it.

In separate reasons for decision, Mr. Justice Marchand stated that he could not see how a writ of prohibition could be issued against a council of arbitration, since it was not an inferior tribunal having the power to judge within a limited jurisdiction but was merely a body established to make inquiry into a matter and report its findings to the Minister of Labour. He stated that he would dismiss the appeal on this ground alone.

Mr. Justice Bertrand concurred in the judgment of the Court because of the clauses in the Trade Disputes Act and the Labour Relations Act protecting councils of arbitration against writs of prohibition.

Mr. Justice Gagné stated that the distinction made by counsel for the employer between "conditions of employment" and other terms which may be included in collective agreements was not clear to him. In his opinion all provisions of a collective agreement were conditions of employment. If a check-off clause were included in an agreement, as the employer admitted it could be, and yet was not a condition of employment which was binding, it would be of no use at all to the employees.

Referring to the employer's argument that a check-off provision did not deal with an employer's relations with his employees but only with his relations with the union, Mr. Justice Gagné emphasized that a union speaks on behalf of all its members. The union, acting for the protection of the individual worker, negotiates an agreement fixing wages, hours of labour and type of work and this agreement is binding on all its members. The purpose of the collection of membership dues is not to enrich the union but to cover the costs of its services to the members. The payment of union dues is therefore intimately connected with an employee's work and wages.

For these reasons His Lordship considered that the check-off provision was a condition of employment and that the council of arbitration did have authority to consider whether or not it would recommend its inclusion in the collective agreement. He also found that the Minister of Labour was authorized to appoint a second council when the first refused to consider the question submitted to it.

Mr. Justice Barclay, in giving reasons for his dissenting judgment, maintained that there was a distinction between conditions of employment or working conditions and other conditions which might be included in a collective agreement. Any provision not illegal or against public order might become a term of an agreement, and if both parties agreed to include it, it could then be treated as a working condition, but not otherwise. He held that a council of arbitration could deal with actual working conditions and could recommend their adoption, but could not deal with or make any recommendations regarding other stipulations in the contract which are left to the free consent of the employer and the employee.

In Mr. Justice Barclay's view, "working conditions" meant the conditions which an employee must fulfil in order to earn his wages and the conditions which an employer must fulfil in order to reap the benefit of his employee's work. He found that the check-off was not a working condition.

> It is only after the employee, by complying with the working conditions, has earned his wages that the question of the voluntary check-off arises. At most it is a service which the company is asked to perform, it is not one of the company's obligations... As the check-off is not a stipulation of the contract, and not yet having been agreed to, it cannot be considered as a working condition.

Accordingly, in his opinion, the council of arbitration had no jurisdiction to make a recommendation as to the proposed check-off provision.

Considering that the second council was appointed for the sole purpose of dealing with a subject outside its jurisdiction, he held that a writ of prohibition should be issued against it. In his opinion, Section 34 of the Trade Disputes Act and Section 41a of the Labour Relations Act protected a council of arbitration from such a writ only when it was exercising its proper functions. For this reason he would have allowed the company's appeal.

The Court dismissed the employer's appeal from the judgment of the Superior Court which had accepted the case advanced by the unions and had dismissed the company's application for a writ of prohibition against the council of arbitration. *Price Brothers and Company Limited* v. *Letarte et al,* Rapports *Judiciaires de Québec* [1953], BR Montreal, No. 4, 307.

Manitoba Court of Appeal...

...finds one hour adequate notice of dismissal for painter paid by the week at an hourly rate

The Manitoba Court of Appeal, on March 20, 1953, dismissed a workman's appeal from a ruling that he was not entitled to a week's notice of dismissal

since he was employed by the hour and knew of his employer's practice of giving not more than an hour's notice.

Mr. Justice Beaubien described the facts of the case in his reasons for judgment. The appellant had been hired as a spray painter in May 1950. The contract of hiring was an oral one and nothing was said regarding termination of employment. The only arrangement made was that he was to start at a wage of 90 cents an hour and was to receive $1 an hour if he proved satisfactory after a trial period of two weeks. The appellant testified that no notice regarding termination of employment was ever posted in the shop and that the employer had never raised the question at a meeting of employees. The painter worked steadily for his employer, except for short periods of absence during his wife's illness and during his holidays, until October 4, 1951, when he was discharged along with nine others. On that day he was told at 4 p.m. that he would be "through" at 5.15 p.m.; his wages were paid up to that time. On October 2 he had been paid the amount he had earned during the week ending the previous Friday.

A police magistrate awarded the workman $48.80 in lieu of a week's notice of dismissal. The employer appealed this ruling to the county court. The county court judge, holding that the painter was employed by the hour and that in the circumstances the notice given him was reasonable, allowed the appeal. The workman appealed from this judgment to the Court of Appeal, claiming that he was entitled to one week's notice of termination of employment both at common law and by the terms of the Manitoba Hours and Conditions of Work Act.

Mr. Justice Beaubien stated that the point to be decided was the nature of the hiring. The appellant contended that it was a weekly hiring, terminable on a week's notice. His Lordship cited authorities which supported the view that where a hiring is for an indefinite period reasonable notice must be given and that the question of what constitutes reasonable notice depends on the nature of the hiring and other circumstances of the employment.

Mr. Justice Beaubien then reviewed the decision of the county court judge. He had accepted the employer's contention that his employees were hired by the hour, although they were paid once a week for convenience, and that they could leave their job any time they wished and could be discharged on an hour's notice. He had found also that the employee who brought the complaint was well aware of the system followed by the company. He was in its employ for 16 months, was off work on at least two occasions and was active in organizing a union among the employees, so that he would have particular knowledge of the company's employment practices. The county court had held, therefore, that the notice given was reasonable in the circumstances.

Mr. Justice Beaubien then considered the appellant's claim that the Hours and Conditions of Work Act gave him the right to one week's notice. This Act provides that, where the period of employment is not fixed and wages are paid once a month or more often, notice must be given by an employer who dismisses an employee or by an employee who leaves his job, and the period of notice must not be shorter than the regular pay period. This provision does not apply, however, where a different custom respecting termination of employment exists in an establishment.

The county court judge had held that Section 6B(1) of the Act, which contains the requirement respecting the giving of notice, was not applicable because it was the established practice of the company to dismiss or lay off employees on an hour's notice and the employee making the complaint knew of this custom. Mr. Justice Beaubien considered that the county court judge was justified in this view. However, the fact that the statutory provision did not apply did not deprive the appellant of his common-law right to reasonable notice. He agreed with the finding of the county court judge that the appellant was employed by the hour and that in the circumstances the notice given him was reasonable.

The Court accordingly dismissed the appeal with costs. *Emler* v. *Display Fixtures Ltd.* [1953], 8 WWR (NS) 289.

In 1952 the average output of coal per man-day in underground mines was highest in the Yukon at 3·896 tons and lowest in New Brunswick at 1·597 tons. The national average was 2·549 tons.

Canada's coal mines employed an average of 21,754 persons during 1952, of whom 5,858 worked on the surface and 15,896 underground.

Recent Regulations under Provincial Legislation

Major revision of Quebec's General Minimum Wage Order 4 results in higher minimum wage rates for small centres. Rates for municipal and school corporation employees are also raised by two special orders

General Order 4, the blanket minimum wage order covering the majority of unorganized workers in the province of Quebec, was revised and re-written in simpler form. The order, while still covering the entire province, now applies to three zones instead of four. Although there was no general increase in minimum wages, rates were raised for certain classes of workers, notably those employed in centres of less than 2,000 people. The general minimum rates set by the order for workers in factories, shops, offices and other workplaces are 51, 46 and 41 cents an hour in Zones I, II and III, respectively.

Two special orders, Nos. 41 and 42, governing employees of municipal and school corporations and stationary enginemen and firemen, were also revised in line with the changes in Order 4, and the minimum rates for employees of municipal and school corporations were increased.

Of the 13 remaining special orders, four expired and nine were renewed for another year.

Quebec Minimum Wage Act

Effective from April 25, the Quebec Minimum Wage Commission revised three minimum wage orders, General Order 4, Order 41 covering employees of municipal and school corporations and Order 42 governing stationary enginemen and firemen. These orders are effective until May 1, 1954.

At the same time the Commission renewed until May 1, 1954, nine of the remaining 13 special orders. The nine orders renewed, without change, are: Order 2, covering payment of overtime; 3, holidays with pay; 3A, holidays with pay in the building construction industry; 11, hospital and charitable institutions; 14, real estate undertakings; 23, taverns; 26A, taxicabs in Montreal; 29, taxicabs in Quebec and Lévis; and 39, forest operations.

The four orders which expired on May 1, 1953, are: Order 5, governing silk textiles; 8, cotton textiles; 19, full-fashioned hosiery; and 37, manufacture of glass containers. Workers in these undertakings are now under General Order 4.

All changes were effected by O.C. 373, made on March 26, and gazetted April 25.

General Order 4

Order 4, which applies to all undertakings under the Minimum Wage Act not covered by special orders, is estimated to cover close to 1,000,000 workers. This lengthy and complex order, made in 1942 and frequently amended, was revised and generally simplified. In addition to the simplification and improved arrangement effected in the revision, the number of zones for which minimum rates are set was reduced from four to three. The order, as before, applies to the entire province but the former Zones III and IV, covering places with from 2,000 to 10,000 persons and places with under 2,000 persons, respectively, have been combined to form Zone III. Hence, workers in the smaller centres must now receive a higher minimum rate than before.

In the revised Order 4, although there was no general increase in minimum wages, the rates were raised for certain classes of workers. Rates under the order were increased by 10 per cent on November 15, 1952.

With the exceptions noted below, Order 4 covers all employees other than farm workers, domestic servants, workers under a special order and those governed by a decree under the Collective Agreement Act. The following groups were added to the list of persons exempted from the order: university or superior school students; employees of church corporations or boards of trustees; and telephone operators in Zone III who are not exclusively occupied as such and who do not have regular working hours.

Other workers who continue to be exempted from the order include blind persons working in establishments where they constitute the majority of the employees (rather than, as before, the only employees), emergency workers for the prevention or fighting of forest fires; the employer's wife; his partner if he works in a partnership other than a joint-stock company; employees of religious and charitable institutions, teaching establishments, hospitals, etc.; employees of Desjardins savings banks; workers in peat bog exploitations working as peat-cutters; employees of lodging houses with fewer

than five bedrooms to let; and salesmen who habitually work outside the employer's establishment.

For the purposes of the order the province is divided into three zones, the former Zones III and IV having been combined. Zone I consists of Montreal, Longueuil, St. Lambert, Laprairie, Laval-des-Rapides and municipalities totally or partially situated on the Island of Montreal. In Zone II are Quebec City, including the part of Number 5 industrial zone which lies outside the city limits, 22 other cities, the towns of Iberville, Jonquières, La Tuque, Quebec-West, Rimouski and Victoriaville, the village of Giffard and any other municipality of more than 10,000 persons. Zone III covers the rest of the province. The order does not cover any territory not included in an electoral district.

In the revision of Order 4 a new arrangement was adopted. Formerly, minimum wage rates were set for six categories of workers: (1) Employees in industrial and commercial establishments; (2) Office employees; (3) Carters, chauffeurs, messengers and garage employees; (4) Employees in hotels and restaurants; (5) Watchmen and janitors; (6) Miscellaneous employees, including seasonal workers, building construction workers, bootblacks, etc.

For the most part, rates are now set out with reference to the number of hours worked in the regular work week in an establishment. The order sets out rates for six classes: (1) Establishments with a 48-hour regular work week; (2) Establishments with a 54-hour regular work week; (3) Establishments with a 60-hour regular work week; (4) Establishments having no regular work week; (5) Hotels, restaurants and similar undertakings; (6) Apartment houses, office buildings, and other real estate undertakings. With the arrangement of the order into divisions according to the length of the regular work week, it is no longer necessary to set out the minimum rates payable for many different types of employment, hitherto enumerated in the order.

Classification of Workplaces

Establishments with a 48-hour Work Week

The revised order classifies the establishments and undertakings under it according to the length of the regular work week. The regular work week for all establishments for which a longer work week is not fixed is 48 hours. Workplaces with a 48-hour week, therefore, are not specifically listed in the order.

Establishments with a 54-hour Work Week

The following establishments are considered as having a 54-hour regular work week: retail stores, bakeries, biscuit factories, chocolate factories, flour mills, canneries, butcher shops, meat-packing plants, cheese-processing plants, barbering and hairdressing shops, laundries, cleaning, dyeing and clothes-pressing establishments, shoe-shine and shoe-repair shops, garages and service stations, theatres, public recreational centres, funeral parlours, spinning, knitting and weaving mills and carding-houses, foundries and sawmills in Zones II and III, agricultural implement and separator factories in Zone III, and factories making sashes and doors, furniture, coffins, boxes, veneer or plywood, small wooden articles, looms, railroad ties and other similar articles.

Establishments with a 60-hour Work Week

A 60-hour regular work week applies in dairies and creameries, cheese and butter factories and transportation undertakings.

No Regular Work Week

Open air sporting clubs, snow-clearing undertakings and cemetery undertakings are considered as having no regular work week.

Minimum Rates and Overtime

As noted above, Order 4 now sets out minimum rates for six classes of establishments. In the following summary, the first four classes are grouped together. For workers in these four classes the general minimum rates are the same: 51 cents an hour in Zone I, 46 cents in Zone II, and 41 cents in Zone III. In the first three classes these rates are payable for the number of hours in the regular work week and overtime becomes payable after 48 hours, after 54 hours or after 60 hours, as the case may be. No overtime is payable for the workers in the fourth class for whom no regular work week is fixed.

Overtime must be paid for at time and one-half the regular rate in the case of employees paid by the hour and not covered by a collective agreement. Where, however, an employee is governed by a collective agreement, he must be paid for overtime not less than time and one-half the minimum rate set by Order 4. The order does not require overtime rates to be paid to employees who are paid on a weekly, monthly or yearly basis at least $50 a week in Zone I and $45 in Zones II and III.

With respect to the first four classes, lower rates—39, 36 and 31 cents an hour in Zones I, II, and III, respectively—are fixed for inexperienced workers. The order

provides that only 20 per cent of the total number of workers in an establishment may be classed as inexperienced. Previously, 75 per cent of the workers in a factory or shop were required to receive the minimum rate and lower rates were set for the remaining 25 per cent.

Irrespective of the length of the regular work week in an establishment, rates of 30 cents an hour in Zone I, 25 cents in Zone II and 22 cents in Zone III are fixed for office boys and messengers; 44, 41 and 35 cents, respectively, for watchmen; and 58, 53 and 48 cents, respectively, for motor vehicle chauffeurs.

Temporary employees in canneries for whom no regular work week is fixed and who work during the season June-October must be paid not less than 39, 36 and 31 cents an hour. Pin-boys and bootblacks, whose regular work week is 54 hours, must be paid the same rates as apply to messengers—30, 25 and 22 cents an hour. Caretakers who are given free lodgings on the premises are entitled to a weekly minimum wage of $18 in Zone I, $16 in Zone II and $15 in Zone III. No regular work week is fixed for these employees.

Some employees have a regular work week which is different from the one fixed for the establishment in which they work, e.g., while the regular work week in mining undertakings is 48 hours, employees working at the surface have a regular work week of 54 hours and those engaged in continuous work have a regular work week of 56 hours. Watchmen, maintenance men and service men, motor vehicle chauffeurs and their helpers, employees taking care of horses and vehicles, and employees supervising power-houses and electrical substations all have a regular work week of 60 hours and the payment of overtime is required for any work in excess of the 60-hour work week.

No regular work week is fixed for employees working on ships or boats, longshoremen, employees occupied at work conditioned by the tide, employees engaged in preparing fish on the shore, in snowhouses or in cold storage, operators of power-shovels or bulldozers and their helpers, employees whose hours are unverifiable and caretakers who are provided with free lodgings on the premises. This group is not entitled to any overtime rate.

A fifth division of the order applies to hotels, restaurants, lunch-counters, cabarets, cocktail bars, cafés, clubs, taverns, roadhouses or inns, lodging-houses with at least five bedrooms to let, boarding-houses and staff-houses.

The hourly minimum rates for employees in this division are as follows:—

	Zones		
	I	II	III
(a) all employees except those covered by (b) (c) (d) (e) and (f)	51¢	46¢	41¢
(b) office boys, messengers, bell boys, porters, cloakroom attendants	30	25	22
(c) employees of lodging-houses having at least five bedrooms to let	36	34	29
(d) watchmen	44	41	35
(e) waiters, waitresses, valets, chambermaids and elevator operators	44	41	35
(f) cooks and motor vehicle chauffeurs	58	53	48

Caretakers who are provided with free living quarters on the premises must receive the same minima as caretakers working in other establishments, namely $18, $16, and $15 a week, depending on the zone.

The regular work week, after which overtime becomes payable, for employees in hotels, restaurants and similar undertakings is 60 hours, except for boarding-house, lodging-house and staff-house employees, and open air sporting club employees, who have no regular work week.

Employers in hotels, restaurants and similar undertakings may establish the month or half-month as the period of work for employees who are hired by the month or half-month, respectively. In such cases, overtime must be paid for hours worked in excess of such monthly or half-monthly periods. The "regular working month" is calculated by multiplying the number of hours in the regular work week by $4\frac{1}{3}$ or, if there are 31 days in the month, by $4\frac{1}{2}$. Similarly, the "regular working half-month" is established by multiplying the number of hours in the regular work week by $2\frac{1}{6}$ or, in a month of 31 days, by $2\frac{1}{3}$.

The sixth division of the order covers apartment houses, office buildings and other real estate undertakings.

Monthly rates are set for janitors who are charged with the supervision of a real estate undertaking and whose duties include the leasing of apartments and collecting of rents. If free, heated living quarters are provided on the premises, a janitor must be paid at least $75 a month in Zones I and II and $60 in Zone III. When unheated lodgings are provided, the rates are $85 in Zones I and II and $70 in Zone III. If a janitor is not provided with living quarters, he must be paid $95 a month in Zones I and II and $80 in Zone III. No regular work week is fixed for janitors.

For all other employees in apartment houses, office buildings and other real estate undertakings, except office boys, messengers, watchmen and motor vehicle chauffeurs, the order fixes the same general minimum rates as for other types of establishments—51, 46 and 41 cents an hour for the three zones. Office boys, messengers, watchmen and chauffeurs must receive the same rates as are set for these classes elsewhere in the order. Sixty hours constitute the regular work week of employees in these undertakings, after which overtime must be paid.

General Provisions

General provisions relating to weekly rest, daily guarantee, annual holidays with pay, payment of wages, deductions for board and lodging, keeping of records and posting of notices remain practically the same as before.

As before, every employee in all establishments covered by Order 4 except real estate undertakings and undertakings for which no regular work week is fixed must be allowed 24 consecutive hours of rest each week or two periods of 18 consecutive hours each.

All divisions of the order except those covering real estate undertakings and undertakings which have no regular work week provide for a three-hour minimum. A worker must be paid for at least three hours at his minimum rate, rather than at his regular rate, as before, when he is called to work and works less than the regular working day, unless he refuses to do the work required of him.

The provisions of Order 3 which requires an employee to be granted a week's holiday with pay after a year's continuous service apply to workers under Order 4. Janitors are excluded from these provisions.

Order 4 no longer contains the requirement that wages must be paid at least twice a month. As before, however, when payment is made in cash, the money must be placed in a sealed envelope with the following information on it: name of worker, pay period, total hours of work and overtime shown separately, wages earned and wage rate, deductions and take-home pay. Tips are the exclusive property of the worker and may not be considered as wages, even with the employee's consent.

Deductions may be made from the minimum wage when, by agreement, lodgings or meals are furnished by the employer to the employee. Such deductions must not exceed, in all three zones, 25 cents for one meal or $4.50 for meals per week; 25 cents a day for lodging or $1.50 per week; and $6 a week for full board and lodging. Previously, the above deductions were authorized for workers in Zone I, lower deductions being permitted in the other zones. Any other deductions from the minimum wage are prohibited unless imposed by statute or court order.

Uniforms when required for employees in hotels and restaurants must be furnished by the employer. The provision requiring uniforms to be kept in proper condition at the employer's expense has been omitted.

The requirement is continued that each employer must keep records showing, for each employee, name and address, occupation, date of commencement of employment, pay period, hours of beginning and finishing work, total number of hours worked, overtime, wage rate and wages earned, deductions, take-home pay and particulars regarding annual holidays with pay. Records must be retained for five years. The employer is also required to post in a conspicuous place all orders and notices furnished by the Commission.

Changes in Order 4

The chief increase in minimum rates brought about by the revision of Order 4 affects persons working in workplaces in the former Zone IV (i.e., where the population is under 2,000), who now receive the higher Zone III rates. For example, the minimum hourly rates for experienced workers in factories, shops and offices have been, since November 15, 1952, 51 cents in Zone I, 46 cents in Zone II, 41 cents in Zone III and 36 cents in Zone IV. In the revised order, Zones III and IV have been combined to form a new Zone III, which now covers all places in the province with less than 10,000 people, and the rates are 51 cents in Zone I, 46 cents in Zone II and 41 cents in Zone III. Thus, workers in the former Zone IV whose minimum was 36 cents an hour now have a minimum of 41 cents. The increase in rates brought about as a result of the re-zoning applies to all rates set in Order 4 as well as to the rates established in Orders 41 and 42. In some cases the rates for Zone IV were formerly the same as for Zone III and are therefore unchanged.

Rates for certain employees were changed in the other zones as well. Office boys and messengers, bell boys, porters and cloakroom attendants who previously had a minimum rate of 22 cents an hour in all zones now must receive 30, 25, and 22 cents, according to zone. Pin-boys and bootblacks must also receive these rates.

Their former rates were 29 cents in Zones I and II and 22 cents in Zones III and IV.

Rates for janitors in apartment houses have been changed and now apply also to janitors in other real estate undertakings, including office buildings. The work of such janitors includes management of the establishment, e.g., the collection of rents. If heated living quarters are provided on the premises, the rates, formerly $72.60 a month in Zones I and II and $58.08 in Zones III and IV, are now $75 in Zones I and II and $60 in Zone III. Where no lodgings are provided, rates have been increased by 62 cents to $95 a month in Zones I and II and by 14 cents to $80 in Zone III. A new category for janitors who are provided with unheated living quarters establishes rates of $85 in Zones I and II and $70 in Zone III.

A new category has also been included in the order for caretakers in establishments other than real estate undertakings who continuously supervise their employer's establishment and who are provided with free lodgings on the premises. Their weekly minimum wage rates are $18, $16 and $15 in the three zones.

Certain motor vehicle chauffeurs previously receiving lower rates than drivers of commercial vehicles must now receive the same rates as the latter, 58, 53 and 48 cents an hour. For the former group the rates were 51, 46, 41 and 36 cents in the four zones. Minimum rates are no longer specifically set out for garage mechanics. Their hourly rates have been reduced from 58, 53, 48 and 44 cents to the general rates of 51, 46 and 41 cents which, as before, apply to other garage employees. The regular work week of employees engaged in repair work in garages is now 54 rather than 60 hours.

The regular work week for which minimum rates are set was reduced for several types of workplaces. It was reduced from 54 to 48 hours in the following: establishments manufacturing electrical appliances in Zone III; crushed stone quarries; fox farms; and factories manufacturing felt hats, concrete pipes, rubber goods or organs. In waste material trading establishments the work week was reduced from 60 to 48 hours.

The work week in the following establishments was reduced from 60 to 54 hours: foundries, funeral undertaking establishments and agricultural implement and separator factories in places of under 10,000 population; sawmills in Zones II and III; and wool-carding and spinning establishments. The regular work week for sash and door factories was increased from 50 to 54 hours.

The revised order does not require the payment of overtime after 12 hours in a day. There is now no provision for the payment of overtime on a daily basis but the order continues to require overtime to be paid for hours in excess of the regular work week and in some cases in excess of the regular working month or half-month.

Other changes which have been noted above were in the ratio of inexperienced workers to experienced workers in an establishment (inexperienced workers may now constitute only 20 per cent of the employees) and in the deductions made by an employer for board and lodging. These have been made the same for all zones.

Orders 41 and 42

In November 1950, sections of General Order 4 that set out the minimum wages for employees of public corporations and for stationary enginemen and firemen were removed and made into separate orders: Order 41, applicable to employees of public corporations, and Order 42, applicable to stationary enginemen and firemen. Requirements for these groups relating to hours of work and overtime, weekly rest, daily guarantee, payment of wages and permissible deductions, records to be kept by employers and certain other matters were still included in Order 4. Such provisions have now been added to Order 41 and Order 42, making them complete, self-contained orders. The arrangement of Orders 41 and 42, as revised, is the same as that of Order 4 and minimum rates are set out for the same three zones.

Municipal and School Corporations

Order 41, which formerly applied to employees of public corporations, now covers employees of municipal and school corporations only. Accordingly, the sections fixing minimum rates for members of vestry boards or corporations of church trustees and other public corporations and for sacristans or sextons employed in a building used for religious worship have been omitted.

The revised order increases the minimum wage for most employees of municipal and school corporations. Employees covered by Order 41 are now divided into three general categories: (a) experienced employees, except those for whom special provision is made; (b) watchmen; (c) office boys, messengers, apprentices and inexperienced

employees. Not more than 20 per cent of the total number of employees of a corporation may be paid at the rate for an inexperienced worker.

The minimum wage generally applicable to experienced employees under this order is 51 cents an hour in Zone I, 46 cents an hour in Zone II and 41 cents an hour in Zone III. For watchmen, the minimum hourly rate is 44, 41 and 35 cents, according to the zone. Office boys, messengers, apprentices and inexperienced employees must receive at least 30, 25 and 22 cents an hour, according to the zone.

The hourly rates noted above are the same as those fixed by Order 4 and apply to all employees of municipal and school corporations working under conditions which make it possible for the employer to verify their hours of work. These include clerks, secretaries, treasurers, secretary-treasurers, accountants, clerical assistants, firemen, policemen, watchmen, carters, chauffeurs, maintenance workers and others.

Those employees governed by Order 41 for whom hourly minimum rates are set must now receive a substantially higher rate than before. Clerks, secretaries and treasurers of corporations and their assistants were formerly classed as office employees and, if they had at least two years' experience, were required to receive 35, 32, 28 and 25 cents an hour in the four zones. They are now subject to the general minimum rate of 51 cents in Zone I, 46 cents in Zone II and 41 cents in Zone III.

Watchmen, for whom the minimum rates were formerly 30, 28, 24 and 20 cents in the four zones, must now receive 44 cents an hour in Zone I, 41 cents in Zone II and 35 cents in Zone III.

Carters, chauffeurs and their helpers are now subject to the general minimum rates of 51, 46 and 41 cents. In the earlier order, special rates established for this group were considerably lower. For firemen and policemen the minimum rates were previously 30, 28, 24 and 20 cents. The general minimum rates now apply to them also.

For employees of a municipal or school corporation whose hours of work are not verifiable a minimum weekly or monthly wage is established which does not depend on the zone or the hours of work. The secretary of a local municipal corporation is entitled to a minimum monthly wage which, as before, varies with the population of the municipality. The minimum ranges from $18 in a community of 250 persons or less (an increase of $3) to $100 in a municipality with 10,000 or more persons (an increase of $10). The five minimum rates for communities with a population between 250 and 10,000 have each been increased by $5.

The secretary of a county municipality must now receive $40 a month, an increase of $5.

The minimum monthly wages of secretaries of school corporations vary with the number of property owners in the district. These range from $12 in an area with 50 or fewer property owners to $80 in an area with more than 2,000 property owners. In all cases the minimum is from $2 to $5 higher than before.

The minima for attendance officers and teachers have not been increased. The minimum wage of an attendance officer also depends on the number of property owners in the district and ranges from $3 to $25 a month. Teachers in the employ of a school corporation, regardless of zone, are entitled to receive at least $60 a month. Corporations are forbidden to make any deduction from a teacher's wages for lodging furnished, even if the wage exceeds the minimum.

As before, teachers who do maintenance work at the school where they teach must receive pay for such work at an hourly rate separately and in addition to their teaching salary, even where the salary is above the minimum. For such maintenance work the general minimum rate of 51 cents an hour in Zone I, 46 cents in Zone II and 41 cents in Zone III must be paid. These rates represent an increase, since the previous minima were 30, 28, 24 and 20 cents in the four zones.

As in Order 4, it is provided that caretakers who are given free lodgings on the premises must be paid a weekly minimum wage of $18 in Zone I, $16 in Zone II and $15 in Zone III.

The period of work of employees governed by Order 41 is the week. However, it may be a "regular working month" for employees paid by the month or a "regular working half-month" for employees paid by the half-month. In such cases, as for hotels under Order 4, overtime must be paid for hours worked beyond the month or half-month.

For most employees of municipal and school corporations the regular work week is 54 hours, after which overtime becomes payable. The provisions for overtime pay are similar to those prescribed in Order 4.

As before, the regular work week of chauffeurs and their helpers is 60 hours and of firemen and policemen 72 hours, after which the overtime rate must be paid. In Zones I and II the working hours of fire-

men and policemen may average 72 hours a week over a consecutive two-week period but may not exceed 144 hours in two weeks except in case of extreme urgency. Firemen and policemen employed by corporations in Zones I and II must, as before, receive at least $1 an hour for any time worked beyond 144 hours in a two-week period. This overtime pay must be granted even if their regular wages exceed the required minimum. This provision does not apply to fire chiefs, chiefs of police and their assistants.

Employees occupied at snow clearing, those operating power-shovels, bulldozers and similar vehicles, caretakers, employees whose hours of work are unverifiable, attendance officers and teachers have no regular work week.

Order 41 contains the same provisions as Order 4 with respect to the three-hour minimum and weekly rest but makes no provision for annual holidays, since employees of municipal and school corporations are excluded from holidays legislation.

Stationary Enginemen and Firemen

The main change in the revised order governing stationary enginemen and firemen, No. 42, is that it no longer applies to certain types of enginemen, namely, butter or cheese factory stationary enginemen, sawmill stationary enginemen, portable enginemen, Diesel engine operators and their helpers.

As before, employees under the order are classified as first, second or third-class chief enginemen; second, third or fourth-class enginemen; and firemen. Stationary enginemen must hold the certificate required for their work by the Stationary Enginemen Act. The new order provides that enginemen are classified according to the kind and class of installation which they direct or supervise and to the nature of the work referred to in the Act and regulations.

Minimum rates for those under the order remain the same except that stationary enginemen and firemen in centres with fewer than 2,000 persons must now receive the same minimum as those in centres having a population between 2,000 and 10,000.

Weekly minimum wage rates for chief enginemen are $51 in all zones for first-class chief enginemen; $42 in Zone I, $40 in Zone II and $38 in Zone III for second-class chief enginemen; and $36, $34 and $32 for third-class chief enginemen. These rates are the same as they were previously for Zones I, II and III. The former Zone IV rates have been eliminated and chief enginemen in the area formerly included in Zone IV must now receive the rate for Zone III. This represents an increase of $2 in the minimum rate for second and third-class chief enginemen.

A similar adjustment was made in the minimum rates for class enginemen, for whom the following hourly rates are set: 66, 63 and 60 cents for second-class enginemen; 55, 53 and 50 cents for third-class; and 50, 48 and 45 cents for fourth-class enginemen. For these classes the inclusion of Zone IV in Zone III means an increase of 5 cents an hour for second-class and fourth-class enginemen.

Firemen's hourly minimum wage rates are 40, 38 and 35 cents. For firemen in small centres the increase is five cents an hour.

The regular work week continues to be 60 hours for firemen and class enginemen and time worked in excess of 60 hours in a week must be considered as overtime and paid for at time and one-half the regular rate. This applies to employees paid on an hourly wage basis and not governed by a collective agreement.

As previously, no regular work week is set for chief enginemen.

The special provision that an employee must be paid as a stationary engineman or fireman for any time during which he works as such, even if he is at the same time occupied at work not governed by Order 42, continues in effect.

Employees covered by Order 42 must, if called to work, be paid for three hours' work at their minimum rate. They must be allowed a weekly rest of 24 hours or two periods of 18 consecutive hours. They are entitled to annual holidays with pay under Order 3.

The United States National Labor Relations Board has ruled that a union certified as the exclusive bargaining agent of employees can not charge non-members a fee for processing their grievances. The union in 1952 began charging $15 for handling an ordinary grievance and $400 to take a grievance through formal arbitration. The ruling was made in a case involving Local 1, Independent Metal Workers Union, at the Hughes Tool Company, Houston, Texas.

74562—8

Monthly Report on Operation of the Unemployment Insurance Act

Statistics* for March, 1953, show claims for benefit rose by 8,000. Decreases in six provinces outweighed by increases in the other four

The total of initial and renewal claims for unemployment insurance benefit filed in local offices across Canada in March rose by 8,000. Although decreases occurred in six provinces, they were offset by increases in the other four provinces. The major increase (12,530) was in Quebec, with smaller increases in Alberta (1,037), New Brunswick (889) and Nova Scotia (703).

The Dominion Bureau of Statistics monthly report on the operation of the Unemployment Insurance Act shows that a total of 179,714 initial and renewal claims for benefit was filed during the month, compared with 171,658 in February and 154,356 in March, 1952.

There was a slight decline in the volume of recorded unemployment, as measured by a count of ordinary claimants signing the live unemployment register on the last working day of the month. On March 31, ordinary claimants numbered 294,497 (255,256 males and 39,241 females), compared with 308,757 (264,964 males and 43,793 females) on February 28 and 275,018 (224,944 males and 50,074 females) on March 31, 1952. The remaining claimants for whom unemployment registers were included in the live file on March 31 were: 16,012 short-time; 2,759 temporary lay-off; and 65,613 supplementary benefit.

Adjudications of initial and renewal claims during March numbered 176,499, of which 110,514 granted entitlement to benefit; 51,773 initial claims were disallowed because of insufficiency of contributions. Disqualifications were imposed in 22,894 cases (including 6,696 on revised and 1,986 on supplementary benefit claims). The chief reasons for disqualification were: voluntarily left employment without just cause, 7,108 cases; not unemployed, 6,734 cases; and not capable of and not available for work, 2,224 cases.

Claimants who came on benefit during the month totalled 114,683, compared with 121,507 during February and 90,354 during March 1952.

*See Tables E-1 to E-7.

> In a comparison of current employment statistics with those for a previous period, consideration should be given to relevant factors other than numbers, such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

During March, $20,796,825 was paid in compensation for 6,613,705 days of proven unemployment, in comparison with $18,505,590 and 5,918,651 days in February and $14,932,190 and 5,537,221 days during March 1952.

The average daily rate of benefit for the week March 28-April 3 was $3.15, compared with $3.14 for the week February 28-March 6, and $2.71 for the week March 29-April 4, 1952.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for March 1953 show that insurance books have been issued to 4,527,968 employees who have made contributions to the unemployment insurance fund at one time or another since April 1, 1952.

Employers registered at March 31 numbered 248,551, an increase of 550 since February 28, 1953.

Supplementary Benefit

A total of 51,754 claimants who failed to satisfy the contribution requirements had their claims considered for supplementary benefit during the month. In addition, 1,750 renewal supplementary benefit claims were filed. Of the 39,211 initial claimants who became eligible for supplementary benefit, 32,412 or 83 per cent qualified under Class 1—persons for whom a benefit year had terminated since March 31, 1952. A total of $3,203,621 was paid during the month. During the week March 28-April 3, supplementary benefit payments numbered 53,854.

Decisions of the Umpire under the Unemployment Insurance Act

Digests of two selected decisions rendered by the Umpire

Decision CU-B 912, February 19, 1953

Held: *That the claimant, who had no knowledge of the English language and who restricted her employment to stenography in an area where opportunities for that type of work are limited to those speaking English or those who are bilingual, had not proved that she was available for work within the meaning of the Act.*

Material Facts of Case.—The claimant, married, 29 years of age, filed an initial application for benefit on October 3, 1952, at the Commission's Office in "A", a city in southern Ontario, and stated that she had worked as a stenographer in "B", a city in Quebec, from 1945 to August 30, 1952, when she lost her employment because her employer had found another person to take her place at a lower salary. She also stated that inasmuch as she did not speak or write English she would take work as a French stenographer only. Her salary at the time of separation was $27 a week.

The insurance officer disqualified her from the receipt of benefit for an indefinite period on the ground that she was not available for work within the meaning of Section 27(1)(b) of the Act. The insurance officer explained that his decision was not based on the claimant's lack of knowledge of the English language but on the fact that she had restricted her employment to stenography in an area where opportunities for that type of work are limited to those speaking English or those who are bilingual.

In her appeal to a court of referees she stated that when she was replaced by another stenographer in "B", she got married and took up residence with her husband in "A", where he had a job, and that as both the English and French languages are spoken in Canada it was reasonable for her to expect that she could find employment as a French stenographer in "A". In appearing before the court, the claimant explained through her interpreter that for the past ten years she had worked solely as a stenographer and had never been engaged in any other occupation, that in striving to learn the English language so as to fit herself for work in "A" she and her husband were staying with an English family with whom she converses in that language at every opportunity and also that she was planning to attend school with a view to becoming better acquainted with the language. After taking into consideration that the French language is an official one of this country, that the Unemployment Insurance Act is intended as a national coverage for all persons coming under it, that the claimant had not separated from her last employment of her own volition and that finally she had been immediately disqualified upon filing her claim for benefit, the court unanimously allowed her appeal.

The insurance officer appealed to the Umpire.

Conclusions.—I agree with the insurance officer that the court of referees has based its decision on "considerations which have no relationship with the case" and that it erred in finding that the claimant has proved that she was available for work within the meaning of the Act.

As explained by the insurance officer in the first instance, the claimant was disqualified from the receipt of benefit not because of her inability to speak English but owing to her self-imposed restricted availability to a kind of employment which does not exist in the area. Her case would have been decided otherwise had she shown good faith and registered for employment of a kind which, under the circumstances, could reasonably be expected to be found for her.

It goes without saying that an insured person who is unemployed must conform to the exigencies of the "labour market" and to contend that the reverse is equally true leads to absurdity.

The principle involved is the same as in the case of claimants who live in a remote area and who refuse to take employment elsewhere or in the case of those who for domestic or other reasons restrict their availability to hours which are inconsistent with those of the "labour market".

As I have stated in many previous decisions:—

> Availability to work is primarily a subjective matter which must be considered in the light of a claimant's intention and mental attitude towards accepting employment. Viewed objectively, it might be determined by a claimant's

74562—8½

prospects of employment in relation to a certain set of circumstances beyond his control or which he has deliberately created.

I might add that one must not lose sight of the fact that the aim of the Unemployment Insurance Act is to financially assist claimants who are sincerely willing to work but who are in the unhappy position of being unable to find employment.

For those reasons, the decision of the court of referees, which is against the intent of the Act, must be reversed and the appeal is allowed.

The disqualification from the receipt of benefit imposed by the insurance officer in the first instance is reinstated as from the date that this decision is communicated to the claimant.

Decision CU-B 913, February 19, 1953

Held: *That a claimant who was employed two days a week should have applied for the full-time job which was notified to her regardless of the fact that the weekly wage would have amounted to less than that which she received in respect of her two days' work and unemployment insurance benefit.*

Material Facts of Case.—The claimant, married, 23 years of age, filed an initial application for benefit on February 4, 1952, and stated that she had been employed as a cashier in a chain store at a salary of $35 a week from July 9, 1951, to January 19, 1952, when she was dismissed because of an error in her cash. She stated that since then the employer had rehired her to work on Fridays and Saturdays. The claim was allowed.

On October 20, 1952, the local office notified the claimant of employment as a helper in a paper manufacturing concern at the prevailing rate of pay in the district for that type of work, *viz,* 55 cents an hour. The hours of work were from 7:00 a.m. to 4:00 p.m., five days a week. She failed to apply for the employment chiefly because of the low wages offered. The local office commented that the job did not call for experience, that there were chances of advancement, and that the possibility of her being taken on full-time at the chain store was uncertain.

The insurance officer disqualified the claimant from the receipt of benefit for a period of six weeks because, in his opinion, she had, without good cause, failed to apply for a situation in suitable employment (Section 40(1)(a) of the Act).

In her appeal to a court of referees she stated that had she accepted the employment she would have lost any chance which she might have had of being reinstated to full-time employment at the chain store, where she was paid $16 for two days' work; that in addition to the said amount she received unemployment insurance benefit amounting to $10, which made a total of $26 a week as against the $22 a week which she would have received for five days' work had she accepted the employment offered.

The court of referees, after having heard the claimant, unanimously reversed the decision of the insurance officer, basing its decision on substantially the same grounds as those stated in her appeal.

The insurance officer appealed to the Umpire.

Conclusions.—It is easy to conceive that the claimant would have preferred to continue working two days a week and draw $26, which included $10 in benefits, rather than take full-time employment which would have given her only $22 a week.

However, I entirely agree with the insurance officer that she "must not expect that the Unemployment Insurance Commission is obliged to pay here benefit indefinitely for the four unemployed days of the week". Either she is genuinely seeking full-time employment, in which case she must accept any suitable employment notified to her by the local office, or, as the case would seem to be, she does not want to take employment except on her own conditions and therefore she should not be considered as being available for work within the meaning of the Act.

It is true that the salary offered could not be compared with that which she received when she was working full-time or, proportionately, with that which she earns at the present time but it was in accordance with the prevailing rate in the district. The work would have been easy to perform and, if we do not lose sight of the fact that she had been unemployed four days a week during a period of nine months, it must be concluded that she has, without good cause, failed to apply for a situation in suitable employment.

To maintain the decision of the court of referees would be to sanction a principle which is against the intent of the Act as well as being unfair to the workers who fully contribute to the Unemployment Insurance Fund.

The appeal is allowed and the disqualification from benefit, originally imposed on the claimant by the insurance officer, is reinstated as from the date that this decision is communicated to her.

Labour Conditions in Federal Government Contracts

Wage Schedules Prepared and Contracts Awarded during April

Works of Construction, Remodelling, Repair or Demolition

During April the Department of Labour prepared 136 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition.

In the same period, a total of 91 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under this heading provide that:—

(a) the wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and 44 in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and 44 per week;

(d) no employee shall be discriminated against because of his race, national origin, colour or religion, nor because the employee has made a complaint with respect to such discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded under this heading for the month of April are set out below:—

Department	No. of Contracts	Aggregate Amount
Agriculture	2	$ 54,126.00
Defence Construction (1951) Ltd.	1	11,000.00
Defence Production (March report)	192	1,173,643.00
Post Office	9	117,222.63
Public Works	3	25,944.00

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:—

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen, and if there is no current rate then a fair and reasonable rate, but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom, then fair and reasonable hours;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no employee shall be discriminated against because of his race, national origin, colour or religion, nor because the employee has made a complaint with respect to such discrimination.)

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour, showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work. These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is, however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

Contracts Containing Fair Wages Schedules Awarded—April

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.)

Collective Agreements

(Continued from page 886)

Building Trades, Sherbrooke

An Order in Council dated March 26 and gazetted April 4, amends the previous Orders in Council for this industry (L.G., Nov. 1951, p. 1539; June 1952, p. 781, Oct., p. 1362, and previous issues) by the addition of "The Corporation of Master Electricians of the Province of Quebec, Sherbrooke Branch", to the list of contracting parties.

Building Trades, St. Jérôme

An Order in Council dated March 26 and gazetted April 4, amends the previous Orders in Council for this industry (Nov. 1950, p. 1905; Jan. 1951, p. 64, Nov., p. 1539, Jan. 1952, p. 56, April, p. 453, June, p. 782, and previous issues), as well as another Order in Council published in the *Quebec Official Gazette*, August 2, 1952, by the addition of "The Corporation of Master Electricians of the Province of Quebec, Laurentide Branch", to the list of contracting parties.

Prices and the Cost of Living*

Consumer Price Index, May 1, 1953

Registering its sixth successive fractional drop, the Dominion Bureau of Statistics consumer price index declined from 114·6 at April 1 to 114·4 at May 1. Over the past 16 months, the index has dropped from a peak of 118·2 reached in January 1952.

Between April 1 and May 1 the food index declined from 110·9 to 110·1 as lower prices for butter, potatoes, tomatoes, onions, beef and veal outweighed increases for coffee, eggs, grapefruit, lettuce and fresh and cured pork. These price changes occurred in combination with normal seasonal changes in the consumption of fruits, vegetables, meats, fats and eggs.

The clothing series increased from 109·7 to 110·1. The household operations index, however, declined from 116·9 to 116·6, largely as a result of a seasonal drop in the prices of coal in Ontario and Quebec.

Among other commodities and services, advances for theatres and barbers proved more important than a decline for gasoline and the index moved up from 115·0 to 115·1.

The shelter component advanced slightly from 122·7 to 122·9 as a result of small increases in both rent and home ownership.

The index one year earlier (May 1, 1952) was 115·9; group indexes were: food 115·5, shelter 119·6, clothing 112·3, household operation 116·2, other commodities and services 115·6.

Cost-of-Living Index, May 1, 1953

The cost-of-living index (1935-39=100) also dropped during April, declining from 183·9 at April 1 to 183·6 at May 1. At May 1, 1952, it stood at 186·7.

Group indexes at May 1 (April 1 figures in parentheses) were: food 222·8 (223·5), rent 151·0 (150·9), fuel and light 153·2 (155·5), clothing 206·3 (205·3), home furnishings and services 196·2 (196·8), miscellaneous 149·0 (148·7).

Group indexes one year earlier (May 1, 1952) were: food 235·3, rent 146·3, fuel and light 150·6, clothing 210·1, home furnishings and services 198·2, miscellaneous 147·4.

City Cost-of-Living Indexes, April 1, 1953

Cost-of-living indexes registered small advances in six of the nine regional cities between March 2 and April 1. Indexes for Halifax, Montreal and Toronto declined slightly.

Food indexes were lower at all centres except Winnipeg as decreases for butter, potatoes and most fresh meats offset a general increase in eggs.

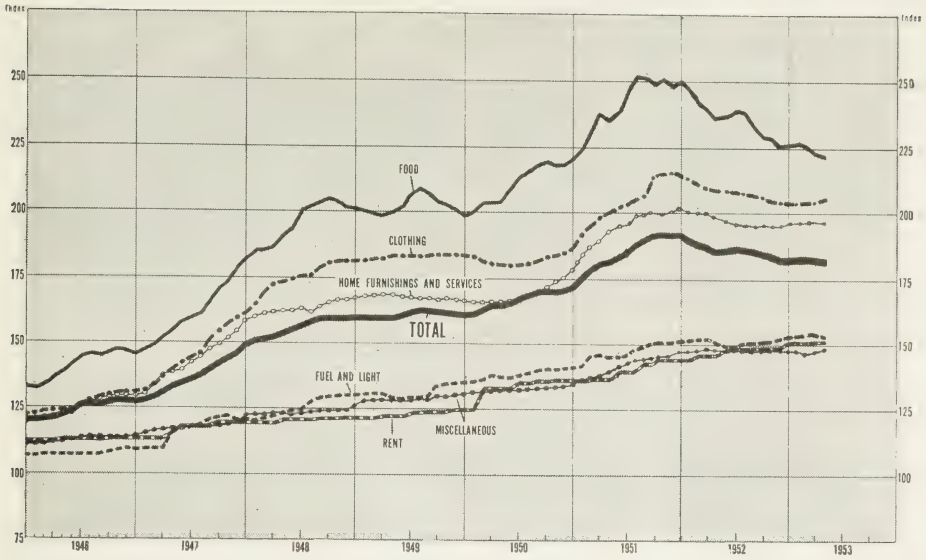
Among other groups, index movements were generally unchanged to higher. Few changes occurred in clothing, while scattered increases in furniture prices were reported in five cities. Rent indexes were higher in six cities while fuel and light indexes advanced in four centres, with no decreases being reported. In the miscellaneous items group, advances were general for doctors' and dentists' fees, automobile mechanics' wage rates, and magazine subscriptions.

Composite city cost-of-living index point changes between March 2 and April 1 were: Winnipeg +0·3 to 176·9; St. John's +0·2 to 101·5; Saint John +0·1 to 180·5; Saskatoon +0·1 to 182·5; Edmonton +0·1 to 176·4; Vancouver +0·1 to 187·2; Montreal —1·6 to 188·2; Halifax —0·3 to 173·3; and Toronto —0·2 to 181·0.

Wholesale Prices, April 1953

Wholesale prices in April continued the indeterminate trend that has characterized prices over the past several months, according to the Dominion Bureau of Statistics report. Between March and April the composite index declined from 221·9 to 219·6, a loss of one per cent.

This is the lowest point reached by the index since August 1950. The postwar peak of 243·7 was touched in July 1951. In April last year the index stood at 226·8.



Six of the eight major groups moved down between March and April, one remained unchanged and one moved higher. The largest percentage change was registered by non-ferrous metals, which dropped 2·3 per cent from 174·7 to 170·7 as a result of declines in all major base metals, including tin, lead, zinc and copper.

A drop in the vegetable products index from 201·5 to 197·3 reflected lower prices for grains, vegetable oils, sugar, coffee, raw rubber, potatoes and canned vegetables. These outweighed advances in imported fresh fruits, cocoa beans and bread at certain centres.

Lower quotations for most raw and processed farm products, including livestock, fresh meats, butter, hides and skins, and leather, as well as losses in fishery products, overbalanced strength in eggs, fowl, lard,

*See Tables F-1 to F-6 at end of book.

COST OF LIVING IN CANADA FROM JANUARY 1946

prepared meats and furs to move the animal products index down 1·8 per cent from 238·7 to 234·4.

The non-metallic minerals and their products index receded from 175·2 to 174·4 when declines in imported coal, crushed stone and sand and gravel outweighed increases in crude petroleum and its products.

Wood, wood products and paper moved down from 290·9 to 289·9 because of decreases in newsprint, woodpulp, eastern hemlock, fir timber and cedar shingles.

A decline in chemicals and allied products from 176·5 to 176·2 reflected decreases for sodium cyanide and a number of paint materials. Iron and its products advanced from 221·4 to 221·5 as a result of a change in wire quotations. Fibres, textiles and textile products remained unchanged at 241·6 as lower prices for certain cotton fabrics, raw cotton and jute bags balanced a firmer tone in wool and woollen products.

Canadian farm product prices at terminal markets registered a substantial decline in April after several months of moderate declines. Between March and April the composite index dropped from 220·8 to 214·5, the lowest level touched since December 1947. Animal products recorded the sharpest change; an index drop from 264·3 to 256·0 reflected price decreases in livestock, butterfat and eastern milk for cheese manufacture. Eggs and fowl prices moved higher in this section. Lower quotations for grain and potatoes were responsible for a change in field products from 177·3 to 173·0.

Residential building material prices continued to advance in April. The composite index moved up fractionally from 283·4 to 283·6. Advances were noted for warm air furnaces and smoke pipes, lesser increases in sand and gravel. The latter outweighed decreases for softwood lumber and shellac.

The United States consumer price index rose 0·1 per cent between mid-March and mid-April to 113·7, the United States Bureau of Labor Statistics reports. The index stands 0·7 per cent above the level a year earlier and 11·7 per cent above that at the start of the Korean War. This is the second successive monthly rise after three declines in a row.

Strikes and Lockouts

Canada, April, 1953*

Time lost in industrial disputes resulting in work stoppages in April 1953, was little changed from the low figures of the previous three months. About half the idleness in April was caused by three stoppages: clothing and hosiery factory workers at Montreal, Que.; grain elevator workers at New Westminster and Vancouver, B.C.; and flour, cereal and feed mill workers at Peterborough, Ont., and Saskatoon, Sask.

Wages and related questions were the central issues in 15 stoppages in April 1953, causing more than 90 per cent of the total loss. Of the other disputes, three arose over causes affecting working conditions and three over dismissals of workers.

Preliminary figures for April 1953, show 21 strikes and lockouts in existence, involving 3,562 workers, with a time loss of 29,120 man-working days, compared with 21 strikes and lockouts in March 1953, with 5,450 workers involved and a loss of 33,018 days. In April 1952, there were 37 strikes and lockouts, with 12,121 workers involved and a loss of 178,713 days.

For the first four months of 1953 preliminary figures show 52 strikes and lockouts, involving 11,898 workers, with a time loss of 116,965 days. In the same period in 1952 there were 63 strikes and lockouts, with 29,063 workers involved and a loss of 362,733 days.

Based on the number of non-agricultural wage and salary workers in Canada, the time lost in April 1953, was 0·03 per cent of the estimated working time; 0·04 per cent in March 1953; 0·21 per cent in April 1952; 0·04 per cent for the first four months of 1953; and 0·11 per cent for the first four months in 1952.

Of the 21 stoppages in existence in April 1953, two were settled in favour of the employers, one was a compromise settlement and five were indefinite in result, work being resumed pending final settlement. At the end of the month 13 stoppages were recorded as unterminated.

(The record does not include minor strikes such as are defined in another paragraph nor does it include strikes and lockouts about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes and lockouts of this nature still in progress are: compositors, etc., at Winnipeg, Man., which began on November 8, 1945, and at Ottawa and Hamilton, Ont., and Edmonton, Alta., on May 30, 1946; and waitresses at Timmins, Ont., on May 23, 1952.)

Great Britain and Other Countries

The latest information on strikes and lockouts in various countries is given in the LABOUR GAZETTE as it becomes available. Statistics given in the annual review and in this article are taken, as far as possible, from the government publications of the countries concerned or from the International Labour Office *Year Book of Labour Statistics*.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in February 1953, was 165; 11 were still in progress from the previous month, making a total of 176 during the month. In all stoppages of work in progress, 36,300 workers were involved and a time loss of 152,000 working days caused.

Of the 165 disputes leading to stoppages of work which began in February, 10, directly involving 1,300 workers, arose over demands for advances in wages, and 59, directly involving 9,400 workers, over other wage questions; seven, directly involving 1,400 workers, over questions as to working hours; 18, directly involving 2,300 workers, over questions respecting the employment of particular classes or persons; 64, directly involving 3,400 workers, over other questions respecting working arrangements; five, directly involving 3,200 workers, over questions of trade union principle; and two, directly involving 100 workers, were in support of workers involved in other disputes.

Australia

During the third quarter of 1952, there were 493 industrial disputes resulting in work stoppages directly involving 99,865

**See* Tables G1 and G2 at end of book.

workers. The time loss was 225,272 man-working days for all workers directly and indirectly involved.

New Zealand

For the year 1952, there were 50 strikes involving 16,297 workers, directly and indirectly, with a time loss of 28,123 man-days. Figures for the fourth quarter of 1952 show 13 strikes with 3,933 workers directly and indirectly involved and a time loss of 16,805 man-days.

United States

Preliminary figures for March 1953, show 450 work stoppages resulting from labour-management disputes beginning in the month in which 180,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 1,100,000 man-days. Corresponding figures for February 1953, are 350 work stoppages involving 120,000 workers and a time loss of 1,000,000 days.

[1] Includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies and non-metallic mineral products. The non-durable group includes the remaining manufacturing industries.

[2] Mainly hotels, restaurants, laundries, dry cleaning plants and business and recreational services.

TABLE C-4.—HOURS AND EARNINGS IN MANUFACTURING

(Hourly-Rated Wage-Earners) SOURCE: Man-hours and Hourly Earnings, D.B.S.

Tables C-4 to C-6 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage-earners for whom statistics of hours of work are also available, whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage-earners of the co-operative firms.

Year and Month	All manufactures			Durable Goods			Non-Durable Goods		
	Average Hours	Average Hourly Earnings	Average Weekly Wages	Average Hours	Average Hourly Earnings	Average Weekly Wages	Average Hours	Average Hourly Earnings	Average Weekly Wages

D—National Employment Service Statistics

Tables D-1 to D-5 are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751: statistical report on employment operations by industry, and UIC 757: inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

Form UIC 751: This form provides a cumulative total for each month of all vacancies notified by employers, applications made by workers, and referrals and placements made by the National Employment Service. Also reported are the number of vacancies unfilled and applications on file at the beginning and end of each reporting period. Because the purpose of these data is to give an indication of the volume of work performed in various local National Employment Service offices, all vacancies and applications are counted, even if the vacancy is not to be filled until some future date (deferred vacancy) or the application is from a person who already has a job and wants to find a more suitable one.

Form UIC 757: This form provides a count of the number of jobs available and applications on file at the end of business on a specified day. Excluded from the data on unfilled vacancies are orders from employers not to be filled until some future date. The data on job applications from workers exclude those people known to be already employed, those known to be registered at more than one local office (the registration is counted by the "home" office), and registrations from workers who will not be available until some specified future date.

From January 24, 1952, to December 24, 1952, inclusive, unemployment insurance claimants on temporary mass lay-offs were not registered for employment and thus were not included in the statistics reported on form UIC 751 and form UIC 757. A temporary mass lay-off was defined as a lay-off either for a determinate or indeterminate period which affected 50 or more workers and where the workers affected, so far as was known, were returning to work with the same employer. Commencing 15 days after the date of such a lay-off, claimants still on the live insurance register were registered for employment on their next visit to the office and henceforth were counted in both statistical reporting forms. This procedure is no longer in effect, as all workers on temporary mass lay-offs now are registered for employment and so counted in the statistical reporting forms. This change in procedure should be kept in mind when comparing the figures on applications for employment during 1952 with data for earlier and subsequent periods.

Persons losing several days' work each week and consequently claiming short-time unemployment insurance benefits are not included in either statistical reporting form unless they specifically ask to be registered for employment.

(1)—Preliminary—subject to revision.
Current vacancies only. Deferred vacancies are excluded.

(2)—Commencing January 2, 1953, the Standard Industrial Classification Manual of the Dominion Bureau of Statistics replaced the Industrial Classification Manual of the Department of Labour. Since there is a difference in the grouping of the two industry divisions—Transportation, Storage and Communication, and Public Utility Operation, the change in these divisions can only be recorded in the Grand Total.

Cumulative totals	63		29,063		362,733	0·11

* Preliminary figures.

‡ Strikes unterminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, APRIL, 1953 [1]

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars [2]
	Establishments	Workers		
Strikes and Lockouts in Progress Prior to April, 1953				
MANUFACTURING—				
Animal Foods—				
Packinghouse workers, Stratford, Ont.	1	39	860	Commenced March 6; for a new agreement providing for increased wages and reduced hours from 45 to 40 per week with guaranteed 36-hour week following reference to conciliation board; unterminated.
Textiles, Clothing, etc.—				
Clothing and hosiery factory workers, Montreal, P.Q.	2	290	5,000	Commenced November 25, 1952; for a new agreement providing for increased wages and other changes following reference to arbitration board; partial return of workers; unterminated.
Metal Products—				
Jewellery factory workers, Vancouver, B.C.	5	41	800	Commenced December 8, 1952: for implementation of award of conciliation board for increased wages, pay for nine statutory holidays and other changes in new agreement under negotiations; unterminated.
Aluminum ware factory workers, Wallaceburg, Ont.	1	96	1,930	Commenced March 23; for a new agreement providing for increased wages, extension of relief periods for moulders and hospital and accident insurance plan; unterminated.
CONSTRUCTION—				
Buildings and Structures—				
Carpenters, Fort William, Ont.	1	9	50	Commenced December 17, 1952; for a new agreement providing for increased wages retroactive to April 1, 1952; terminated April 23; reference to Labour Relations Board; in favour of employer.
TRANSPORTATION AND PUBLIC UTILITIES—				
Miscellaneous—				
Grain elevator workers, New Westminster and Vancouver, B.C.	5	275	5,500	Commenced February 16; for a new agreement providing for increased wages, premium for dust, job classification and pay for eight statutory holidays instead of six following reference to conciliation board; unterminated.
SERVICE—				
Business and Personal—				
Garage workers, Saint John, N.B.	1	22	500	Commenced February 9; for union recognition and implementation of award of conciliation board providing for increased wages in union agreement; unterminated.
Strikes and Lockouts Commencing During April, 1953				
MANUFACTURING—				
Vegetable Foods, etc.—				
Flour, cereal and feed mill workers, Peterborough, Ont., and Saskatoon, Sask.	2	596	4,250	Commenced April 22; for new agreements providing for increased wages, reduced hours from 44 to 40 per week and other changes following reference to conciliation board; unterminated.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, APRIL, 1953 [1]

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars [2]
	Establishments	Workers		
Strikes and Lockouts Commencing During April, 1953—Continued				
Rubber and Its Products—				
Rubber factory workers, Kitchener, Ont.	1	[3] 74	200	Commenced April 22; protesting new time standards for revised conditions; terminated April 25; return of workers pending settlement; indefinite.
Textiles, Clothing, etc.—				
Cotton factory workers, Hamilton, Ont.	1	900	900	Commenced April 2; protesting dismissal of five workers and proposed elimination of certain jobs; terminated April 2; return of workers pending negotiations; indefinite.
Cotton, jute and paper bag factory workers, Vancouver, B.C.	1	71	780	Commenced April 16; for a new agreement providing for increased wages following reference to conciliation board; unterminated.
Metal Products—				
Lighting fixtures factory workers, Toronto, Ont.	1	89	1,300	Commenced April 6; protest against revision of lunch and rest periods in paint shop to permit continuous production in new agreement under negotiations; terminated April 24; return of workers and replacement pending conciliation; indefinite.
Household appliances factory workers, Guelph, Ont.	1	198	3,500	Commenced April 7; for a greater increase in wages than recommended by conciliation board and other changes in new agreement under negotiations; unterminated.
Wire drawers, Hamilton, Ont.	1	[4] 60	60	Commenced April 13; protesting new incentive bonus on new machines; terminated April 14; return of workers pending settlement; indefinite.
Die casting factory workers, Hamilton, Ont.	1	130	325	Commenced April 14; protesting suspension of two workers for infraction of company rules; terminated April 16; return of workers pending settlement; indefinite.
Die casting factory workers, Wallaceburg, Ont.	1	63	440	Commenced April 22; for a union agreement providing for increased wages retroactive to Oct. 30, 1952 and other changes following reference to conciliation board; unterminated.
Non-Metallic Minerals, Chemicals, etc.—				
Chemical factory workers, Elmira, Ont.	1	[5] 128	1,280	Commenced April 20; for a union agreement providing for increased wages and other changes following reference to conciliation board; unterminated.
CONSTRUCTION—				
Miscellaneous—				
Pipe line installers, Kamloops, B.C.	1	220	200	Commenced April 22; for reinstatement of a dismissed foreman; terminated April 23; return of workers; in favour of employer.

TABLE G-2.—STRIKES AND LOCKOUTS IN CANADA, APRIL, 1953 [1]

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars [2]
	Establishments	Workers		
Strikes and Lockouts Commencing During April, 1953—Concluded				
TRANSPORTATION—				
Electric Railways and Local Bus Lines—				
Bus drivers and garagemen, Hull, P.Q.	1	66	350	Commenced April 15; for implementation of award of conciliation board for wage increase retroactive to Sept. 1, 1952, instead of Jan. 1, 1953, in new agreement under negotiations; terminated April 20; negotiations; compromise, retroactive to Nov. 1, 1952.
TRADE—				
Variety store clerks, Weyburn, Sask.	1	10	155	Commenced April 11; for a union agreement providing for increased wages; unterminated.
SERVICE—				
Business and Personal—				
Garage workers, Fort William and Port Arthur, Ont.	7	185	740	Commenced April 27; for a new agreement providing for increased wages retroactive to Mar. 1 instead of Apr. 9 and reduced hours from 46½ to 44 per week following reference to conciliation board; unterminated.

[1] Preliminary data based where possible on reports from parties concerned, in some cases incomplete; subject to revision for the annual review.

[2] In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

[3] 196 indirectly affected; [4] 15 indirectly affected; [5] 60 indirectly affected.

Tractors, loadmobiles, etc.	3	3			1	7		1			1		16
Mine or quarry cars				6									6
Trains or other railway vehicles					2	1		29					32
Streetcars													
Other motor-driven transportation vehicles, N.E.S.													
Man-powered vehicles and craft													
Objects thrown or kicked back by tools	1				1			1					3
Objects thrown or kicked back by machinery				2	11	1							14
Objects being hoisted or conveyed		9		1	6	5		6					27
Objects falling or flying in mines and quarries				41		5							46
Materials being handled by fellow worker					1	4							5
Materials being handled by victim		8			6	1		6	1				22
Materials falling from stockpiles	3	3			6	1							13
Another person (other than acts of violence)					1								1
Animals	13	4			1								18
Falling trees or limbs	5	62				2	1						70
Landslides or cave-ins		3		4	1	17					1		26
Miscellaneous						1					1		2
Total	**28**	**101**		**67**	**50**	**67**	**2**	**57**	**4**	**1**	**14**		**391**
Caught In, On or Between:													
Machinery	3	1		2	13	2			2				23
Belts, pulleys, chains, lines, etc.	3	1		1	2	1							8
Elevators, hoisiting and conveying apparatus		1		6	4	2		1			1		15
Buildings and structures (including parts of these such as doors, windows, etc.)					2	1							3
Automobiles and trucks		1			2	4		1	3		1		12
Tractors, loadmobiles, etc.	1	1			2	3		1					8
Mine and quarry cars				7		1							8
Trains and other railway vehicles						1		8					9
Streetcars													
Miscellaneous transportation vehicles and craft													
Materials in use or stored in plant				1	2	1		1					5
Objects in water (e.g., logs, caught between boat and wharf)		1				1							2
Miscellaneous													
Total	**7**	**6**		**17**	**27**	**17**		**12**	**5**		**2**		**93**
Collisions (including derailments, wrecks, etc., but not falls, slips, struck by, caught in, on or between:													
Involving steam railways				2		2		39					43
Involving street railways													
Involving automobiles and trucks	7	2		5	26	27	3	37	20		15		142
Involving tractors, loadmobiles, etc.	37	1		1	2	8			1		1		51
Involving mine and quarry cars				1									1
Involving water craft		21	12	3		1		19	1		7		64
Involving aircraft		1			1	2		11	1		13		29
Involving other transport agencies	1												1
Involving elevators and other hoisting and conveying apparatus						2					1		3
Involving miscellaneous agencies	2				2								4
Total	**47**	**25**	**12**	**12**	**31**	**42**	**3**	**106**	**23**		**37**		**338**
Falls and Slips													
(a) falls on same level													
Due to rough ground or floor surfaces													
Due to collapse of resistance	1				3								4
Due to tripping over or stepping on object					2								2

TABLE H-2.—FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1952, BY INDUSTRIES AND CAUSES—(Concluded)

Causes	Agriculture	Logging	Fishing and Trapping	Mining and Quarrying	Manufacturing	Construction	Electricity, Gas and Water Production and Supply	Transportation, Storage and Communications	Trade	Finance	Service	Unclassified	TOTAL
Falls and Slips (a) falls on same level—concluded													
Due to slippery surfaces	1					1							2
Due to slipping while handling materials						2							2
Due to slipping while operating machines						1							1
Due to physical condition of workman													
Due to vehicles in motion (other than struck by, collision, etc.)	4			1		1		4	2				12
Miscellaneous							1						1
Sub Total	**6**			**1**	**5**	**5**	**1**	**4**	**2**				**24**
(b) falls to different levels													
From ladders or stairs				2	6	3	1	1			7		20
From scaffolds and stagings				1	2	27		2					32
From platforms, ramps and stationary vehicles		1		2	6	1	1	4					15
From buildings, roofs and towers	1				10	13					3		27
From bridges, trestles and catwalks						4		1					5
From poles, trees, logs and stumps	1	2		1		1	3	1			1		10
From stockpiles													
From moving railway vehicles					1			5					6
From other moving transportation vehicles	1	1	1		1	1			2				7
Into holds of vessels		1	1		1			3					6
Into shafts, pits, excavations, etc.				8	1	8		1	1				19
Into rivers, lakes, sea or harbours	2	19	5	2	11	12	3	15			9		78
Into storage bunkers					5	1							6
Into tanks, vats or kilns					2	2							4
Miscellaneous falls to different level	1					1		1					3
Sub Total	**6**	**24**	**7**	**16**	**46**	**74**	**8**	**34**	**3**		**20**		**238**
Total	**12**	**24**	**7**	**17**	**51**	**79**	**9**	**38**	**5**		**20**		**262**
Conflagrations, Temperature Extremes and Explosions													
Conflagrations		4		1	10	10		2			3		30
Exposure to welding flashes					1								1
Exposure to cold or cold substances			1										1
Exposure to steam or other hot vapours					1								1
Exposure to hot liquids or molten metal					3								3
Exposure to heat or hot substances, N.E.S.				1	1								2
Explosions—blasting accidents	4	2		7		5					4		22
Explosions of coal and/or dust				26				7					33
Air blasts (bumps) in mines				2									2
Explosions of steam pressure apparatus													
Explosions of liquid air, gas pressure apparatus and containers				1	1		1		3				6
Explosions of gasoline and/or oil	1	1		1	3	2							8
Explosions of chemicals					4	1							5
Ammunition and firearms (accidental)			1										1
Other explosions													
Total	**5**	**7**	**2**	**39**	**24**	**18**	**1**	**9**	**3**		**7**		**115**
Inhalation, Absorptions, Ingestion (asphyxiation, poisoning, etc.)													
Exposure to acids, alkalis and similar chemicals				1									1
Exposure to poisonous gasses				3	3	4			2		3		15
Exposure to dust				41	19	1							61
Exposure to poisonous vegetation													
Exposure to miscellaneous poisonous agencies				1									1
Total				**46**	**22**	**5**			**2**		**3**		**78**
Contact with Electric Current													
Lightning accidents	1												1
Exposure to or contact with electricity	2	3		2	9	9	27	7			1		60
